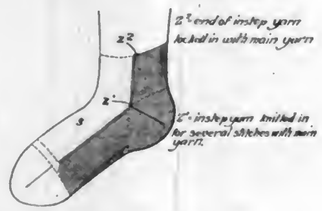
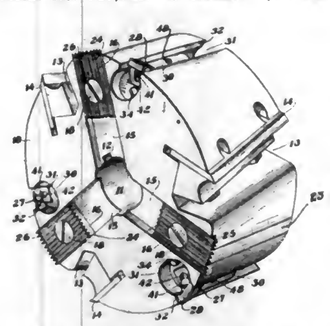
2. In a dispensing mechanism a container having a substantially horizontal opening in the lower end thereof and a side opening in a wall of the container adjacent said horizontal opening, a rotary member over the horizontal opening having teeth thereon, a rotary feed disc having teeth intermeshing with the teeth of the rotary member for the purpose of directing materials from the container thru the side wall opening, and a closure including a door portion and an oscillating shaft bearing in the container, said door portion including a flat top flange extending from said shaft and of substantially triangular formation adapted to overlie a portion of said rotary disc, said door furthermore including a flange at the free edge of the first mentioned flange portion extending transversely thereto downwardly into the space between the rotary disc and the wall of said container in which the side opening is provided, said last mentioned flange having one end thereof shaped to conform to the teeth of the rotary disc, the other end thereof being notched to permit the passing of the teeth of the rotary member there past, and said last mentioned flange being divergent towards the rotary disc with respect to the plane of the side wall opening.

1,664,803. PAINT-SPRAYING MACHINE. LEWIS RUDOLPH SHAFTO AGASSIZ, Vancouver, British Columbia, Canada. Filed Dec. 14, 1926. Serial No. 154,830. 6 Claims. (Cl. 91—45.)



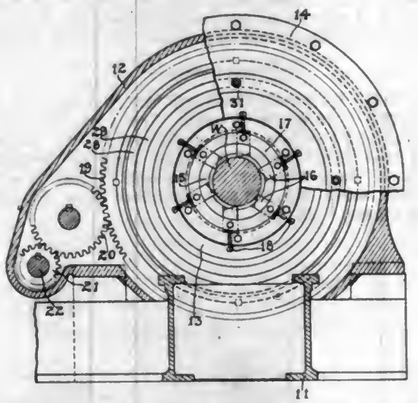
1. In a paint spraying machine having a paint container, a paint ejector, an aerated paint outlet, and an air inlet to the container and the paint ejector, a valve adapted to close against the air inlet, and means as the paint reaches a predetermined low level to close the valve.

1,664,804. TOOL GUARD. GEORGE E. ALLEN, Buffalo, N. Y. Filed July 14, 1926. Serial No. 122,479. 3 Claims. (Cl. 2—11.)



1. A tool guard comprising a cuff, means for securing the cuff to the person of the workman, a coupling member mounted upon the cuff, a flexible tube connected at one end to the coupling member and a guard coupled to the opposite end of the flexible tube.

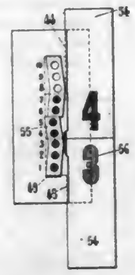
1,664,805. KNITTED FABRIC AND METHOD OF MAKING THE SAME. GEORGE LAWSON BALLARD, Norristown, Pa., assignor to Wildman Mfg. Co., Norristown, Pa., a Corporation of Pennsylvania. Original application filed Nov. 6, 1922, Serial No. 599,402. Divided and this application filed Nov. 6, 1924. Serial No. 748,180. 2 Claims. (Cl. 66—179.)



1. A split foot stocking having an instep yarn knit in with the yarn from the main feed at the end of the heel gore to be thereby locked in place, said instep yarn being continued intact in knitting split fabric at the ankle portion at the top of the instep, the main yarn forming the split fabric above the heel, said instep yarn being thereafter knit in with the main feed yarn, and then severed, substantially as described.

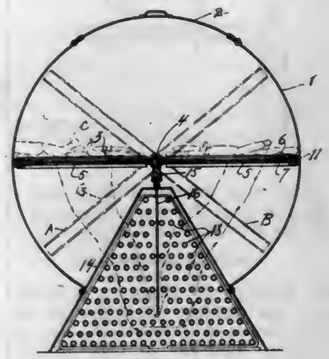
1,664,806. CUTTER HEAD FOR WOODWORKING MACHINES. ROLAND O. BETTERLEY, Williamsport, Pa., assignor to Hermance Machine Company, Williamsport, Pa., a Corporation of Pennsylvania. Filed Nov. 5, 1924. Serial No. 747,943. 6 Claims. (Cl. 144—223.)

1. The combination of a rotary cutter head having a longiutdinal slot extending from end to end thereof and extending from the peripheral surface of the head inwardly toward its axis, said slot having near said surface undercut faces, a cap plate disposed between said faces and closing the outer side of the slot, means for securing the cap plate in position, a cutting spur mounted for radial adjustment at one end of the head, a screw extending longitudinally through said slot, and means cooperating with said screw for clamping the spur in its adjusted position.



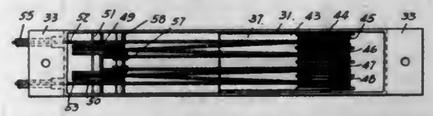
1,664,807. ROTATING CUTTER HEAD. LYNDON C. COLE, Hamilton, Ohio, assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 2, 1926. Serial No. 99,314. 9 Claims. (Cl. 164—60.)

1. A revolving cutter head for metal cutting machines comprising in combination, a body member, an annular member rotatably mounted therein, cutting tools mounted on said annular member, means to rotate said annular member, and removably positioned bearing members therefor engaging opposite sides of said annular member and adapted to retain the annular member against axial movement.



1,664,808. TEACHING DEVICE. ALFRED COOPER, Stowmarket, England. Filed Oct. 18, 1926, Serial No. 142,463, and in Great Britain Oct. 31, 1925. 11 Claims. (Cl. 35—2.)

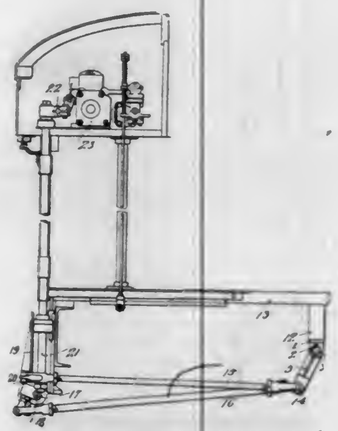
1. Appliance for teaching arithmetic comprising a guide having a front plate, a rear plate extending at one side laterally beyond the front plate, a spacing strip between said front and rear plates arranged to leave a slot between the two plates, 10 holes pierced in said front plate over said slot said holes being arranged in two



groups of 5, the holes of each group being arranged on an obtuse angle, and the two groups being stepped laterally relatively to each other.

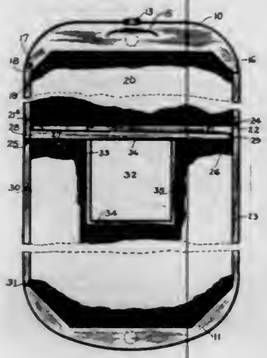
1,664,809. DRYING-ROOM TUMBLER. ERNEST DAVIS, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed Sept. 15, 1926. Serial No. 135,556. 8 Claims. (Cl. 34—7.)

1. A drying room tumbler comprising a horizontal cylindrical casing, an oscillating clothes support mounted in the casing concentric with the axis of the casing and extending diametrically of the casing, the support having a perforate portion providing passages for air, means for oscillating the support about its axis, and means for drying the air in the casing during the circulation thereof by the movement of the support.



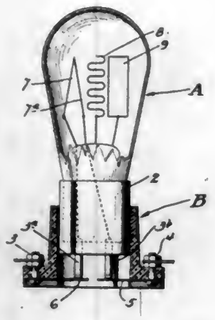
1,664,810. DIRECTION SIGNAL. ROBERT C. FORRELL, Los Angeles, Calif. Filed Oct. 21, 1926. Serial No. 143,174. 1 Claim. (Cl. 116—63.)

A direction signal comprising a casing having an open bottom and an opening in its front wall, a transparent panel spanning the opening, a U shaped frame insertable into the casing through its open bottom and closing the latter, means for securing the frame to the casing, a pair of rollers journaled in the end walls of the casing and



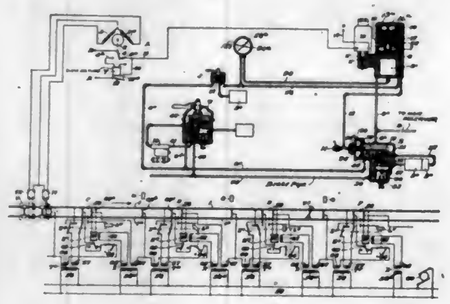
horizontally disposed above and below the opening, a web having a plurality of signal legends thereon and trained about the rollers to expose a portion of the web at a time through said panel, one of said rollers having a spring normally acting to wind the web thereon, and means by which the other roller is adapted to be rotated to unwind a predetermined length of web from the spring roller and thereby expose any one of the signal legends through said panel.

1,664,811. ROCKER-STEP CONNECTION. PARIS R. FORMAN, Rahway, N. J., assignor to National Pneumatic Company, New York, N. Y., a Corporation of West Virginia. Filed Feb. 4, 1926. Serial No. 85,829. 3 Claims. (Cl. 105—445.)



1. A rocker step connection comprising a plate bar having integral arms thereon, a bifurcated link member and means for pivotally attaching said link to said arms.

1,664,812. RADIATOR. FREDERICK GAROIULO, EATON G. EDWARDS, and CHARLES OPPE, New Haven, Conn., assignors to The G. & O. Manufacturing Company, New Haven, Conn. Filed Apr. 20, 1921. Serial No. 463,022. 22 Claims. (Cl. 257—125.)

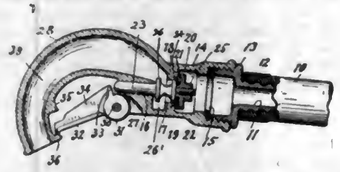


1. A radiator comprising a plurality of sections, means located between adjacent sections to receive a part of the contained fluid from one section and by-pass it about the adjacent section, said by-pass being cut off from communication with said adjacent section.

1,664,813. FILAMENT-CURRENT-REVERSING DEVICE. LEON W. GILLIS, Alderwood Manor, Wash. Filed July 19, 1927. Serial No. 206,875. 8 Claims. (Cl. 250—27.5.)

3. In a thermionic tube having a base provided with prongs and a filament connected with the prongs, a socket to receive the base and the prongs, contact members in the base engageable with the prongs to close an electric circuit through the filament in one direction, means insertable between the prongs and the contacts of the socket to reverse the current flow through the filament, said means comprising an elongated block of insulating material having two openings formed therein to receive the prongs of the tube base, and a pair of contact members carried by said insulating member, said contact members being arranged on opposite sides of the insulat the member and being disposed on an angle, each contact member having upper and lower contacts formed at opposite ends thereof, the upper contacts engaging the prongs and the lower contacts engaging the socket contacts, the contacts on the insulating member being so arranged that the lower ends thereof will engage the socket contacts of opposite prongs and the upper ends of the contacts will engage prongs opposite to the socket contacts.

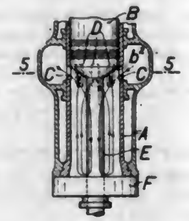
1,664,814. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HENRY W. GRIFFIN, New York, N. Y., and LEMUEL F. HOWARD, Edgewood Borough, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed June 10, 1922. Serial No. 567,397. Renewed Aug. 26, 1924. 24 Claims. (Cl. 246—63.



4. Railway traffic controlling apparatus comprising a vehicle provided with a magnet, mechanism on said vehicle controlled by said magnet and effective for a given interval of time after de-energization of the magnet to apply the brakes, manually operable means on the vehicle for preventing an application of the brakes during said interval of time, a slow-closing electromagnetic circuit

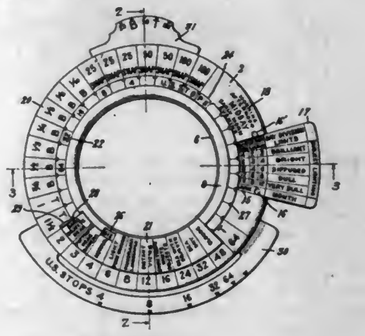
controller on the vehicle, means for energizing said magnet when said circuit controller is closed; and means partly on the vehicle and partly in the trackway for energizing said magnet directly under clear traffic conditions, for energizing said circuit controller under caution conditions, and for deenergizing both said magnet and circuit controller under stop conditions.

1,664,815. PROCESS FOR THE MANUFACTURE OF BURNT BUILDING MATERIALS OR THE LIKE OF CLAY. HUGO GROŠNOOS, Copenhagen, Denmark. Filed Aug. 4, 1925, Serial No. 48,054, and in Denmark Aug. 6, 1924. 4 Claims. (Cl. 25—156.)



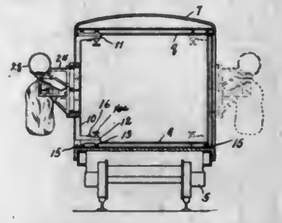
1. Process for the production of burnt building materials of clay, comprising the steps of preparing a granular annealed material from an admixture of clay and chemical substances adapted to lower the fusing point of the clay, admixing a quantity of said granular annealed material with the clay from which the actual moulded units for the building material are produced, moulding and pressing said units, and drying, burning and cooling the same in a kiln in one continuous operation.

1,664,816. NOZZLE. FRED E. HANSEN, Lakewood, Ohio, assignor to The Hansen Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 7, 1927. Serial No. 166,349. 8 Claims. (Cl. 251—116.)



7. In a device of the class described, a nozzle comprising a portion adapted to be attached to a pressure line, a valve in said portion adapted to be closed by pressure in the line, a stem on the valve extending axially through said portion, a hook-shaped delivery end for the nozzle extending to one side of the said stem, and means within the space enclosed by the hook-shaped end for moving said stem against the pressure on the valve, said means being so positioned as to be operable by engagement with the rim of a vessel when the nozzle is positioned to discharge into the vessel.

1,664,817. SCAVENGING INTERNAL-COMBUSTION ENGINE. ERNST HERKT, Kiel, Germany, assignor to Fried. Krupp Germaniawerft Aktiengesellschaft, Kiel-Gaarden, Germany. Filed Apr. 3, 1926, Serial No. 99,510, and in Germany Apr. 3, 1925. 1 Claim. (Cl. 123—61.)

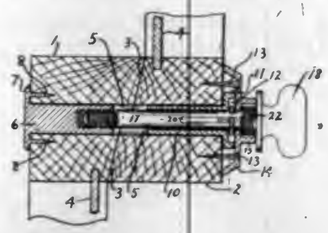


Two cycle internal combustion engine of the Diesel type, comprising a cylinder, a piston working therein having a piston rod penetrating the cylinder room and an end face tapering towards the piston rod, piston controlled inlet ports arranged at both sides of the cylinder and outlet ports arranged at one side of the cylinder between the inlet ports and at the same level with the inlet ports, said inlet ports being inclined so that the incoming scavenging air flows tangent the tapered end face of the piston on both sides and strikes the cylinder wall opposite to the outlet ports, the two flows of the scavenging air uniting and being directed along said wall to the cylinder head crossing the piston rod and flowing to the outlet ports, said outlet ports being inclined at the same angle as the tapered face of the piston rod.

1,664,818. PHOTOGRAPHIC EXPOSURE CALCULATOR. JOHN R. HEWETT, Schenectady, N. Y. Filed June 2, 1922. Serial No. 565,482. 4 Claims. (Cl. 235—88.)

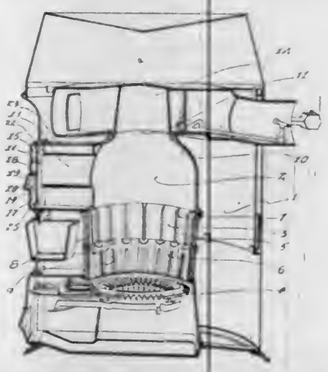
1. An instrument for use in photography comprising an annular casing, an annular disc in said casing provided with light factor tables, an opening in said casing of the same size as the tables on said disc, a scale plate flanking said opening and means for positioning any one of said tables opposite said opening in alinement with said scale plate.

1,664,819. MAIL RECEIVING AND DELIVERING DEVICE. HENRY J. HILL, Jersey City, N. J. Filed May 6, 1926. Serial No. 107,001. 2 Claims. (Cl. 258—9.)



1. A device of the class described comprising a carriage having inwardly projecting extensions, guide rails for said carriage whereby it may be moved to either side of a railway car, a plate secured to the carriage, a triangular arm hingedly connected to said plate, shock resisting means for said arm, a hook pivotally connected to the outer end of said arm and interconnected links between said arm and said hook.

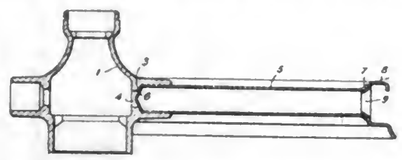
1,664,820. WINDOW FASTENER. CHARLES LEOPOLD HUGHES, Hamilton, Ontario, Canada. Filed Aug. 11, 1925. Serial No. 49,612. 1 Claim. (Cl. 292—251.)



A sash fastener for windows comprising a cylindrical element formed with a flanged head at one end and with an internally threaded axial recess at the other end, spicular projections carried by the flanged head and directed towards the end having the axial recess therein, a sleeve having an enlarged head at one end, said sleeve positioned in spaced relation from and in axial align-

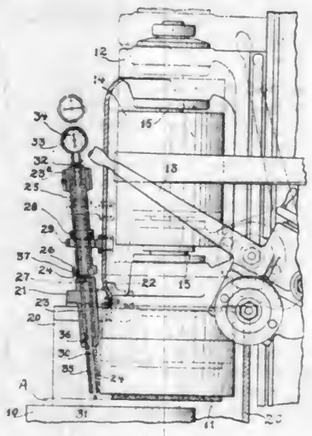
ment with the cylindrical element with the enlarged head remote from said cylindrical element, said enlarged head formed with a recess in the end thereof, a face plate superimposed over the enlarged head and provided with an orifice in alignment with the bore of the sleeve, a spindle slidably mounted within the sleeve and projecting outwardly through the orifice in the face plate, a finger grip at the outer end of said spindle, a compression coil spring upon the spindle and operative between the

face plate and finger grip, the spindle formed with a slot therein, a ring surrounding the spindle and having one end thereof bent within the slot and slidable therealong, said ring located within the recess in the enlarged head of the sleeve, the spindle positioned in axial alignment with the cylindrical element and formed at the end thereof adjacent to said element with an externally threaded portion adapted to have threaded engagement within the internally threaded recess in the element.



1,664,821. ADDITIONAL AIR SUPPLY FOR WARM-AIR FURNACES. RICHARD JUDD, ERNEST TAYLOR, and RALPH S. MCNANEY, Dowagiac, Mich., assignors to Premier Warm-Air Heater Company, Dowagiac, Mich., a Corporation of Michigan. Filed Jan. 24, 1927. Serial No. 163,220. 5 Claims. (Cl. 126—112.)

1. In a warm air furnace, the combination of a combustion chamber, a fuel supply passage therefor, a door for said passage and means for directing a supply of air into said combustion chamber including a channel extending longitudinally of and cast integrally with the walls of said fuel supply passage at the top portion thereof and a cooperating channel in said door adapted to communicate with the aforesaid channel when the said door is in closed position.

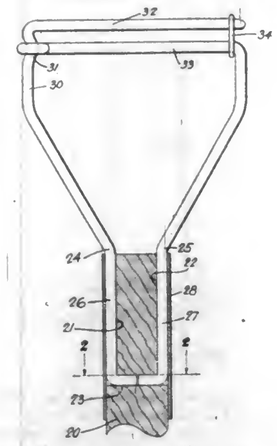


1,664,822. METHOD OF ASSEMBLING TUBULAR-STEEL-SPOKED AUTOMOBILE WHEELS. WILLIAM KISTLER, Chatham, Ontario, Canada. Filed Aug. 30, 1924. Serial No. 735,150. 1 Claim. (Cl. 29—174.)

A method of assembling tubular steel spoked automobile wheels which consists in providing the spoke bosses of a hub with hollow interiors having tapered bottoms into which are inserted the correspondingly tapered upset inner ends of the spokes, the outer ends of the spokes having been previously swelled out into bell-like form, then applying to the outer ends of the spokes a heated and consequently expanded steel felloe which at normal temperatures is of an internal diameter slightly less than the distance between the outer ends of the opposed spokes, and subsequently stamping out of the felloe in-

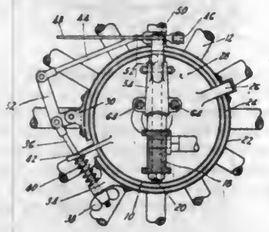
wardly extending tapering spigots engaging the interior walls of the swelled out outer ends of the spokes, the heated felloe upon cooling contracting to its above normal diameter whereby the spokes are placed under compression stresses, said contraction of the felloe on cooling forcing the tapered inner ends of the spokes into their centered position in engagement with the tapered bottoms of hollow interiors of the hub.

1,664,823. SIZE INDICATOR FOR SURFACE GRINDERS. CARROLL KNOWLES, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 19, 1923. Serial No. 620,022. 8 Claims. (Cl. 51—165.)



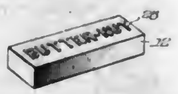
1. An indicator device for surface grinders comprising in combination, a fixed support, an indicator movably mounted on the support, means to remove the indicator from its operative position and return it to its operative position, said means being operated by movement of the wheel toward and from the work supporting table of the grinder.

1,664,824. MOP HOLDER. CARL H. KOEKER, Dayton, Ohio. Filed June 23, 1927. Serial No. 200,989. 3 Claims. (Cl. 15—147.)



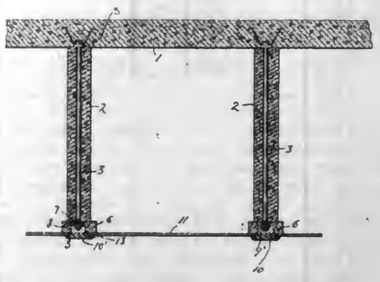
1. A device of the character described comprising, a handle in which are anchored a pair of clamping members having portions diverging from the handle in diametrically opposite directions said members being bent inwardly at a properly spaced distance from the end of the handle toward each other to provide parallel, spaced branches, the one clamping member having a hump bent therein at a point in axial alignment with the

branch of the other clamping member, the end of the last mentioned branch being bent about the hump of the other clamping member to anchor it to said member so that the former cannot move longitudinally of the latter; and a clip carried on the anchored branch of the



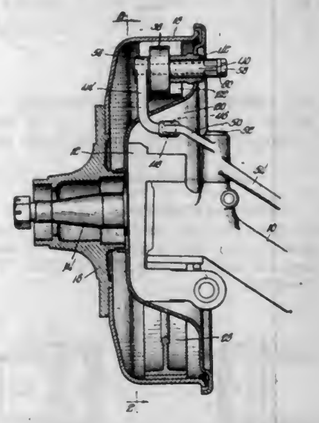
one member, adapted to be latched over the free end of the branch of the other clamping member for securing this free end of the said member to the anchored branch at a point remote from its anchorage at the hump of the one clamping member.

1,664,825. BRACKET AND BRAKE LEVER. EDWARD L. KULICK, Milwaukee, Wis., assignor, by mesne assignments, to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed May 9, 1927. Serial No. 189,751. 16 Claims. (Cl. 188—194.)



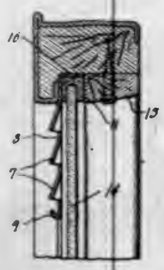
3. A vehicle having, in combination, a swivelled wheel having a drum and a contractable friction device surrounding the drum, a part swivelling with the wheel and arranged to contract said device against the drum, and a non-swivelling member engaging said part, the point of engagement being movable in a plane substantially perpendicular to the swivelling axis.

1,664,826. METHOD OF MARKING CONFECTIONERY. EDWARD MESSER, Pittsburgh, Pa. Filed Oct. 24, 1923. Serial No. 670,401. 2 Claims. (Cl. 107—54.)



1. The method of marking confectionery which comprises coating a center with chocolate, laying a patterned die plate on top of the coated center while the coating is still soft and plastic, cooling the coating while the die plate remains on the coating by its own weight and then removing the die plate from the coating, whereby the top surface of the coated candy is impressed with the design of the die plate.

1,664,827. ALIGNMENT STRIP FOR ELECTRICAL BARRIERS. PAUL NICHOLAY, Wayne, Mich., assignor to Deceleco, Inc., Wayne, Mich. Filed May 16, 1927. Serial No. 191,908. 5 Claims. (Cl. 72—98.)



1. In a device of the character described, the combination with a barrier, and a jamb strip extending upon an edge face of said barrier, and having openings therethrough from its outer face to the engaged edge of the barrier, the outer portions of said openings being enlarged, of securing elements for said strip carried by said barrier projecting into said openings of the strip, and means within the enlarged outer portions of said openings for clamping the strip to the barrier.

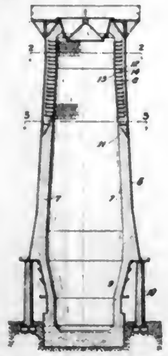
1,664,828. ADJUSTABLE CAM FOR BRAKES. BEN G. PARSONS, South Bend, Ind., assignor to The Bendix Brake Company. Filed Feb. 18, 1925. Serial No. 10,017. 4 Claims. (Cl. 188—194.)

1. A brake comprising, in combination, a drum and backing plate, friction means between the drum and backing plate, a device for operating the friction means, an operating arm on the drum side of said device, and means on the outside of the backing plate for adjusting the relative angular positions of the arm and cam.

1,664,829. VENTILATOR FOR VEHICLES. JOHN H. PARSONS, Pontiac, Mich. Filed Sept. 21, 1925. Serial No. 57,650. 4 Claims. (Cl. 98—2.)

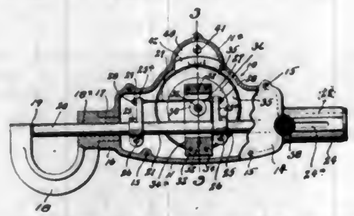
1. The combination with a window frame having a substantially horizontal upper portion and substantially vertical outer guide portions for the pane exteriorly of and at the sides of the top portion, the angle between said horizontal upper portion and vertical guide portions being not greater than ninety degrees of a ventilator comprising a perforated body portion having a centrally arranged securing flange bent at an angle to the body portion greater than ninety degrees and side portions arranged at each end of the flange, whereby when the surface of the securing flange is brought into abutting engagement with the horizontal top portion of the window frame the body portion will be forced outwardly to bring the side portions of the ventilator into engagement with the vertical guide portions of the window frame to prevent rattling of the ventilator.

1,664,830. TRUCK PEDESTAL. HARRY M. PFLAGER, St. Louis, Mo., assignor to Commonwealth Steel Company, Granite City, Ill., a Corporation of New Jersey. Filed Mar. 10, 1927. Serial No. 174,271. 12 Claims. (Cl. 105—205.)



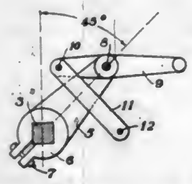
1. A truck pedestal leg having a plurality of parallel surfaces spaced from each other so as to successively engage the respective sides of journal boxes of different widths.

1,664,831. TRUCK PEDESTAL. HARRY M. PFLAGER, St. Louis, Mo., assignor to Commonwealth Steel Company, Granite City, Ill., a Corporation of New Jersey. Filed Mar. 10, 1927. Serial No. 174,272. 12 Claims. (Cl. 105—225.)



1. A car truck pedestal leg having side walls and a transverse web between said side walls, said side walls being provided with spaced bolt holes for securing a wear plate in different positions relative to said web.

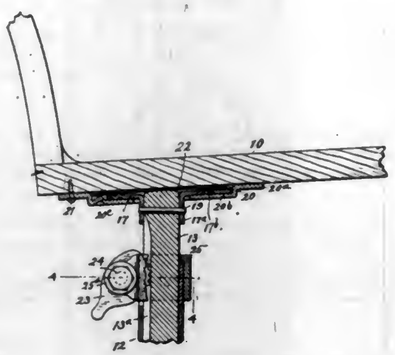
1,664,832. BLAST FURNACE. WILLIAM PATRICK POWER, Newcastle, New South Wales, and ESSINGTON LEWIS, Malvern, Victoria, Australia, assignors to The Broken Hill Proprietary Company, Limited, a Corporation of Victoria, Australia. Filed Jan. 20, 1927, Serial No. 162,265, and in Australia Dec. 9, 1926. 5 Claims. (Cl. 266—25.)



1. In a blast furnace, the combination with an upper lining of means for supporting the same connected to the outer shell of the furnace independently of the lower lining.

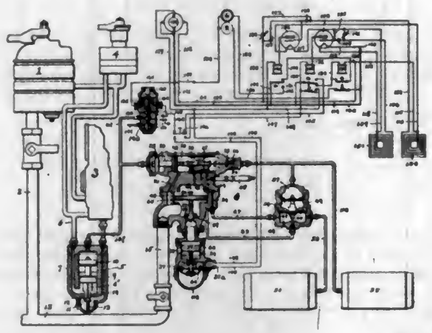
1,664,833. MICROMETER CALIPER. HARRY C. SCHAPER, St. Louis, Mo. Filed Mar. 2, 1925. Serial No. 12,469. 7 Claims. (Cl. 33—147.)

1. A micrometer caliper comprising in combination a stationary work abutment member, a slidable work abutment member cooperating with the former, operating connections adjustably mounted on said slidable member, a measure indicia carrying disk member rotatable by said connections and in accordance with the movement of said slidable member to indicate the distance between said work abutment members, an optical system for reading portion of said indicia bearing member in a magnified form, and a stationary vernier scale in correlation with said indicia member.



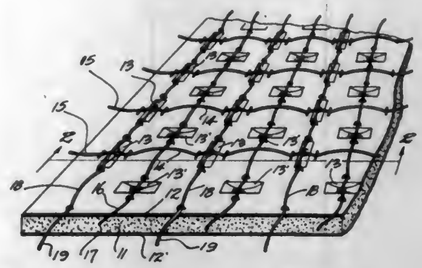
1,664,834. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. WILLIAM E. SMITH, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 18, 1926. Serial No. 142,222. 6 Claims. (Cl. 246—203.)

1. In combination, a rotatable shaft, a crank secured to the shaft, a trip arm pivotally secured to the crank,



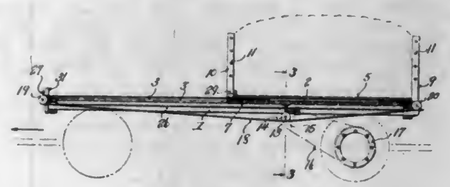
and a link having one end pivoted about a fixed point and the other end pivotally secured to one end of the trip arm.

1,664,835. SEAT CONSTRUCTION. CLARENCE E. STEVENS, Cleveland, Ohio, assignor to White Sewing Machine Corporation, Cleveland, Ohio, a Corporation of Delaware. Filed Feb. 14, 1927. Serial No. 167,882. 4 Claims. (Cl. 155—95.)



1. In a swiveled seat or chair construction, a seat, a supporting post having at the top a circularly corrugated flange, and a plate secured to the lower side of the seat and having an offset portion extending beneath said flange.

1,664,836. VALVE. CHARLES B. STONE, Detroit, Mich., assignor to Continuous Train Control Corporation, Detroit, Mich., a Corporation of Michigan. Filed Jan. 22, 1926. Serial No. 82,902. 3 Claims. (Cl. 303—8.)

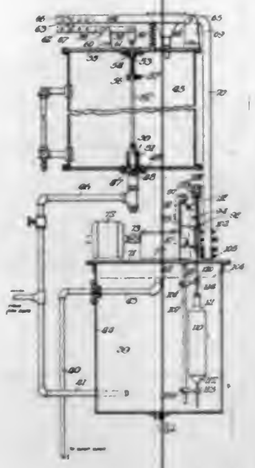


1. In an air brake system for railway trains comprising an engineer's train valve, a distributer valve, and an automatic electro-pneumatic valve adapted to cause the application of the brakes, a control valve between the distributer valve and the train valve adapted to be operated by air received from the electro-pneumatic valve under normal running conditions to keep open a passage between the distributer valve and the train valve and to close said passage when the electro-pneumatic valve causes the application of the brakes.

1,664,837. PLASTER BOARD. JOSEPH STRAND, Los Angeles, Calif., assignor to Klinch Lath Corporation, a Corporation of California. Filed June 25, 1924. Serial No. 722,265. 6 Claims. (Cl. 72—124.)

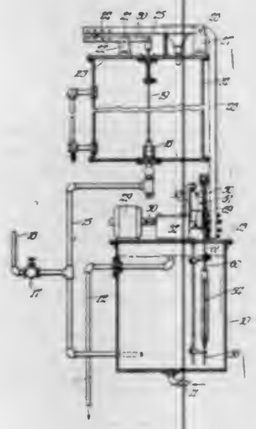
1. A plaster board provided with longitudinal and transverse keying slots having sides substantially at right angles to the surface of said board; and a plurality of plaster reinforcing wires secured to the sides of, and entirely outside of, said plaster board, and arranged crisscross over a portion of said slots.

1,664,838. HAYRACK. LOUIS C. STRUENSEE, Oshkosh, Wis. Filed Mar. 17, 1926. Serial No. 95,239. 1 Claim. (Cl. 214—81.5.)



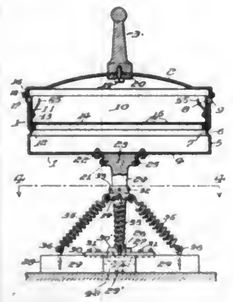
A hay rack comprising a pair of longitudinally extending bed members, a stationary hay receiving platform carried by the rear part of said bed members, a track comprising a pair of rails carried by said bed members and extending across said rear platform, said rails each consisting of an angle iron having a flat bottom portion, an upturned portion and an outwardly turned portion, a movable platform provided with pairs of angle irons, rollers revolubly mounted between the pairs of angle irons and adapted to travel upon the said rails, said movable platform having a plurality of inwardly turned lips fitting over the outwardly turned portions of said rails, the upturned portions of said rails constituting guiding flanges to prevent the rollers from passing off said rails, and means for shifting said movable platform.

1,664,839. FLUIDITY-CONTROL SYSTEM. HUGO H. WEBMINK, Villa Park, Ill., assignor to Belden Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 22, 1924, Serial No. 745,190. Renewed Feb. 23, 1928. 5 Claims. (Cl. 23—253.)



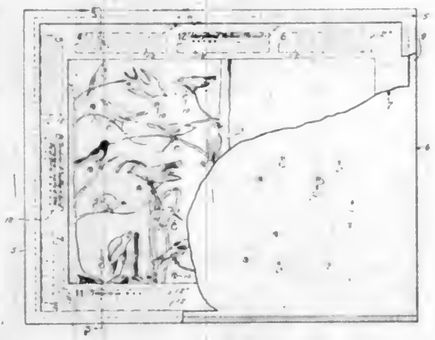
3. In a system for regulating the density of a solution, the combination of a valve for admitting thinner from a source of supply to the solution, a part engaging said

valve and adapted to open the valve when actuated, and means for actuating the part comprising a constantly



driven member normally inoperative to actuate said part, and a buoy having means for enabling said driven member to actuate said valve part.

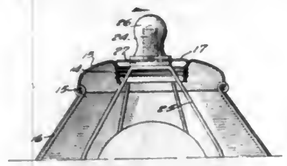
1,664,840. APPARATUS FOR STANDARDIZING SOLUTIONS. HUGO H. WERMINE, Villa Park, Ill., assignor to Belden Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 14, 1925, Serial No. 30,214. Renewed Feb. 23, 1928. 4 Claims. (Cl. 23—253.)



1. In a system for regulating the composition of a solution, the combination of a member submerged in said solution and having a relatively high temperature coefficient of expansion as compared with a solid body, and means controlled by the buoyancy of said member for supplying said solution with liquid of a different composition to compensate for changes in such composition.

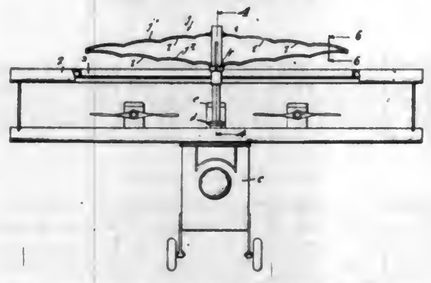
1,664,841. SIFTER. HERBERT S. WOODWARD, Carbondale, Pa. Filed Aug. 2, 1924. Serial No. 729,706. 8 Claims. (Cl. 209—331.)

1. In a sifter, the combination with an universally resilient support, of a screening device rigidly secured to the free end of said support whereby said device may be agitated substantially horizontally in all directions and said device will be returned after agitation to its normal position, due to the resiliency of said support.



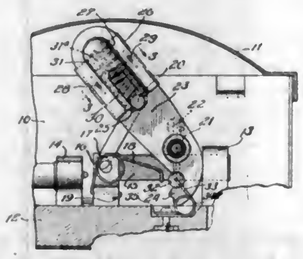
1,664,842. EDUCATIONAL APPLIANCE. G. FRED YESSLER, Port Chester, N. Y., assignor, by mesne assignments, to Knapp Electric Corporation, Port Chester, N. Y., a Corporation of New York. Filed Oct. 15, 1926. Serial No. 141,744. 7 Claims. (Cl. 35—12.)

1. An educational appliance, including a frame member, a card and a relatively movable backing sheet adapted to be associated with said frame, sets of symbols upon said sheet and sets of representations upon said card, the latter being formed with sets of openings through which the symbols are visible to identify said representations, one set of symbols being visible when the card is in one position, a second set of symbols being visible through a second set of openings when the card is in another position upon said sheet.



1,664,843. SHADE-SUPPORTING ADAPTER FOR LAMPS. PHILIP ACKER, Brooklyn, N. Y. Filed May 8, 1926. Serial No. 107,547. 3 Claims. (Cl. 240—128.)

1. A shade supporting adapter for lamps, in the form of a sheet metal ring having external threads of the size of the threads on the skirt of a lamp socket cover, whereby a shade support adapted to fit a socket cover

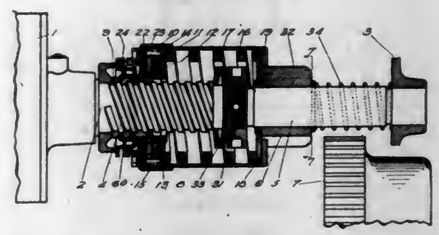


may fit the ring, and a spider carried by one end of the ring, the spider being apertured to fit the adapter to a small post, or the like.

1,664,844. SAFETY LANDING AND TAKE-OFF DEVICE FOR AEROPLANES. JAMES BRUSH ANDERSON, Portland, Oreg. Filed June 22, 1927. Serial No. 200,700. 7 Claims. (Cl. 244—15.)

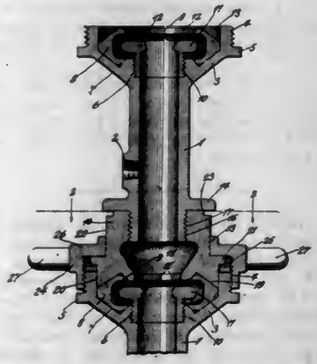
1. In combination with an aeroplane of the type described and provided with a cock pit, auxiliary means for lifting and lowering the aeroplane under conditions mentioned, consisting of a driven vertical shaft carrying horizontally extended, oppositely disposed wings, the said shaft being telescopable, and the wings and their attachment to the shaft adapted to permit the wings to be brought closely together in substantially flat relation.

1,664,845. SWITCHING DEVICE. ALBERT P. BALL, Detroit, Mich., assignor to Square D Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 23, 1921. Serial No. 517,165. 8 Claims. (Cl. 200—153.)



6. In a switch, stationary contacts, movable contacts, an operator, a link pivotally mounted with respect to said movable contacts and having a lost motion connection with said operator, and a spring for snapping the movable contacts open, said link being recessed at its upper end and having hooked lower end, the recess receiving the operator and said link further comprising a pair of plates on opposite sides of the upper end of said main link member, said plates being bulged outwardly and oppositely to form a barrel which permanently positions said spring between said operator and a stop formed by said plates, and said bulged portions being recessed oppositely to the recess in the main link member, whereby the association of said plates and said member eventuates a slotted link having a spring so positioned therein that the contacts are snapped open.

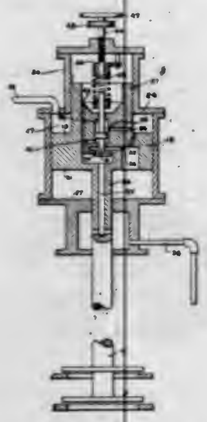
1,664,846. TREATMENT OF ROCK ASPHALT. WILLIAM P. BENTLEY, Dallas, Tex. Filed Feb. 17, 1928. Serial No. 255,202. 5 Claims. (Cl. 94—23.)



1. A method which comprises first determining the voidage in rock asphalt reduced to usuable sizes, then adding bituminous flux in an amount insufficient to fill said voids but in an amount which, when added to the naturally contained bitumen, is sufficient, with said naturally contained bitumen, to fill said voids without a substantial excess or substantial deficiency.

1,664,847. ENGINE-STARTING APPARATUS. JOSEPH BIJUR, New York, N. Y., assignor, by mesne assignments, to Eclipse Machine Company, New York, N. Y., a Corporation of New York. Filed Feb. 1, 1917. Serial No. 145,839. 92 Claims. (Cl. 74—7.)

1. A drive for engine starters comprising a control member mounted for longitudinal and rotary movement, and a driving member adapted to cooperate with and drive a member of the engine to be started and mounted in tandem relationship with the control member, such driving member being operatively connected therewith whereby said longitudinal and rotary movements of the control member are imparted to the driving member.

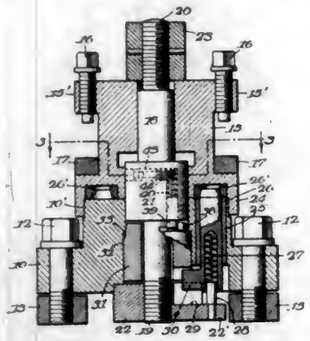


1,664,848. PIPE COUPLING. BARNETT MORSE BROWNELL, St. Louis, Mo., assignor to Diamond Metal Products Co., a Corporation of Missouri. Filed Dec. 14, 1925. Serial No. 75,242. 3 Claims. (Cl. 285—122.)

1. In a pipe coupling the combination of a pair of coupling members having contacting telescoping swivel connection and each having an annular groove in its end,

said grooves being opposite each other, a clamping device holding said members in contacting telescoping connection, a gasket wholly enclosed by said members and seated in said grooves and having a groove extending outwardly from its inner side, an element screwed into the end of one of said members out of contact with said gasket, and a flange integral with said element extending into said groove in said gasket and being out of contact with said gasket leaving said gasket free to expand in said grooves in said members.

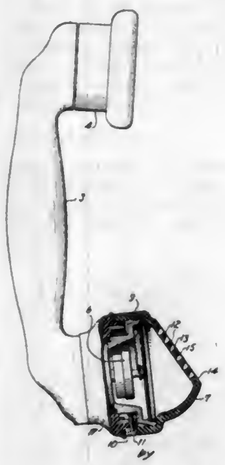
1,664,849. GOVERNOR. OZRO N. BRYANT, Moore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 22, 1925. Serial No. 32,089. 8 Claims. (Cl. 269—14.)



1. In a variable fluid pressure operated governing apparatus, a differential piston for effecting governing movements, means for admitting variable fluid pressure to the side of lesser area of the differential piston, means for by-passing fluid to the side of greater area, a pressure operated relief valve carried by the differential piston for determining the pressure on the side of greater area, and a spring connecting the relief valve with a stationary part for modifying its action in accordance with the position of the differential piston.

1,664,850. PROCESS FOR MAKING ICE CRYSTALS. SAMUEL C. CARNEY, Tulsa, Okla., assignor to Roxana Petroleum Corporation, a Corporation of Virginia. Filed Feb. 4, 1926. Serial No. 86,104. 5 Claims. (Cl. 99—3.)

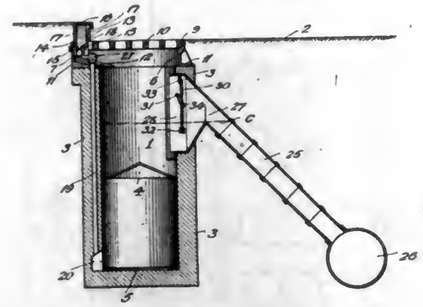
4. The process of forming ice crystals which consists in passing separated quantities of the ice mass through a volume of carbon dioxide gas under pressure, and molding the separated quantities by compacting them while impregnated with the gas.



1,664,851. TOOL POST. GEORGE M. CLASS, Madison, Wis., assignor to Gisholt Machine Company, Madison, Wis., a Corporation of Wisconsin. Filed Aug. 18, 1926. Serial No. 129,885. 3 Claims. (Cl. 29—49.)

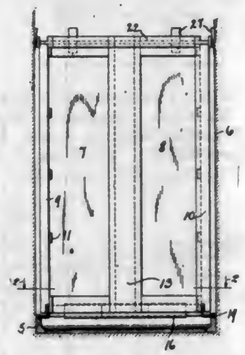
1. In a tool post, the combination of a base, an upwardly spring-pressed locking bolt in said base formed with a lateral projection, a tool holder rotatable on said base having sockets in its under side to interlock with the upper end of said bolt, a rotatable stud extending centrally through said base and tool holder, said stud formed with an enlarged intermediate portion, an operating arm fast on the upper end of said stud, a rotatable sleeve encircling said stud beneath said enlarged portion, said sleeve formed on its lower end with cams cooperating with said projection to retract said bolt and on its upper end with ratchet teeth, a downwardly spring-pressed pawl slidably mounted in said enlarged portion

cooperating with said ratchet teeth to turn said sleeve, and cooperating means carried by said enlarged portion and the tool holder operative to index the latter by a continued movement of said arm in the same direction after said bolt has been retracted.



1,664,852. TRANSMITTER MOUTHPIECE. HAROLD F. DODGE, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 30, 1922. Serial No. 610,000 9 Claims. (Cl. 179—187.)

1. A transmitter mouthpiece having a grid formed of a plurality of parallel bars forming openings of greater dimensions at one side than at the other.

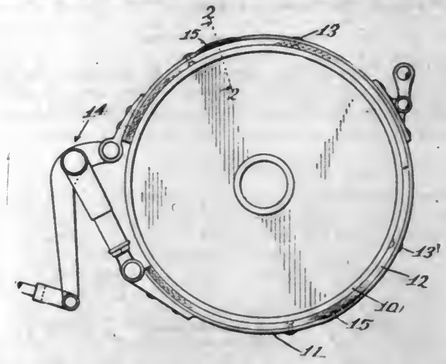


1,664,853. SEWER CATCH BASIN. ELMER W. FIRTH, Jamaica, N. Y., assignor of one-half to Hugh Gordon Miller, New York, N. Y. Filed Mar. 2, 1927. Serial No. 171,938. 3 Claims. (Cl. 182—3.)

1. In a sewer catch basin arranged to receive a removable receptacle comprising a surrounding wall having an outlet located above the top of such receptacle, a pressure relief pipe having an air inlet located above the bottom of the outlet and an air outlet positioned to relieve

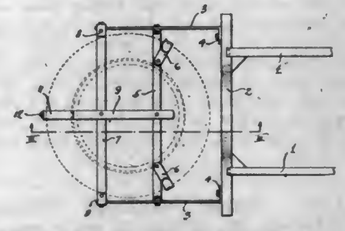
the suction at the bottom of the basin created upon removal of said receptacle, and a removable cap on the upper end of said pipe.

1,664,854. REMOVABLE LINING FOR CLOSETS AND THE LIKE. BERTHOLD FRIEND, Brooklyn, N. Y. Filed Nov. 1, 1926. Serial No. 145,637. 6 Claims. (Cl. 20—1.11.)



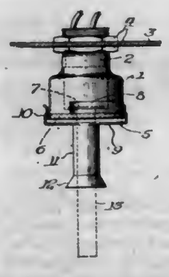
1. A lining for clothes closets and the like comprising a plurality of separable panels which may be constructed of moth or germ proof material such as cedar or its equivalent, said panels being arranged within and adjacent the rear and side walls of a given area, means for adjustably supporting said panels on the base board within said area and a top shelf cooperating with the upper portions of said panels to maintain the same in paralelism to each other and in uniform spaced relation to the walls of said area.

1,664,855. ANTISQUEAK DEVICE FOR VEHICLE BRAKES. JOHN S. GARD, Los Angeles, Calif. Filed Apr. 20, 1926. Serial No. 103,274. 1 Claim. (Cl. 188—259.)



In a brake shoe having a lining secured thereto by rivets, an anti-squeak device comprising a strip of sheet metal which in length is substantially equal to the width of the lining, and which is shorter in width than in length, thereby enabling it to be readily inserted between the shoe and the lining between adjacent rivets, said strip having flat longitudinal edge portions and being corrugated with the corrugations extending lengthwise

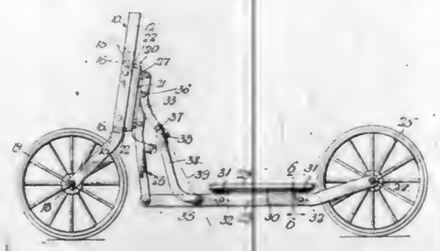
thereof between the flat edge portions and lying entirely on one side of the plane of the flat edge portions, said device being maintained in position between said brake



lining and shoe, solely by its frictional contact with said elements and serving to force portions of the lining into binding engagement with a brake drum.

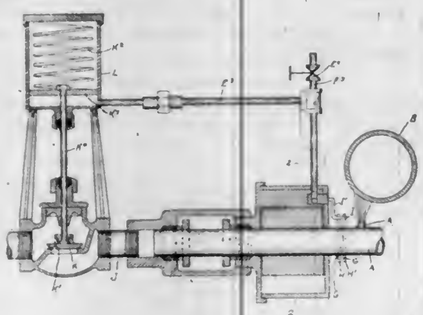
1,664,856. UNDERSLUNG TIRE CARRIER. WALTER R. GREEN, Chicago, Ill.; Albert H. Green, executor of said Walter R. Green, deceased, assignor to International Stamping Company, Chicago, Ill., a Corporation of Illinois. Filed May 8, 1926. Serial No. 107,589. 4 Claims. (Cl. 224—29.)

1. In an underslung tire carrier, a plurality of longitudinally extending brackets adapted for attachment to the chassis, a plurality of U-shaped members attached to said brackets, one of said U-shaped members being also adapted for attachment to the body of a vehicle, a longitudinal member secured to said U-shaped members and a tire-retaining shoe removably secured on said longitudinal member.



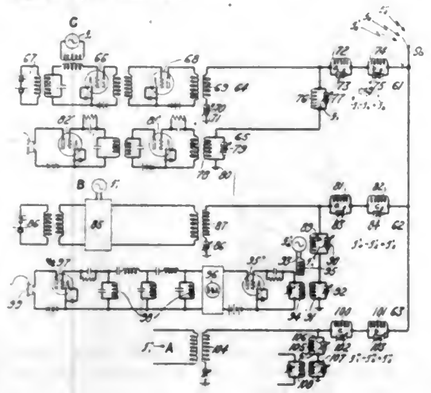
1,664,857. CIGARETTE LIGHTER. MERL J. HARKLESS, Homewood, Ill. Filed Sept. 13, 1926. Serial No. 134,959. 5 Claims. (Cl. 219—32.)

1. A lighter of the character described comprising a mount, an ignition element operatively disposed thereon, and a cigarette guide or holder hinged to said mount



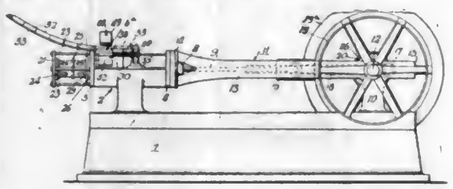
and adapted when in operative position to cooperate with said element to facilitate lighting of a cigarette thereby and when in inoperative position to permit access to said element for lighting a cigar.

1,664,858. SCOOTER. FREDERICK H. HEADLEY, Northfield, near Birmingham, England. Filed Jan. 19, 1924. Serial No. 687,182. 2 Claims. (Cl. 280—87.5.)



1. In a vehicle of the kind described, the combination of a normally substantially upright steering post, a horizontally disposed platform frame, wheels carried by said post and frame respectively, a steering head pivotally connected to the steering post for a lateral movement, a pair of clips fixed to the head and including spaced ears, a pair of links pivotally connected at their bottom ends to the front end of the frame and rigidly fixed at their top ends to the spaced ears of said clips carried by the steering head, and folding brace bars including a breakable lock rule joint, with the top ends thereof connected to said links between said clips and with the bottom ends thereof connected to the platform frame, said brace bars being capable of being locked in their extended position to hold the post and frame in their operative relation or being folded, one upon the other, so that the post may be swung back and over upon the frame.

1,664,859. BOILER CLEANER. HERMAN C. HEATON, Chicago, Ill., assignor, by mesne assignments, to Diamond Power Specialty Corporation, Detroit, Mich., a Corporation of Michigan. Filed July 10, 1920. Serial No. 395,260. 4 Claims. (Cl. 122—392.)

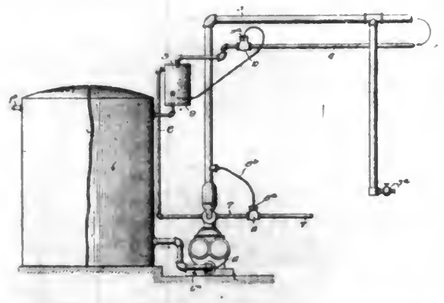


1. The combination with a rotative blower unit, of a motor adapted to drive said unit, a valve controlling the supply of steam or other cleaning substance to said blower unit, a piston connected to said valve, a cylinder receiving said piston, a spring within said cylinder engaging one side of said piston and urging the valve to its seat, and a common means for supplying an energizing fluid to said cylinder at the other side of the piston and to the motor.

1,664,860. SIGNAL SYSTEM. RAYMON A. HEISING, Millburn, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 16, 1924. Serial No. 713,694. 6 Claims. (Cl. 250—9.)

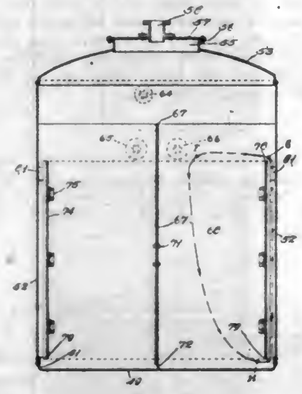
1. A transmitting channel comprising a transmitting conductor, a circuit associated in energy transfer relation thereto, and a reactive circuit in shunt to said circuit, said reactive circuit comprising a combination of impedance elements which is loop-resonant at a frequency to be transmitted, and said reactive circuit, as measured between its terminals connected to said first mentioned circuit, being also resonant at at least one frequency to be excluded.

1,664,861. MACHINE FOR SQUARING SPOKE STOCK. KRISTIAN M. MATHISEN, Menominee, Mich., assignor to Heywood-Wakefield Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 6, 1926. Serial No. 79,529. 9 Claims. (Cl. 144—197.)



1. A machine of the kind described embodying therein, a support, cutter members mounted on the support and arranged to produce the desired cross sectional shape to the blank, a magazine mounted on the support to receive a stack of billets with the bottommost billet in substantial alignment with said cutter members, a drive shaft, a reciprocating member operatively connected to said drive shaft and adapted to engage the bottommost billet in the stack to project it therefrom and to push it toward said cutter members, means for feeding billets to the magazine, a gate associated with said magazine for controlling the admission of billets thereto from said feeding means and means also actuated from the drive shaft for operating said gate.

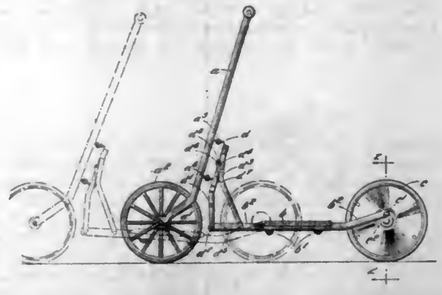
1,664,862. MEANS FOR KEEPING UP THE TEMPERATURE IN HOT-WATER-SUPPLY SYSTEMS. SPENCER OTIS, Chicago, Ill., assignor to The Locomotive Terminal Improvement Company, Chicago, Ill., a Corporation of Maine. Filed Sept. 2, 1919. Serial No. 321,274. 10 Claims. (Cl. 122—396.)



1. In a water supply system, a storage tank adapted to contain water in quantity, at a temperature that

adapts the water to meet a required demand, a combined supply and circulation water line having means for delivering water for consumption and means for returning unconsumed water to the tank, means for causing

water to flow from the tank through said line and back to the tank, and means automatically responding to the temperature of water returning through said line, adapted to act upon the returning water of circulation and rectify its temperature before it reenters the tank.



1,664,863. STILL. FRANZ PUENING, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Delaware. Filed July 25, 1924. Serial No. 728,250. 20 Claims. (Cl. 196—125.)

1. A tar still adapted for continuous operation comprising, in combination: a cylindrical plate providing a vertical heating wall and a space; a bottom and cover therefor; material inlet and outlet openings therefor; partitions arranged within said plate to provide compartments, one of said partitions extending diametrically across the space provided by said plate, and the other of said partitions extending from said plate to said diametrically extending partition, the upper ends of said partitions terminating a short distance above the inlet and outlet openings; vertically extending baffles arranged between each two partitions and alongside of but spaced from said plate, the lower edges of said baffles being spaced from said bottom, and the upper edges stopping below the outlet opening level, each of said baffles being hingedly secured to its partition; said partitions having apertures therein near their upper edges and below the outlet opening level and between the baffles and the heating plate to permit passage of the material being treated from one compartment to the next.

16. A still having a cylindrical upwardly extending heating wall, a top and a bottom adjacent thereto, an inlet and an outlet therefor, partitions therein subdividing said still into compartments; baffles arranged concentric to but spaced from said heating wall, said baffles being rigidly secured to said partitions, said baffles being spaced from said bottom and terminating at their upper ends below the outlet for the material to be treated.

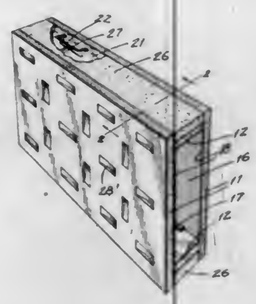
1,664,864. SCOOTER. RICHARD RUTHERFORD, London, England, assignor to Frederick Hagger Headley, Birmingham, England. Filed June 18, 1925, Serial No. 37,887, and in Great Britain Sept. 16, 1924. 3 Claims. (Cl. 208—38.)

1. A scooter comprising an underframe of substantially parallel bars, a footboard mounted on said underframe, a steering column, a running wheel mounted concentrically in said steering column, means for connecting said underframe and said steering column, a rear disc wheel, a hub eccentrically mounted in said rear wheel, said hub comprising a tube flanged over at its ends tightly on the opposite faces of the wheel and a spindle eccentrically mounted in the rear end of said underframe and also freely passing through said hub.

1,664,865. BOILER CLEANER. NORMAN L. SNOW, Detroit, Mich., assignor to Diamond Power Specialty Corporation, Detroit, Mich., a Corporation of Michigan. Original application filed Jan. 15, 1923, Serial No. 612,864. Divided and this application filed July 13, 1925. Serial No. 43,301. 3 Claims. (Cl. 122—392.)

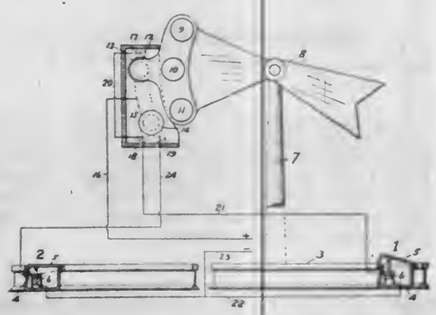
1. A tubular blower element provided with a series of discharge nozzles distributed along its length for discharging a cleaning fluid adjacent parts of a boiler to be cleaned, said blower element diminishing in diameter from one of its ends to the other so that when operatively associated with the boiler the resistance to the flow of furnace gases will be diminished.

1,664,866. COATED FABRIC AND PROCESS OF MAKING SAME. WILLIAM O. STODDARD, Jr., Detroit, Mich., assignor to Duratex Corporation, Newark, N. J., a Corporation of New Jersey. Filed May 3, 1920, Serial No. 378,408. Renewed Jan. 18, 1926. 12 Claims. (Cl. 154—2.)



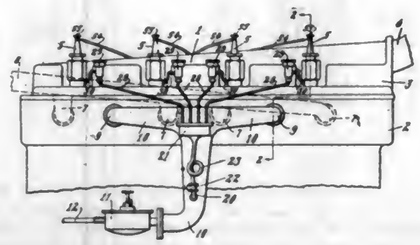
1. A coated fabric which comprises a fabric base, a relatively thin closely woven top fabric, an intermediate

cementing layer of flexible rubber composition uniting said fabric base and said top fabric and a pyroxylin coating covering and supported on said top fabric.



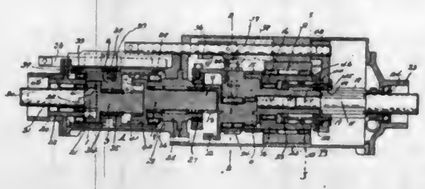
12. The process of making coated fabrics which consists in applying to the surface of a base fabric a layer of rubber cement; superposing on the cement a second fabric; applying a number of coats of pyroxylin solution successively to the second fabric; subjecting each coat to a drying operation; and finally finishing the pyroxylin surface.

1,664,867. HOLLOW TILE. JOSEPH STRAND, Los Angeles, Calif., assignor to Klinch Lath Corporation, Los Angeles, Calif., a Corporation of California. Filed Dec. 6, 1926. Serial No. 152,879. 11 Claims. (Cl. 72—41.)



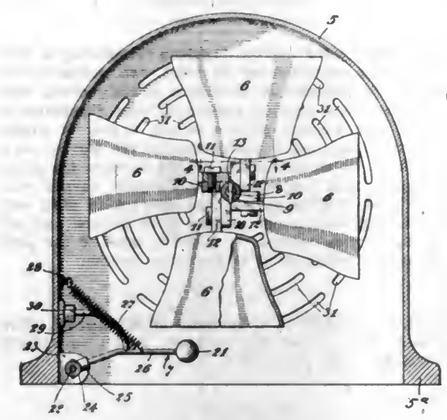
1. A hollow tile comprising: a pair of spaced side members; stop members secured to adjacent faces of said side members near the edges thereof; end members extending between said side members and engaging said stop members, there being channels formed at the ends of said side members; and means in said channels for fastening said side members and said end members together.

1,664,868. AUTOMATIC TRAIN CONTROL. MICHAEL SWORASKI, Philadelphia, Pa. Filed Sept. 27, 1926. Serial No. 137,945. 4 Claims. (Cl. 246—183.)



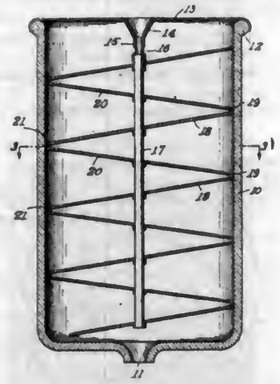
3. Automatic train control apparatus comprising spaced electromagnetic track trips, a centrally positioned lever operative in two directions by the track trips, a pneumatic impulse plunger controlled by said lever, a pneumatic power control adapted to be actuated into shut off power position by one impulse of said plunger, a pneumatic brake control adapted to be normally inactive in respect to said plunger, and pneumatic means arranged to receive air from and controlled by the power means and adapted to connect the plunger and brake control upon a repetition of the impulse of the plunger.

1,664,869. MEANS FOR DISTRIBUTING EXPLOSIVE MIXTURES TO INTERNAL-COMBUSTION ENGINES. EDWARD L. WAYBRANT, New Bedford, Mass. Filed Sept. 15, 1925. Serial No. 56,417. 2 Claims. (Cl. 123—187.5.)



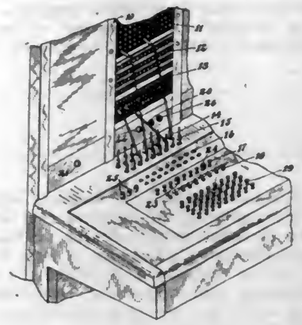
1. The combination with the spark plugs of an internal combustion engine, of apparatus for diverting a portion of the explosive mixture formed in the carburetor thereinto, which includes a tube leading from the intake manifold of the engine, a trap in said tube permitting an accumulation of condensate of the explosive fuel on stoppage of the engine, a reservoir communicating with said manifold by said tube, and a plurality of tubes leading from said reservoir, each of which tubes communicates with the interior of a spark plug and is provided with a check valve permitting explosive mixture to be admitted into the spark plug only on the intake stroke of the corresponding piston.

1,664,870. TRANSMISSION MECHANISM. WALTER W. WELLS, Lansing, Mich., assignor to Reo Motor Car Company, Lansing, Mich., a Corporation of Michigan. Filed Dec. 15, 1924. Serial No. 756,093. 7 Claims. (Cl. 74—34.)



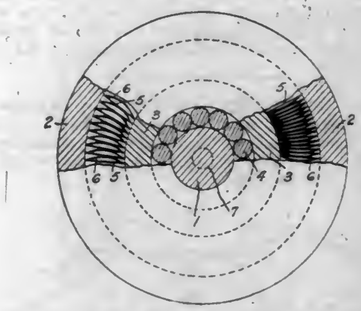
1. In a transmission, the combination with a pair of coaxial gears, a planet carrier, a planet gear member meshing with both of said coaxial gears, a longitudinally slidable sleeve, a driven shaft continuously clutched to said sleeve and means for longitudinally sliding said sleeve to a plurality of longitudinal positions, one of said positions being arranged to clutch the planet carrier to said driven shaft and to simultaneously prevent rotation of the planet gear member, another of said positions clutching one of said coaxial gears to said driven shaft and a third position clutching both the planet carrier and one of said coaxial gears to said driven shaft and means for preventing rotation of the planet carrier when said sleeve is in its intermediate position.

1,664,871. SIGNAL. HANS WERDER, Vevey, Switzerland, assignor to Ewald C. Dieckerhoff, New York, N. Y. Filed Sept. 1, 1926, Serial No. 133,067, and in Switzerland and Germany Mar. 4, 1926. 5 Claims. (Cl. 116—25.)



8. In a device of the character described, a plurality of rotatable sound-emitting elements, a clapper normally positioned in the path of said elements and adapted to be successively contacted thereby and a spring constantly returning said clapper to its normal position after being contacted by each element.

1,664,872. LIQUID-COOLING DEVICE. ROBERT WEST, New York, N. Y., assignor of one-half to Hugh McMurray, Newark, N. J. Filed Oct. 5, 1926. Serial No. 139,743. 2 Claims. (Cl. 257—178.)



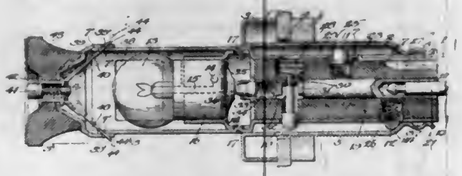
1. A liquid device comprising a container, an open nipple at the bottom of said container, a flat cap having a bead fitting over the top of said container, a funnel formed on said cap, said funnel having a perforated cylindrical portion, a rod carried by said cylindrical portion, and a multiplicity of oppositely inclined plates fixed on said roll over which the liquid to be cooled is passed progressively, said plates and rods being removable from said container together with said cap.

1,664,873. METHOD AND APPARATUS FOR TIMING THE USE OF ELECTRICAL CIRCUITS. JESSE L. BOYNTON, New York, N. Y., assignor of fifty per cent to Charles A. Marshall, New York, N. Y. Filed May 31, 1927. Serial No. 195,394. 20 Claims. (Cl. 179—8.)

1. Means for approximately timing and controlling over-time payments for numerous pre-payment telephone calls, the lines for which are under the control of a central office operator, comprising a signal common to numerous lines for giving an indication to the operator at regular intervals of time equal to an established payment period, in combination with marking means effaceable upon termination of calls for individually marking lines carrying calls at the times of said indications, whereby upon the next signal indication the operator is apprised of such calls as have extended beyond the established payment period and may then demand additional payments before permitting such calls to continue.

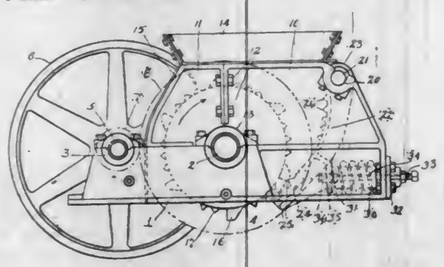
1,664,874. UNIDIRECTIONAL DRIVING DEVICE. GEORGE CONSTANTINESCO, Weybridge, England. Filed Mar. 17, 1927, Serial No. 176,163, and in Great Britain Sept. 1, 1926. 3 Claims. (Cl. 192—41.)

1. A unidirectional driving device comprising in combination a driven member consisting of a shaft and a rotor fixed thereon, and an oscillating member concentrically mounted on the driven shaft, a space being left between the rotor and the oscillating member, and pairs of elastic plates or blades in the said space, each pair consisting of a normally flat member and a normally curved member, the width of each normally flat member being greater than the radial width of the space between the rotor and the oscillator, and the chordal width of the curved members being slightly less than this width, such pairs being packed so closely together that the op-



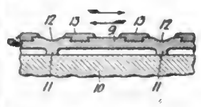
posite edges of the normally flat plates abut against the rotor and the oscillator member respectively, and the said plates are themselves slightly bent when in their operative positions.

1,664,875. LATH. SAMUEL K. COWAN, New York, N. Y., assignor to Cowan Lath Board Company, Nashville, Tenn., a Corporation of Tennessee. Filed July 18, 1924. Serial No. 726,801. 2 Claims. (Cl. 72—116.)



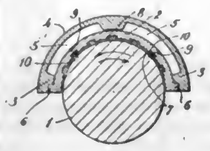
2. An article of the character described made from a board having a plurality of elongated and substantially parallel saw kerfs cut entirely through the board lengthwise thereof simulating a plurality of laths in a board, the front side of each saw kerf having the side edges thereof extending approximately at right-angles to the face of the board, and the back side of each saw kerf being wider than the front side.

1,664,876. ELECTRIC LAMP. HARRY A. DOUGLAS, Bronson, Mich. Original application filed Jan. 27, 1926. Serial No. 84,099. Divided and this application filed Sept. 4, 1926. Serial No. 133,622. 2 Claims. (Cl. 240—8.16.)



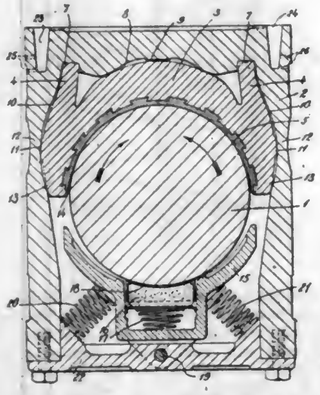
1. The combination with a shell; of a lamp within the shell; a closure for one end of the shell; and a latch carried by said closure and in the form of a bar having a lateral extension movable into registrable openings formed in the closure and shell to latch the closure and shell together, the opening in the shell having a reduced continuation in the form of an open ended slot in which the portion of the bar adjacent the lateral extension of the bar is receivable and is passed to release the latch.

1,664,877. SINGLE-ROLL CRUSHER. MAHLON E. FIRST, Lakewood, Ohio, assignor to The C. O. Bartlett & Snow Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 10, 1923. Serial No. 650,632. 8 Claims. (Cl. 83—53.)



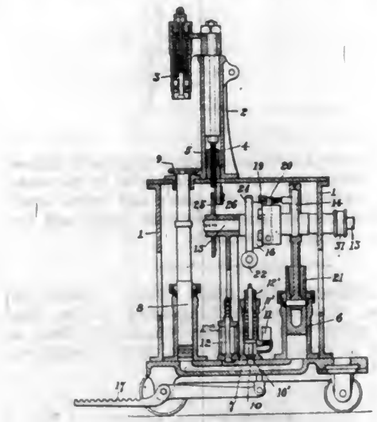
1. In crushing mechanism, the combination of a frame, a toothed roll journaled in said frame, a breaker plate cooperative with said roller, yieldable means maintaining said plate at a spaced distance from said roll, and frangible means for releasing said yieldable means on undue strain.

1,664,878. BEARING. GERHARD FLINTERMANN, Orange, N. J. Filed Aug. 3, 1925. Serial No. 47,772. 7 Claims. (Cl. 308—160.)



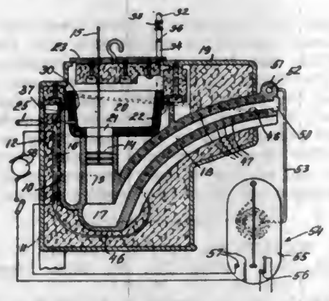
1. A bearing for moving members comprising a bearing element supported at at least two points spaced apart in the direction of movement of the moving member to provide a yielding portion between the points of support, said yielding portion having a pair of projections extending toward the surface of the moving member both of which are located wholly between the points of support, said projections being rigidly carried relative to said yielding portion and adapted to yield with said yielding portion and partake of its flexure, and said projections being located on opposite sides of the point of maximum deflection of said yielding portion.

1,664,879. BEARING. GERHARD FLINTERMANN, West Orange, N. J. Filed May 24, 1926. Serial No. 111,427. 4 Claims. (Cl. 308—160.)



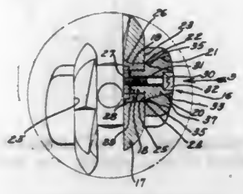
4. A friction bearing comprising two members one of which is movable relative to the other, a bearing element located between said members and having a yielding portion, means for supporting said yielding portion at its forward and rear ends to provide a clearance under the yielding portion, and a bearing projection located midway between the supporting means the surface of which is in relative sliding engagement with the surface of the moving member and said bearing projection being adapted to yield with the yielding portion of the bearing element and to partake of its flexure.

1,664,880. JOURNAL BEARING. GERHARD FLINTERMANN, West Orange, N. J. Filed Dec. 24, 1926. Serial No. 156,824. 6 Claims. (Cl. 308—43.)



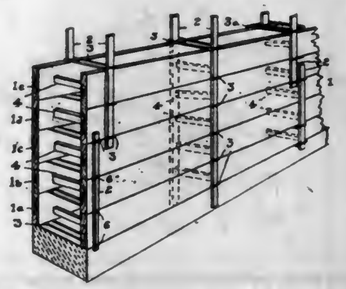
1. A journal bearing comprising a journal, a housing, a bearing member interposed between the journal and the housing and comprising a rigid main portion having a bearing surface fitting a portion of the surface of the journal and a yielding supporting leg near each end of the rigid main portion adapted to permit slight displacement of said rigid main portion, the sides of the bearing member being adapted to abut against the adjacent walls of the housing, said walls of the housing being flexible to yieldingly oppose movement of the bearing member.

1,664,881. CROWN-CORKING MACHINE. JOHN WALTER FLOWER, Wimborne, England. Filed Aug. 8, 1924, Serial No. 730,988, and in Great Britain Feb. 19, 1924. 8 Claims. (Cl. 226—84.)



1. A machine for fixing crown corks on bottles of different heights without adjustment of the machine, including a body, a crowning head carried by the body, a ram operative through the body in line with the crowning head, the normal distance between the ram and head being for bottles of maximum length, a pump selectively operative in the body and operative in a single stroke to elevate the ram and bottle carried thereby to the crowning head and then subject the ram to a sufficient pressure to complete the crowning operation, and means whereby the pressure of the pump for the crowning operation may be limited to a predetermined maximum irrespective of the length of the bottle positioning stroke of the ram.

1,664,882. METAL-CASTING MACHINE. WILLIAM S. HADAWAY, Jr., New Rochelle, N. Y. Original application filed Sept. 6, 1921, Serial No. 498,820. Divided and this application filed Feb. 15, 1926. Serial No. 88,198. 26 Claims. (Cl. 219—44.)

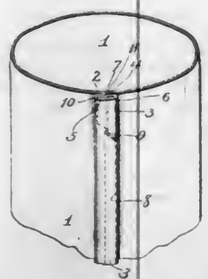


1. An apparatus comprising a metal heating pot, a receptacle for preparing metal for said pot, a throat for discharging metal from the pot, a vapor passage for heating the throat and the pot, a heat exchange member for the receptacle connected with said vapor passage, through which vapor is led into and out of the apparatus.

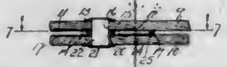
1,664,883. METHOD OF WELDING BEARING PINS TO LEGS OF DRILL BITS. HALL H. HOLDAWAY, Long Beach, Calif. Filed June 22, 1926. Serial No. 117,670. 6 Claims. (Cl. 76—108.)

1. A method of securing inwardly projecting bearing pins to the relatively inaccessible inner surfaces of legs integral with shanks of drilling bits which comprises: providing said legs respectively with outwardly expanding openings extending therethrough, each opening being narrowest in a region in proximity to an inner surface of a leg; providing each pin with a body which tapers uniformly from an intermediate region which has a maximum diameter adapting it to interfit within the mentioned narrowest portion of an opening through a leg; and securing said pins in said legs by depositing molten metal in resultant annular spaces between said pins and said legs.

1,664,884. PROCESS FOR ERECTING FORMS AND APPARATUS FOR CASTING CONCRETE WALLS. OTIS A. HOLLIS, Knoxville Borough, Pa. Filed June 18, 1926. Serial No. 116,814. 4 Claims. (Cl. 25—131.)



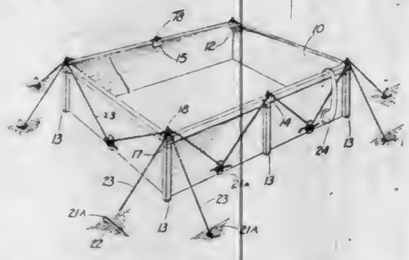
1. For use for the purpose described a wire tie member having its ends pre-formed into loops to receive the stays, the portions of the loops bearing on the stays being provided with broadened bearing surfaces to prevent excess biting into the stays.



1,664,885. STOVEPIPE. WALTER E. HUENEFELD, Cincinnati, Ohio. Filed Mar. 12, 1927. Serial No. 174,770. 2 Claims. (Cl. 126—309.)

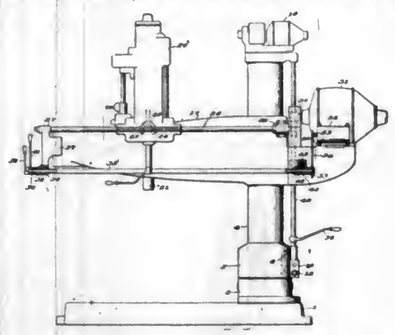
1. A pipe section having at one edge a flange extending outwardly, then parallel to the sheet and then inwardly forming a double fold with a hook shaped edge extending from end to end of the section, an outwardly

projecting hook flange extending approximately from end to end of the opposite edge of the pipe section and engageable with said hook shaped edge, and a tongue projecting from one end portion of the edge having said hook flange and adapted to abut against the double fold portion.



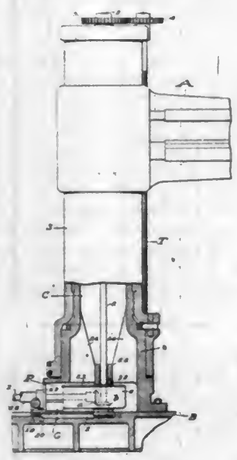
1,664,886. JOINTED RULE. CLAYTON W. HUMPHREY, Unionville, Conn. Filed June 12, 1925. Serial No. 36,743. 4 Claims. (Cl. 33—120.)

1. A blade, a plate secured thereto, a hub projecting from said plate, another blade, a plate secured thereto and having a recess to receive said hub, a pawl attached to said first named plate, a ratchet attached to the last named plate and having teeth to be engaged by said pawl, and means for pivotally connecting said plates.



1,664,887. PORTABLE OUTDOOR SWIMMING POOL. PHILIP KIRKHAM, Riverside, Conn., and GUSTAVE A. SCHEEL, Jackson Heights, N. Y., assignors to F. A. O. Schwarz, New York, N. Y., a Corporation of New York. Filed Aug. 27, 1927. Serial No. 215,856. 5 Claims. (Cl. 4—177.)

1. A portable outdoor swimming pool, comprising posts adapted to be driven into the ground, stretcher bars connecting the upper ends of the posts, a foldable waterproof container and means for securing the upper edges of the container detachably to the stretcher bars.

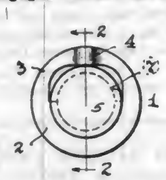


1,664,888. NESTED CONTROL FOR BOTH CLAMP AND SPEEDS. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 31, 1925. Serial No. 19,666. 9 Claims. (Cl. 77—28.)

1. In a radial drill, the combination comprising a column; a radial arm mounted on said column and adapted to have vertical movement on and rotative movement about said column; clamping mechanism for preventing rotative movement of the arm; a drill head slidably mounted on said arm and carrying a drill spindle; a motor mounted on the inner end of said arm for operating said drill spindle; a hollow shaft extending along

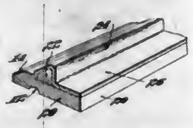
said arm; a control shaft extending through said hollow shaft; control levers adapted to be connected to the outer ends of said shafts for rotating them; and means operated by said shafts for controlling said motor and for operating said clamping mechanism.

1,664,889. DETACHABLE GEAR UNIT. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 2, 1927. Serial No. 165,816. 8 Claims. (Cl. 77—28.)



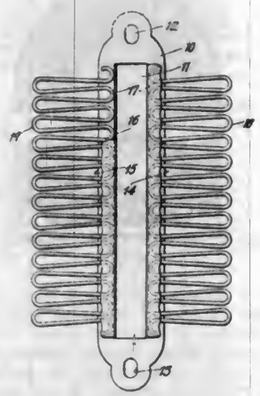
1. A radial drill combining a frame comprising a base and an upright column; a transmission unit removably secured within said frame adjacent the juncture of the base and the column, said unit having an open pan-like portion and two mating angle-drive gears located within said portion; a driving shaft operatively connected with one of said gears; a driven shaft operatively connected with the other of said gears; and a closure provided by said frame and adapted to close said open portion when the transmission unit is in its operative position.

1,664,890. RETAINING DEVICE. ROBERT F. KRELCI, Cleveland, Ohio. Filed Dec. 31, 1926. Serial No. 158,231. 2 Claims. (Cl. 85—7.)



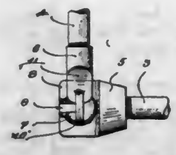
1. An article of the character described having in combination, a pin provided with a circumferential groove closely adjacent one end, a disc of thin bendable sheet

metal having an aperture of less than the cross sectional area of the pin, said disc having portions angularly related to each other, one of said portions providing a flange of semicircular extent adjacent said aperture, and adapted to be engaged within the groove on said pin,



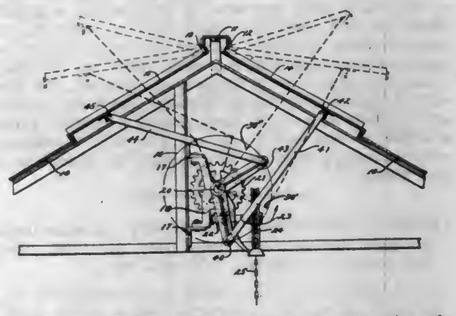
and the opposite portion of said disc being free of said flange and provided with a laterally off-set member which engages the exterior surface of the end of the pin when the adjacent portion of the disc is bent into the plane of the groove.

1,664,891. BEADED WELTING and METHOD OF MAKING THE SAME. HARRY LYON, Holbrook, Mass., assignor to Perley E. Barbour, Quincy, Mass., doing business as Barbour Welting Company, Brockton, Mass. Filed Mar. 12, 1927. Serial No. 174,785. 2 Claims. (Cl. 36—78.)



1. Beaded welting for boots and shoes cut to provide a stitch-receiving groove in its lower face as for Goodyear welting, and having a flap at its upper face formed by an incision from the outer edge of the welt strip inward of such a width as to leave the inner edge of the flap integral with the welt body along a longitudinal line that is outward of the inseam stitch line, and a solid core strip beneath and covered by said flap to form a longitudinal, upstanding bead, whereby full-strength integral stock from said bead to the inner edge of the welt strip is preserved for receiving the inseam stitches.

1,664,892. NECKTIE HOLDER. ARTHUR MEYER and WALTER KRETZSCHMAR, New York, N. Y.; said Kretzschmar assignor to said Meyer. Filed Oct. 18, 1926. Serial No. 142,354. 1 Claim. (Cl. 211—119.)

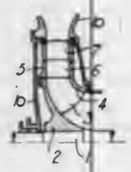


In a necktie-rack, a longitudinally slotted middle support perforated near its ends, the inner marginal edges forming the slot bent outwardly upon the material of the support, spaced therefrom, one continuous wire bent into a plurality of loops having rounded outer and inner apexes on each side of said support, the inner apexes held in the space formed by bending the material of the support upon itself, and ridges formed by pressing the material of the bent part down between the interstices separating the inner ends of the loops.

1,664,893. JOINT. BERNARD MEYERINO, Rochester, N. Y. Filed Feb. 20, 1926. Serial No. 89,792. 2 Claims. (Cl. 287—90.)

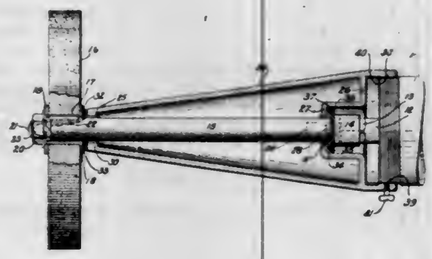
1. A joint comprising two members, one of which has a substantially circular projection and flattened portions adjacent one end of the projection and at right angles to the plane of the projection, and a socket member having a substantially spherical socket and a transverse slot communicating with said socket at one end of the socket member, the walls of said slot having notches which lead to the spherical socket, the circular portion of the first mentioned member lying in the spherical socket and the flattened portions lying in the slot.

1,664,894. VENTILATING-SKYLIGHT-OPERATING DEVICE. ANDERS H. NESHEIM, Milwaukee, Wis., assignor to Federal Steel Sash Company, Waukesha, Wis., a Corporation of Wisconsin. Filed Jan. 7, 1924. Serial No. 684,886. 7 Claims. (Cl. 268—24.)



1. The combination with a pair of closures of a closure operating mechanism comprising a shaft; a positive connection between said shaft and one of said closures for opening and closing the same; a connection providing lost motion between said shaft and the other of said closures whereby it may be opened and closed independently of said first named closure, and means for limiting the movement of one of said connections in one direction.

1,664,895. BLADE WHEEL. ANTENOR NYDQVIST, Trollhattan, Sweden. Filed Jan. 13, 1927, Serial No. 160,940, and in Sweden, Jan. 19, 1926. 2 Claims. (Cl. 253—117.)

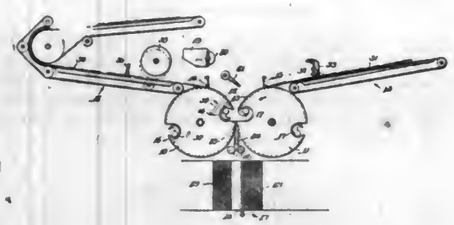


1. A blade wheel, comprising a hub member, blade sections rigidly secured to said hub member, and other blade sections loosely mounted on individual pivots so

as to permit said pivoted blade sections to adjust themselves automatically to form continuous blade surfaces together with said rigid blade sections and at increased

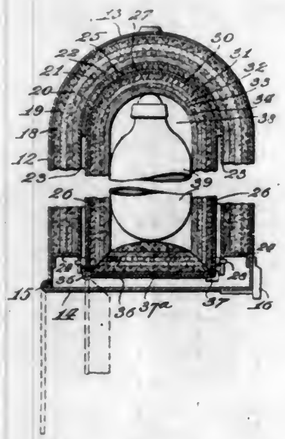
velocity of the wheel to be automatically brought out of operative position relatively to the direction of flow of the driving medium.

1,664,896. GRINDSTONE ATTACHMENT FOR SAUSAGE MILLS. GEORGE E. PEADUE, Santa Monica, Calif. Filed Sept. 16, 1925. Serial No. 56,786. 1 Claim. (Cl. 51—241.)



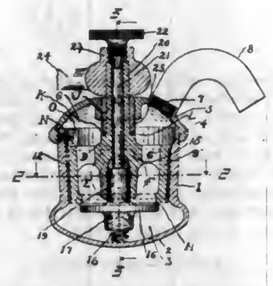
In a grinding attachment for a sausage machine comprising a horizontal shaft projecting from its outer end; an extension shaft rotatable by said shaft; a grinding wheel on said extension shaft; and a relatively long conical bearing extension adapted to doubly support said extension shaft and provided with means for its support from said outlet end of the sausage machine, the larger end of said bearing extension being internally provided with threads adapted to cooperate with external threads provided on said outlet end and also with a transverse web carrying a boss for the support of a bearing for said shaft.

1,664,897. PASS BOOK FOR BANKS. ALFRED GEORGE PILLSBOW, Chicago, Ill. Filed May 31, 1927. Serial No. 195,109. 2 Claims. (Cl. 281—38.)



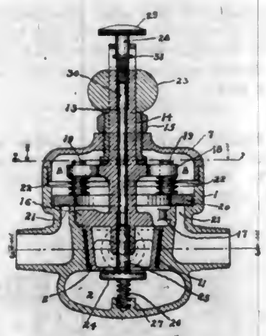
1. A pass-book for banks comprising a cover and a series of sheets with conterminous edges fixedly secured in the cover, one of the sheets being provided on one of its faces with appropriately designated space for the insertion of a name along and across one of its side margins, the leaves following the name-leaf being each provided with a line of perporations substantially parallel to and adjacent its side edge, extending substantially from the top to the bottom edges and rendering the portion thereof which laps said name-space removable, so that the name will be exposed when the strip is removed, the successive sheets having thereon columnar indications for the consecutive entries of an account.

1,664,898. TIPPING MACHINE. ERNST R. RICHARDS, Chicago, Ill., assignor to American Assembling Machine Company, Inc., New York, N. Y., a Corporation of Delaware. Filed June 7, 1926. Serial No. 114,111. 5 Claims. (Cl. 270—58.)



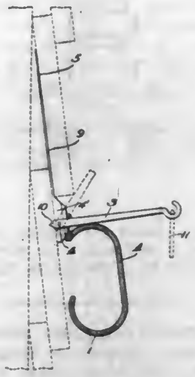
1. A tipping machine having, in combination, two continuously rotating synchronously operated carriers, stops adjacent said carriers located in corresponding positions adapted to hold sheet-like pieces of material in corresponding positions, grippers mounted on said carriers adapted to grip said pieces of material and cam actuated means for simultaneously removing said stops to enable said grippers to clamp a pair of articles to said carriers in registering positions.

1,664,899. EXPLOSIVE PACKAGE AND CARRIER. FREDERICK RIES, Compton, Calif. Filed Jan. 17, 1927. Serial No. 161,547. 5 Claims. (Cl. 220—9.)



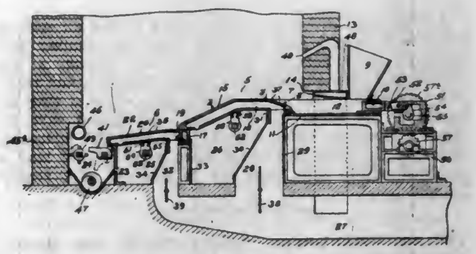
1. In an explosive package and carrier, the combination with a housing comprising inner and outer walls of metal, a plurality of layers of cushioning material arranged between said walls and a door for normally closing the bottom of said housing, of an explosive container package removably positioned within said housing and comprising an outer wall of metal, a plurality of layers of cushioning material arranged within said wall, a metal door normally closing the lower end of the explosive container package, and a plurality of layers of cushioning material arranged upon the inner surface of said door.

1,664,900. MIXING VALVE. BENJAMIN ROSENBAUM, Bronx, N. Y. Filed Mar. 16, 1922. Serial No. 544,257. 33 Claims. (Cl. 277—25.)



1. In a device of the class described the combination with a valve casing having inlets, of a mixing chamber, a tubular valve member having lateral depressions in its outer face for connecting the inlets with said mixing chamber and passages within the valve member for discharging the water from the mixing chamber.

1,664,901. DUPLEX VALVE AND MIXER. BENJAMIN ROSENBAUM, New York, N. Y. Filed Nov. 14, 1922. Serial No. 600,863. 13 Claims. (Cl. 277—25.)

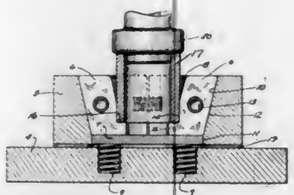


1. In a device of the class described, a valve casing having a plurality of inlets, a mixing chamber, a discharge chamber, and a plurality of outlets; and a rotatable valve member in said casing having axially extending passages to accommodate flowage from said inlets into said mixing chamber and from said mixing chamber into said discharge chamber, said valve member being rotatable to control the flow from said inlets through said outlets.

1,664,902. COMBINED PUTTY KNIFE AND PAINT HOOK. CLARK SEELEY, Otisville, Mich. Filed May 13, 1924. Serial No. 713,066. 3 Claims. (Cl. 7—1.)

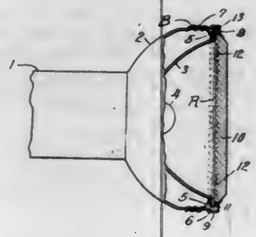
1. A device of the character described including a handle, a putty-knife secured thereto, and having a slot therein extending substantially from the point of connection with the handle toward the end thereof, and a hook pivoted in said slot and being shorter than the length of said slot for swinging movement therethrough.

1,664,903. AUTOMATIC STOKER. JOHN S. SKELLY, Monongahela, Pa., assignor to International Combustion Engineering Corporation, a Corporation of Delaware. Filed Aug. 24, 1923. Serial No. 659,030. 6 Claims. (Cl. 110—44.)



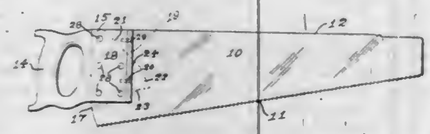
4. In combination in a stoker, a retort extending across the front of the stoker, a series of alternately arranged moving and stationary grate bars located in parallel relation and extending from the retort toward the rear of the stoker, each of said grate bars having three substantially flat fuel supporting surfaces, located at an angle one to the other whereby the direction of the travel of the fuel varies as the fuel moves longitudinally of said bars, means for delivering fuel transversely through said retort and on to said bars and means for reciprocating the movable bars of the series.

1,664,904. APPARATUS FOR STRAIGHTENING TUBULAR CASTINGS. EDWARD J. STANEK, Milwaukee, Wis. Filed Jan. 4, 1926. Serial No. 79,276. 6 Claims. (Cl. 153—34.)



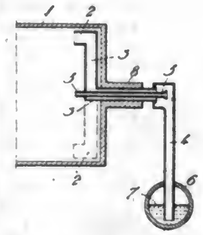
2. The combination with a casing and straightening dies disposed therein for engagement with a tubular

article, of cooperative surfaces on the dies and casing to cause the dies to contract about the tubular article



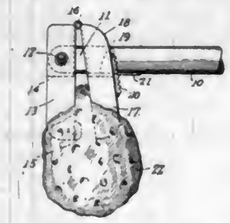
to be straightened, means for moving the entire article during straightening and means for moving the dies by pressure transmitted from the article being straightened.

1,664,905. BATTERY HAND LAMP. HENRY W. STAPLES, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a Corporation of Connecticut. Filed Apr. 30, 1927. Serial No. 187,771. 5 Claims. (Cl. 240—10.5.)



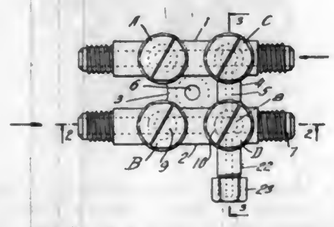
1. The combination of a lamp casing having an opening therein, a flanged lens retaining band surrounding said opening and removably secured to said casing, a lens within said band engaging the flange thereof, a flat resilient ring within said band, spaced lugs on said ring for engaging the edges of said lens and spaced ears extending from the outer edge of said ring for releasably engaging the interior of said band, whereby said lens is retained within said band and is centered with respect to said band.

1,664,906. HANDSAW. STEPHEN SULIK, New Britain, Conn. Filed Aug. 24, 1927. Serial No. 215,120. 6 Claims. (Cl. 7—13.)



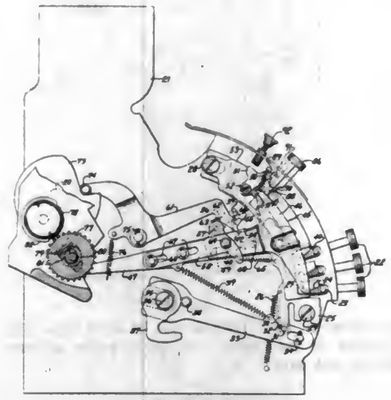
1. In a handsaw, a blade having a toothed edge and a straight edge, a handle having a slotted body portion for receiving the rear end of said blade, one face of said body portion having its edge perpendicular to said straight edge to form a square, the other face of said body portion having its edge inclined to said straight edge to form a miter, the edge of said other face beyond said miter extending toward the tip of the blade to form a stop for preventing said miter edge from being injured by contact with the work.

1,664,907. CONDENSATION EXHAUST FOR DRYING CYLINDERS AND SUCH LIKE. PER OTTO THEODOR SYLWAN, Forshaga, Sweden. Filed Dec. 11, 1926, Serial No. 154,245, and in Sweden Dec. 19, 1925. 1 Claim. (Cl. 34—4.)



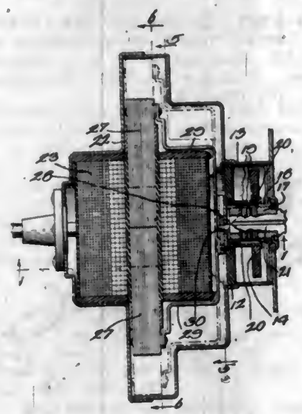
The combination with a steam drying cylinder of a condensation exhaust device comprising a scoop rotatable within said cylinder, said scoop having a conduit extending axially of said cylinder, a condensate drain pipe located outside of said cylinder and communicating with said conduit, and a vapour pressure relief tube extending axially through said conduit, said tube communicating with said drain pipe and with the interior of said cylinder above the level of the liquid therein.

1,664,908. SURFACE-CLEANING IMPLEMENT. GARRET TERPENNING, Jersey City, N. J. Filed Mar. 5, 1927. Serial No. 172,961. 5 Claims. (Cl. 15—150.)



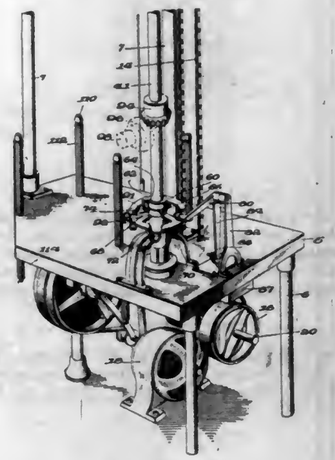
1. An implement of the class described comprising a handle, a jaw pivoted at the end of said handle, a second jaw hinged to the first jaw, a rack fixed on said second jaw, and a detent carried by said handle to engage the teeth of said rack.

1,664,909. VALVE MANIFOLD. ALFRED M. THOMSON, Newark, N. J., assignor to Joseph Mercadante, New York, N. Y. Filed Oct. 21, 1926. Serial No. 148,289. 8 Claims. (Cl. 277—46.)



8. In a valve manifold, a pair of separate parallel passages connected by a cross passage, valves in each of said passages for controlling fluid flow therethrough, valves for controlling the communication between each of said parallel passages and said cross passage and a feed pipe communicating with said cross passage.

1,664,910. CASH REGISTER. HENRY TÖNSMANN, Sao Paulo, Brazil, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Mar. 29, 1924. Serial No. 702,856. 3 Claims. (Cl. 235—3.)

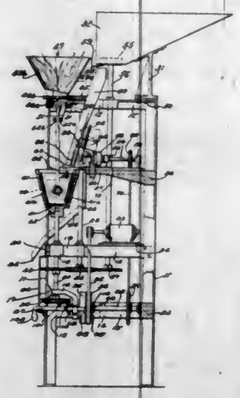


1. In a machine of the class described, the combination of record material feeding rollers normally ineffective with one roller having a movable bearing adapted to be moved to make said rollers effective, a pitman connected to and adapted to move said bearing, a driving member, a lever operated by said driving member, a reciprocating member operated by said lever member, a latch member carried by said reciprocating member and retained in its home position by said lever, a depressible key returned to home position during the operation of the machine, and a movable member operated by said key and adapted to permit said latch to engage said pitman and move said feeding roller into effective feeding position.

1,664,911. AUTOMOTIVE VEHICLE IGNITION SYSTEM. FELIX J. WATTS, Bronson, Mich., assignor to Harry A. Douglas, Bronson, Mich. Filed Mar. 7, 1927. Serial No. 173,582. 11 Claims. (Cl. 175—361.)

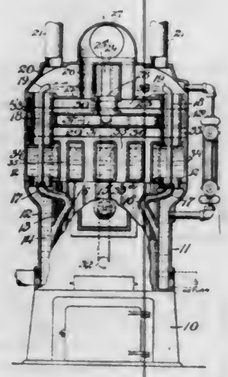
1. The combination with primary and secondary windings having a magnetizable core establishing inductive relation therebetween; of circuits respectively containing said windings, the circuit that contains the secondary winding also containing a gas igniting element, said core being formed with relatively movable sections to enable the introduction of sufficient reluctance in the magnetic circuit containing said core to prevent said gas igniting element from functioning; and means for opening and closing one of said circuits and separating said core sections when this circuit is open and relatively approaching said core sections when this circuit is closed.

1,664,912. PACKAGE ELEVATOR. JAMES L. BALDWIN, Chicago, Ill. Filed Nov. 8, 1926. Serial No. 147,072. 19 Claims. (Cl. 187—28.)



17. An elevator comprising a vertically-slidable carriage driven by a motor, said motor being provided with a switch, a control rod having a plurality of stops spaced along the rod as the stations intended for the carriage and also distributed circumferentially to correspond, dogs carried by the carriage and engageable by said stops, a cam carried by the carriage, to engage a given stop and move the same into the path of the dogs, such movement causing the rod to turn, an oscillatory lever for actuating the switch, a uni-directional impeller carried by the rod, a collar loose on the rod and having a series of abutments corresponding to the number of stops on the rod and selectively engageable by the impeller when the rod is turned to correspond, a radial arm integral with the collar and adapted to depress the switch lever on the occasion of an impulse, and a member rigid on the rod and having a circumferential series of cams corresponding in number to the said abutments, that cam which is nearest the switch lever serving to raise the latter when the movement of the rod is induced by the first mentioned cams in a direction reverse to that induced by the impeller.

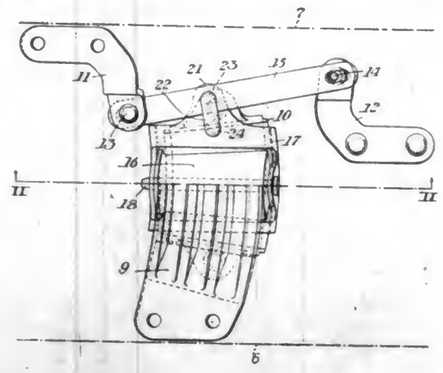
1,664,913. PLANT-POTTING MACHINE. CLAUDE G. BEWLEY, Spokane, Wash., assignor of one-half to Roy F. Wilcox & Co., Montebello, Calif., a Copartnership consisting of Roy F. Wilcox, Francis K. Wilcox, and Oscar Keeline, and one-half to Spokane Concrete Flower Pot Machine Company, Inc., Spokane, Wash., a Corporation of Washington. Filed Aug. 17, 1925. Serial No. 50,632. 15 Claims. (Cl. 226—1.)



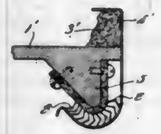
1. A plant potting organization comprising: means for supporting a pot; means for supporting a plant to be potted; and means for the gradual filling of soil into said

pot; said pot supporting means and said plant holding means being rotated, at substantially the same rate, by intermediate gearing, having a common drive.

5. A plant potting organization comprising: means for supporting a pot beneath soil feeding means; and means for tamping the said soil, said tamping means comprising both a resilient finger and an expanded foot, one of said tamping means being provided with a guide.



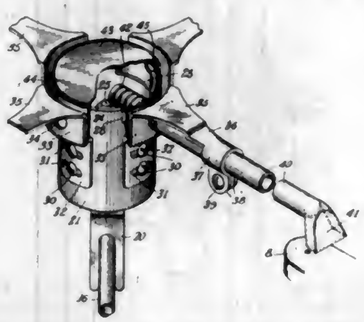
1,664,914. BOILER. CHARLES B. BOYNTON, East Orange, N. J., assignor to Perco Heater Corporation, Newark, N. J. Filed Feb. 11, 1925. Serial No. 8,366. 6 Claims. (Cl. 122—40.)



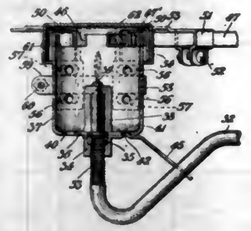
1. A boiler comprising a lower water chamber inclosing a fire box, an upper section, a percolating tube forming a return bend in the fire box and having its upper portion disposed so as to deposit water into the upper section, and a tube to convey steam from the lower part of the boiler to the upper section, said last mentioned tube inclosing the percolating tube above the water line.

1,664,915. SIDE BEARING. ARNOLD CHRISTIANSON and CHRISTIAN CHRISTIANSON, Hammond, Ind. Filed Dec. 31, 1926. Serial No. 158,207. 2 Claims. (Cl. 308—226.)

1. The combination with a railway car having a body bolster and a truck bolster, of a bracket extending downwardly from the body bolster, a bracket extending upwardly from the truck bolster, a lever pivotally connected at its ends to said brackets, a roller bearing cage disposed between said brackets, and a pivotal connection between the forward end of said cage and the mid portion of said lever, the lever being disposed exteriorly of the cage.

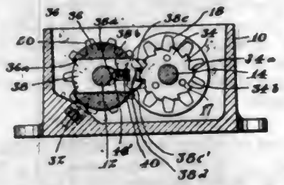


1,664,916. COVER CLAMP FOR IRONING BOARDS OR BUCKS. WILLIAM COLCLOUGH, Norwood, Ohio, assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed Feb. 27, 1926. Serial No. 91,170. 3 Claims. (Cl. 68—10.)



1. The combination with an ironing board for ironing machines, of cover cloth securing means therefor comprising curved downwardly extending carding cloth strip portions arranged below opposed margins of the board.

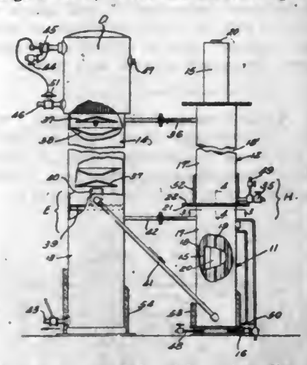
1,664,917. SAFETY IGNITER FOR GAS STOVES. WILLIAM F. DESTER, Newark, N. J., assignor to U. S. Tool Co., Inc., East Orange, N. J., a Corporation of New Jersey. Filed Nov. 10, 1925. Serial No. 68,072. 2 Claims. (Cl. 158—115.)



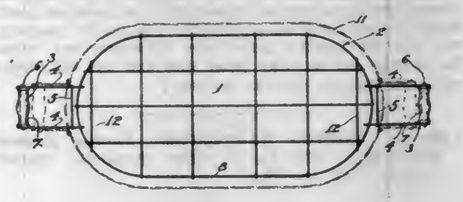
1. The combination with a gas burner, a pilot tip and a gas supply source, of a pipe connecting said supply source with said tip, a control valve in said pipe, a housing completely enclosing said tip, a cap loosely engageable over said housing having an intervening air space, a bracket adjustably engaged on said housing, a tube adjustable in said bracket to extend horizontally through the wall of said housing into the path of flame from said tip, said tube having a series of weakening grooves whereby shortening is facilitated, and means on the outer end of said tube adapted to collect gas from said burner and deliver to said tip.

1,664,918. SAFETY GAS-STOVE IGNITER. WILLIAM F. DESTER, Newark, N. J., assignor to U. S. Tool Co., Inc., East Orange, N. J., a Corporation of New Jersey. Filed Dec. 19, 1925. Serial No. 76,411. 3 Claims. (Cl. 158—115.)

1. In a safety lighter for gas stoves, the combination with a gas supply source, a burner in controlled communication therewith and a pilot, of a housing completely enclosing said pilot, tubular connections between said pilot and one of the openings in said burner, a valve controlled pipe between said gas source and said pilot, and means for adjusting the height of said pilot and housing relative to said burner.



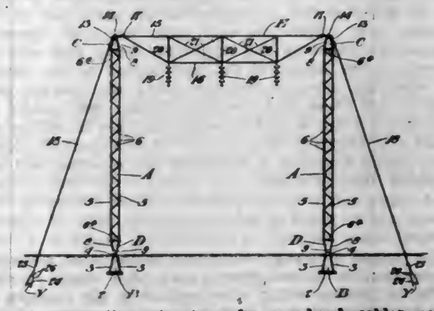
1,664,919. OPERATING DEVICE. EMIL EK, Portland, Me., assignor to Adde and Company, Portland, Me., a Corporation of Maine. Filed Oct. 27, 1925. Serial No. 65,128. 4 Claims. (Cl. 74—54.)



1. The combination with a main shaft and a counter shaft having a ratchet wheel carried thereon, of a pawl mounted on said main shaft and rotatable therewith; said main shaft having a bearing surface transverse to its axis along which said pawl is adapted to slide into engagement with said wheel; said pawl having a central slot through which the shaft passes; and means interposed between said shaft and one end of the slot for urging the pawl toward wheel engaging position.

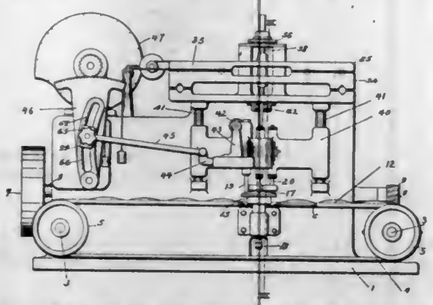
1,664,920. FIRE STILL AND OIL TREATER. FORREST E. GILMORE, Los Angeles, Calif., assignor to Forrest E. Gilmore Company, Portland, Oreg., a Corporation of Delaware. Filed Feb. 4, 1926. Serial No. 85,852. 7 Claims. (Cl. 196—117.)

1. In a fluid heating and separating organization of the general character described: a heater comprising a substantially vertical central flue constituting an inner wall of a chamber to receive the liquid to be treated; a burner near the bottom of said flue; means for introducing said liquid near the bottom of said chamber; and means for conducting the heated liquid from said chamber, at a higher level, to an associated evaporator, said inner wall being provided with outwardly projecting fins, radially disposed in vertical planes to facilitate heat exchange.



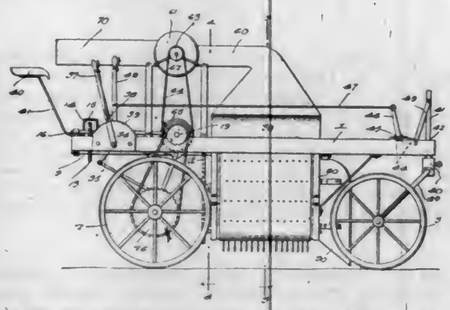
1,664,921. WASH BOILER. PAUL E. GOLDMAN, Pittsburgh, Pa. Filed Jan. 10, 1927. Serial No. 160,064. 2 Claims. (Cl. 68—80.)

1. In combination with a wash-boiler, a clothes-basket comprising an upper-frame and a basket-body made of reticulated wires depending therefrom; a lifting-handle positioned at each end of said clothes-basket and hingedly mounted on said frame; hook-members positioned on said handles and adapted to engage the top-edge of said wash-boiler for suspending said clothes-basket therein, and transversely disposed stops secured on said top-frame for limiting the inward swing of said handles into said clothes-basket.



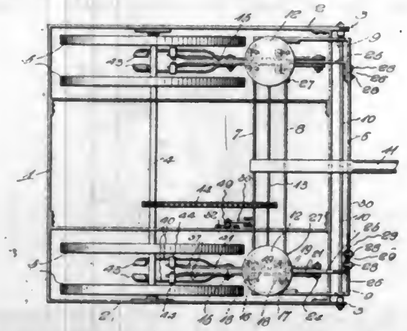
1,664,922. SUPPORT FOR OVERHEAD CABLES. CHAUNCEY MARSH GOODRICH, Windsor, Ontario, Canada. Filed July 31, 1926. Serial No. 126,250. 5 Claims. (Cl. 189—22.)

4. A supporting structure for overhead cables comprising a pair of ground anchors, a mast flexibly connected to each of said ground anchors so as to permit



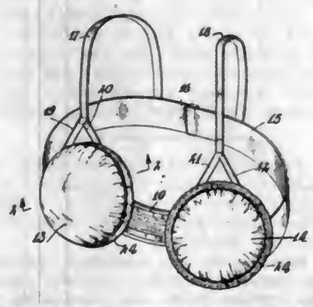
a limited universal movement, a plate having a flexible connection with the top of each of said masts to permit a limited universal movement of said plates relative to said masts, a pair of guys connected to each of said plates and stretched taut in opposite directions, and a flexible truss suspended between said plates.

1,664,923. LENS-TESTING MACHINERY. WILLIAM A. GUNNING, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Dec. 4, 1919. Serial No. 342,348. 18 Claims. (Cl. 33—191.)



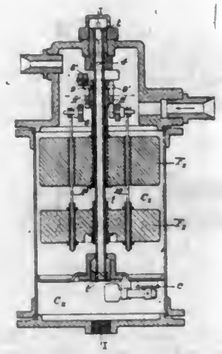
1. A machine for the purpose described including an intermittently advancing lens carrier, a marking point, means for bringing the center of a lens on the lens carrier and the marking point into alignment, and means for moving the marking point into and out of contact with the lens on the lens carrier.

1,664,924. COTTON HARVESTER. PEYTON HELTON, Abbott, Tex. Filed Apr. 27, 1926. Serial No. 104,986. 1 Claim. (Cl. 56—49.)



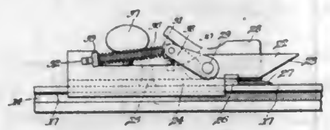
A cotton harvester comprising a frame, a rear swingable bail shaped axle having the intermediate portion of its bail journaled in bearings at the under side of the frame, rear wheels on said axle, manually operable means for adjusting and adjustably fixing said axle to determine the height of the rear portion of the frame, a cross-head movable vertically below the forward portion of the frame and having a vertical stem guided in the frame, a bail shaped forward axle fixed to said cross-head and equipped with ground wheels, manually operable means connected to said stem for adjusting and adjustably fixing said stem with respect to the frame, lower and upper longitudinally disposed rollers carried by the frame and arranged in pairs at opposite sides of a longitudinal space adapted to accommodate plants in a row, belts trained over said rollers and having inner stretches movable upwardly and spaced apart, and means on said belts for picking cotton bolls incident to the traverse of the apparatus, fenders fixed to pendent portions of the frame and flared outwardly immediately in front of the space between the inner stretches of the belts, means on the frame for collecting cotton from said picking means, longitudinal shaft fixed to and extending rearwardly from the uppermost longitudinal rollers and having spur gears on their rear portions, upper longitudinal shafts having their spur gears meshed with the spur gears on the first named longitudinal shaft and also having miter gears, and a transverse shaft driven from the rear wheels and having miter gears meshed with the miter gears on the second named longitudinal shafts.

1,664,925. PLANTER. LONZO R. HUPP, Urbana, Ohio. Filed Jan. 22, 1926. Serial No. 83,052. 3 Claims. (Cl. 111—63.)



1. In a planter, a main frame, an auxiliary frame overlying the forward portion of the main frame and pivoted at its forward edge to the forward edge of the main frame for tilting motion in a vertical plane, hoppers mounted upon the auxiliary frame at opposite sides of the planter, chutes extending at a downward and rearward angle of inclination from the auxiliary frame and communicating at their upper end with the hoppers and provided at their lower ends with furrow closing means, means for tilting the auxiliary frame and vertically adjusting said chutes and furrow closing means, a shank at each side of the planter having a horizontal arm pivoted to the adjacent chute and a vertical arm adjustably connected with the auxiliary frame, and furrow forming means carried by the horizontal arm of the shank and lying in advance of the adjacent chute and its furrow closing means and adjustable vertically through the pivotal connection of the shank with the chute and adjustable connection of said shank with the auxiliary frame.

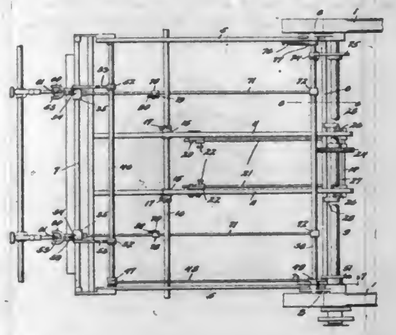
1,664,926. BRASSIÈRE BUST SUPPORTER. HARRIET IMERSHEIN and LOUIS E. GINSBURG, New York, N. Y., assignors to Fairy Brassiere Co., Inc., a Corporation of New York. Filed Feb. 16, 1927. Serial No. 168,597. 2 Claims. (Cl. 2—42.)



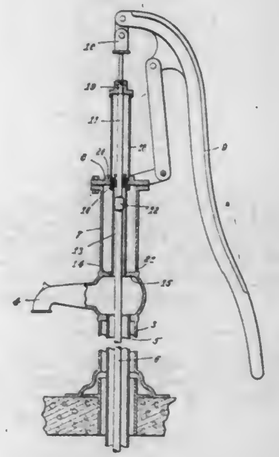
1. In a brassière, segment members positioned in a covering, attached to brassière supporters, said segment members extending partly over one another, extended members, provided with enlarged heads, said extended members attached to one extremity of the said segment members, the extremities of the adjacent said segment members having formed therein elongated apertures adapted to be engaged by the said extended members, said elongated apertures provided with enlarged inner extremities, so as to permit engagement of the said extended members in the said elongated apertures.

1,664,927. PULSOMETER. ALBERT PAUL JAPY, Berne-Seloncourt, France. Filed Apr. 7, 1925, Serial No. 21,418, and in France Apr. 9, 1924. 14 Claims. (Cl. 103—248.)

1. A pulsometer, comprising, in combination, a valve, floats, means operated by the floats for actuating the valve, said means including, a releasing detent and a quick stop escapement for operating said detent.



1,664,928. SNAP GUIDE. WILLIAM M. KELLY, Westfield, N. J. Filed Apr. 15, 1927. Serial No. 184,120. 7 Claims. (Cl. 271—59.)

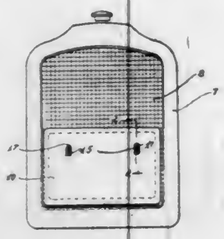


1. A sheet registering mechanism comprising, in combination, a member reciprocating transversely with respect to the path of the sheets having a lower sheet clamping surface, a jaw on the member above said surface pivoted on an axis substantially parallel to said path, means operating in a plane transverse to the path of said member for initiating the closing and opening movements of the jaw at certain points in the path of reciprocation, and spring means for completing the movements and holding the jaw in either closed or open position.

1,664,929. SHEET-FEEDING MECHANISM. WILLIAM M. KELLY, Westfield, N. J. Filed Apr. 15, 1927. Serial No. 184,121. 10 Claims. (Cl. 271—46.)

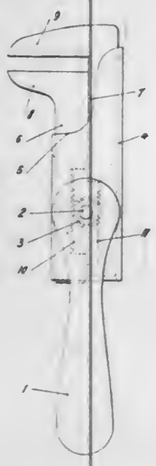
1. Sheet retarding mechanism for printing presses comprising, in combination, a cross bar mounted over the forward end of the feed board, brackets laterally adjustable on said cross bar, slides mounted in said brackets for vertical adjustment, and slow down fingers longitudinally reciprocable in ways formed in the lower portion of said slide.

1,664,930. SANITARY PUMP. OSCAR W. JOHNSON, Rockford, Ill., assignor to Ward-Love Pump Corporation, Rockford, Ill., a Corporation of Illinois. Filed Apr. 21, 1927. Serial No. 185,531. 4 Claims. (Cl. 103—217.)



1. In a pump, the combination with a pump casing and a pump rod, of a sanitary housing for the pump rod comprising an inner housing for said rod within the pump casing and an outer housing fixed to the pump rod and passing down through the top of the pump casing and telescoping over the inner housing.

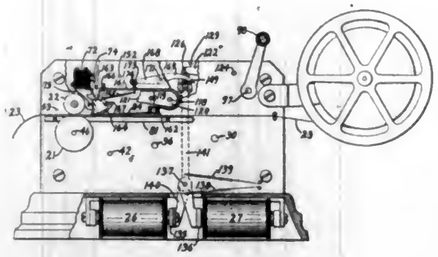
1,664,931. RADIATOR SHIELD. FRANK E. JOHNSTON, Detroit, Mich. Filed Jan. 24, 1927. Serial No. 163,161. 8 Claims. (Cl. 257—132.)



1. A radiator shield of the class described adapted for use with a vehicle radiator provided with horizontally extending openings formed therein, comprising: a main

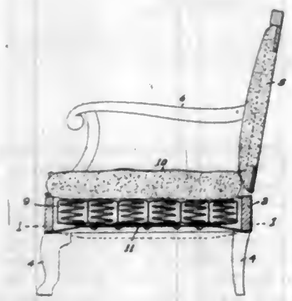
body portion of comparatively stiff material; a reinforcing strip mounted on one side of said main body portion adjacent the edges theref; a layer of yieldable material mounted on the outer side of said reinforcing strip and on the inner surface of said main body portion, said main body portion and said layer of yieldable material having

registering openings formed therein; a supporting hook for engaging in each of said openings and supporting said shield; an arm projecting outwardly from said supporting hook and adapted for being inserted through said openings, and secured therein for retaining said shield in operative relation to said radiator.



1,664,932. MONKEY WRENCH. FRANÇOIS JURICINEC, Paris, France. Filed Sept. 27, 1926, Serial No. 138,047, and in France Oct. 3, 1925. 2 Claims. (Cl. 81—26.)

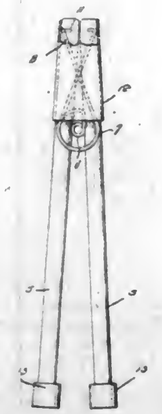
1. In a monkey wrench comprising a casing, two jaws sliding in said casing, a common pinion between said jaws, a rack borne by each jaw and meshing with the common pinion, the combination of a forked control lever, the inner ends of which pass on either side of the casing and a spindle to which the common pinion is keyed passing through the casing and fixed to the said inner ends of the control lever.



1,664,933. SIGNAL INSTRUMENT. GEORGE ERNEST KING, Newton, Mass., assignor to The Gamewell Company, Newton Upper Falls, Mass., a Corporation of Massachusetts. Filed Mar. 16, 1925. Serial No. 15,910. 23 Claims. (Cl. 178—92.)

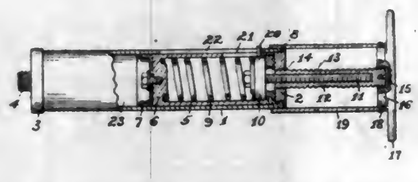
1. A signal instrument having tape marking and feeding means together with motor driving mechanism for said marking and feeding means and automatic starting and stopping mechanism for said feeding means,—in which said marking means comprises a plurality of independently operable mechanisms each involving an escape wheel, a pallet operable by and controlling the movement of said wheel, a marker operable by oscillation of said pallet and means for controlling such oscillation; said feeding means comprises a tape feed train; said motor mechanism comprises means for applying energy, from a single source, independently to each of said marking mechanisms and to said feed train; and said starting and stopping mechanism comprises a detent lever movable in one direction to arrest the running of said train, a spring

urging movement of said lever in the opposite direction, a ratchet wheel moving with said lever, eccentrics operable by the running of said train, pawls arranged for alternate reciprocation by said eccentrics and for cooperation with said ratchet wheel to cause rotation thereof such as will move said lever into effective position, means responsive to operation of any one or more of said marking mechanisms for moving said pawls out of the path of said wheel, holding means for at times preventing movement of said pawls into engagement with said wheel, and means operable by the running of said train for terminating the effectiveness of said holding means.



1,664,934. CHAIR OR COUCH. JACOB KRONHEIM, Cleveland, Ohio. Filed May 13, 1927. Serial No. 190,979. 3 Claims. (Cl. 155—179.)

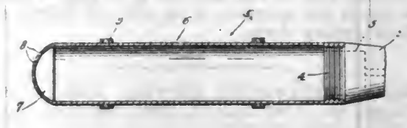
1. A chair or couch having a rectangular base frame, a flexible bottom of narrower width than said frame having its opposite ends fixed directly to the bottom of the front and rear rails of said frame, and springs connecting the opposite sides of said flexible bottom to the side rails of said frame, said springs being arranged to stretch



the middle area of said bottom and hold the same normally in a higher plane than the opposite ends of said flexible bottom where fixed to the front and rear rails.

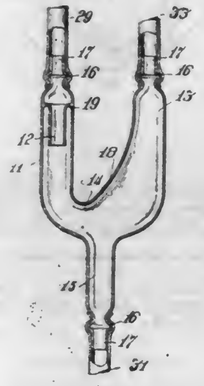
1,664,935. CLOTHES TONGS. WILLIAM Q. LOWE, Akron, Ohio. Filed Mar. 12, 1927. Serial No. 174,852. 1 Claim. (Cl. 68—6.)

In clothes tongs, a pair of elongated legs and a coil wire spring arranged transversely between the legs near one end thereof, the ends of the coil being formed with large convolutions extending across the adjacent sides of the legs, the ends of the wire extending from the convolutions obliquely across the shorter ends of the legs and having their extremities secured to said ends and normally holding said ends together in abutting relation.



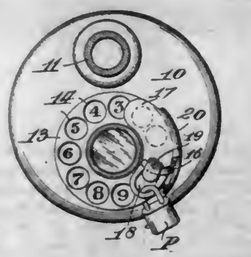
1,664,936. SPRING-ACTUATED LUBRICATOR. KENT E. LYMAN, Cleveland, Ohio. Filed Jan. 11, 1923. Serial No. 612,093. 5 Claims. (Cl. 221—47.3.)

1. In a lubricator, the combination of a tubular body, the tubular body having a rear end, a tubular plunger having a rear end slidably mounted in the tubular body, a coiled spring in the tubular plunger, a head slidably mounted in the tubular plunger near its rear end, and means for forcing the head forwardly to compress the coiled spring, substantially as described.



1,664,937. SMOKER'S APPLIANCE. STEPHEN FRANCIS MALONEY, Scranton, Pa., assignor of one-half to Evan R. Widden, Scranton, Pa. Filed Aug. 30, 1926. Serial No. 132,616. 1 Claim. (Cl. 131—51.)

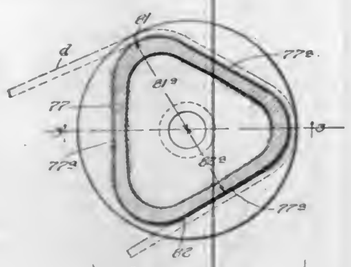
As a new article of manufacture, a cigar or cigarette holder provided at one end with a socket beyond which is a screw threaded nipple, a casing having an imperforated cylindrical body internally screw-threaded at one end and connected to said nipple, said casing being closed at its opposite end and said closed end being provided with air



holes, and a pair of rings disposed in spaced relation to each other about the casing and in spaced relation to the ends of the casing.

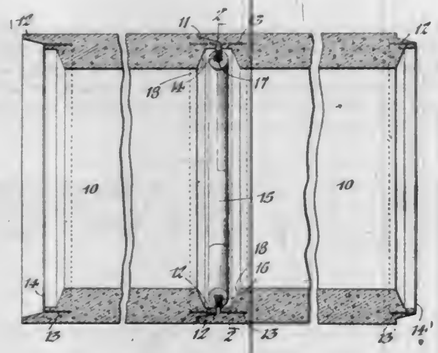
1,664,938. SURGICAL APPLIANCE. ELLEN MCDONNELL, Chicago, Ill. Filed Oct. 6, 1926. Serial No. 139,864. 7 Claims. (Cl. 128—227.)

1. In an article of the class described, a transparent element having three branches, one of said branches being adapted to conduct liquid from a source of supply, another of said branches being adapted to discharge said liquid, the other adapted to conduct any return flow and a gas space between said branches.



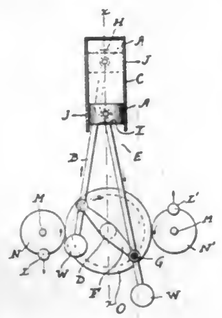
1,664,939. DIAL LOCK FOR AUTOMATIC TELEPHONES. LEWIS F. MORTIMER, Los Angeles, Calif. Filed Dec. 31, 1925. Serial No. 78,532. 7 Claims. (Cl. 179—90.)

1. The combination with an automatic telephone, its rotary dial and finger stop hook, of a plate that is



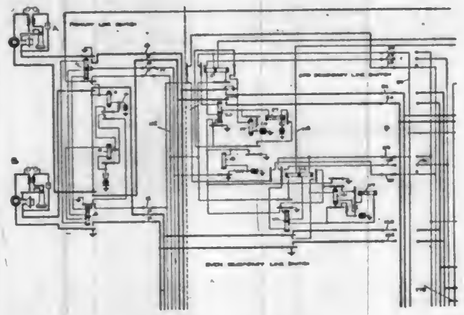
curved lengthwise and is substantially L-shape in cross section so that it will overlie a portion of the top and edge of the rotary dial of the telephone and which plate is provided with an aperture that is adapted to coincide with one of the apertures in the dial and receive a detachable locking device.

1,664,940. EXCAVATING SHOVEL. JOHN W. PAGE, Chicago, Ill. Filed June 14, 1926. Serial No. 115,881. 8 Claims. (Cl. 37—135.)



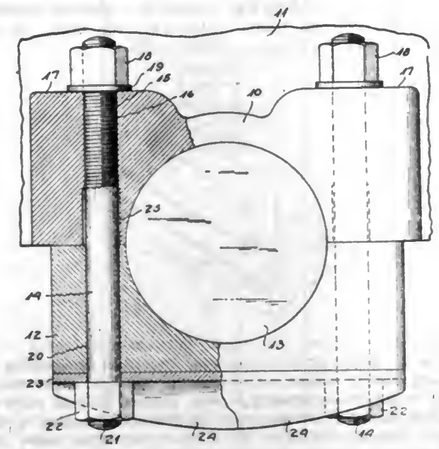
6. A block provided with a sheave having a flattened face for the purpose of increasing the leverage in favor of one end of a rope passing over said sheave.

1,664,941. PIPE JOINT. ALBERT G. PERKINS, Buffalo, N. Y. Filed May 4, 1926. Serial No. 106,690. 3 Claims. (Cl. 72—53.)



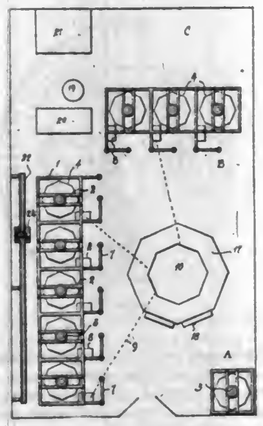
1. In a flexible joint for concrete pipes, the combination of a pair of concrete pipe-sections, each provided at its ends with coupling rings having portions embedded therein, each ring having an annular flange projecting radially inward beyond and clear of the inner wall of the pipe-structure, and clamping means embracing the opposing flanges of the pipe-sections and free from engagement with the pipe-structure to permit said ring-flanges to flex and compensate for misalignment of the pipe-sections.

1,664,942. ENGINE-BALANCING SYSTEM. ARTHUR W. POPE, Jr., Waukesha, Wis., assignor to Waukesha Motor Company, Waukesha, Wis., a Corporation of Wisconsin. Filed Oct. 13, 1926. Serial No. 141,252. 4 Claims. (Cl. 74—38.)



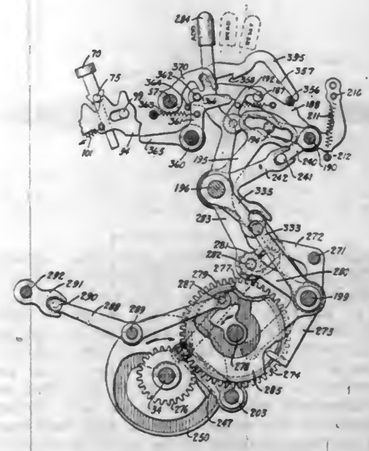
1. In a multi-cylinder engine, the combination with the cylinders, crank shaft, and the piston-connecting rod structures, of eccentric weights revolvable in the same plane and in the same direction on axes of rotation parallel to the crank shaft and with a phase difference of 180°, and means for rotating said weights at a speed to produce a couple for opposing and counteracting the couple set up by the side thrust of the pistons on the cylinder walls due to the angular movement of the connecting rod assemblies about the crank pin axis.

1,664,943. AUTOMATIC TELEPHONE SYSTEM. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed May 8, 1924. Serial No. 711,750. 9 Claims. (Cl. 179—27.)



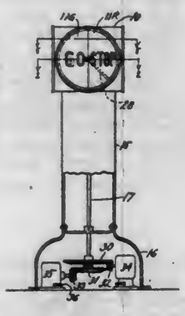
1. In a telephone system, a plurality of telephone lines, means including non-numerical automatic switches and link circuits for interconnecting said telephone lines, impedance devices normally connected to certain of said link circuits while the connection is maintained between said telephone lines, an operator's position, means including only non-numerical automatic switches and link circuits for interconnecting any of said telephone lines with said operator's position, and means responsive to said last mentioned interconnection for disabling certain of the impedance devices of the link circuit included in said last mentioned connection.

1,664,944. BEARING-BOLT STRUCTURE. HERBERT G. RITTER, Waukesha, Wis., assignor to Waukesha Motor Company, Waukesha, Wis., a Corporation of Wisconsin. Filed Apr. 20, 1927. Serial No. 185,085. 6 Claims. (Cl. 308—74.)



2. In a bearing structure, the combination of the bearing members, through bolts extending through said members and having threaded engagement with one of said members, and nuts engaging the ends of said bolts and abutting against said members.

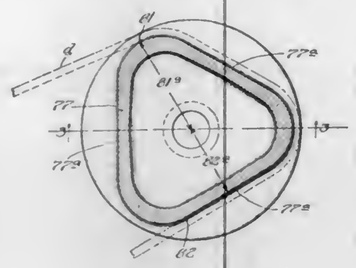
1,664,945. SELF-SERVICE STORE EQUIPMENT. ALEXANDER C. ROBERT, Desdemona, Tex. Filed Jan. 12, 1926. Serial No. 80,698. 1 Claim. (Cl. 186—1.)



Self service store equipment comprising a plurality of polygonal shaped shelving units, removable shelves therefor, each of said units having a central shaft mounted on ball bearings, divisional walls in the units radiating from said shaft, openings for doors between the walls, a railing with an entrance space adjacent each door and shelving unit, a basket stand for each of said units, and a plurality of conveyors for returning the baskets directly from a cashier's stand respectively to a plurality of said stands.

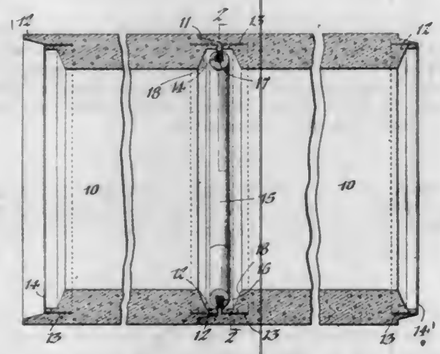
1,664,946. CASH REGISTER. WILLIAM H. ROBERTSON, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed May 1, 1926. Serial No. 106,016. 40 Claims. (Cl. 235—3.)

1. In a machine of the class described, the combination of a totalizer element, an actuator therefor, a differentially movable member, a device connected to said actuator, means for coupling said device to said member whereby they both operate as a unit during adding operations for positioning said actuator, and means for uncoupling said device from said member during total taking operations whereby said device is moved under control of said totalizer element for determining the position to which said member is to be adjusted.



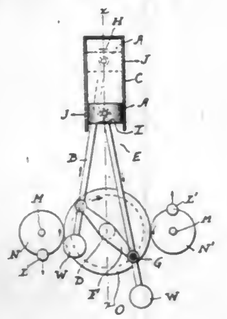
1,664,947. TRAFFIC REGULATOR. MATHEW E. RUSCH, St. Paul, Minn. Filed Nov. 13, 1925. Serial No. 68,767. 8 Claims. (Cl. 177—337.)

1. In a traffic signal a housing, a dial in a wall of said housing formed of a plurality of complementary translucent sections including go signal means for one and stop signal means for another of said sections, a pointer, means mounting said pointer for movement over said dial, means for continuously moving said pointer over said dial, illuminating means associated with each section of said dial for illuminating said section, a circuit for each illuminating means, and means including said pointer foreclosing the circuit for the illuminating means for that section over which the pointer is moving.



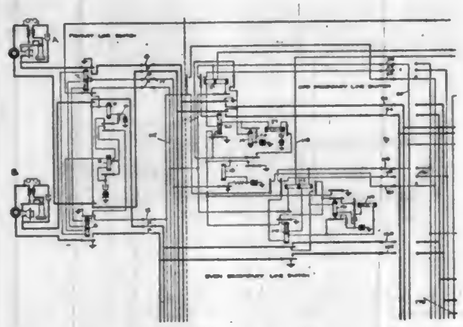
curved lengthwise and is substantially L-shape in cross section so that it will overlie a portion of the top and edge of the rotary dial of the telephone and which plate is provided with an aperture that is adapted to coincide with one of the apertures in the dial and receive a detachable locking device.

1,664,940. EXCAVATING SHOVEL. JOHN W. PAGE, Chicago, Ill. Filed June 14, 1926. Serial No. 115,881. 8 Claims. (Cl. 37—135.)



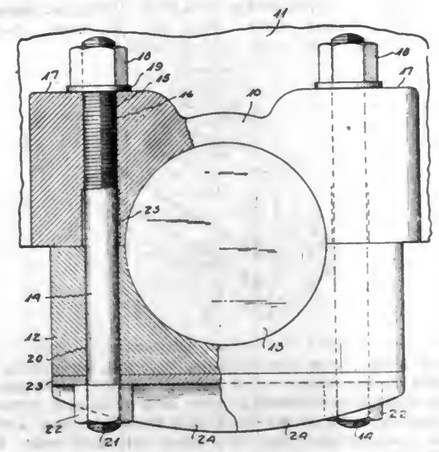
6. A block provided with a sheave having a flattened face for the purpose of increasing the leverage in favor of one end of a rope passing over said sheave.

1,664,941. PIPE JOINT. ALBERT G. PERKINS, Buffalo, N. Y. Filed May 4, 1926. Serial No. 106,690. 3 Claims. (Cl. 72—53.)



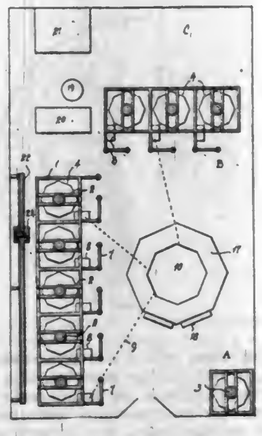
1. In a flexible joint for concrete pipes, the combination of a pair of concrete pipe-sections, each provided at its ends with coupling rings having portions embedded therein, each ring having an annular flange projecting radially inward beyond and clear of the inner wall of the pipe-structure, and clamping means embracing the opposing flanges of the pipe-sections and free from engagement with the pipe-structure to permit said ring-flanges to flex and compensate for misalignment of the pipe-sections.

1,664,942. ENGINE-BALANCING SYSTEM. ARTHUR W. POPE, Jr., Waukesha, Wis., assignor to Waukesha Motor Company, Waukesha, Wis., a Corporation of Wisconsin. Filed Oct. 13, 1926. Serial No. 141,252. 4 Claims. (Cl. 74—38.)



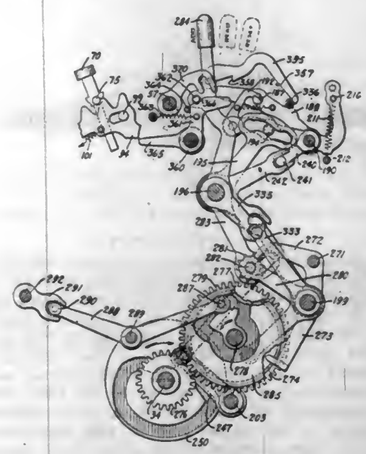
1. In a multi-cylinder engine, the combination with the cylinders, crank shaft, and the piston-connecting rod structures, of eccentric weights revolvable in the same plane and in the same direction on axes of rotation parallel to the crank shaft and with a phase difference of 180°, and means for rotating said weights at a speed to produce a couple for opposing and counteracting the couple set up by the side thrust of the pistons on the cylinder walls due to the angular movement of the connecting rod assemblies about the crank pin axis.

1,664,943. AUTOMATIC TELEPHONE SYSTEM. WINFRED T. POWELL, Rochester, N. Y., assignor to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed May 8, 1924. Serial No. 711,750. 9 Claims. (Cl. 179—27.)



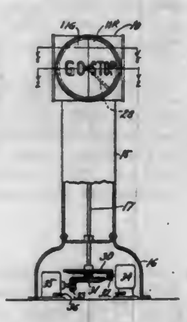
1. In a telephone system, a plurality of telephone lines, means including non-numerical automatic switches and link circuits for interconnecting said telephone lines, impedance devices normally connected to certain of said link circuits while the connection is maintained between said telephone lines, an operator's position, means including only non-numerical automatic switches and link circuits for interconnecting any of said telephone lines with said operator's position, and means responsive to said last mentioned interconnection for disabling certain of the impedance devices of the link circuit included in said last mentioned connection.

1,664,944. BEARING-BOLT STRUCTURE. HERBERT G. RITTER, Waukesha, Wis., assignor to Waukesha Motor Company, Waukesha, Wis., a Corporation of Wisconsin. Filed Apr. 20, 1927. Serial No. 185,085. 6 Claims. (Cl. 308—74.)



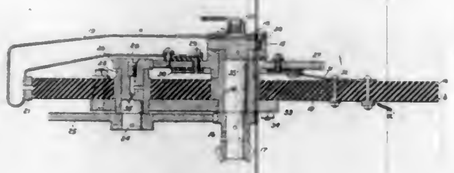
2. In a bearing structure, the combination of the bearing members, through bolts extending through said members and having threaded engagement with one of said members, and nuts engaging the ends of said bolts and abutting against said members.

1,664,945. SELF-SERVICE STORE EQUIPMENT. ALEXANDER C. ROBERT, Desdemona, Tex. Filed Jan. 12, 1926. Serial No. 80,698. 1 Claim. (Cl. 186—1.)



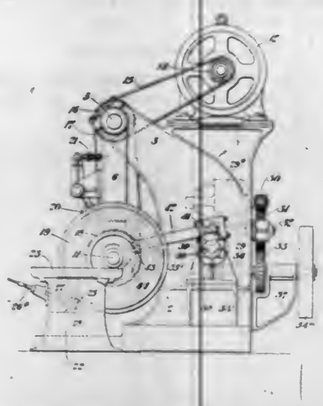
Self service store equipment comprising a plurality of polygonal shaped shelving units, removable shelves therefor, each of said units having a central shaft mounted on ball bearings, divisional walls in the units radiating from said shaft, openings for doors between the walls, a railing with an entrance space adjacent each door and shelving unit, a basket stand for each of said units, and a plurality of conveyors for returning the baskets directly from a cashier's stand respectively to a plurality of said stands.

1,664,946. CASH REGISTER. WILLIAM H. ROBERTSON, Dayton, Ohio, assignor to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed May 1, 1926. Serial No. 106,016. 40 Claims. (Cl. 235—3.)



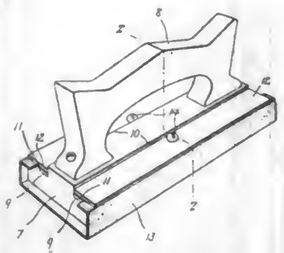
1. In a machine of the class described, the combination of a totalizer element, an actuator therefor, a differentially movable member, a device connected to said actuator, means for coupling said device to said member whereby they both operate as a unit during adding operations for positioning said actuator, and means for uncoupling said device from said member during total taking operations whereby said device is moved under control of said totalizer element for determining the position to which said member is to be adjusted.

1,664,947. TRAFFIC REGULATOR. MATHEW E. RUSCH, St. Paul, Minn. Filed Nov. 18, 1925. Serial No. 68,767. 3 Claims. (Cl. 177—337.)



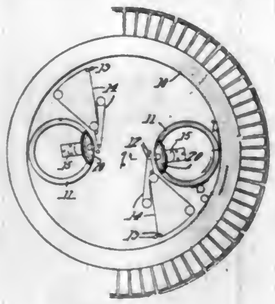
1. In a traffic signal a housing, a dial in a wall of said housing formed of a plurality of complementary translucent sections including go signal means for one and stop signal means for another of said sections, a pointer, means mounting said pointer for movement over said dial, means for continuously moving said pointer over said dial, illuminating means associated with each section of said dial for illuminating said section, a circuit for each illuminating means, and means including said pointer foreclosing the circuit for the illuminating means for that section over which the pointer is moving.

1,664,948. DATA TRANSMITTER AND RECEIVER. HARRY K. RUTHERFORD, Cambridge, Mass. Filed Aug. 22, 1924. Serial No. 733,596. 6 Claims. (Cl. 201—55.) (Granted under the provisions of the act of Mar. 3. 1883, 22 Stat. L., 625.)



1. A transmitting or receiving instrument embodying an insulator disc, a plurality of resistance elements disposed about the periphery of the disc, a reenforcing plate attached to the disc, a central and an offset bushing extending through the disc and supported by the plate, a rotatable shaft carried by each of the bushings, a pinion secured to the under portion of the central shaft, a gear secured to the under portion of the offset shaft and in engagement with the pinion, a gear embracing and supported by the central bushing, said gear engageable with the upper portion of the offset shaft, contact arms mounted on said last mentioned gear and on the central shaft and movable over the resistance elements and sliding contacts adapted to collect and transmit current from the arms.

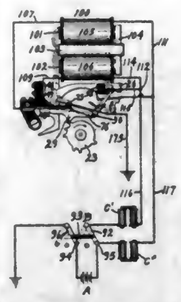
1,664,949. GRINDER. OTTO SANN, Johnstown, Pa. Filed Feb. 25, 1925. Serial No. 11,564. 1 Claim. (Cl. 51—55.)



A grinder comprising, in combination a fixed vertically disposed housing having a pair of forwardly projecting arms, a shaft mounted in the upper ends of said arms, a grinding wheel support having its upper end journaled on said shaft so as to permit oscillating movement of said support relative to said shaft, a second shaft journaled adjacent the lower end of said support, a grinding wheel on said second named shaft, a motor on said housing, means for transmitting power from said motor to said second named shaft to rotate said shaft and said grinding wheel, a power shaft journaled in said housing, a fly-wheel fixed on said power shaft, a second motor, gearing connecting said second motor with said power shaft, a second shaft journaled in said housing, gearing connecting said last named shaft and said power shaft, and at least one connecting rod having one end eccentrically mounted on said last named shaft and having its other end connected to said grinding wheel support, whereby said support is oscillated.

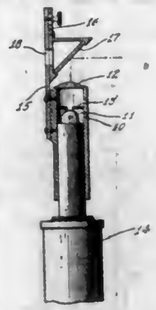
1,664,950. SANDPAPER HOLDER. SEBERN JOSEPH SLOAN, Warren, Ohio. Filed Jan. 26, 1926. Serial No. 83,920. 4 Claims. (Cl. 51—187.)

4. A device of the character described comprising a block having upper rabbets along opposite edges forming walls, lower clamping strips secured in said rabbets, upper clamping strips above said lower clamping strips for clamping the edges of a sheet extending under the block, the upper clamping strips being curved longitudinally in their normal unsprung formations so as to bow upwardly from the block, a single screw engaging through each upper clamping strip adjacent to its inner edge and intermediate the ends of the strip, and nuts embedded in said block under the lower clamping strips for the engagement of said screws, the inner edges of the upper clamping strips abutting said walls.



1,664,951. CIRCULAR-COMBING MACHINE. JAMES SOUTHWELL, North Chelmsford, Mass. Filed May 23, 1927. Serial No. 193,485. 4 Claims. (Cl. 19—122.)

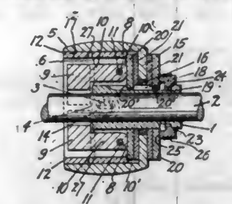
1. The combination with the large and small circles of a horizontal circular combing machine, of a rotary brush in position for the bristles thereof to enter between the pins of a small circle to rotate the brush, and a series of pins carried by the brush for cooperating with the outer rows of pins on the small circle.



1,664,952. SIGNALING APPARATUS. NATHAN H. SUREN, Needham, Mass., assignor to The Gamewell Company, Newton Upper Falls, Mass., a Corporation of Massachusetts. Filed Sept. 6, 1924. Serial No. 736,361. 17 Claims. (Cl. 177—361.)

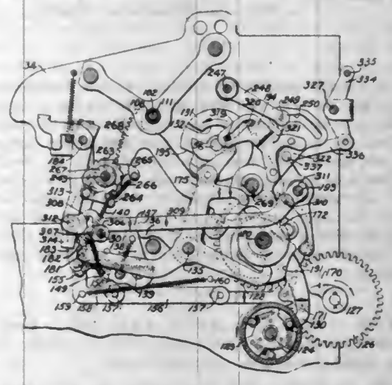
3. In a signal transmitter, an electromagnet having three cores and two windings carried by respective ones of two of said cores, the third of said cores being so related to said two cores as to provide a path for lines of magnetic force from either of said windings, non-interference mechanism comprising an armature cooperating with all of said cores, a circuit controller connected between said windings, and a ground branch contact for cooperation with said circuit controller.

16. Signal transmitting apparatus having a member for controlling the operation thereof, a code wheel, and a signaling contact operable in a predetermined path thereby; in combination with a grounding contact movable into or out of such path of said signaling contact, and controlling means for said grounding contact so governed by engagement with a part connected to said member as to permit movement of said grounding contact into such path of said signaling contact only while said member is ineffectively positioned.



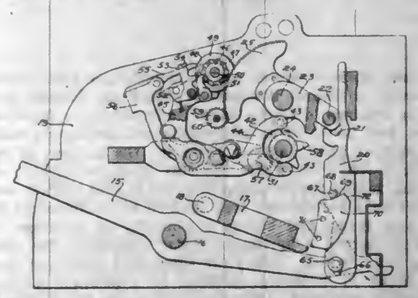
1,664,953. DIAGNOSTIC INSTRUMENT FOR THROWING A BEAM OF LIGHT INTO THE EYE. EDGAR D. TILLYER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Nov. 5, 1923. Serial No. 672,926. 2 Claims. (Cl. 88—20.)

2. In a diagnostic instrument for throwing a beam of light into a patient's eye, a support having a sight opening of substantially the size of the pupil of the human eye and a transparent reflecting member secured to the support in alignment with the said opening, the side of the reflecting member removed from the support being highly polished and having a continuous reflecting surface whereby the light reflected from the patient's eye will convey the whole image to the observer's eye without shadow.



1,664,954. CONSTANT-CAPACITY AUTOMATIC CLUTCH. CLARENCE WALTER TYDEMAN, Denver, Colo. Filed Nov. 1, 1927. Serial No. 230,276. 13 Claims. (Cl. 192—105.)

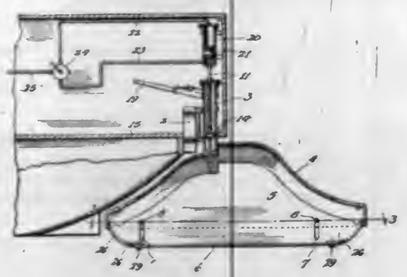
1. In a constant capacity automatic friction clutch, having a driving and a driven member, adapted to be engaged by weights pivotally mounted upon the driving member when they are acted upon by centrifugal force, automatic take-up means mounted upon one of said members and, irreversible by the weights when acted upon



by said centrifugal force, and including an actuating spring, and adapted to exert pressure upon one of said members to prevent clearance between them at any time.

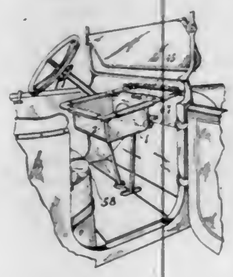
1,664,955. CASH REGISTER. EDWARD J. VON PEIN, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Apr. 13, 1921. Serial No. 460,882. 18 Claims. (Cl. 235—3.)

1. In a machine of the class described, the combination of item entering means adapted upon actuation to set up recording elements in accordance with the amount entered, a platen, power means therefor, and means positively actuated by said item entering means for rendering the power means effective and for locking said item entering means.



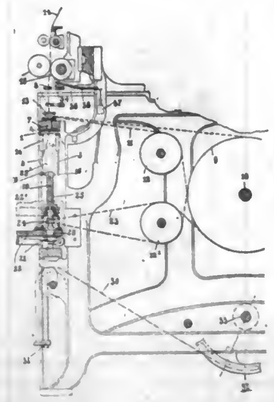
1,664,956. CASH REGISTER. EDWARD J. VON PEIN, Dayton, Ohio, assignor, by mesne assignments, to The National Cash Register Company, Dayton, Ohio, a Corporation of Maryland. Filed Apr. 24, 1922. Serial No. 556,304. 7 Claims. (Cl. 235—14.)

1. In a machine of the class described, the combination of a depressible key, a totalizer having a rotatable element, a totalizer actuator, means operated by said,



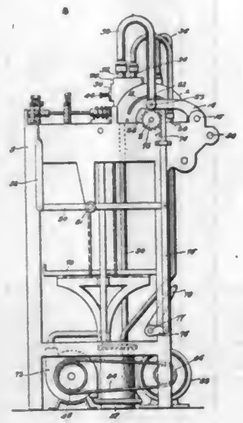
key to engage and drive said actuator, and a connection between said key and said last-named means for moving said means at a velocity relatively slower than said key during the latter part of the depression of said key.

1,664,957. RUDDER. ELIJAH FLEET WEBB, Kenova, W. Va. Filed Dec. 8, 1926. Serial No. 153,895. 2 Claims. (Cl. 114—167.)



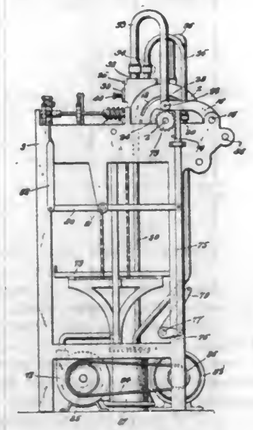
1. A rudder comprising a main hollow member open at its bottom, an auxiliary member having a snug fit within the main member and movable therein through the bottom, a hollow rudder post extending upwardly from the main member, a stem connected to the auxiliary member and passing through the hollow post, and an open coil spring mounted upon the stem and housed within the upper portion of the post and confined between the upper end of said post and a stop carried by the stem and operating to normally hold the auxiliary member projected.

1,664,958. INFANT'S AUTO CARRIER. EARL A. ZEISER, Cincinnati, Ohio. Filed Feb. 9, 1925. Serial No. 7,838. 1 Claim. (Cl. 155—10.)



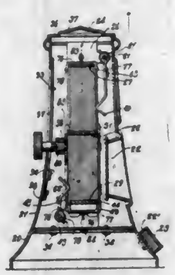
In an infant's carrier for automobiles, a seat frame preferably U-shaped, the ends of which are formed into eyes or bearings, a frame bracket adapted to be fastened to the dash board of an automobile and having its ends extending at right angles thereto for the purpose of receiving a rod upon which the seat frame is capable of pivoting, means for retaining said rod in said bracket and seat frame, a rectangular seat adapted to be supported by said seat frame and having a plurality of openings in one end thereof, a horizontal frame connecting the seat frame near its end, means for supporting said seat and seat frame in horizontal position or a position capable of holding an infant, said supporting means being adjustable and pivotally mounted on said dash board and capable of being moved, substantially as set forth and for the purposes specified.

1,664,959. SPINNING AND TWISTING FRAME. JEAN ZVORIKIN, Paris, France. Filed Mar. 26, 1926, Serial No. 97,756, and in France Feb. 3, 1926. 4 Claims. (Cl. 118—51.)



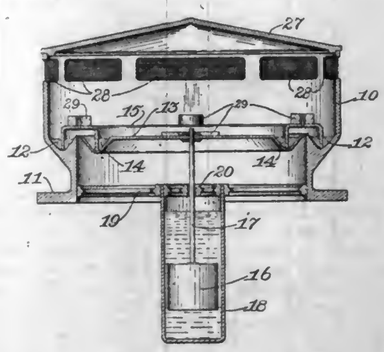
1. A spinning couple comprising a rotary spindle, a thread-receiving bobbin mounted thereon and rotating independently thereof, and means for imparting a twist to the thread, said means including a rapidly rotating disk rotating on the same axis as the spindle and bobbin and having two depending arms on one of which the thread is guided to the bobbin.

1,664,960. CONVERTIBLE OSCILLATING ROTARY FEEDER. LESTER KYLE ALDRICH, Sidney, Ohio. Filed May 21, 1926. Serial No. 110,701. 31 Claims. (Cl. 271—20.)



1. A feeder of the class described including a suction nozzle mounted for movement on a fixed axis above and in spaced relation with a stack of sheets for advancing a sheet to pull the same from the stack, oscillating means for picking up a sheet and lifting the same to deliver it to the suction nozzle, and separate means for varying the amount of suction on the nozzle of the oscillating means.

1,664,961. CONVERTIBLE OSCILLATING ROTARY FEEDER. LESTER KYLE ALDRICH, Sidney, Ohio. Original application filed May 21, 1926, Serial No. 110,701. Divided and this application filed Nov. 5, 1926. Serial No. 146,499. 15 Claims. (Cl. 271—20.)



1. A feeder of the class described including a pull off suction nozzle mounted for rotary movement on a fixed axis and located above and in spaced relation to a stack of sheets, means for continuously rotating the nozzle, and oscillating means consisting of a pivoted suction arm for picking up a sheet and moving the same backward for forming an undulation in the picked up sheet and for delivering the sheet to the pull off nozzle.

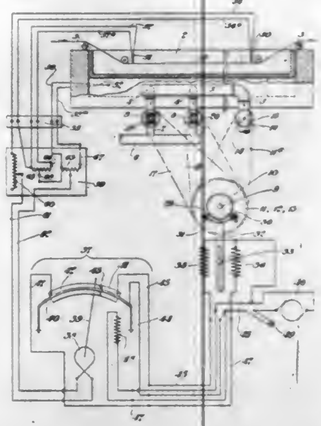
1,664,962. CHANGEABLE EXHIBITOR. LOUIS V. ARONSON, Newark, N. J. Filed Oct. 16, 1926. Serial No. 142,024. 5 Claims. (Cl. 40—79.)

1. A changeable exhibitor comprising, in combination, means to support packs of cards in mutually edgewise relation, means to press the cards in said packs in opposite directions respectively, reciprocating means surrounding said first named means and telescoping with said packs acting to shift cards alternately from one pack to another during reciprocation, means normally holding the cards from movement under action of said pressing means and removed from action by engagement with said reciprocating means.

1,664,963. LIQUID SEAL. HAROLD V. ATWELL, Whiting, Ind., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Feb. 14, 1927. Serial No. 168,059. 5 Claims. (Cl. 277—45.)

3. A liquid seal comprising a vapor outlet, a liquid channel around said outlet, a pressure plate in said outlet, a liquid channel on said plate, a closing member adapted to co-operate with liquid in said channels to effect closure of the outlet and adapted to be supported from either of said channels, means for applying an upward force of predetermined magnitude on said plate, so that said member effects closure of the outlet, except when the plate is depressed by a certain excess pressure thereabove or when the plate and member are raised together by a certain excess pressure therebeneath.

5. In combination an outlet passage, a member movable in said passage in opposite directions therein in response to variations in pressure relations on the opposite sides thereof, said movable member being provided with a channel adapted to contain a liquid sealing medium, channel forming means co-operating with the outlet passage to contain a liquid sealing medium, and a closure member co-operating with the channels of the movable member and the channel forming means of the outlet passage to seal the outlet passage, said closure member being movable in one direction with the movable member and being supported in the outlet passage when the movable member is moved in the other direction.



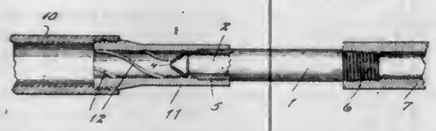
1,664,964. STONE VENEER. GEORGE BENTLEY BERGEN, Sr., Milwaukee, Wis. Filed Dec. 2, 1925. Serial No. 72,836. 3 Claims. (Cl. 91—68.)

3. The method of veneering wood surfaces which consists in preparing a solution of magnesite and magnesium chloride, then adding colors to separate portions of said mixture while maintaining fluidity, then allowing partial setting to take place, then priming the wood surface to be treated, then subsequently flowing said colored portions on the surface to be treated, allowing sufficient time between the application of each color to permit initial setting to take place so as to avoid blending or mixing of the separate colors.

1,664,965. APPARATUS FOR TEMPERATURE CONTROL. ALBERT BONDS, Cleveland, Ohio. Filed May 19, 1926. Serial No. 110,303. 11 Claims. (Cl. 236—15.)

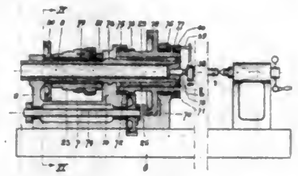
1. A temperature control mechanism comprising the combination with a source of heat, of a plurality of temperature responsive elements, one of said elements being located at the point to be regulated, and other of said elements being located at spaced points relatively closer to said source of heat than said first named element, said elements being adapted to supply varying independent

electric currents in accordance with temperature changes, and means for interconnecting said currents so as to obtain a desired proportionate amount of each of said cur-



rents, and for accumulating said proportionate amounts of current into a single current, and means operable by said single current for varying the heat supplied.

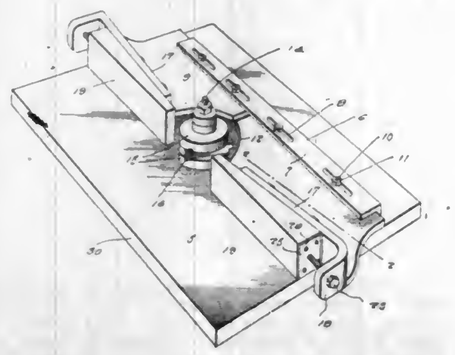
1,664,966. OPHTHALMIC TEMPLE. WILLIAM H. BOUTELLE, Sturbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Jan. 7, 1924. Serial No. 684,806. 2 Claims. (Cl. 88—52.)



1. A temple of the character described comprising an inner metallic temple consisting of a straight flattened side portion having its greatest width disposed in the vertical plane and a terminal ear loop portion circular in cross section and a seamless non-metallic outer tube covering the flattened side portion of the metallic temple and tapered down to the diameter of the ear loop portion adjacent the union of the ear loop and side portions of the inner temple.

1,664,967. SELF-CLEANING OIL BURNER. OSCAR CHRISTENSEN, Baltimore, Md., assignor to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed Feb. 3, 1926. Serial No. 85,772. 7 Claims. (Cl. 210—164.)

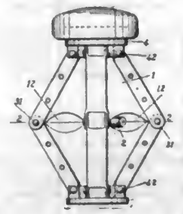
1. Liquid purifying means comprising the combination of a tubular member interposed in a liquid conduit and having its end toward the liquid current provided with a central orifice of relatively small diameter as compared with the tubular member itself, the remainder of said end being imperforate, and means located in advance of said tubular member for producing turbulence of the liquid.



1,664,968. LATHE. EDOUARD COENEN, Brussels, Belgium. Filed Jan. 14, 1926, Serial No. 81,323, and in Belgium Jan. 22, 1925. 11 Claims. (Cl. 82—29.)

1. A lathe comprising a fixed shaft carrying a fixed center, a tubular shaft rotating about the fixed shaft, an intermediate shaft driving the tubular shaft, two bearings encompassing the tubular shaft, two bearing blocks containing said bearings, and three supports encompassing the fixed shaft.

10. A lathe comprising a fixed shaft carrying a fixed center, a tubular shaft rotating about the fixed shaft, two bearings encompassing the tubular shaft, two bearing blocks containing said bearings, an intermediate shaft driving the tubular shaft arranged at each side of the fixed shaft, a drive pulley mounted idly on the fixed shaft, a gear located at each extremity of the drive pulley and fixed thereupon, two gears mounted idly on shafts located on each side of the fixed shaft and engaging with the preceding ones, a clutch member fixed angularly on each of these two shafts but slidable along them, means for putting each clutch member separately in contact with the idly mounted gears, a gear keyed on each of these shafts, a gear keyed on each of the intermediate shafts engaging with the preceding gear, and means for varying the distance between the tubular shaft and each intermediate shaft so that a pinion keyed on each intermediate shaft may be put into or out of engagement with the gear wheel keyed on the tubular shaft, by moving these pinions transversely with respect to their axis.

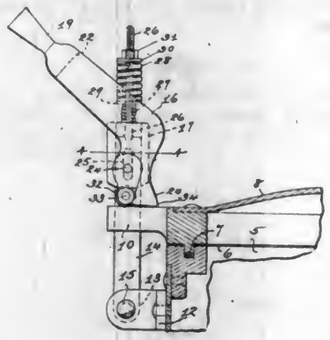


1,664,969. GUIDE FOR MOLDER TABLES. JOHN C. CONOVER, Somerville, N. J. Filed Jan. 8, 1927. Serial No. 159,984. 2 Claims. (Cl. 144—253.)

1. In combination, a pair of plates, means for adjustably mounting the rear alined edges of the plates on a table for movement in alinement with each other, flanges rising from the forward edges of the plates and having angular extensions, wedge blocks having their inclined

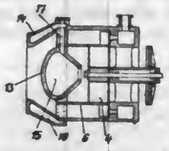
faces slidable on the flanges, pin and slot means engaging the blocks on the flanges, and screw means associated with the extensions and the blocks for moving them along the flanges.

1,664,970. TIRE-INFLATING MECHANISM. WILLIAM GORDON CUMMING, Montreal, Quebec, Canada. Filed Nov. 28, 1924. Serial No. 752,749. 5 Claims. (Cl. 152—11.)



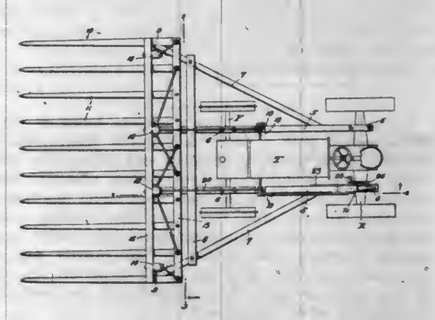
1. In a device of the class specified the combination of a wheel rim and a pneumatic tire thereon with a suction pump within the tire comprising a rubber body having slits radiating from an axis radial to the wheel, a valved air inlet tube leading to the center of the rubber body, an air filter thereto beyond the rim and a valved outlet tube leading from the center of the rubber body to the inside of the tire.

1,664,971. BILLIARD CUE. CLAYTON C. DEAN, Mundelein, Ill. Filed Sept. 1, 1927. Serial No. 216,798. 6 Claims. (Cl. 273—68.)



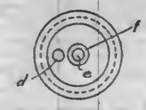
1. A billiard cue comprising a cue rod tapering alternately from a point near the center, and of substantially uniform diameter along the handle end.

1,664,972. RETORT-COVER CLAMP. DANIEL W. DUDDERAR, Mount Airy, Md. Filed July 9, 1927. Serial No. 204,474. 6 Claims. (Cl. 220—55.)



1. The combination with a retort vessel, of a cover having radial openings around its periphery, a bar pivotally attached to the vessel below the cover and movable into the radial opening above its pivot-point, a clamping lever pivoted with respect to the bar above the radial opening, spring-means on the upper end of the bar and means operating between the spring-means and the clamping lever to press the latter on the cover.

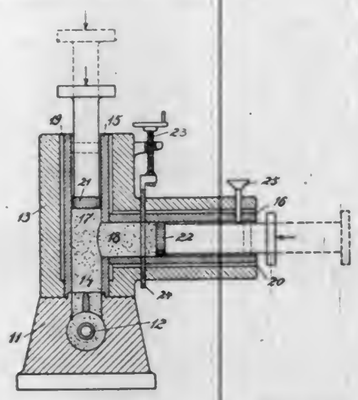
1,664,973. GAS BURNER. REGNIER EICKWORTH, Dortmund, Germany. Filed Aug. 5, 1927, Serial No. 210,796, and in Germany Aug. 6, 1926. 2 Claims. (Cl. 158—119.)



2. A burner comprising a casing having a central inlet opening and containing an annular chamber to which gas is admitted, a wheel having a series of blades in line with said opening, and a second series of blades surrounding the first series, the casing having nozzles through which gas issuing from said chamber may be directed against said second series of blades, a tubular member in line with said inlet in which air is impelled by the first series of blades, the casing being extended to envelop said member, a hollow body adjacent the end of said member, and means for admitting a cooling fluid to said body and conducting it therefrom.

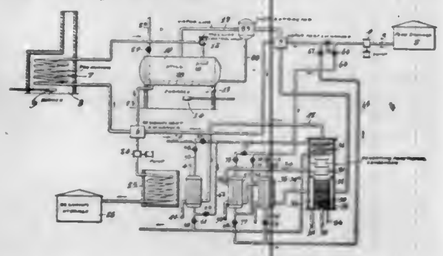
1,664,974. TRACTOR SWEEP RAKE. CLIFFORD A. FLEMING, Huntsville, Mo. Filed Nov. 18, 1925, Serial No. 69,901. Renewed Dec. 13, 1927. 1 Claim. (Cl. 56—27.)

A sweep rake of the character set forth, the combination of a frame section, means rigidly and detachably securing the frame to the forward and rear axles of a tractor, a tine section, forwardly and outwardly diverging braces extending from the intermediate portion of the frame with their outermost portions disposed under the inner corners of the tine section, pivotal elements connecting the tine section to the frame and braces intermediate their outermost ends, and elevating means connected to the tine section.



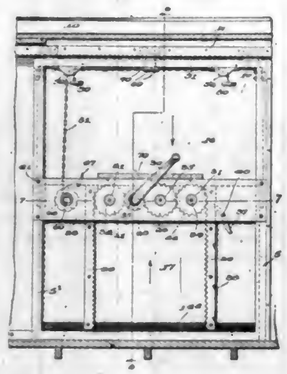
1,664,975. DISPENSING CLOSURE FOR BOTTLES AND THE LIKE. ERNST OTTO GOTTSCHALK, Dresden, Germany. Filed May 25, 1927, Serial No. 193,996, and in Germany Feb. 6, 1926. 2 Claims. (Cl. 215—76.)

1. A dispensing closure for bottles and the like comprising an apertured cap adapted to fit over the mouth of a bottle, a cover rotatably secured to said cap and



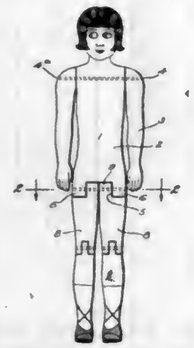
having a discharge opening registering with the aperture in said cap, the edges of said opennig being turned inwardly, and a closure member interposed between said cap and said cover and pivoted to said cap, said closure member being provided with a projection constructed and arranged to seat in said opening and being provided with a portion adapted to close the aperture in said cap.

1,664,976. MACHINE FOR MAKING METALLIC TUBING. FERDINAND HANFF, Berlin-Charlottenburg, Germany, assignor to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Oct. 16, 1925, Serial No. 62,829, and in Germany Dec. 1, 1924. 2 Claims. (Cl. 207—2.)



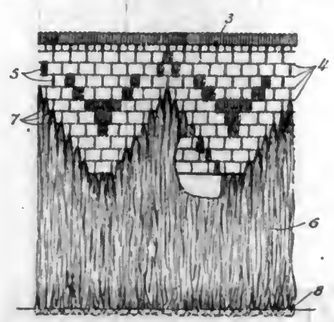
1. In a machine for making endless tubes or for providing cables with a seamless metallic sheath, the combination of a pressing chamber containing the plastic-liquid metal and two cylinders and plungers therein disposed to exert pressure upon said metal one being the operating plunger and the other the feeding plunger, the operating plunger standing constantly under uniform outside pressure and means for temporarily separating the feeding plunger from the metal to permit the release of the pressure upon that plunger and the charging of its cylinder with fresh metal.

1,664,977. ART OF DISTILLING LUBRICATING OILS. RICHARD W. HANNA, Piedmont, Calif., assignor, by mesne assignments, to Standard Oil Company of California, San Francisco, Calif., a Corporation of Delaware. Filed Oct. 4, 1923. Serial No. 666,475. 3 Claims. (Cl. 196—77.)



2. In the art of petroleum distillation, heating the oil to be distilled to a temperature at which portions thereof would crack if maintained at such temperature for a period of time sufficient to permit the cracking reaction to take place, while maintaining the same in substantially liquid phase, immediately passing the heated oil before substantial cracking thereof take place to a vaporizing chamber, maintained under a reduced pressure less than atmospheric, wherein the temperature of the oil is dropped below the temperature at which portions would crack, extracting from the vapors the tarry "mist" without substantial scrubbing of vapors in said step, and thereafter fractionally condensing the vapors into a number of distillates of different boiling points.

1,664,978. GRAIN-CAR DOOR. GEORGE W. HARER and JACOB J. BURRI, Chicago, Ill. Filed Dec. 22, 1924, Serial No. 757,530. Renewed Dec. 8, 1927. 6 Claims. (Cl. 20—27.)

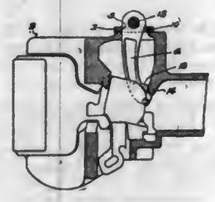


1. A grain car door comprising a frame, a cross bar carried by the frame, gears carried by the cross bar and having engagement with each other, a panel slidably carried by the frame and having racks adapted to engage certain of said gears, a crank having connection with one of said gears and adapted to be turned to move said panel vertically, and means supporting the door frame and said parts carried thereby for horizontal movement as a unit to completely open or completely closed position.

1,664,979. ARTICULATION OF DOLL MEMBERS. HELEN SARGENT HITCHCOCK, New York, N. Y. Filed Jan. 27, 1926. Serial No. 84,023. 1 Claim. (Cl. 46—40.)

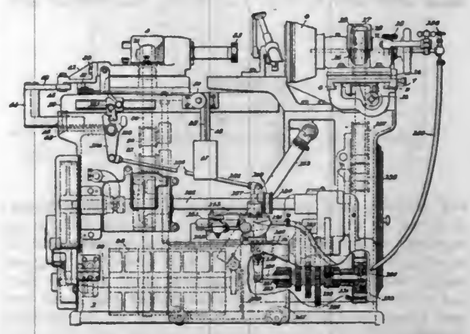
A doll formed from flat pieces, having a body portion centrally recessed with a rectangular recess with a straight horizontal bottom and parallel vertical sidewalls at right angles to the bottom, so as to leave rectangular body extensions on opposite sides of said recess, and legs having the upper outer corners cut away to receive the body extensions and provide leg extensions that enter the body recess in contact with each other, all arranged so that the outer contour of the legs and body portions are substantially continuous to form the outer continuous thigh lines of the doll, and means for pivoting the leg extensions in the body recess.

1,664,980. TRIMMING AND METHOD OF MAKING SAME. ABRAHAM HOLTZ, Bronx, N. Y., assignor to Sadinoff & Wendroff Inc., New York, N. Y., a Corporation of New York. Filed Sept. 3, 1927. Serial No. 217,389. 2 Claims. (Cl. 66—170.)



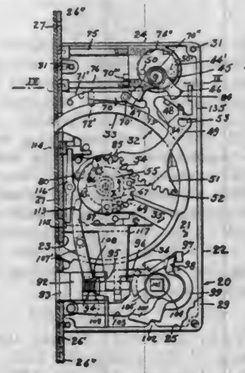
1. The method of making trimmings for curtains and the like which consists in forming a base warp fabric, and, in the act of fabricating said base fabric, attaching to the warp threads thereof an ornamental fringe which covers portions of the base fabric of varying width, with the remainder of the base fabric exposed.

1,664,981. METHOD OF CLEANING CHICLE AND SIMILAR GUMS. DONALD W. HOWE, EARLE R. PICKETT, and DOUGLAS M. MCBEAN, Canajoharie, N. Y., assignors to Beech-Nut Packing Company, Canajoharie, N. Y., a Corporation of New York. Filed July 13, 1925, Serial No. 43,433. Renewed Sept. 2, 1927. 10 Claims. (Cl. 18—49.)



1. The method of cleaning chicle and similar gums, which consists in emulsifying the gum in water hot enough to liquefy the gum, filtering the emulsion thus produced, and separating the gum and excess water of said filtered emulsion.

1,664,982. CAR-COUPLER-LOCK-LIFTER SAFETY ATTACHMENT. SYLVESTER L. JOINER, McGregor, Tex. Filed July 28, 1927. Serial No. 209,078. 4 Claims. (Cl. 213—127.)

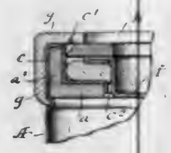


1. A lock liffer attachment for car couplers comprising a member having an opening to receive and permit free independent movement of the lock lifter of a car coupler, said member being adapted to rest upon the top of the coupler head and arranged to receive and support the release rigging to limit the downward movement of the lock lifter.

1,664,983. AUTOMATIC COOLANT-ARRESTING MECHANISM. GEORGE C. KIMMEL, Worcester, Mass., assignor, by mesne assignments, to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Original application filed May 6, 1921, Serial No. 467,297. Divided and this application filed Nov. 20, 1923. Serial No. 675,910. 5 Claims. (Cl. 51—267.)

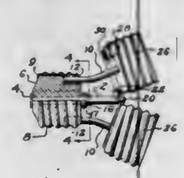
1. In a machine of the class described, a housing, a head stock having work supporting mechanism mounted on said housing, a tool head carrying a tool mounted on a carriage movable to and from said head stock, automatic means for moving said tool head toward and from said head-stock, means for rotating the work, means including a pipe for furnishing a cooling medium to the work, a valve in said pipe, and means rendered effective by abnormal movement of said tool head simultaneously to render said work rotating means ineffective and actuate the valve to cut off the flow of coolant to the work.

1,664,984. LOCK MECHANISM. CLIVE W. LANPHERE, New York, N. Y. Filed Sept. 9, 1926. Serial No. 134,446. 34 Claims. (Cl. 70—29.)



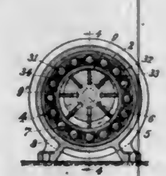
1. A lock comprising a casing, a guard, a bolt adapted to interlock with said guard, spindle means to actuate said bolt from one side of said casing, key-actuated means to actuate said bolt from another side of said casing, and means to permit interchanging the positions of said spindle and said key-actuated means.

1,664,985. CONTAINER. ALFONS MAUSER, Cologne-Marienburg, Germany. Filed Dec. 12, 1925, Serial No. 74,993, and in Germany Aug. 17, 1925. 8 Claims. (Cl. 220—78.)



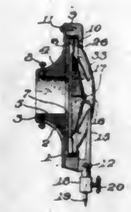
1. A container comprising a shell having an inwardly bent projection at a distance from its end, and a return-bent end portion located on the inside of said shell, a

cover support clamped between said projection and said return-bent portion, a reinforcing ring surrounding said return bent end portion of the shell, having a flange projecting inwardly at the extremity of the shell, in engagement with the bend of said portion and an inturned lip engaging with and covering the outer part of said inward projection, whereby said reinforcing ring is secured upon said shell in interlocking engagement with,



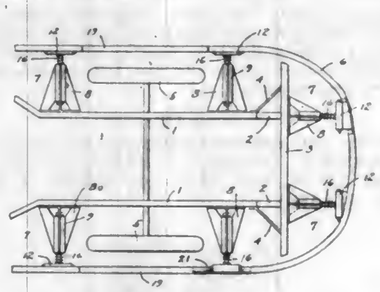
and protects, said portion and projection against shocks or blows, an expanding ring fitted within the shell in engagement with said flange, a cover fitted between said expanding ring and said support, and a packing ring engaging said cover and the return-bent portion of the shell and preventing leakage between said shell and cover support from the interior of the container to the exterior thereof.

1,664,986. PLUG CONNECTER. BENJAMIN P. MCKINLEY, Flushing, N. Y., assignor to Hemco Electric Manufacturing Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed Dec. 8, 1923. Serial No. 679,298. 8 Claims. (Cl. 173—335.)



1. In a plug connecter, the combination of an externally screw-threaded plug shell, an insulating washer within the same, a contact member passing through said washer, two internally threaded receptacle shell electrically connected to said contact member, two contacts connected to said externally threaded plug shell and having their ends centrally located within said internally threaded receptacle shells respectively, and a mass of insulating material molded about said internally threaded receptacle shells and extending to said washer, said externally threaded plug shell being internally flanged at its outer end and having solder secured to its inner surface adjacent to its other end holding said washer against said flange.

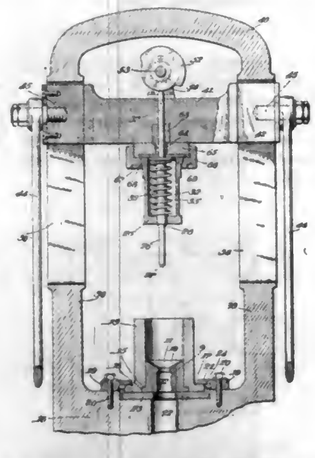
1,664,987. ROTARY ENGINE. ROBERT MEYER, Gelsenkirchen, Germany. Filed Jan. 29, 1923. Serial No. 615,551, and in Germany Jan. 30, 1922. 5 Claims. (Cl. 121—84.)



1. A rotary engine comprising a cylinder provided with a central portion having annular recesses adjacent its ends and having ports for the intake and exhaust of motive fluid, a rotary piston eccentrically mounted in said cylinder and having radial slots, blades radially movable in said slots and adapted to frictionally slide over the inner surface of said central portion, stay rings rotatably mounted in said recesses, the inner diameter of said stay rings being the same as the inner diameter of said central portion, and anti-friction bearings between said rings and said cylinders, maintaining the rings in alignment with said central portion.

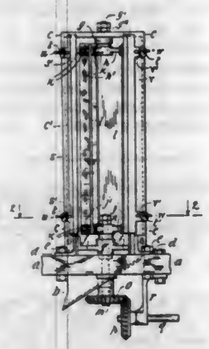
1,664,988. SOUND REPRODUCER. IDA E. MOBLEY, Roslyn, Pa. Filed July 16, 1926. Serial No. 122,877. 4 Claims. (Cl. 274—25.)

1. In a sound reproducer for talking machines, in combination, a substantially cylindrical rim provided at one edge thereof with an inturned flange, a back plate arranged to be detachably secured to the opposite edge of said rim to form conjointly with said flange an annular groove, a diaphragm having a plane marginal portion and a central conically shaped portion arranged with said marginal portion within said groove and said conically shaped portion projecting away from said plate, and a protecting shield for said diaphragm having a marginal portion received within said groove and a central portion conforming to the shape of and spaced from the central portion of said diaphragm.



1,664,989. AUTOMOBILE BUMPER. JAMES NICKELS, Silvis, Ill. Filed Sept. 17, 1926. Serial No. 136,106. 2 Claims. (Cl. 293—55.)

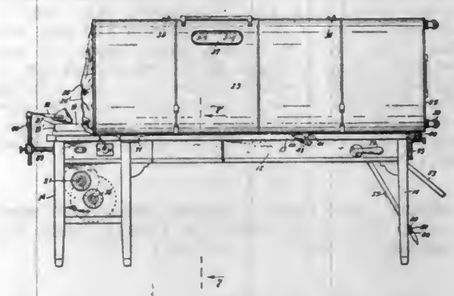
1. In a device of the class described, an inner frame, an outer frame encircling the same, and provided with removable sections, and pairs of oppositely acting shock-absorbing devices uniting said frames.



1,664,990. MEANS FOR MAKING SEAMLESS TUBING. PAUL OEHMIG, Jr., and FRANK LUTZNER, Chicago, Ill. Filed Aug. 11, 1924. Serial No. 731,843. 2 Claims. (Cl. 207—3.)

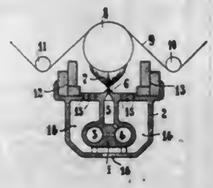
1. In a tube extruding apparatus embodying a ductile metal container and a die associated with said container, a plunger reciprocable in said container, a mandrel having an annular shearing shoulder extending through said plunger, yielding means between said mandrel and plunger for normally maintaining the same against relative movement, means for operating said plunger and

mandrel as a unit and means for advancing said mandrel relative to said plunger against the tension of said yielding means for shearing an extruded tube from the waste metal in said container.



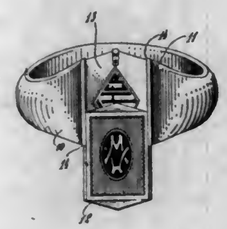
1,664,991. MACHINE FOR FLESHING FURRED SKINS. RICHARD OLDS, Walkerville, Australia. Filed Jan. 14, 1926, Serial No. 81,133, and in Australia Aug. 8, 1925. 1 Claim. (Cl. 149—15.)

A fleshing machine having an outer frame or casing with an upright opening formed therein, vertical adjustment plates mounted on the frame adjacent to each side of the opening, said plates being adapted to slide horizontally for adjustment purposes, a series of rotatably mounted vertical straight knives arranged on a knife spider to rotate with the casing, and a lower bearing spider fixed within the frame and provided with a central bearing device in which the knife spider is supported.



1,664,992. ELECTROTHERAPEUTICAL APPARATUS. SIGMUND PONGO, New York, N. Y. Filed July 26, 1927. Serial No. 208,555. 6 Claims. (Cl. 174—177.)

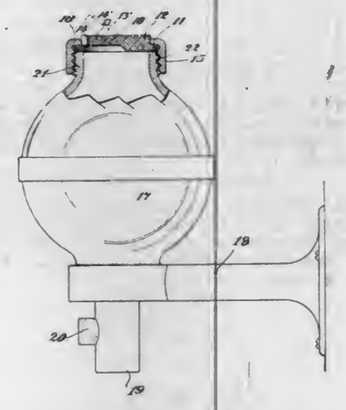
1. An electro-therapeutical apparatus, comprising a table adapted to receive a prone body, guide rails adjacent the longitudinal edges of the top of said table, a casing slidable on said guide rails having an open bottom, said casing being approximately of a length corresponding to that of the table top and the latter closing the bottom portion of said casing when said casing is mounted upon said table, electric lights within said casing, two rollers on the table top adjacent the foot portion of the



latter, bearing members on said casing intermediate its ends, said bearing members being adapted to be brought into engagement with said rollers, whereby said table top is supported when it is swung on said bearing members around said rollers, and means adapted to balance the weight of said casing and support it in tilted position on said rollers.

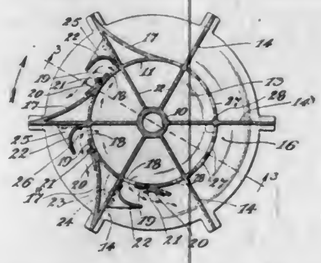
1,664,993. PROCESS FOR HEATING THE SINGEING MEMBERS OF CYLINDER SINGEING MACHINES. WALTER OSTHOFF, Barmen, Germany. Filed Dec. 4, 1925, Serial No. 73,290, and in Germany Dec. 10, 1924. 2 Claims. (Cl. 26—6.)

1. The method of heating the singeing member in singeing machines, which comprises causing a non-oxidizing oil-carrying flame to impinge directly upon the active surface of a traveling singeing member.



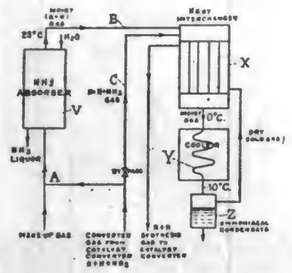
1,664,994. JEWELRY. AUGUSTIN PEREZ REA, Mexico City, Mexico. Filed Nov. 28, 1923, Serial No. 677,502, and in Mexico Nov. 28, 1922. 3 Claims. (Cl. 40—17.)

1. An article of the character specified comprising a body portion having a shallow recessed part at the outer side thereof whose base forms a panel, a shallow device



receiving receptacle in said panel and flush therewith, grooves in the sides of said recessed part, said recessed part having a slot in one end, a cover conformed to said recessed part and adapted to lie within the same and slidably engaging the grooves therein to permit of the exposure of said device, said cover having a recess at the inner side thereof; the contiguous surfaces of said cover and said panel closely engaging each other, and the outer surface of said cover being substantially flush with the adjacent portions of the outer surface of said body portion, a stop arranged on said cover adjacent one end thereof to engage with said slot in said recessed part to limit the inward movement of said cover, and a spring detent arranged on said recessed part to be received within said recess of said cover and to engage the same, whereby to lock said cover to its adjusted position within said recessed part.

1,664,995. CONTAINER CLOSURE. WILLIAM H. ROSE, Jersey City, N. J. Filed July 3, 1924. Serial No. 724,142. 5 Claims. (Cl. 215—37.)

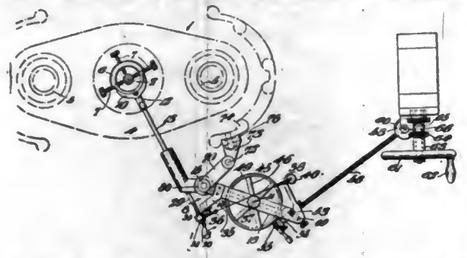


1. In a container closure, in combination, an annular flange and a flap-valve member, a portion of which is integral with the flange and thicker than said flange, the face portion of the valve member abutting upon the flange when in normal position.

1,664,996. CENTRIFUGAL PULP SCREEN. GEORGE F. SHEVLIN, Glens Falls, N. Y., assignor to George F. Shevlin & Son, Glens Falls, N. Y., a Partnership composed of George F. Shevlin, Sr., and George F. Shevlin, Jr. Filed Mar. 31, 1927. Serial No. 179,778. 5 Claims. (Cl. 92—34.)

1. In a centrifugal pulp screen, a stock distributor comprising a hub, a cylindrical member, blades extending from the hub to and beyond the cylindrical member, a plurality of vanes each associated with the outer portion of the cylindrical member and an adjacent portion of one of the blades, and a plurality of deflector plates each associated with a vane and so constructed and secured in position as to positively direct the passage of stock to the corresponding vane.

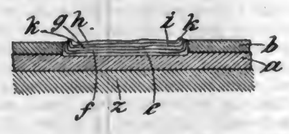
1,664,997. PROCESS OF DRYING GASES. ROLAND EDGAR SLADE, Billingham-on-Tees, and VICTOR EMMANUEL PARKE, Runcorn, England, assignors to Atmospheric Nitrogen Corporation, Solvay, N. Y., a Corporation of New York. Filed Jan. 28, 1926. Serial No. 84,323, and in Great Britain Jan. 28, 1925. 8 Claims. (Cl. 23—7.)



2. In the process of drying gas for use in the manufacture of synthetic ammonia, the steps which comprise scrubbing an ammonia containing gas which is subsequently to participate in the synthesis with a liquid capable of absorbing ammonia, setting up in the residual gas a condition such that it contains in addition to its water vapor content a small percentage of gaseous ammonia sufficient, upon subsequent reduction of the temperature of the gas to below 0° C., to preserve a condition of liquidity in the condensate, then subjecting the gas mixture aforesaid to a temperature below 0° C., collecting and removing the condensate as ammoniacal liquor and passing the gas thus dried to an ammonia catalyst in the synthesis system.

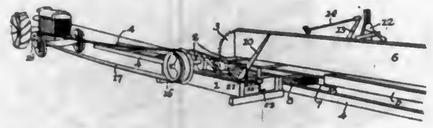
1,664,998. PROCESS OF MANUFACTURING FUEL BRIQUETTES. ALBERT L. STILLMAN, Plainfield, N. J., assignor to The General Fuel Briquette Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 21, 1927. Serial No. 162,681. 2 Claims. (Cl. 44—23.)

1. In the process of making fuel briquettes, the improvement which consists in mixing bituminous coal with a bituminous binder heated to a molten condition, and subjecting the mixture at a temperature above the fusion point of the binder and in the presence of water vapor to an intense grinding operation until volatile constituents of the coal are liberated and passed into solution in the molten binder.



1,664,999. RECORDING APPARATUS FOR TESTING MACHINES. WILLIAM J. TRETCH, Philadelphia, Pa., and FRANCIS BUCKINGHAM, Franklinville, N. J., assignors to Riehle Bros. Testing Machine Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 15, 1922. Serial No. 607,112. 2 Claims. (Cl. 234—1.)

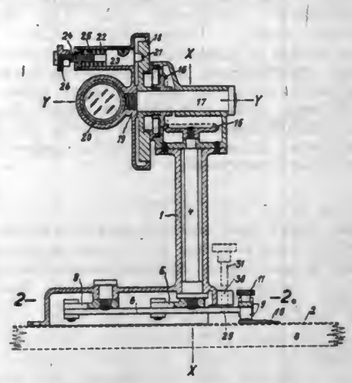
1. In a device of the character stated for testing the amount of elongation of the specimen being tested, clamps adapted to be attached to the specimen to be tested, upper and lower fingers adapted to contact with said clamps, an upper rod connected to said upper fingers, a frame carried by said upper rod, a recording instrument supported in said frame, a stem projecting from said lower fingers, a flexible connection from said stem to a



movable portion of said instrument, for rotating the latter when stress is applied to the specimen to be tested and a drum actuated by deflection of said specimen.

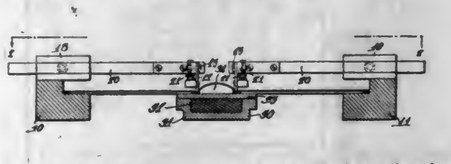
1,665,000. MERCURIAL PRINTING SURFACE. ARTHUR RONALD TRIST, London, England. Filed Oct. 5, 1926, Serial No. 139,651, and in Great Britain Nov. 5, 1925. 12 Claims. (Cl. 41—41.5.)

1. A planographic printing plate having ink retaining areas and mercurial ink refusing areas, comprising a base plate, an electrodeposited layer of metal with which mercury can amalgamate, an electrodeposited layer of a metal unaffected by mercury to which printing ink will adhere, a recess or recesses passing through said last named layer so as locally to expose the first named layer, and a highly polished mercurial amalgam in each recess.



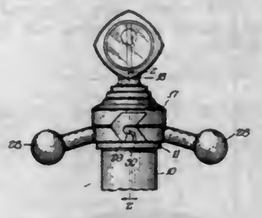
1,665,001. SAWMILL. CHARLES H. TURNER, Statesville, N. C. Continuation of application Serial No. 667,420, filed Oct. 8, 1923. This application filed Jan. 6, 1926. Serial No. 79,536. 1 Claim. (Cl. 143—157.)

In a sawmill having a frame, a shaft journaled in said frame, a saw operatively connected to said shaft, and pulley means on said shaft adapted to be connected by a belt to a distant source of power; means for controlling said source of power comprising: a foot pedal mounted on said frame in position for convenient foot manipulation by a sawmill operator, an arm operatively associated with said foot pedal, tension means connecting said arm and the throttle of said distant source of power, and means associated with said pedal for normally maintaining said arm in position to provide the smallest quantity of power necessary to operate said sawmill.



1,665,002. DEVICE FOR TRACING CROSS SECTIONS. OTTO VON GRUBER, Stuttgart, Germany, assignor to the Firm Carl Zeiss, Jena, Germany. Filed Sept. 16, 1927, Serial No. 220,028, and in Germany Sept. 30, 1926. 2 Claims. (Cl. 33—67.)

1. Device for tracing cross sections containing a foot, a ruler supported on this foot rotatable about a vertical axis, a telescope adapted to measure distances and supported on the foot rotatable about a horizontal axis, a coupling inserted between the telescope and the ruler, adapted to impart to the ruler during rotations of the

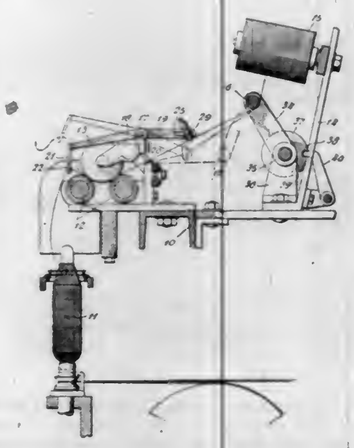


telescope about the said horizontal axis a uniform rotation about the said vertical axis, the said coupling being disengaging, and means adapted to fix the ruler with respect to the said foot.

1,665,003. CASE-FORMING ATTACHMENT. JOHN HARRY WEAVER, Camden, N. J., assignor to Jesse Satenstein, Camden, N. J. Filed Aug. 14, 1926. Serial No. 129,169. 6 Claims. (Cl. 11—2.)

1. In a case back-forming attachment having a forming bar, means for creasing a case including a support mounted in a plane above the forming bar and disposed at right angles to said bar, creasing means swingably depending from the support, and a spring pressed member pivoted to the creasing means for holding said means downwardly against a case being fed thereunder.

1,665,004. AUTOMOBILE RADIATOR CAP. JOHN F. WHITE, Chicago, Ill., assignor to White Products Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 11, 1925. Serial No. 22,270. 4 Claims. (Cl. 220—24.)

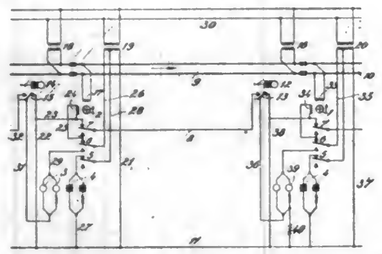


1. A radiator cap comprising a bushing for connection to the radiator nipple, a cap hinged to the bushing for closing the end thereof, a collar rotatable on the bushing and cooperating catch members on the collar and cap engageable by rotation of the collar for holding the cap closed and limiting rotation of the collar relative to the cap in one direction.

1,665,005. METHOD FOR THE SEPARATION OF M-DINITROBENZENE FROM ITS ISOMERS. HENRY J. WEILAND and IVAN GUBELMANN, South Milwaukee, Wis., assignors to The Newport Company, Carrollville, Wis., a Corporation of Delaware. Filed Aug. 19, 1926. Serial No. 130,356. 7 Claims. (Cl. 260—142.)

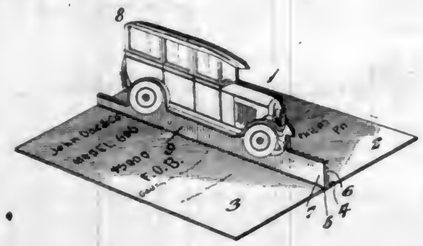
1. The method of purifying technical m-dinitrobenzene containing other isomers, which comprises treating the technical m-dinitrobenzene with an alkali forming substance in water solution adapted to convert the other isomeric dinitrobenzenes into water soluble bodies without decomposing the m-dinitrobenzene and separating the unchanged m-dinitrobenzene.

1,665,006. STOP MOTION FOR YARN-TWISTING MACHINES. JULIUS WYSS, Watertown, Mass., assignor to New England Spun Silk Corporation, New York, N. Y., a Corporation of Massachusetts. Filed Apr. 29, 1927. Serial No. 187,453. 9 Claims. (Cl. 117—33.)



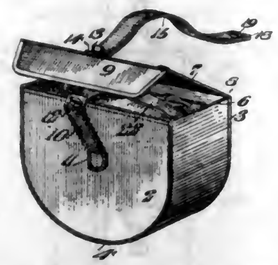
1. In a yarn twisting mechanism, the combination with a frame, delivery rolls supported therein, feeding means from which yarns are drawn to said rolls, and a bobbin for receiving said yarns from said rolls; of a stop motion device including an arm carried by said frame and having a rocking movement relative thereto, means on said arm operable by movement thereof in one direction to engage and grip the yarns at a point between said feeding means and delivery rolls to cause said yarns to be severed at said point by the action of said rolls, and means to alter the direction of feed of the yarns to the delivery rolls to prevent engagement thereof by said gripping means when said arm moves to its operative position.

1,665,007. DORINE FOR LOOSE POWDER. JAMES LESLIE YOUNGHUSBAND, Chicago, Ill. Filed Dec. 14, 1925. Serial No. 75,182. 1 Claim. (Cl. 132—83.)



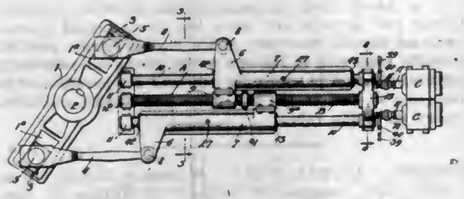
A powder applicator having a lining of resilient flexible material adjacent one face thereof adapted to hold said applicator in extended lateral position.

1,665,008. AUTOMATIC SECTION-BLOCK SYSTEM FOR RAILROADS. HERMANN ARNDT, Berlin, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, Germany, a Corporation of Germany. Filed Sept. 9, 1925, Serial No. 55,380, and in Germany Sept. 20, 1924. 5 Claims. (Cl. 246—34.)



1. In a block signal system, in combination, a railroad track subdivided into individual block sections by insulating joints, a signalling device provided at the beginning of each of said sections and consisting of stop lamps and go ahead lamps, a relay for controlling the circuits to said lamps and adapted to receive current on the one hand through the rails of the block section and on the other hand from an auxiliary phase which when the armature of said relay has dropped off is connected in series with the stop lamps of the preceding block section, contacts upon the armature of said relay adapted to light up the stop and go ahead lamps respectively by their make and break, a source of alternating current adapted to supply the current for operating said relay and said signal lamps, line conductors adapted to connect said source of current with the two phases of the relay and the signal lamps, and line conductors between said signal lamps and relay contacts.

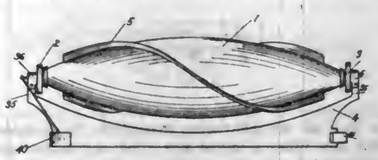
1,665,009. ADVERTISING DEVICE. HARRY S. C. BACON, Philadelphia, Pa., assignor to E. S. Edmondson Company, Philadelphia, Pa., a Corporation of Delaware. Filed Apr. 7, 1927. Serial No. 181,705. 1 Claim. (Cl. 40—126.)



A device of the character stated, comprising a pair of rectilinear leaves forming in opened or display position a flat rectilinear base and arranged to be folded one upon the other book-fashion in non-display position, the folding points of each leaf being creased and bent to form a longitudinal continuous, relatively rigid flange throughout the entire length of each of the leaves, which in the open position of said leaves is self-supporting and is arranged at right angles thereto, means for securing said flanges together, and a representation of an article to be advertised extending from said flanges so as to be vertically positioned in the flat, opened position of said leaves, the latter when open extending rectilinearly in every direction at right angles to and forming a stable support, for said flanges and the display, said leaves being of greater area than said flange and its display, so as to enclose and protect the latter when said leaves are folded book-fashion.

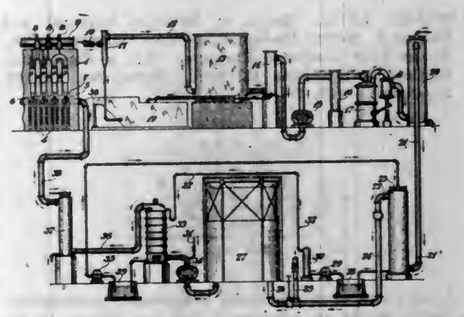
1,665,010. LADY'S HAT BAG. HUGO BAROL, Philadelphia, Pa. Filed Mar. 4, 1926. Serial No. 92,157. 1 Claim. (Cl. 206—8.)

A device of the character stated consisting of a body having front and rear walls which are flat and which are arranged in parallelism, side walls which are flat for a portion of their extent and which terminate in a rounded bottom, a flat, rectilinear covering lid, a foldable flap on the lid, for engaging over the flat, front face of said body, means for fastening the flat, rectilinear part of said lid upon the top of said body comprising a front strap having its lower and fixedly secured to the said flat, front wall, a stud on the upper front flat part of said lid adapted to be engaged by an eye in the upper end of said front strap, a base supporting said stud, and a carrying strap detachably secured at each end and having its front end attached to the front end of said cover by the base carrying said stud, the rear end of said carrying strap being connected with the rear end of said lid, said carrying strap extending transversely of said flat, rectilinear lid.



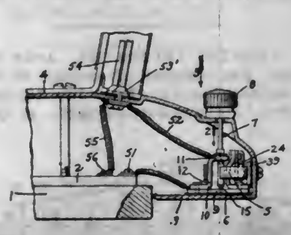
1,665,011. STEERING MECHANISM FOR VESSELS. GEORGE EUGENE BARRETT, New York, N. Y., assignor to Lenher Engineering Company, New York, N. Y., a Corporation of New Jersey. Filed July 28, 1927. Serial No. 208,920. 9 Claims. (Cl. 114—157.)

1. In mechanism of the class described, the combination with a rudder cross-head, of parallel guide rods, a right and left hand screw shaft between the rods, means for supporting the rods and screw at one end, a housing for enclosing and supporting the opposite ends of the rods and screw, elongated sliding sleeves on the guide rods having internally threaded members that engage the screw and having also projecting arms, links pivoted to said arms and to the cross-head, gearing within the housing, and a dual power mechanism for actuating the gearing, together with means for throwing either half of said power mechanism out of action.



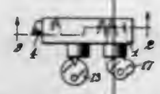
1,665,012. SPIRAL ROTARY SHIP OR SIMILAR VESSEL. JOSEPH C. BECHARD, Fall River, Mass. Filed Oct. 21, 1927. Serial No. 227,794. 4 Claims. (Cl. 115—20.)

1. A boat comprising an imperforate shell, a keel, said shell being mounted for axial movement on said keel, concentric sleeves at each end of said shell, said shell being secured to the outer sleeve and being adapted to turn therewith, a driving means on said outer sleeve at one end of the shell, bearing members on the outer sleeves, longitudinal truss members rotatably mounted on



said bearing members, a cross truss means for holding said inner sleeve away from said outer sleeve, said inner sleeve being secured to the keel, and driving means secured to said tubular member for rotating said shell.

1,665,013. GAS PURIFICATION. JOSEPH BECKER, Pittsburgh, Pa., assignor to The Koppers Company, a Corporation of Delaware. Filed Jan. 22, 1927. Serial No. 162,706. 18 Claims. (Cl. 23—3.)

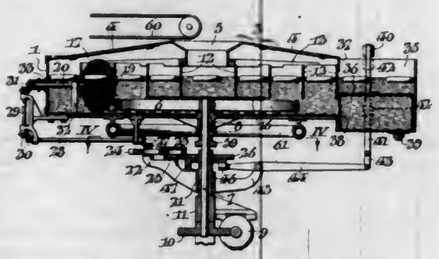


2. The process of gas purification which comprises transferring impurities from the gas to a liquid, and subsequently transferring said impurities from said liquid to a portion of the purified gas.

1,665,014. THERMOSTATIC CURRENT CONTROL. OTTO Q. BECKWORTH, Los Angeles, Calif. Filed July 9, 1925. Serial No. 42,480. 20 Claims. (Cl. 200—138.)

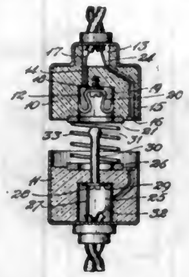
1. A thermostatic current control device comprising in combination a deflectable conducting bar having a conducting end, a contact suitably positioned to engage therewith, a thermostatic strip, a loose draw pin connecting the bar and strip to allow movement of the strip independent of the bar to a desired extent, the movement of the strip on increase of temperature through the medium of the pin moving the bar to break the contacts, and actuating means independent of the operation of the thermostatic strip and independent of the physical characteristics of the conducting bar to return the conducting bar into contacting position on cooling of the thermostatic strip.

1,665,015. LOCK. EDGAR M. BENHAM, Norwood, Ohio, assignor to The Mosler Lock Company, Covington, Ky., a Corporation of Ohio. Filed June 12, 1926. Serial No. 115,441. 1 Claim. (Cl. 70—72.)



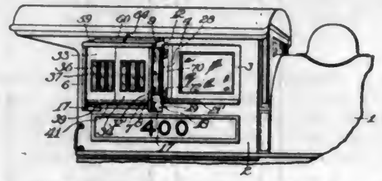
In a lock of the character described, in combination, a master key tube, a guard key tube, a tumbler pivoted approximately at its midpoint intermediate said key tubes and having an obstructing portion normally positioned closely adjacent the front of the master key tube, whereby full movement of a master key into the master key tube is prevented, said tumbler having a portion adjacent the top of the guard key tube engageable by a guard key in the guard key tube, whereby said tumbler may be pivoted to withdraw said obstructing portion thereof out of the path of movements of a master key into the master key tube.

1,665,016. LOCK. EDGAR M. BENHAM, Norwood, and GEORGE J. BAUER, Madisonville, Ohio, assignors to The Mosler Lock Company, Covington, Ky., a Corporation of Ohio. Filed June 12, 1926. Serial No. 115,443. 21 Claims. (Cl. 70—72.)



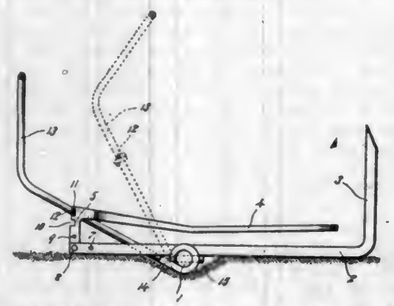
1. In a lock of the character described, in combination, a casing having an aperture, a bolt bar slidable in the casing, a guard tumbler for dogging the bolt bar, a special tumbler having a key designating mark positioned to be invisible through said aperture in the normal position of the tumbler, said tumbler being movable into position exposing said mark at said aperture, said guard tumbler being movable by means of a key independently of said special tumbler, and said guard tumbler being movable and said special tumbler being disposable into position exposing the mark at the aperture simultaneously by means of another key.

1,665,017. COOKING APPARATUS. JOHN C. BERGNER, Lansdowne, Pa., assignor of one-half to Frank Ellis Morris, Philadelphia, Pa. Filed July 10, 1919. Serial No. 309,899. Renewed July 30, 1927. 21 Claims. (Cl. 53—7.



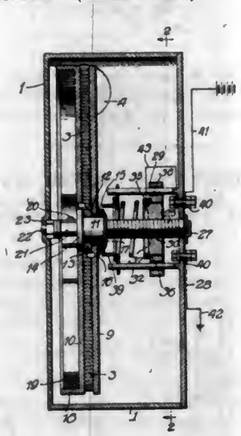
1. A cooking apparatus comprising a receptacle or pan for a cooking fluid; and means for whirling the liquor in a gyratory course to convey the articles to be cooked through the apparatus.

1,665,018. ELECTRIC SWIVEL SOCKET. PERCY SCOTT BLACK, Fort Worth, Tex. Filed Apr. 25, 1927. Serial No. 186,394. 2 Claims. (Cl. 173—343.)



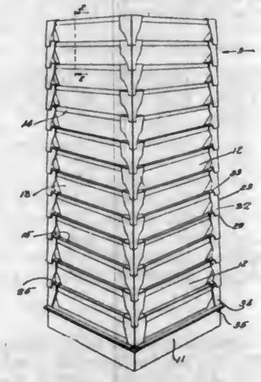
1. In an electric connector, a pair of body members of insulating material each having a central recess, contact rings arranged opposite each other on the confronting faces of said body members, a spring member having one end fixed to one body member and engaging the contact ring carried thereby, said spring being positioned to engage the other contact ring upon assembly, and a pair of axially disposed contacts one of which is disposed within the recess of one body member and the other of which is carried by the other member and, projects through said contact rings to engage the first axially disposed contact.

1,665,019. LOCOMOTIVE-CAB-WINDOW PROTECTOR. JACOB C. BOYLE, Indianapolis, Ind. Filed Jan. 31, 1927. Serial No. 164,791. 9 Claims. (Cl. 20—40.)



1. A knock-down locomotive cab window protector having two opposite end parts and doors hinged thereto and also flexible front part and a flexible bottom part removably connected to the end parts, means for removably securing the end parts to the cab, and a separate roof to rest on the tops of the end parts and having means to secure it to the cab.

1,665,020. ANIMAL TRAP. WINFIELD CATLIN, Rockville, Ind., assignor of one-half to William N. Cox, Bloomingdale, Ind. Filed Sept. 28, 1926. Serial No. 138,213. 14 Claims. (Cl. 43—82.)

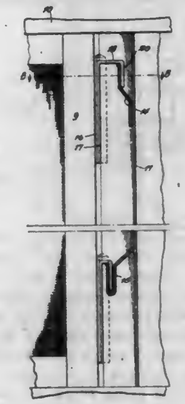


1. An animal trap comprising a pivot bar, a rod extending across and connected to the bar and terminating in a jaw at one end, a trip pivoted to the other end of the rod, a spring-stressed jaw engaging the pivot bar to swing about the axis thereof to move to a trapping position relative to the other jaw, and means releasably engaged by the trip for retaining the jaws open.

1,665,021. AUTOMATIC ELECTRIC SWITCH FOR CABLE-CARRYING DRUMS. JOSEPH H. COHEN, Bridgeport, Conn. Filed Nov. 3, 1923. Serial No. 672,630. 4 Claims. (Cl. 200—153.)

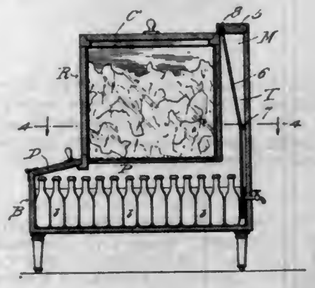
1. A take-up device for current-carrying cables, comprising a current carrier take-up drum on which the cable is wound and to which the cable is electrically connected, the drum having a contact member forming a necessary structural part of it; and a cooperating contact member disposed axially of the drum and adapted to carry current and movable toward and from the drum in a direction parallel to the axis thereof through the rotation of the drum to electrically engage and disengage the said contact member which forms a necessary structural part of the drum.

1,665,022. COOLING TOWER. EDWARD W. COOK, Los Angeles, Calif., assignor of one-half to Edward I. Field, Los Angeles, Calif. Filed Apr. 27, 1927. Serial No. 187,016. 11 Claims. (Cl. 189—12.)



1. A cooling tower having a plurality of louver units, corner structures connected to each unit, said corner structures of an upper unit resting on a unit next below.

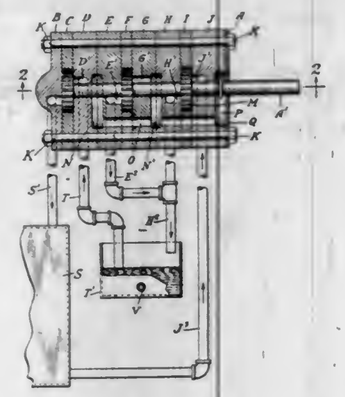
1,665,023. SMOKER'S MOUTHPIECE. ADOLF GANZFRIED and WILLIAM B. CLARY, Los Angeles, Calif. Filed July 21, 1926. Serial No. 123,893. 2 Claims. (Cl. 131—10.)



1. A smoker's appliance comprising in combination, a cylindrical stem having a mouth piece at one end and a cigarette holder fixedly secured at the other end, a series of connecting grooves on the peripheral surface of the stem, said grooves being connected to smoke passages through the mouth piece and to the cigarette holder, screw threads at the holder end of the stem, and a sleeve insertable over the mouthpiece and the stem and screwed on said threads.

1,665,024. DOOR, SASH, AND SCREEN. CHARLES F. GESCHICKTER, Washington, D. C. Filed Dec. 24, 1925, Serial No. 77,652. Renewed Aug. 29, 1927. 4 Claims. (Cl. 16—149.)

1. A hanging stile for doors, screens and sash, comprising a substantially U shaped stile, one side member of which is longer than the other, to function as a blind stop, and hinge engaging and sustaining hooks secured to and entirely positioned within said stile.



1,665,025. BOTTLE-HANDLING MEANS. SIDNEY C. GILBERT, Jackson, Ohio. Filed Dec. 27, 1926. Serial No. 157,354. 4 Claims. (Cl. 312—36.)

1. In a bottle handling machine, a passage to contain a plurality of bottles, said passage having an end accessible for removal of bottles and being provided at a

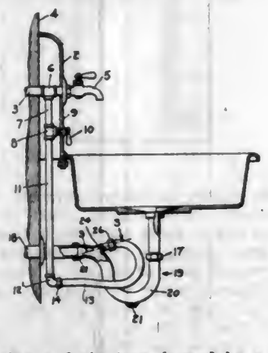
remote point with a bottle inlet, a support along which a bottle may be moved to said inlet, a slidable cover for said inlet disposed in the path along which the bottle is moved on said support, whereby said slidable cover may be forced open by pushing the bottle against it, and means connected with and actuated by said cover for automatically advancing the passage-contained bottles toward said accessible end of the passage each time said cover is opened.

1,665,026. APPARATUS FOR MAINTAINING UNIFORM OIL LEVEL. ALBERT E. GRANT, New York, N. Y. Filed June 10, 1927. Serial No. 197,834. 4 Claims. (Cl. 103—1.)

1. In combination, a main reservoir, an auxiliary reservoir, two pumps driven in unison, one of which draws oil from the main reservoir and delivers to the auxiliary reservoir and the other of which draws oil from the auxiliary reservoir and delivers to the main reservoir, the inlet to said last named pump being located at the height in said auxiliary reservoir at which the oil lever is to be maintained.

1,665,027. MOLD FOR FORMING CONCRETE PLANT PROTECTORS. JAMES H. HALEY, Jackson, Mich. Filed May 17, 1927. Serial No. 192,013. 10 Claims. (Cl. 25—124.)

1. Means for forming a concrete plant-protector in the ground comprising a mold of a shape to correspond approximately with the shape of plant-protector to be produced and having a plate to pack the top surface of the ground around the opening formed by the mold.

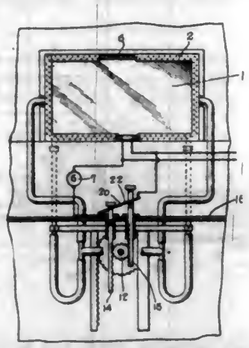


1,665,028. SUPPORT FOR FLEXIBLE DOORS OF KITCHEN CABINETS. AXEL I. S. HALVORSEN, Albany, Ind., assignor to McCormick Brothers Company, Albany, Ind., a Corporation of Indiana. Filed Jan. 25, 1927. Serial No. 163,408. 1 Claim. (Cl. 312—190.)

A support for doors composed of flexibly connected slats, comprising a metal disk having an arcuate flange extending around the greater part of its circumference and having a rib extending from one end of the flange inwardly on the disk past the other end of the flange and thence parallel with the flange for only a part of the

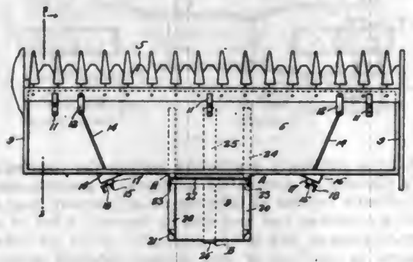
length of the latter, said rib and flange constituting guides for the door, the central part of the disk being unobstructed to permit the door to coil upon itself.

1,665,029. COMBINATION WATER FAUCET AND SINK TRAP. HENRY J. HARTNETT, Los Angeles, Calif. Filed Apr. 13, 1925. Serial No. 22,919. 1 Claim. (Cl. 182—22.)



A sink having a drain trap formed by a conduit extending downwardly from the bottom of the trap, then upwardly and then horizontally, a water supply for the sink, a valve controlled conduit leading from the water supply to the trap, said conduit being located at the point where the upwardly extending portion of the trap bends into the horizontally extending portion and being so arranged as to discharge water in the direction of out-flow from the trap substantially in the center of a horizontal portion of the trap, and a nozzle mounted in the conduit forming the trap through which the water discharges to materially increase its velocity.

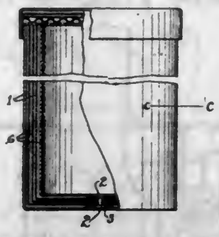
1,665,030. BUNION CORRECTOR. MARCELL HARTWIG, Los Angeles, Calif. Filed Dec. 20, 1926. Serial No. 155,940. 3 Claims. (Cl. 128—81.)



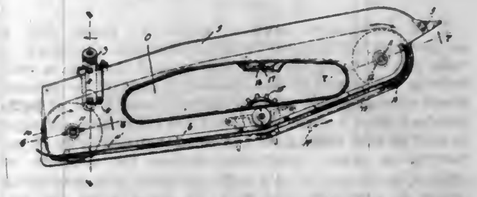
1. A bunion corrector comprising a resilient flexible structure having a toe stall at one end, a heel gripping device at the other end, said heel gripping device having flexible parts engaging around the back of the heel and with a web passing underneath the heel, said parts being joined by a strap portion fitting along the inside of the foot and conforming partly to the arch of the foot.

1,665,031. WINDOW CLEANER AND CLEARER. KARL HERMAN, Chester, Pa. Filed Sept. 20, 1927. Serial No. 220,759. 7 Claims. (Cl. 20—40.5.)

1. In combination with a window, a blast nozzle, a supply pipe communicating with said nozzle, a valve in said supply pipe, a heating element, and a control for said heating element actuated by said valve.



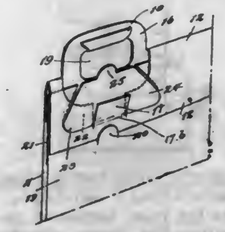
1,665,032. ATTACHMENT FOR MOWERS. ANDREW J. HOLLAND, King City, Mo. Filed Oct. 9, 1926. Serial No. 140,506. 1 Claim. (Cl. 56—207.)



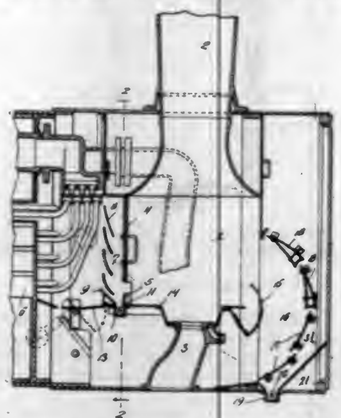
An attachment of the class described comprising a bottom having an offset forward edge to extend under a cutter bar of a mower, a plurality of substantially Z-shaped brackets attached to the bottom to extend over the cutter bar, sides rising from the bottom, a back rising from the bottom, links engaged with the cutter bar, rods engaged with the links, blocks in the back having openings through which said rods project, nuts threaded on the rods and having cranks so that they may be tightened against the block, an extension formed on the rear edge of the bottom to the rear of the back, a pair of L-shaped bars having their vertical arms secured to the rear surface of the back and their horizontal arms secured to the under surface of the bottom, said vertical arms projecting above the back and merging into downwardly and rearwardly inclined extensions, a third L-shaped bar having its horizontal portion extending along the under surface of the bottom and its extension, and having its vertical arm rising at the rear edge of the extension and being shorter than the first-mentioned vertical arm.

1,665,033. INSULATED CONTAINER. SOREN K. JENSEN, Wichita, Kans. Filed Apr. 30, 1926. Serial No. 105,828. 1 Claim. (Cl. 229—5.5.)

In an insulated container, a cylindrical container comprising smooth sheets and corrugated sheets alternately connected by adhesive substance, pointed portions extending from one edge and having a lateral bend so that the outer points thereof will meet in the center to form a bottom, a disc to engage on both sides of the points, and a pin centrally connecting the discs as binding and aligning means for the points, a smooth covering for the inside and outside of the bottoms, all as, and for the purpose described.

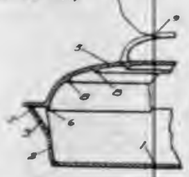


1,665,034. GATHERER. GEORGE C. JETT, Milwaukee, Wis., assignor to Runge Corn Harvester Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 10, 1923. Serial No. 679,817. 6 Claims. (Cl. 56—88.)



1. A gathering mechanism for corn harvesting machines comprising two elongated units cooperating to provide a corn passage therebetween, a supporting wheel for each unit, means for rockably connecting each unit to a harvesting machine, cooperating stalk feeding means on said units, and driving connections between said wheels and said feeding means.

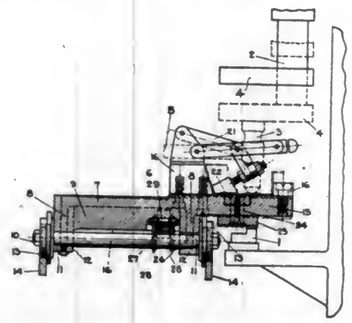
1,665,035. PARCEL BAG. CHARLES P. KLEEBAUER, Cohoes, and ROBERT M. LACKEY, Waterford, N. Y., assignors to Cohoes Envelope Co., Inc., Cohoes, N. Y., a Corporation of New York. Filed Mar. 2, 1925. Serial No. 12,519. 3 Claims. (Cl. 229—68.)



1. A bag as characterized having a front, a back, and a closure flap integrally formed with said front, said front, back and flap having reinforced coordinating sections, and means for locking said flap in service, said means embodying a dart partially severed from the reinforced section, of said back, said dart having laterally extending wings, and said flap having an aperture formed therein, said aperture having a relatively narrow recess, offset from said aperture; and means for drawing said dart into and through said recess to permit said wings overlapping the body of said flap adjacent said recess; and a guard member normally closing said recess for engaging said dart to hold the same in locking position.

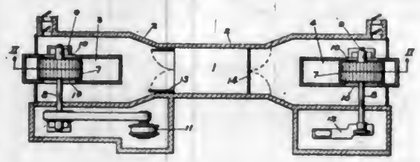
1,665,036. SPARK ARRESTER. ROBERT E. MARTIN, Sheridan, Wyo., assignor of three one-hundredths to Louis L. Livingston and one-twentieth to Edward G. Livingston, Sheridan County, Wyo. Filed Mar. 8, 1926. Serial No. 93,299. 3 Claims. (Cl. 110—122.)

2. In combination with a locomotive smoke box, a smoke stack, a chamber in communication therewith, a baffle plate defining the rear wall of said chamber, a wall defining the bottom of said chamber, a conduit for exhaust steam extending through said bottom wall, a set of baffle members spaced apart one above the other and arranged in rear of said baffle plate and separated therefrom by an intervening space, conducting means for products of combustion in rear of said baffle members, said conducting means in communication with the space below the bottom wall of the chamber, a curvilinear wall at the forward portion of the bottom wall of the chamber and forming a part of the front of the chamber and also defining the rear wall of an arcuate passage connecting the space below the bottom wall of the chamber and the forward portion of said chamber, and an arcuate set of spaced baffle members defining the forward wall of said arcuate passage.



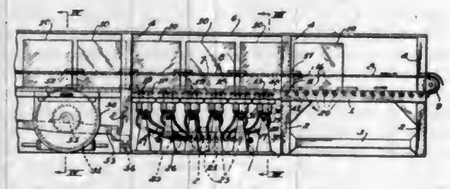
1,665,037. SKILLET. CHARLES A. MASSINO, Millcreek Township, Erie County, Pa., assignor to The Griswold Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed Dec. 21, 1925. Serial No. 76,605. 1 Claim. (Cl. 53—7.)

The combination of a skillet having a pouring lip; and an imperforate cover having a surrounding rib extending downwardly along the inner surface of the wall of the skillet and a surrounding flange extending outwardly from the rib, the flange having a contour and width relatively to the pouring lip sealing the pouring lip with the cover turned in any position circumferentially on the skillet.



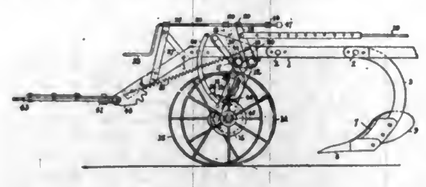
1,665,038. ELECTRIC WELDING MACHINE. JOSEPH W. MEADOWCROFT, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 7, 1925. Serial No. 73,564. 11 Claims. (Cl. 219—4.)

1. In an electric spot welding machine, the combination with the fixed and movable electrodes thereof, of a track extending transversely with respect to said electrodes, and a work-supporting carriage running on said



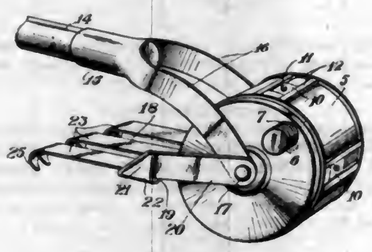
track in a path extending across and between said electrodes and adapted with the work to close the welding circuit therebetween.

1,665,039. VENTILATING APPARATUS. WILLIAM J. MONTGOMERY, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Oct. 28, 1922. Serial No. 597,669. 5 Claims. (Cl. 98—50.)



1. In a stationary ventilating system, the combination of a plurality of alternately independent operable means individually capable of inducing an air current in a vertical air passage and arranged on opposite sides of said vertical passage, and means responsive to an air current induced by any one of said current inducing means to prevent flow of air through another of the inducing means.

1,665,040. MACHINE FOR ROUNDING THE EDGES OF GLASS SHEETS. WILLIAM OWEN, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Apr. 8, 1926. Serial No. 100,652. 2 Claims. (Cl. 51—3.)



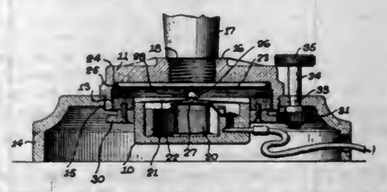
2. A machine for rounding the edges of glass sheets, comprising an abrading wheel provided with a plurality of circumferential grooves, a corresponding plurality of pairs of roughing wheels, arranged in series in staggered relation, in advance of the grooved wheel, and means for supporting and carrying a plurality of sheets of glass in parallel relation over the roughing wheels and then over the grooved abrading wheel, the members of each pair of roughing wheels having their axes of rotation on opposite sides of the line of travel of the sheet and arranged so that the cutting surface of one of each pair of roughing wheels engages one of the corners at the edge of the sheet, and the cutting surface of the other wheel of the pair engages the other corner at such edge of the sheet.

1,665,041. PLOW. MAURICE PLANESS, Alger, France. Filed May 23, 1924, Serial No. 715,468, and in France Sept. 4, 1923. 3 Claims. (Cl. 97—72.)

1. In plows having two wheel axles, the combination with the main frame, of a power lift mechanism adapted to be operated by the traction pull of the tractor and comprising a crank disk rotatably mounted on one of the wheel axles, a crank arm, a trunnion operatively connecting the said crank arm with said crank disk, a casing fixed on the said wheel axle and being closed by said crank disk, a wheel journalled on said axle, the hub of said wheel forming a bearing for said crank disk, teeth formed on said hub inside said casing, a pawl pivotally carried by said crank disk and adapted to engage said teeth, a toothed disk rotatably mounted on said axle, a spring connecting the said toothed disk and the said pawl, a spring-controlled lever cooperating with said pawl and toothed disk for coupling the said wheel with the said crank disk so as to cause the latter to rotate with the said wheel, thereby lifting the plow through the medium of the said crank arm, and means for releasing said pawl permitting the free rotation of said wheel.

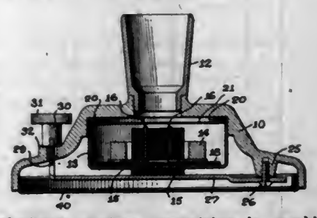
1,665,042. SEEDER. TEMPLE RICHARDS, Glace Bay, Nova Scotia, Canada. Filed May 18, 1926. Serial No. 109,910. 2 Claims. (Cl. 111—74.)

1. Seed covering devices for a seeder including the combination with the seeder axle, of a body formed of a strip of metal having its ends doubled back on itself diagonally to lie at right angles in the same plane, and then bent vertically, just within the diagonal fold, into a plane at right angles to the body; the said ends of the body being mounted on the ends of the seeder axle; and a rearwardly extending tine carried on the said body.



1,665,043. CONVERTIBLE TOY. WALTER E. STARK, New York, N. Y. Filed Dec. 30, 1926. Serial No. 157,978. 8 Claims. (Cl. 46—40.)

1. A convertible toy comprising a duplex body part, a duplex head part, and a duplex base part, the base part forming two supports on each of which the toy may be supported in an upright position, the whole outline of the toy in side elevation being formed to represent one creature when set on one support and formed to repre-

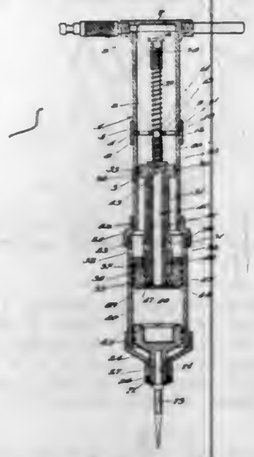


sent another and different creature when set on its other support, each support part constituting the feet of one creature and the tail of the other.

1,665,044. SOUND-REPRODUCING DEVICE AND ADJUSTING MEANS THEREFOR. SWEN R. SWENSON, South Orange, N. J., assignor to Multiple Electric Products Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 26, 1924. Serial No. 734,213. 12 Claims. (Cl. 179—116.)

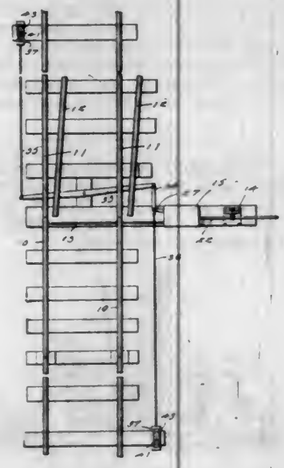
9. A loud speaker comprising in combination, a casing and cap therefor, an electromagnet and diaphragm mounted within said casing and cap and relatively movable toward and away from each other upon relative rotation of said casing and cap in opposite directions, a base to which said cap is secured and surrounding said casing, and means operable from the exterior of said base for causing relative rotation of said casing and base, said last mentioned means comprising a gear secured to said casing.

1,665,045. TELEPHONE RECEIVER. SWEN R. SWENSON, South Orange, N. J., assignor to Multiple Electric Products Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 23, 1925. Serial No. 4,139. 3 Claims. (Cl. 179—115.)



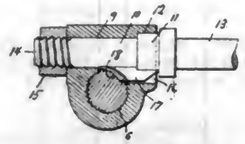
1. A telephone receiver comprising in combination, a diaphragm, means comprising an electromagnet for vibrating said diaphragm, an elastic compressible annulus in engagement with the periphery of said diaphragm on the side thereof opposite said electromagnet, and means for compressing the outer portion of said annulus to move the central portion of said diaphragm toward said electromagnet.

1,665,046. PNEUMATIC HAMMER. RALPH H. TUCKER, Los Angeles, Calif. Filed Oct. 29, 1924. Serial No. 746,555. 5 Claims. (Cl. 121—30.)



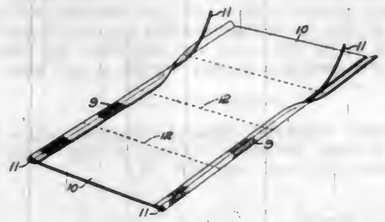
1. A pneumatic hammer comprising in combination a piston, a hammer connected thereto, a casing, a valve

in the piston to admit compressed air from the back of the piston to the front of the hammer, a valve in the hammer to conduct air from the front of the hammer to the rear of the hammer, means connected to the casing



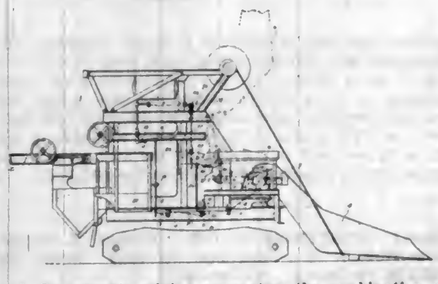
to operate the valve, ports in the casing to exhaust air from the rear of the hammer, and an anvil having a recess in the casing positioned to be struck by the hammer, the recess forming an air space adjacent the face of the hammer when the blow is struck.

1,665,047. SWITCH-OPERATING MECHANISM. WASHINGTON I. WANDS, Fairbury, Nebr. Filed Sept. 1, 1927. Serial No. 216,922. 14 Claims. (Cl. 246—410.)



1. In switch operating mechanism, movable switch points shiftable to "main line" or "siding" positions, a bar connected with said switch points and spring-pressed to maintain the switch points in "main line" position, a manually operable lever, a pivoted arm connected with said lever and having latching engagement with said bar whereby the bar may be shifted to "siding" position and maintained against return movement under the influence of its spring, means for disengaging the arm from the bar to permit movement of the bar to "main line" position and actuating mechanism for said means including a trip operable by the rolling stock passing over the right-of-way.

1,665,048. BATTERY TERMINAL. ALBERT W. WEIMER and JACOB F. SMITH, Geneseo, Ill.; said Weimer assignor to Walter Parson, Geneseo, Ill. Filed Jan. 3, 1927. Serial No. 158,718. 1 Claim. (Cl. 173—259.)

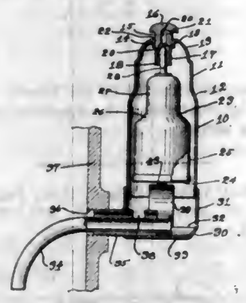


A battery terminal of the class described including a body, one portion of which is provided with a bore extending at right angles to a bore provided in the other portion thereof, a recess extending from the second bore to the first bore and communicating therewith at its inner end, a shank extendable into the second bore and having a locking element movable in the recess and adapted to bite into a battery post in the first bore, said first bore being provided with a plurality of teeth on its interior surface, said second bore being counter-sunk at one end and said shank being enlarged to be received in said counter-sunk end, the other end of the shank being provided with a thread and a nut on said threaded end to draw the shank into the second bore causing the locking element to bite into the battery post, the edge of said element being provided with a plurality of teeth adapted to bite into the post.

1,665,049. BOOKBINDING AND METHOD OF PRODUCING THE SAME. ROY C. BAKER, Quincy, Mass. Filed Oct. 30, 1922. Serial No. 597,738. 14 Claims. (Cl. 281—23.)

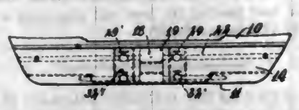
1. The art of binding books, characterized by attaching head-bands to a back-lining, and subsequently attaching the back-lining to the book signatures.

1,665,050. WATER, POWER, AND SPEED CONTROL MECHANISM FOR CONCRETE-MIXING AND SIMILAR MACHINES. CHARLES F. BALL, Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 13, 1927. Serial No. 183,409. 14 Claims. (Cl. 83—73.)



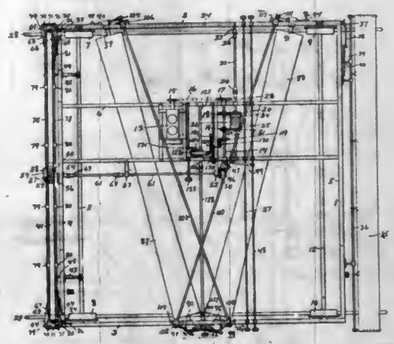
1. In concrete mixing apparatus, the combination with a motor for driving the same and a charging device therefor, of means for causing acceleration of the speed of the motor during the charging operation.

1,665,051. METHOD OF PACKAGING STAPLES OR THE LIKE AND PACKAGE PRODUCED THEREBY. THOMAS A. BRIGGS, Providence, R. I., assignor to Boston Wire Stitcher Company, Portland, Me., a Corporation of Maine. Filed Oct. 1, 1925. Serial No. 59,894. 2 Claims. (Cl. 1—56.)



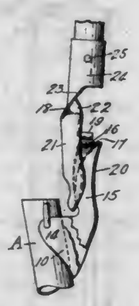
1. As a new article of commerce, a staple package constituted by a strip of relatively thin sheet-material such as paper folded along its longitudinal edges to form downwardly extending marginal portions, a series of substantially U-shaped staples straddled across the top of the strip in contiguous relation with their sides in contact, and a coating of adhesive applied over the staples to cement them in place while adapting the strip and coating to be readily broken to allow the detachment of the individual staples as they are applied to the work.

1,665,052. RADIATOR VALVE. WILLIAM H. CADWELL, New Britain, Conn. Filed Sept. 13, 1926. Serial No. 135,026. 6 Claims. (Cl. 236—63.)



1. An outlet plug for the top of a radiator air valve, said plug having a head and a tubular stem adapted to extend within said valve, and forming a seat for a valve-closing member, said plug having a laterally extending passage communicating with the outer atmosphere, and means on said plug for protecting the outer end of said passage from dust or injury.

1,665,053. PROPELLING MECHANISM FOR BOATS. CARLOS CARPIO, New York, N. Y. Filed Aug. 1, 1927. Serial No. 209,750. 2 Claims. (Cl. 115—14.)

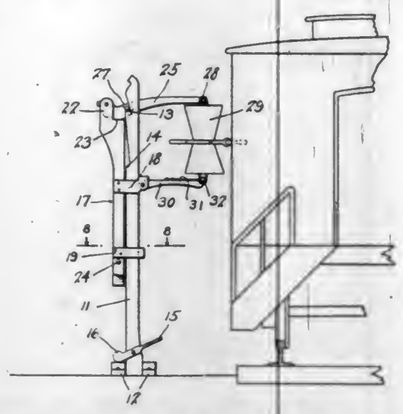


1. A boat of the class described comprising a hull having spaced apart parallel channels in the bottom thereof at both ends thereof, discharge nozzles extending through apertures in the bottom of said boat and disposed in said channels, a pump mounted in said boat, discharge pipes communicative with said nozzles and with said pump, a plurality of supply pipes extending through apertures in the ends of said boat and communicative with said pump adapted to draw in water when said pump is operated, said discharge nozzles being adapted to discharge water rearwardly for forcing said boat forwardly and valves in said discharge and supply pipes adapted to be manipulated for causing water to be discharged from diagonally opposite nozzles to rotate said boat.

1,665,054. FINISHING MACHINE. EDWARD G. CARR, Chicago, Ill., assignor to The Lakewood Engineering Company, Lakewood, Ohio, a Corporation of Ohio. Filed May 21, 1923. Serial No. 640,416. 8 Claims. (Cl. 94—95.)

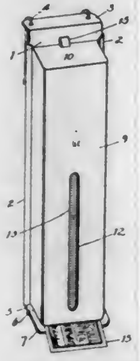
1. In a finishing machine, the combination with a frame, of a spreading templet, means to reciprocate the spreading templet longitudinally, and means for tilting the spreading templet.

1,665,055. BAIL-ATTACHING MEANS FOR LANTERNS AND THE LIKE. ROBERT A. CURRIE, Syracuse, N. Y., assignor to R. E. Dietz Company, New York, N. Y. Filed June 22, 1927. Serial No. 200,607. 7 Claims. (Cl. 220—94.)



1. The combination with an article having a bail ear provided with upwardly projecting channel-shaped portions and having inbent portions with spaced transversely extending parts at the upper end of the ear, of a bail having a metal bail end formed to seat in the channel of the companion bail ear, a stud on one of said members entering a hole in the other member, said bail end having a part formed to nest in and be held from lateral movement in the channel of the bail ear below the stud, and having an integral portion above the stud formed to enter between and engage said spaced transverse parts at the upper end of the bail ear.

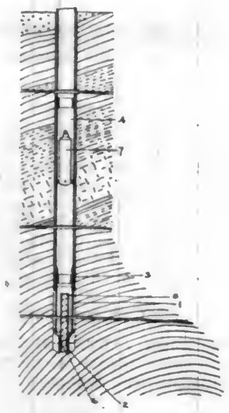
1,665,056. RAILWAY MAIL-BAG CRANE. MARION J. DAVIS, Brinkley, Ark. Filed June 6, 1927. Serial No. 196,834. 2 Claims. (Cl. 258—23.)



1. In a mail bag suspension crane of the class described, a standard, attaching feet at the bottom of the standard, an elongated guide at the upper end of the standard, upper and lower seats formed on said standard, a carrier slidable on said standard, upper and lower arms pivotally connected to said carrier, the upper arm

extending through said guide and being provided with a stud adapted to be selectively received in said seats, together with a foot pedal pivotally mounted on said

standard and cooperable with the lower end of the standard for lifting the carrier to dispose the stud in said lower seat.



1,665,057. TICKETS HOLDER. LUCIEN GENEST, Montreal, Quebec, Canada. Filed Dec. 9, 1926. Serial No. 153,656. 1 Claim. (Cl. 312—60.)

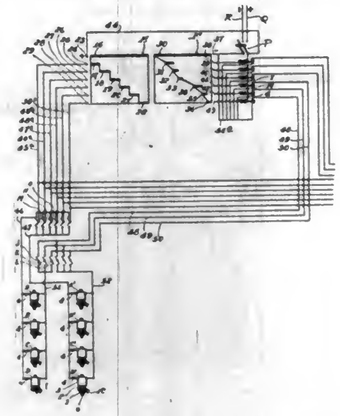
A dispensing ticket holder comprising a base plate having a pair of longitudinal grooves, a casing adapted to contain a plurality of folded tickets and having a pair of flanges slidable in said grooves, a second plate fixed to said base plate and projecting perpendicularly therefrom at the bottom thereof to limit the sliding movement of said casing in one direction, a spring-pressed detent adapted to engage said casing to limit its sliding movement in the opposite direction, and a spring-pressed closing plate hinged to said second plate and adapted to close the lower end of said casing.

1,665,058. MEANS FOR OBTAINING DATA IN EARTH BORES. G. DALLAS HANNA, San Francisco, Calif., assignor to Associated Oil Company, San Francisco, Calif., a Corporation of California. Filed June 14, 1926. Serial No. 115,736. 11 Claims. (Cl. 33—205.)

1. An apparatus for the described purpose comprising a body adapted to be lowered into a bore hole; direction indicating means carried thereby; a member associated with said body and adapted for movement relative thereto and independent of the movement of said indicating

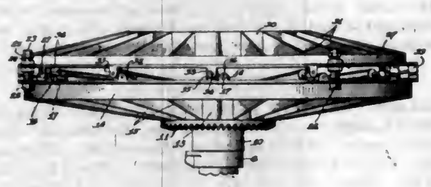
means; and means actuated by the inertia of said movable member for controlling the operation of said direction indicating means.

1,665,059. SNAP LINK. ORIS C. HILL, Pawtucket, R. I. Filed Nov. 29, 1927. Serial No. 236,509. 3 Claims. (Cl. 24—236.)



1. A link comprising a bar having one end portion relatively reduced in thickness and increased in width whereby shoulders are formed on its edges and across one side, the ends of the bar curving over the same to form hooks of different radii with the smaller hook terminating over the shoulder on the side of the bar, and a spring tongue anchored at one end on the outer side of the smaller hook and having its free end engaging against the inner side of the larger hook.

1,665,060. AUTOMATIC CONTROL MEANS FOR ELECTROMAGNETIC OPERATING DEVICES. HALBERT K. HITCHCOCK, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Feb. 5, 1927. Serial No. 166,156. 11 Claims. (Cl. 171—91.)

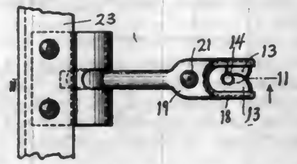


1. The combination with a plurality of electro-magnetic windings, which are to be energized and a source of electric current, of a rotating drum provided with a series of separate contact strips each extending a part of the way only around the drum, brushes engaging the strips, a plurality of circuits from said source of current each one of which passes through one of said windings and one of said strips and its brush, a manually operable cut off switch in each of said circuits, a second rotating drum provided with a series of separate contact strips of different lengths, brushes engaging said strips, and means

whereby any one of said contact strips on the second drum may be brought into any one or more of said circuits, the movements of the drums being timed so that

said circuits are maintained through the brushes, and strips of the first drum, while the brushes of the second drum are in contact with the strips on such drum.

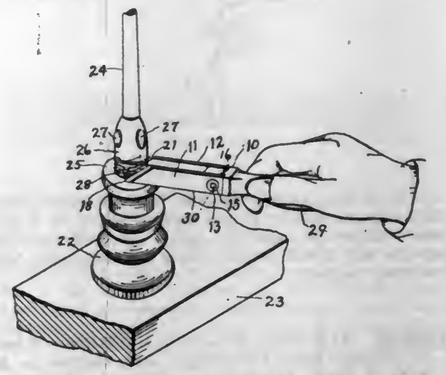
1,665,061. ADJUSTABLE SORTING MACHINE. RUSSELL V. JUDSON, Detroit, Mich. Filed Sept. 27, 1926. Serial No. 138,081. 4 Claims. (Cl. 209—108.)



1. In a centrifugal sorting machine, a lower roll carrier, an upper roll carrier, a plurality of driven rolls in each carrier, the rolls of each carrier being disposed approximate to the rolls of the other carrier to form passes for sorting, and means for adjusting one carrier relative to the other.

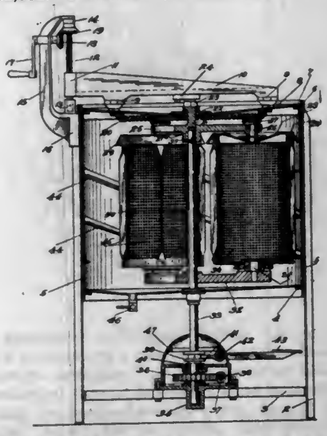
1,665,062. MOLD FOR MAKING METAL PATTERNS BY ELECTRODEPOSITION. ARTHUR K. LAUKEL, Detroit, Mich. Filed Oct. 15, 1926. Serial No. 141,886. 1 Claim. (Cl. 204—6.)

As a new article of manufacture, a mold for receiving electrodeposited metal in an acid electrolyte, said mold being constructed of substantially carbonate-free plaster of Paris.



1,665,063. THREAD GUIDE FOR SPINNING AND TWISTING MACHINES. GEORGE H. MAGRATH, Whitinsville, Mass., assignor to Whitin Machine Works, Whitinsville, Mass. Filed Apr. 1, 1927. Serial No. 180,118. 2 Claims. (Cl. 242—157.)

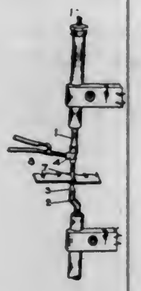
1. A thread guide comprising a pair of separable duplicate sections, each section having a rear base portion, a hook shaped front portion forming a guide eye between said portions with a slit opening into one side of said eye, a flange projecting at a right angle from said hook shaped portion, the inner side of said flange being bevelled towards the point of the hook, said sections formed into a block by combining them together in a reversed relation with each other with the base and eye on one sec-



tion registering respectively with those of the other, and means for holding the sections together in a block formation.

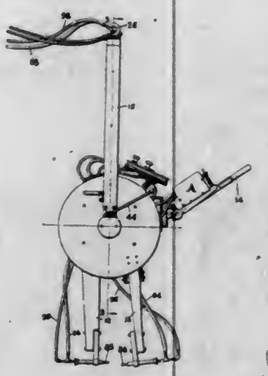
1,665,064. TOOL FOR REMOVING WASTE FROM SPINDLES. GEORGE H. MAGRATH, Whitinsville, Mass., assignor to Whitin Machine Works, Whitinsville, Mass. Filed June 17, 1927. Serial No. 199,501. 2 Claims. (Cl. 28—19.)

1. A tool for removing waste from spindles comprising a head, two parallel blades of equal length a predetermined distance apart fixed to the head, an inclined bevelled cutting edge on the front end of each blade and a handle attached to the head for manually actuating the tool.



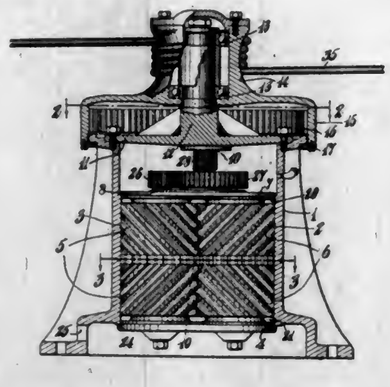
1,665,065. CENTRIFUGAL MACHINE. WILLIAM W. MALLOY, San Pedro, Calif. Filed Oct. 18, 1926. Serial No. 142,352. 8 Claims. (Cl. 210—67.)

1. In a centrifugal machine, a set of upper and lower spiders and means for driving the spiders, a set of ver-



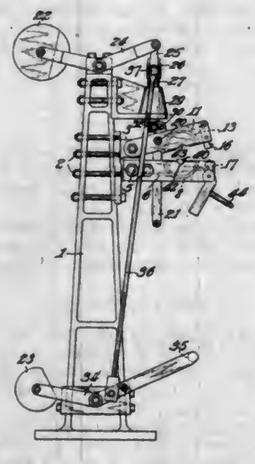
tical foraminous receivers supported by and between the spiders for rotation in an orbit, the upper spider having a set of covers for the receivers, and means on the receivers for causing a reactionary rotation of the receivers.

1,665,066. ELECTRIC WELDING MACHINE. JOSEPH W. MEADOWCROFT, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 24, 1925. Serial No. 71,039. 5 Claims. (Cl. 219—4.)



1. In a spot welding machine, the combination with the electrodes thereof having welding points, of a separate auxiliary electrode telescoping with and removably fitted to one of said welding points and cooperating with the other electrode.

1,665,067. ELECTRIC WELDING MACHINE. JOSEPH W. MEADOWCROFT, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 7, 1927. Serial No. 173,329. 7 Claims. (Cl. 219—4.)



1. An electric welding apparatus comprising a pair of interconnected plate members, a transformer supported between said members, a pair of relatively movable electrode supporting arms connected to said transformer and extending beyond the peripheral edges of said plates, means for rotatably supporting said plates, transformer and arms as a unit, and means for imparting a rotative movement to said unit.

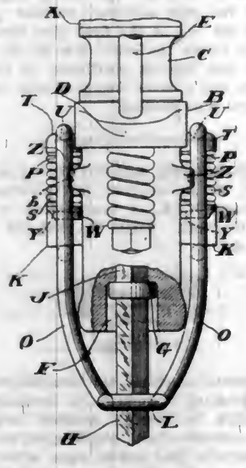
1,665,068. HAULING MECHANISM. ROBERT C. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Jan. 14, 1922. Serial No. 529,104. 6 Claims. (Cl. 254—150.)

1. A power driven capstan comprising a base casting housing a motor and provided with an upwardly extending stem and a coaxial laterally projecting annular flange, the interior of said casting comprising a motor compartment and a reduction gearing compartment, a winding drum journaled wholly on said stem and provided with an enlarged base which terminates in a cylindrical portion coaxial with said annular flange and carrying an internal gear, a flange member carried by said cylindrical portion and overlying the outer lower portion of said flange, whereby an enclosed chamber is provided, and operative connections between the motor and the drum including a gear journaled on said casting.

1,665,069. MACHINE FOR TWISTING THE EYES OF WIRE REELS. GEORGE A. PAFF, Portsmouth, Ohio, assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of Delaware. Filed Sept. 24, 1926. Serial No. 137,478. 7 Claims. (Cl. 140—71.)

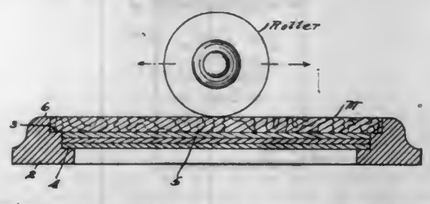
1. In a machine for twisting the eyes of wire reels, a pair of relatively movable jaws adapted for receiving

therebetween an eye portion of a reel, a pair of complemental gear segments carried by and rotatable in said jaws, and a pinion rotatably mounted on one of said jaws and operable for rotating said segments.



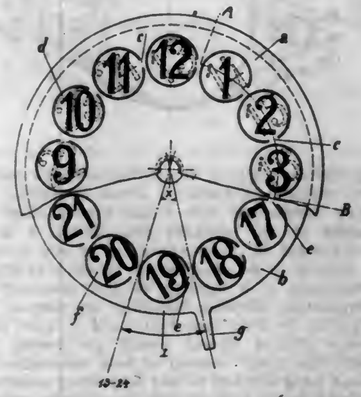
1,665,070. TIRE BEAD. ROBERT C. PIERCE, Belleville, N. J., assignor, by mesne assignments, to American Chain Company, Inc., a Corporation of New York. Filed Feb. 19, 1923. Serial No. 619,838. 22 Claims. (Cl. 245—1.5.)

4. A reinforcement for tire beads, comprising an annulus of triangular form in cross-section constructed of convolutions of woven wire tape.



15. As an article of manufacture, a woven inextensible tape for use in reinforcing tire beads and comprising a series of lengths of different widths decreasing progressively from the base of the bead.

1,665,071. STEEL RETAINER. WILLIAM PRELLWITZ, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Nov. 12, 1926. Serial No. 147,951. 2 Claims. (Cl. 121—32.)



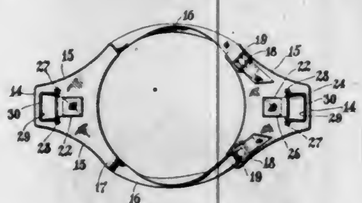
1. A drill steel retainer comprising a front head having trunnions, said trunnions having inwardly tapering bearing surfaces, bearings on said trunnions, said bearings having inwardly tapering bearing surfaces cooperating with said inwardly tapering bearing surfaces on said trunnions and having spring centering tips, springs centered on said bearings, spring seats having centering tips carried by said springs, a retainer in the form of looped resilient member embracing the drill steel, the free ends of the arms of said retainer being bent to form elongated loops embracing the trunnions and spring seats at each side of the front head, whereby the bearings on said trunnions tend to press inwardly towards the sides of the front head while the arms of the retainer swing free and clear of the front end of the front head, and retaining lugs at each side of the front head cooperating with the retainer rearwardly of the trunnions.

1,665,072. MANUFACTURE OF IMITATION-MARBLE PANELS. WILLIAM J. SCHENK, Home Gardens, Calif. Filed Mar. 9, 1927. Serial No. 174,067. 1 Claim. (Cl. 18—48.8.)

The herein described method of manufacturing a marble-like panel which consists of making a magnesite cement, building a flat body of this in layers and applying a thin sprinkling of mineral coloring powder as each layer is formed, rolling the plastic body to give a spiral form to the layers, dividing the roll cross-wise into slices, laying the slices flat upon a framed panel back, compacting the slices to approximately the plane of the frame, and finally smoothing off the top of the filling flush with the frame edge and letting harden in the frame.

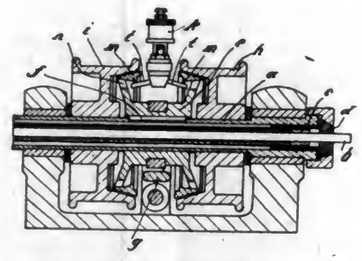
1,665,073. CLOCK AND WATCH WITH TWENTY-FOUR HOUR FIGURE INDICATION. EWALD SCHWANKE, Waldshut, Germany. Filed Feb. 21, 1927, Serial No. 170,017, and in Germany Feb. 22, 1926. 3 Claims. (Cl. 58—128.)

3. Clocks and watches with twenty-four hour figure indications, comprising a front stationary dial, partly stamped out portions bent inwards forming simultaneously windows in which the hours from 1 to 12 appear,



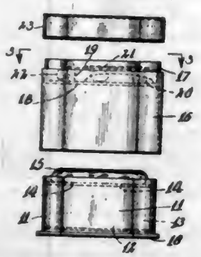
a rear displaceable dial with partly stamped out portions forming outwardly bent flaps carrying the hour indications from 13 to 24, means for displacing said rear dial in such a manner that the figure-indications of said rear dial appear in the openings of the front dial, covering the hours from 1 to 12.

1,665,074. COMBINATION ADVERTISING HANDKERCHIEF AND RADIOSCOPE. JOSEPH SHEPARD, Schenectady, N. Y. Filed June 29, 1927. Serial No. 202,308. 2 Claims. (Cl. 24—3.)



1. In a device of the class described, the combination with a handkerchief member, of a plurality of spaced tubular members extending along both sides of the lower end of the handkerchief member, a folded card having the bend at the bottom and the free ends at the top, spaced tubular members extending along each top end of the card, and aligned with the first mentioned tubular members, and removable pins engaged thru the said tubular members.

1,665,075. SANITARY BELT AND BUCKLE. OTTILIE CHARLOTTE STAHL, New York, N. Y. Filed Mar. 6, 1926. Serial No. 92,816. 1 Claim. (Cl. 128—291.)

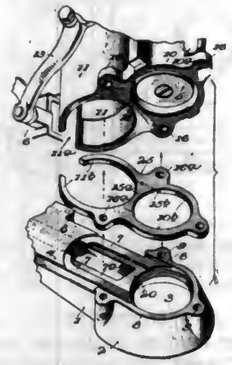


In a sanitary support, supporting members comprising a fabric material, a fastening device comprising a substantially rectangular wire frame having loops at the extremities of the rearward end thereof, a U-shaped frame journaled on the rearward end of said rectangular frame adapted to be urged in the direction of the latter by attachment of a bandage to said U-shaped frame, said supporting members including an element having a portion of its body immovably held in fixed position, the lower portion thereof having an opening therein to receive the upper crossbar of said rectangular frame, said loops being stitched to said supporting members, said rectangular frame and said U-shaped frame being substantially square at their lower ends, the squared lower portions cooperating with the upper stitched loops to prevent bunching of a bandage after adjustment on the support.

1,665,076. FRICTION DISK CLUTCH. KARL TESSKY, Esslingen-on-the-Neckar, Germany. Filed Nov. 30, 1926, Serial No. 151,718, and in Germany Dec. 17, 1925. 2 Claims. (Cl. 192—113.)

1. A friction disk clutch comprising a conical friction disk having an opening intermediate its centre and its conical circumferential surface and stationary means near said opening for supplying lubricant into said opening.

1,665,077. CONTAINER FOR COSMETICS. ANNA WILKS and EDWARD SCHEIER, New York, N. Y. Filed July 27, 1927. Serial No. 208,677. 5 Claims. (Cl. 132—83.)



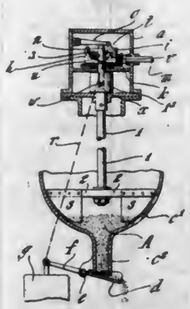
1. An article of the class described comprising a base, vertical sides secured thereto, a powder package housed by the vertical sides, a puff on the package, a pipe member, the said vertical sides being engaged within the bottom of the pipe member, another pipe member secured within the top of the first pipe member, a horizontal partition across the lower side of the second pipe member, rouge and lipstick positioned on the said horizontal partition, and a cover engaging over the top of the second mentioned pipe member.

1,665,078. TELEPHONE RECEIVER. JAMES M. WILSON, Newark, N. J., assignor to Amplitone Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 18, 1922. Serial No. 588,808. 16 Claims. (Cl. 179—116.)

1. In a telephone receiver, the combination of a normally convex primary diaphragm, a normally plane secondary diaphragm, a spacing member located at and separating the centers of said diaphragms, a receiver cup, a cover cap therefor, and means upon said cup and cap for pressing the circumferences of said diaphragms toward each other, whereby the convexity of said primary diaphragm is reduced and said secondary diaphragm is made convex.

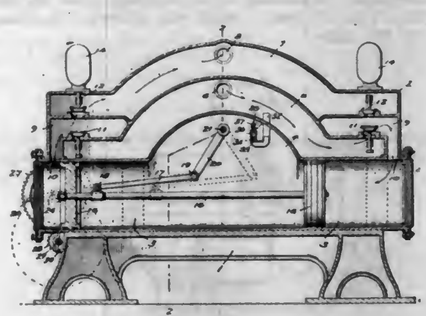
1,665,079. CAPPING MACHINE. WILBUR L. WRIGHT, Fulton, and JOHN L. DOLPHIN, Syracuse, N. Y., assignors to Oswego Falls Corporation, Fulton, N. Y., a Corporation of New York. Filed May 18, 1927. Serial No. 192,359. 4 Claims. (Cl. 226—92.)

4. A flat plate for insertion and clamping between the bottom and top members of a capping machine in converting the machine to use handle caps, said plate having an opening to register with the vertical throat of the bottom member and an opening to register with the cap magazine, and a portion to form spaced cap stops immediately below the front portion of the bottom edge of the magazine with an intermediate free passage for the top projections of handle caps moving forward below said plate.



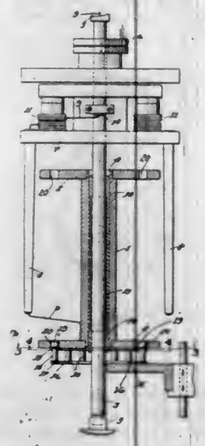
1,665,080. INDIVIDUAL TEA BAG. WILLIAM T. ABBOTT, Cambridge, Mass. Filed Jan. 14, 1928. Serial No. 246,845. 6 Claims. (Cl. 53—3.)

1. A stirring tea bag comprising a bag adapted to hold an individual portion of tea, and a normally rigid, bendable stirring shank secured at one end to the mouth of the bag.



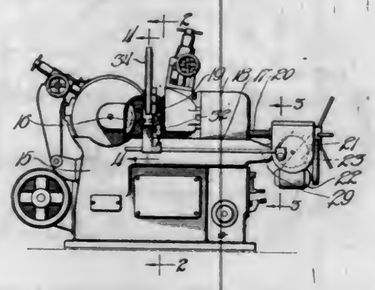
1,665,081. VALVE MECHANISM FOR CONTROLLING THE DISCHARGE OF POWDERED MATERIAL AND SAND FROM TANKS OR OTHER RECEPTACLES. LEONARD ANDREWS, Westminster, England. Filed July 23, 1927, Serial No. 207,078, and in Great Britain July 30, 1926. 3 Claims. (Cl. 210—54.)

1. For automatically controlling the discharge of powdered material from the outlet at the lower portion of a tank, mechanism comprising a loaded valve adapted to close the discharge outlet of the tank, a rotary device arranged to rotate in the lower portion of the tank and to be retarded to a greater or less extent by solid material therein, a motor driven cam device and adjustable means arranged to drive the rotary device and to be acted upon by the loaded valve and by the cam device, the arrangement being such that when the mechanism is in use and little or no solid material has collected in



the lower portion of the tank, the valve is held by its load in its closed position but when material collects in the lower portion of the tank, the resistance offered thereby to movement of the rotary device and of the adjusting means, causes the cam device to move the adjusting means in a direction to open the valve, against the action of its load, to a greater or less extent and depending upon the amount of solid material collected in the lower portion of the tank.

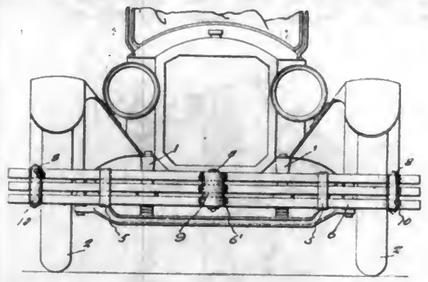
1,665,082. SUCTION FORCE PUMP. ARNOLD BOHNENBLUST, Riley, Kans. Filed Nov. 14, 1927. Serial No. 233,214. 1 Claim. (Cl. 103—175.)



A pump comprising spaced cylinders and a compartment connecting the cylinders, an inlet manifold extended along the compartment and the cylinders, an outlet manifold extended along the inlet manifold, chambers communicating with the cylinders and with the inlet and outlet manifolds, check valves controlling the passage of liquid from the inlet manifold to the chambers and closing toward the inlet manifold, check valves controlling the passage of liquid from the chambers to the outlet manifold and closing toward the chambers, connected elements comprising pistons slidable in the cylinders, means for joining the pistons together, mechanism assembled with one of said connected elements for reciprocating the pistons, a priming conduit establishing communication between the compartment and the inlet manifold, and a float-operated valve controlling the flow through the conduit nad responsive to changes of liquid level in the compartment.

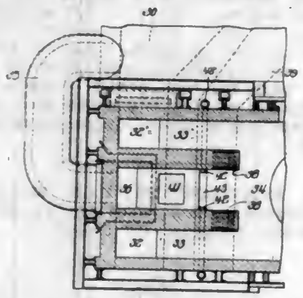
1,665,083. SPOOL SUPPORT FOR TWISTING MACHINES AND THE LIKE. GEORGE L. BROWNELL, Worcester, Mass. Filed Mar. 29, 1927. Serial No. 179,367. 3 Claims. (Cl. 242—118.)

1. As a new article of manufacture, a wooden spool comprising a cylindrical barrel and heads, one head having attached thereto heat dissipating means including metal disks with staggered spacing members therebetween.



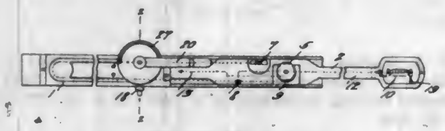
1,665,084. GRINDING MACHINERY. JOHN E. CASTER, Cincinnati, Ohio, assignor to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed July 27, 1927. Serial No. 208,869. 18 Claims. (Cl. 51—103.)

1. A machine of the character described, including opposed grinding and regulating wheels and an intermediate work rest, said wheels having contoured work engaging portions disposed in opposition one to the other, advanceable means for shifting the work along the throat between said wheels, and means for intermittently imparting an advancing movement thereto.



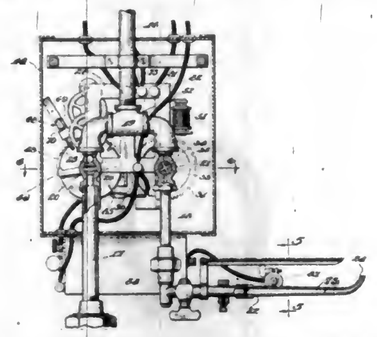
1,665,085. ROLLER GUARD FOR AUTOMOBILES. DENNIS J. CUNNINGHAM, Washington, D. C. Filed Aug. 27, 1927. Serial No. 215,873. 2 Claims. (Cl. 293—55.)

1. A bumper for vehicles comprising flat bars which are substantially V-shaped in plan and which have inwardly rounded depressed portions at the center and adjacent to the ends thereof, substantially U-shaped brackets fixedly secured to the bars of the bumper, rollers having shafts journaled in the parallel arms of



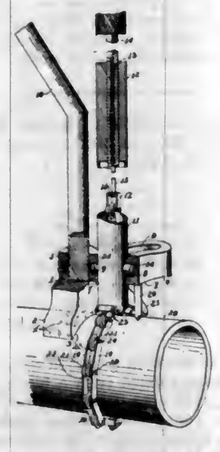
the brackets and arranged in the respective depressions and partly projecting therethrough, and a yieldable support for the bumper.

1,665,086. OPEN-HEARTH FURNACE. GEORGE L. DANFORTH, Jr., Chicago, Ill., assignor, by mesne assignments to Open Hearth Combustion Company, Chicago, Ill., a Corporation of Delaware. Filed July 13, 1922. Serial No. 574,727. 3 Claims. (Cl. 263—15.)



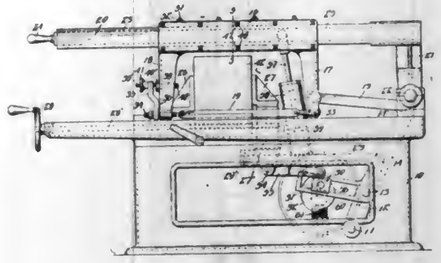
1. In an open hearth furnace, regenerative chambers, slag pockets, passages connecting the regenerative chambers and slag pockets, passages connecting the slag pockets and furnace ports, and vertically operating dampers adapted to close off the passages connecting certain of the regenerators and the slag pockets, and passages for connecting said certain regenerators to certain of the furnace ports independently of the slag pockets.

1,665,087. DIRECTION SIGNAL. ADOLF FEHRMANN, Hamburg, Germany. Filed July 5, 1927, Serial No. 203,580, and in Germany Oct. 1, 1926. 1 Claim. (Cl. 116—50.)



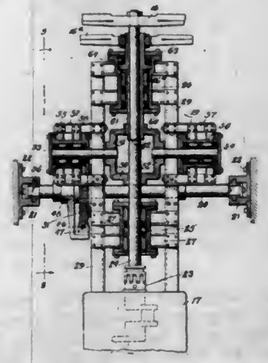
A direction signal, including a hollow rectangular main casing, a hollow signal arm slidable in said casing, a drum casing offset relative to the main casing, one wall of the drum casing forming part of th main casing, a cord drum mounted in the drum casing, guide rollers mounted in the main casing, a cord terminally secured to the signal arm and passing over said guide rollers and over said drum to permit operation of the signal arm in either direction in the main casing, and illuminating means carried by each end of the signal arm.

1,665,088. AUTOMATIC LIGHTER FOR GAS WATER HEATERS. HARVEY A. L. FOWLER, Valley Stream, N. Y. Filed June 24, 1927. Serial No. 201,254. 6 Claims. (Cl. 158—115.)



6. In a lighter for gas appliances, a gas control valve having a rotatable plug, a shaft extending from said plug, a disk mounted on said shaft and having notches in its peripheral edge, a movable member seated in one of said notches, an electric motor operatively connected to said shaft by a gear train, said motor being arranged in an electric circuit with a source of electric energy, a motor control switch normally open and disposed in the path of movement of said movable member, and manually operated means for lifting said member out of its engaging notch to actuate said switch to close said motor circuit whereby said motor will impart rotation to said plug to move the same to open and closed position, said member automatically dropping into the next notch in said disk during partial rotation thereof to disengage said switch, an electric spark device, a switch arm mounted on said shaft, a contact disposed in the path of rotation of said contact, said switch arm, contact and spark device being arranged in an electric circuit with a source of electric energy, whereby said arm may engage said contact to close said circuit to actuate said spark device during rotation of said shaft.

1,665,089. PIPE CUTTER. JOHN O. GAFFNEY, Arroyo Grande, Calif. Filed Aug. 26, 1926. Serial No. 131,649. 7 Claims. (Cl. 81—191.)

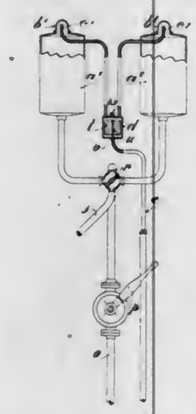


1. A pipe cutter comprising a handle having a tubular end portion, a chain connected to the tubular end portion at one end and having its other end inserted in said tubular end portion, an adjusting device inserted between said handle and the last mentioned end of the chain, an annular cutter element mounted in each link of the chain, and a guide member mounted on the pipe to engage the chain and provided with a central groove to permit passage of the cutting elements of the chain.

1,665,090. HACK SAW. DEWEY E. GOMMEL, Indianapolis, Ind., assignor to E. C. Atkins & Company, Indianapolis, Ind., a Corporation of Indiana. Filed Sept. 11, 1924. Serial No. 737,144. 5 Claims. (Cl. 29—73.)

1. In a power hack saw structure the combination of a table, a saw guide pivoted on one end of the table, a saw slidably mounted upon said guide, a lever pivotally mounted underneath the table and having its upper end extending above the table and formed with an angular slotted arm beneath the table, a sliding block mounted in said slot of said arm, a link connecting the upper end of said lever with the saw, a power shaft mounted beneath the table adjacent the lever, means connecting said power shaft with the sliding block in the slotted angular arm of said lever, a work-holding vise mounted on said table one jaw of which is fixed and the other of which is slidable, a connection between the lower end of said slidable jaw and the power shaft for operating the same, and means connecting said slidable jaw with the saw frame for controlling the length of its stroke as said movable jaw is adjusted, all substantially as set forth.

1,665,091. FLYING MACHINE. WILLIAM H. GOYNE, Tillamook, Oreg. Filed May 5, 1927. Serial No. 188,956. 13 Claims. (Cl. 244—15.)

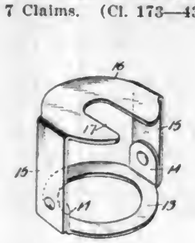


12. In a flying machine, a body, a horizontal shaft longitudinally adjustable on the body, a frame rotatably adjustable on the shaft, and a pair of lifting propellers carried by the frame.

1,665,092. WHEEL RIM. JASPER LEOPOLD GREENWOOD, North East Harbor, Nova Scotia, Canada. Filed Sept. 8, 1924, Serial No. 736,555. Renewed Jan. 10, 1928. 3 Claims. (Cl. 301—63.)

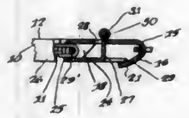
2. In a wheel structure, a wheel disk terminating in a laterally extending peripheral flange slightly diverging toward its free end, a radially projecting tire retaining flange joined to said peripheral flange at its free end, the junction of said flanges defining a re-entrant angle, a second wheel disk fitted in said re-entrant angle and bolts extending between the wheel disks.

1,665,093. LIQUID-DISTRIBUTING APPARATUS. FRANZ GOUVION, Brussels, Belgium. Filed Jan. 24, 1923, Serial No. 614,706, and in Belgium Jan. 24, 1922. 1 Claim. (Cl. 221—100.)



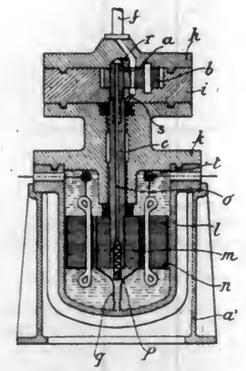
Liquid measuring and distributing apparatus comprising a pair of measuring receptacles, means to supply them alternately with liquid, an overflow duct leading from each of said receptacles, an excess liquid receiving receptacle into which said ducts, discharge, said ducts also communicating with each other by reason of their connection with the excess liquid receiving receptacle so that air is caused to pass between said measuring receptacles while they are alternately filled and emptied, and a duct for the discharge of liquid from said excess liquir receiving receptacle, said excess liquid receiving receptacle having an automatically acting air inlet valve and also having a float operated valve to control the discharge of liquid therefrom.

1,665,094. TIRE BOOT. CLAUDE HENRY, Flint, Mich. Filed Oct. 3, 1927. Serial No. 223,759. 5 Claims. (Cl. 152—24.)



1. A tire boot of the character described comprising an elastic body, a chain vulcanized in said body, and anchor plates adapted to receive the bead of a tire casing and secured to said chains.

1,665,095. ELECTRICAL PLUG LOCK. JESSE B. HENRY, Connersville, Ind. Filed Jan. 5, 1927. Serial No. 159,182. 7 Claims. (Cl. 173—43.)



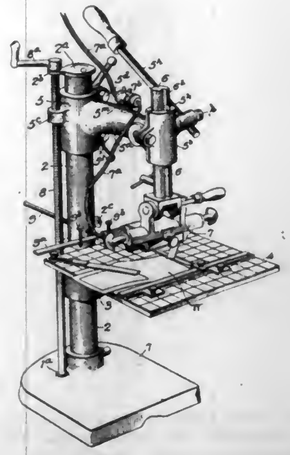
1. The combination with an electrical connection formed of separable sections of a ring member arranged to be mounted on one of said sections, and a disk member pivoted on the first member and swingable into and out of position to prevent accidental detachament of the other section, substantially as set forth.

1,665,096. SNAP FASTENER. ROBERT H. HOLMES, Chicago, Ill. Filed Mar. 22, 1927. Serial No. 177,375. 3 Claims. (Cl. 24—233.)

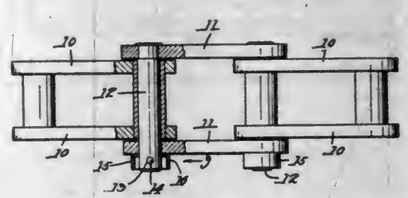
1. The combination with a link, of a snap fastener, said snap fastener being formed from a blank having one end portion turned back upon itself to provide a keeper lip and an opposite end portion turned back upon itself to provide a latch finger adapted for releasable engagement with the keeper lip, said blank having laterally extending portions bent substantially at right angles with respect to the body of the blank and said lateral portions being perforated, a pin positioned in said perforations and engaging said link for connecting said link to said snap fastener, and a finger struck from said opposite end portion and projecting through an opening formed in the body of the blank, said finger facilitating moving said latch finger from yieldable engagement with said keeper lip.

1,665,097. CIRCULATION PUMP OF THE ROTARY TYPE. ALBERT HUGUENIN, Paris, France. Filed Jan. 31, 1927, Serial No. 164,911, and in France Feb. 19, 1926. 2 Claims. (Cl. 230—139.)

1. In a rotary gas circulation pump, the combination of coacting gear wheels, a variable speed induction motor of the squirrel-cage type, means for connecting said gear wheels to said motor, and an absolutely tight casing in which the whole is enclosed, said casing being adapted to withstand the delivery pressure of the pump.



1,665,098. ANTISKID CHAIN FOR AUTOMOBILES. EARL B. JOHNSON, Hartsdale, N. Y. Filed Mar. 11, 1927. Serial No. 174,579. 1 Claim. (Cl. 24—237.)



A self adjusting fastening element comprising a single length of yieldable material bent approximately midway between the ends to provide an eye, the free ends of said material converging towards each other and being bent upon themselves to provide a hook, one of the free ends being longer than the other to extend over and inward of the same and bent at an angle with respect to the other to provide an inwardly extending yieldable finger for normally restricting the entrance to the mouth of said hook.

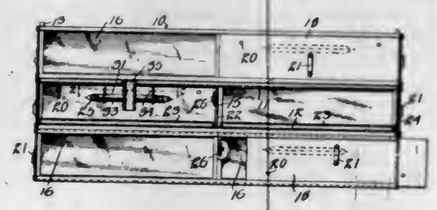
1,665,099. WORK HOLDER FOR PRINTING AND EMBOSSING MACHINES. SAMUEL F. KIESLING and OLAF HALVORSEN, Chicago, Ill. Filed Aug. 2, 1926. Serial No. 126,474. 11 Claims. (Cl. 101—407.)

1. For a machine having a movable die, a work holder comprising a gauge board adapted to be mounted in the path of said die, said board having evenly spaced co-orthogonal lines marked thereon, the lines being graduated from the center of the board to each side thereof, and the point of intersection of the "zero" lines being disposed in alignment with the axis of the plunger; and a plurality of adjustable spring clamps on the gauge board.

1,665,100. PIN-RETAINING MEANS FOR CHAINS. HERMANN KLAUCKE, Worcester, Mass., assignor to Baldwin Chain & Mfg. Co., Auburn, Mass., a Corporation of Massachusetts. Filed Dec. 13, 1926. Serial No. 154,373. 2 Claims. (Cl. 85—7.)

1. As an article of manufacture, a holding device for a cross pin of a link chain, comprising a cup-shaped member having a flat uninterrupted bottom adapted to engage the surface of one of the links and having a perforation through the bottom for the cross pin on which it is freely rotatable, and a holding pin extending through the cross pin and located in the cup-shaped member at a distance below the edge thereof, the cup-shaped member being centered on the cross pin.

1,665,101. ELEVATOR. CHARLES F. LANE, San Jose, Calif. Filed Dec. 20, 1926. Serial No. 155,922. 3 Claims. (Cl. 198—141.)

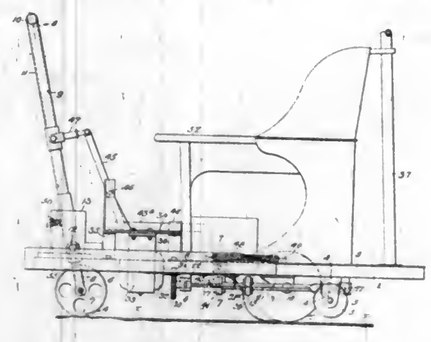


1. A structure of the character described, comprising a carrier element and means for rotating the same through a given path of travel, a plurality of spaced carriers open on their outer sides and mounted on said carrier element on their inner sides, and means for emptying said

carriers at a given point in their path of travel, said means comprising a means for engaging the discharging side of the said carriers whereby to cause the same to

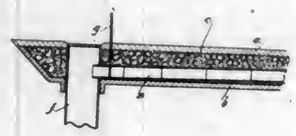
lag behind the opposite closed side, and means for releasing the carriers from said engagement, and means for returning the carriers to their normal positions.

1,665,102. STORAGE BROODER. FRED W. LORD, Tipton, Ind., assignor to The Oakes Manufacturing Company, Tipton, Ind., a Corporation of Indiana. Filed Feb. 28, 1927. Serial No. 171,652. 5 Claims. (Cl. 119—33.)



1. A brooder comprising a plurality of superposed tiers, each tier being provided with a central transverse partition forming a pair of compartments, doors slidably mounted at the outer sides of each compartment and a heating element disposed in one compartment of each tier, said heating elements being disposed alternately at opposite ends of the brooder, substantially as set forth.

1,665,103. VEHICLE CONTROLLING APPARATUS. JOSEPH LUSSE, Philadelphia, Pa., assignor to the Firm of Lusse Brothers, Philadelphia, Pa., consisting of Joseph Lusse and Robert Lusse. Filed Oct. 3, 1922. Serial No. 592,075. 12 Claims. (Cl. 180—78.)



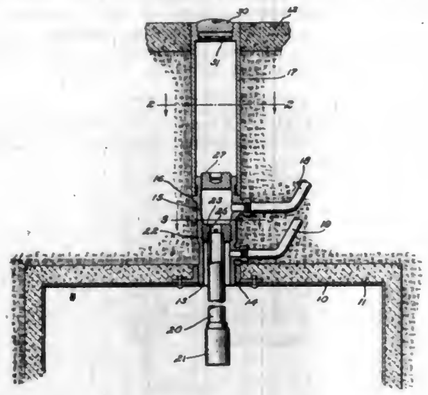
1. The combination of a car having a seat; steering means for said car including a rotary post mounted to swing toward and from the seat and adapted to provide a mounting for a steering wheel; driving mechanism including a traction wheel and a co-operating friction element, said element being movable relative to said wheel to vary the driving effect of the former; and controlling means for said friction element adapted to cause said relative movement upon the swinging of said post.

12. In a car, the combination with bodily movable steering means; of a driving wheel; a motor; a revoluble friction element driven by said motor and movable into and out of engagement with said driving wheel; and means for so operatively associating said steering

means and said friction element that a bodily movement of the former causes a movement of the latter into and out of engagement with said driving wheel.

1,665,104. DRAINAGE SYSTEM FOR PLAYING GROUNDS. ERNEST EDUARD MARTIENSSEN, Hamburg, Germany. Filed Apr. 12, 1927, Serial No. 183,220, and in Germany Dec. 29, 1925. 2 Claims. (Cl. 61—10.)

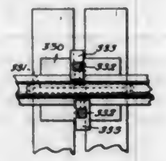
1. A conditioning system for hard tennis courts comprising a lowermost impermeable layer, the playing surface, and an intermediate layer in contact with said surface and said impermeable layer, said intermediate layer being constructed of such material as to take up and retain water, draining through the surface layer, and automatically to maintain a rate of moisture exchange with the surface layer when the latter becomes drier than the adjacent part of the intermediate layer, and means varying the level of water in said intermediate layer for varying the rate of moisture exchange.



1,665,105. PRODUCING STABLE EMULSIONS. ROBERT MEZGER, Stuttgart, Germany. Filed Apr. 1, 1927, Serial No. 180,330, and in Germany July 1, 1925. 13 Claims. (Cl. 134—1.)

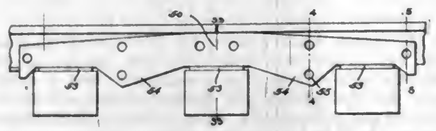
1. The method of preparing stable oil emulsions comprising mixing the constituents so as to effect emulsification, allowing the emulsion to stratify into two end emulsions, removing the end emulsion which is richer in oily material and emulsifying more oil with the end emulsion which is poorer in oil, in a new emulsifying operation.

1,665,106. GASOLINE-STORAGE-TANK FITTING. ALFRED P. MORAN, Ridgefield Park, N. J. Filed Feb. 5, 1927. Serial No. 166,263. 6 Claims. (Cl. 220—85.)



1. An attachment of the character described for underground liquid tanks, comprising a fitting adapted to be secured to a tank and internally screw threaded intermediate of its ends, an externally threaded plug

engaging said internal thread and formed with a vertical opening for the outflow of the liquid contents of the tank, said plug having at the under side an inter-



nally threaded counter bore and a discharge pipe engaging the threads of said counter bore and sustained by said plug.

1,665,107. RAILWAY RAIL AND TIE HOLDING MEANS. GEORGE W. MULLER, Washington, D. C. Filed Mar. 17, 1927. Serial No. 176,104. 19 Claims. (Cl. 238—314.)

1. In a railway track structure, the combination with separated pairs of ties, of tie plates upon said ties, a rail upon said plates, rail clamping members on said plates, means connecting said ties, and common means connecting said clamping members, tie plates and tie connecting means.

1,665,108. RAIL-JOINT BAR OR FISHPLATE. GEORGE W. MULLER, Washington, D. C. Filed Apr. 30, 1927. Serial No. 187,981. 11 Claims. (Cl. 238—188.)

1. A joint bar including an elongated body provided with a reinforced medial portion adapted to snugly fit between the ball and the base of the rail and against the web thereof, and bearing flanges at the terminals of the bar adapted to bear against the rail web.

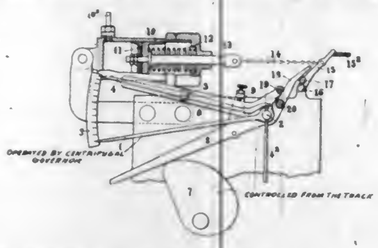
1,665,109. TRIMMER. HENRY A. NELSON, Bijou Hills, S. Dak. Filed July 26, 1927. Serial No. 208,583. 3 Claims. (Cl. 81—187.)

2. A trimmer comprising a tubular carrier provided with a pair of opposed lengthwise extending slots, a shank arranged within the carrier and having a diametrically extending opening, a headed bolt extending through said slots and opening, and extending from one of the slots, a nut mounted on the extended end of the bolt, a trimmer head arranged exteriorly of the carrier and having a reduced inner end integral with the outer end of the shank, and a laterally extending, annular,

solid flange integral with the shank and head at the point of joinder of the shank with said inner end and providing an abutment for direct engagement by the carrier to prevent the latter sliding upon the head.

1,665,110. NEUTRALIZING TREATMENT OF ACID OILS FOR LUBRICANT STOCKS. GEORGE F. OLSEN, Los Angeles, Calif., assignor to General Petroleum Corporation of California, a Corporation of Delaware. Filed Aug. 31, 1926. Serial No. 132,801. 3 Claims. (Cl. 196—41.)

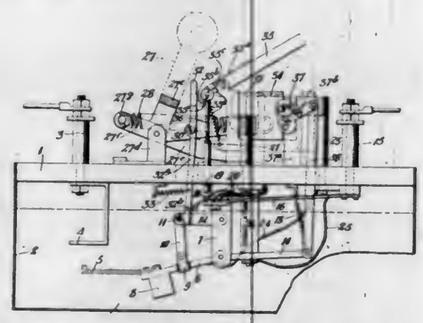
1. In the treatment of acid oils containing organic acidity as well as mineral acidity, a method of neutralization characterized by the fact that a comminuted solid alkali is added in quantity sufficient to neutralize the mineral acidity only, said neutralizing agent being added in successive small quantities during agitation, the presence of water being avoided throughout.



1,665,111. TREATMENT OF LUBRICANT STOCKS. GEORGE FREDRIC OLSEN, Los Angeles, Calif., assignor to General Petroleum Corporation of California, Los Angeles, Calif., a Corporation of Delaware. Filed Oct. 15, 1927. Serial No. 226,507. 5 Claims. (Cl. 196—34.)

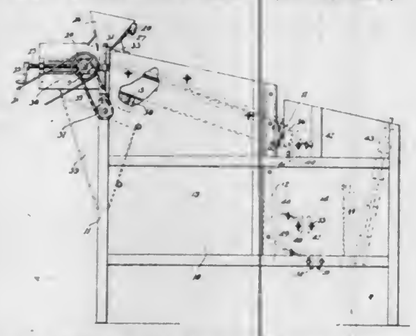
2. In the fractionation and purification of viscous petroleum oils by treatment with liquid sulfur dioxid, the steps comprising: diluting said viscous oil with a light petroleum solvent and adding to said diluted oil a sufficient quantity of a light petroleum extractive obtained from a light petroleum product.

1,665,112. SPEED-CONTROLLING DEVICE FOR RAILWAY AND TRAMWAY TRAINS. ELOI RODOLAUSSE, St.-Antonin, France. Filed Dec. 16, 1924, Serial No. 756,265, and in France Dec. 21, 1923. 3 Claims. (Cl. 246—182.)



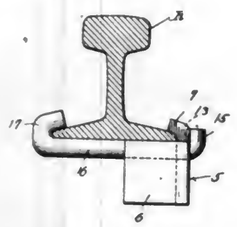
1. An apparatus for the supervision and control of the stoppages and diminutions of speed of railway trains, comprising: an index indicating the real speed of a train,—an axis carrying this index,—a lever pivoting on this axis,—a supervision index pivoting on this lever above the first index and indicating the limitations of the speed,—a control cam with automatic release,—a lever actuated by this cam and bringing back the supervision index to the stoppage position,—a rod controlling the distribution of air to the brakes and actuated by the supervision index when the latter encounters

the speed index.—means, whereby the brakes will be automatically operated when the pressure of the compressed



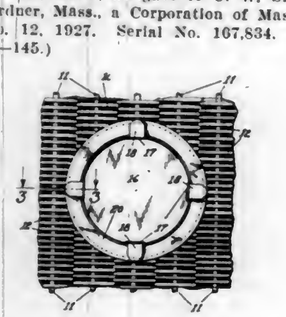
air is inferior to the normal—and means for automatically locking the rod controlling the distribution of air to the brakes.

1,665,113. CIRCUIT BREAKER. FRANK W. ROLLER, East Orange, N. J., assignor to Roller-Smith Company, a Corporation of New York. Filed Sept. 24, 1924. Serial No. 739,512. 13 Claims. (Cl. 200—88.)



3. A circuit breaker comprising a base plate, a manually operated element pivotally mounted thereon, a second element pivotally mounted thereon, a spring connecting said elements, a movable contact element on the opposite side of said base plate, releasable means extending through said base plate and connected between said second element, and said contact element, and automatic means for disconnecting said releasable means upon the occurrence of an abnormal circuit condition.

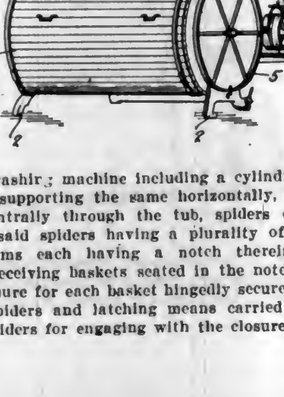
1,665,114. PEA GRADER AND CLEANER. CARL SCHROEDER, Mayville, Wis. Filed Nov. 21, 1924. Serial No. 751,330. 2 Claims. (Cl. 209—119.)



1. A machine of the character described comprising a supporting structure, a bin mounted thereon, a partition dividing the bin into two compartments, an endless conveyor disposed at an inclination above one of said compartments with one end arranged above the partition and extending into the other of said compartments, a hopper mounted above the opposite end of said conveyor, pea grading means arranged in the last mentioned compartment, a receptacle mounted for disposal in the other compartment, and scraping means arranged in the path of the conveyor and above the receptacle.

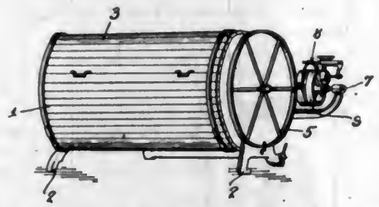
1,665,115. RAIL LOCK. FRANK J. SCHROEDER, Altoona, Pa. Filed Oct. 14, 1927. Serial No. 226,152. 3 Claims. (Cl. 238—329.)

1. An anti-creeper for railway rails including a body portion having inwardly disposed end portions fitted under the rail and having an upstanding flange overlying the upper edge of the rail, said body portion having an opening, a securing member having a hook at one end hooked over the base of the rail and having an upstanding end portion extended through the opening of the body portion, and depressions in the body portion to receive the upstanding end of the securing member.



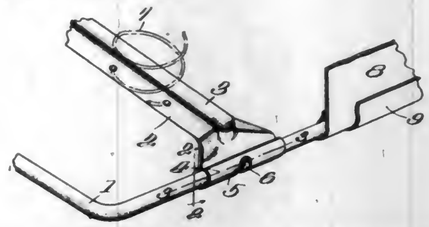
1,665,116. CARRIAGE-HOOD WINDOW. OTTO W. SIEBERT, Gardner, Mass., assignor to O. W. Siebert Company, Gardner, Mass., a Corporation of Massachusetts. Filed Feb. 12, 1927. Serial No. 167,834. 4 Claims. (Cl. 296—145.)

1. A carriage hood window for fabric comprising an outer rim having rearwardly projecting prongs on its inner edge portion, projecting through said fabric, a transparent disc positioned in the opposite side of said fabric from said rim and having a series of slots therein, spaced angularly to correspond to the positions of the prongs on said rim, said prongs extending through said slots and being bent laterally inside of said disc to retain the parts in assembled relation.



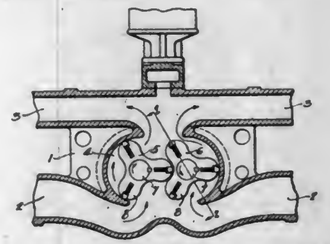
1,665,117. PROCESS AND APPARATUS FOR GRINDING AND POLISHING GLASS. FRANK EDWIN SLOCOMBE, Kirk Sandall, England, assignor to Pilkington Brothers Limited, Liverpool, England, a British Company. Filed Nov. 6, 1924, Serial No. 748,131, and in Great Britain Nov. 10, 1923. 8 Claims. (Cl. 51—278.)

3. Apparatus for the abrasive treatment of glass, comprising apparatus for supplying abrasive media, rotating tables on which the glass is laid, a truck carrying each table moving past the apparatus supplying the abrasive media, means on each truck adapted to rotate the table, rails on which the trucks travel, abrading runners adapted to operate on the glass and means for travelling together the trucks and the runners, during the operation of the runners on the glass.



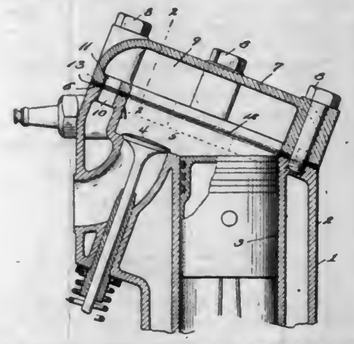
8. Apparatus for grinding and polishing plates of glass of the type in which the glass is laid on tables which are rotated under grinding and polishing runners to effect the grinding and polishing, comprising a truck carrying each table, means on each truck adapted to rotate the table, rails forming a closed circuit round which the trucks are adapted to travel, means operative to move the trucks along the rails, a grinding runner frame and a polishing runner frame adapted to travel with each table during the operative course of each runner frame, a runway for the grinding runner frame and a runway for the polishing runner frame, the said runways forming each a closed circuit of which a portion is adapted to support the runner frames while travelling with the tables while the remainder is a return circuit, means for attaching the grinding and polishing runner frames to each truck at the beginning of their operative courses and detaching them at the end thereof, means mounted on the runner frames adapted to raise and lower the runners, and stationary cam surfaces co-operating with said means to effect such raising and lowering.

1,665,118. CLOTHES WASHER. JAMES V. THOMPSON and HOWARD C. DEITZ, Spencer, W. Va. Filed Mar. 25, 1927. Serial No. 178,353. 2 Claims. (Cl. 68—18.)



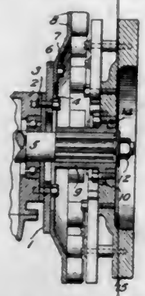
1. A washing machine including a cylindrical tub having legs supporting the same horizontally, a shaft journaled centrally through the tub, spiders on the shaft, each of said spiders having a plurality of radially disposed arms each having a notch therein, reticulated clothes receiving baskets seated in the notches, a reticulated closure for each basket hingedly secured to the arms of the spiders and latching means carried by the arms of the spiders for engaging with the closures.

1,665,119. CUSHION SEAT AND THE LIKE. CHARLES P. TRIMALE, Pittsburgh, Pa., assignor to Fort Pitt Bedding Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 20, 1925. Serial No. 17,057. 1 Claim. (Cl. 155—179.)



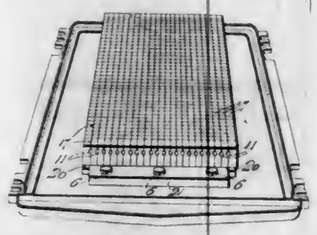
In a cushion or seat having springs and a lower border frame, spring supporting bars having flat ends, the ends of the bars being perforated and wrapped around the frame and the frame being provided with swaged portions engaging the metal around said perforations to prevent longitudinal movement of the bars.

1,665,120. ROTARY FLUID PUMP AND MOTOR. EVERT JANSEN WENDELL, Wayne, Pa., assignor to The Hale Fire Pump Co., Inc., Conshohocken, Pa., a Corporation of Pennsylvania. Filed May 7, 1927. Serial No. 189,536. 3 Claims. (Cl. 103—126.)



1. A rotor for rotary pumps and motors having a peripheral and longitudinal slot, a vane mounted in said slot and having therein limited movement radially of the rotor, said vane having on its inner face a transverse slot, a pin mounted in the rotor and adapted to enter the slot to prevent movement of the vane axially of the rotor, and a spring resiliently retaining the pin in the slot.

1,665,121. INTERNAL-COMBUSTION ENGINE. FRANK R. WEST, Newark, N. J. Filed Sept. 18, 1924. Serial No. 738,465. 8 Claims. (Cl. 123—173.)

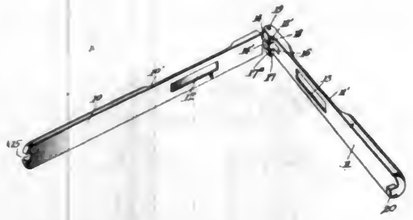


1. An internal combustion engine having a combustion chamber a wall of which is constituted by a relatively thin substantially flat flexible plate of uniform thickness throughout its area and which divides the combustion chamber from the water space of the engine.

1,665,122. TRACTOR-LIGHTING DEVICE. WILLIAM H. WHITE, Copeland, Kans. Filed June 25, 1927. Serial No. 201,529. 2 Claims. (Cl. 290—1.)

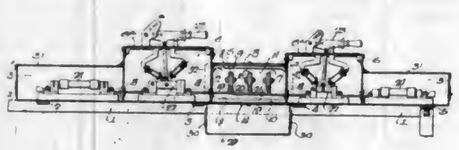
1. Means for placing a magneto on the pulley shaft of a tractor, comprising a plate bolted to a part of the engine block of the tractor, means for fastening to the plate the coil carrying member of the magneto, a hub adapted to be substituted for the pulley on the shaft and means for attaching to the hub the fly wheel of the magneto.

1,665,123. OIL GRATE AND MAT. WILSON A. WILHELM, Vernon, Tex. Filed Sept. 11, 1925. Serial No. 55,885. 2 Claims. (Cl. 100—34.)



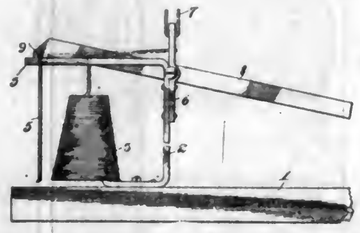
1. An oil grate and mat combined in a unitary structure and comprising a plurality of interlocked movably connected parallel bars arranged with their sides contacting, means extending transversely through said bars to hold them assembled, each bar being provided in each side wall near its upper surface with a longitudinal groove, the grooves of adjacent bars registering when assembled to form oil receiving or collecting channels opening through the ends of the structure whereby the collected oil may be conducted to a suitable place of deposit, a plurality of longitudinally spaced vertical passages leading from said channels through the upper face of the bars to provide oil feeds for the channels, said bars also having transverse channels arranged in a plane above the longitudinal channels and provided with restricted slot-like mouths opening through the tops of the bars to provide a transverse drainage for the structure.

1,665,124. PROPAGATING BOX. ERNEST WRIGHT, Arch Creek, Fla. Filed Jan. 25, 1926. Serial No. 83,666. 1 Claim. (Cl. 47—37.)



A propagating box, a liquid level container therefor, substantially U-shaped supporting legs carried upon the bottom of the box to elevate the same to an appropriate height within the container, and a side member hingedly mounted upon the box adapted to permit transplanting of the contents thereof.

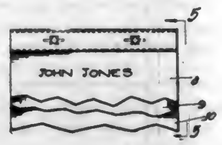
1,665,125. SAFETY-RAZOR-BLADE HOLDER. EDOUARD BARDET, New York, N. Y. Filed May 18, 1926. Serial No. 109,958. 1 Claim. (Cl. 30—25.)



A holder for safety razor blades having in combination a pair of coacting handle members having at one end projections hingedly connected together and extending vertically to prevent endwise shifting of the handle members, one of said handle members at its opposite end having a depending lug adapted to engage a complementary slot in the adjacent end of the other handle member so as to coact with said projections for preventing shifting of the handle members when in the closed position, the inner surface of each of said members having oppositely disposed longitudinal recesses, and a removable blade holder adapted to fit and be positively held in said longitudinal recesses, said blade holder arranged to prevent endwise as well as lateral movement of the handle members when the parts are in their closed position.

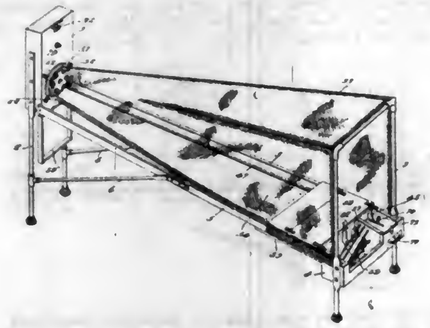
1,665,126. SAFETY SWITCHBOARD. JAMES F. BURNS, Philadelphia, Pa., assignor to V. V. Fittings Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 23, 1922. Serial No. 570,364. 17 Claims. (Cl. 247—11.)

11. Apparatus comprising two lines of switch boxes spaced apart to define an elongated channel; frames extending across said channel and interposed between adjacent boxes; and closure plates mounted on said frames.



1,665,127. TWINE HOLDER. ENOCK A. CARLSON, Delvalle, Tex. Original application filed Apr. 21, 1926, Serial No. 103,554. Divided and this application filed Oct. 16, 1926. Serial No. 142,000. 2 Claims. (Cl. 242—144.)

1. A holder of the character specified comprising a standard having its upper end bent laterally to provide an arm in which openings are formed for guiding the

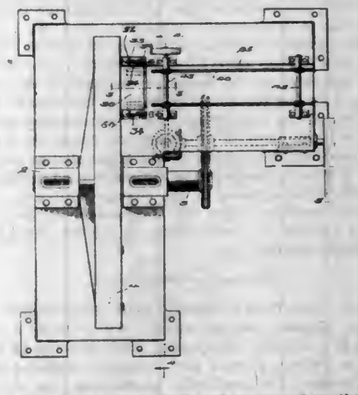


cord, and having its lower end similarly bent and terminating in a vertically disposed loop-shaped support to receive a bobbin of cord, a suspending lug attached to a side of the standard and formed with a cord guiding opening, and a take-up lever pivoted to the standard by means of the said lug, and having an opening for the cord in the end adjacent the outer end of the upper arm.

1,665,128. REENFORCED FOLDER OR FILE HOLDER. CHARLES E. CATHER, Worcester, Mass., assignor to United States Envelope Company, Springfield, Mass., a Corporation of Maine. Filed July 9, 1926. Serial No. 121,473. 2 Claims. (Cl. 129—25.)

1. As a new article of manufacture, a reenforced folder or file-holder comprising a backing sheet having one or more fasteners secured thereto near its upper edge, the material of said edge beyond said fasteners being folded backwardly and secured by adhesive to the rear face of said sheet as a reenforcement for said fasteners, and the doubled portion carrying said fasteners being folded forwardly so as to cause said fasteners to face the front of said sheet, whereby to present the successive papers attached by said fasteners to said folder in the order of their attachment thereto.

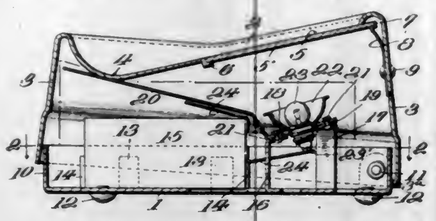
1,665,129. AMUSEMENT DEVICE. JOHN E. CRADDOCK, Perry Point, Md. Filed Apr. 23, 1926. Serial No. 104,171. 4 Claims. (Cl. 273—95.)



1. An amusement device comprising a frame, a casing at the rear end thereof, scoring mechanism carried by the casing, movable targets carried by the casing, means actuated by the movement of the targets for operating the scoring mechanism, an open casing at the front of the frame having an opening in its rear part, means for causing projectiles thrown at the targets to pass through the opening, a tiltable inclined shelf in the open casing for receiving the projectiles passing through the opening, bars for holding the projectiles on the shelf, an adjustable stop associated with the shelf for limiting the number of projectiles occupying the same, a hand lever, means operated thereby for tilting the shelf, means associated with the last mentioned means for preventing projectiles from passing through the opening when the shelf is in tilted position, and means actuated by said lever for returning the scoring mechanism to zero position.

1,665,130. VENTILATOR. DWIGHT A. ELLIOTT, Richmond, Ind. Filed Feb. 23, 1926. Serial No. 89,863. 1 Claim. (Cl. 98—2.)

In combination with a window having fixed stiles, and a glass adapted to slide up and down between said stiles; a ventilator located between said stiles and comprising a sheet-metal member forming the body of the ventilator and having a plurality of horizontal cuts therethrough with the upper edge of each cut curved outward forming downwardly directed openings throughout the face of the body, a reinforcement at each end of the body, the same being formed by doubling the ends of the body, there being slots formed through the said reinforcements and the adjoining portions of the body, L-shaped end members secured to the respective stiles, there being slots formed through the portions of the end members which extend toward each other with each of the slots last mentioned being in register with the said slots in the ends of the main member, bolts extending through all of said slots providing means whereby the main members may be adjustably secured whereby the ventilator may be adjusted to varying distances between the stiles, a flange formed along the inner lower edge of the body member, a tongue extending back from said flange to near the face of the glass, and a screen covering the inner side of the main member.

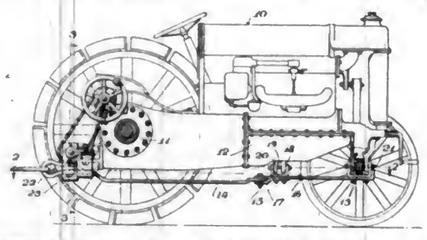


1,665,131. CUTTING OR SLICING MACHINE. EARNEST R. FERRARI, North Bend, Oreg. Filed Mar. 30, 1926. Serial No. 98,550. 5 Claims. (Cl. 144—176.)

1. A slicing machine of the character described comprising a rotatable wheel, a plurality of carriers mounted on the wheel for angular adjustment, knives mounted

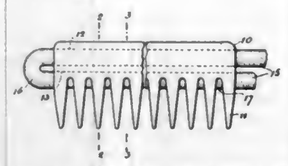
on said carriers, a table co-operably disposed with respect to the wheel and its knives, means for feeding the stock across the table and into the field of action of the knives, said table having a slidable anvil at the end thereof with which the wheel and its knives co-act spring means for projecting the anvil foward the wheel, and co-operating means on the carriers and anvil for causing detraction of the anvil in certain phases of the operation.

1,665,132. FLASH CHANGE TRAY. SYDNEY FISHER, Fairfield, Conn., assignor to Flash Tray Advertising, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 27, 1926. Serial No. 84,192. 5 Claims. (Cl. 40—130.)



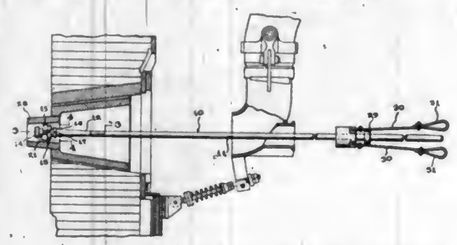
2. A flash change tray including in combination a stamped sheet metal base having an upwardly extending flange, and lugs cut from said base and projecting upwardly therefrom, certain of said lugs being disposed so as to receive a battery and hold the same from sliding on the base, other of said lugs being shaped so as to support a leaf spring and an illuminating means, a change receiving portion having a depending skirt, pivots for securing said change receiving portion to said flange of the base at one end thereof, said change receiving portion having a pocket for the change and an opening for a translucent display panel, a leaf spring mounted on one of said lugs and engaging said change receiving portion for normally holding the same raised, an illuminating means having one terminal thereof connected to the battery ad the other terminal thereof connected to the leaf spring, said battery having a terminal located beneath the leaf spring and out of contact therewith when the change receiving portion of the tray is raised, said leaf spring making contact with the battery terminal when the change receiving portion thereof is depressed so as to connect the illuminating means with the battery and thus illuminate the translucent panel.

3. A flash change tray including in combination, a stamped sheet metal base, a stamped sheet metal change receiving portion having a pocket for the change and an opening for a translucent display panel, said base having an upwardly projecting flange, said change receiving portion having a downwardly extending skirt, said change receiving portion overlying said base with said skirt extending down over said base, means for pivotally connecting the skirt to the flange of the base at one end of the base, a spring for normally holding the change receiving portion of the tray raised to a predetermined position, said skirt being adapted to engage the flange on the base for determining the position to which the change receiving portion is raised, illuminating means located within said tray beneath the opening in the change receiving portion, and means operated upon the depression of the change receiving portion for establishing a circuit through the illuminating means.



1,665,133. DRAWBAR SHIFT FOR TRACTORS. VIRGIL L. GIBSON, Salem, Oreg. Filed Mar. 8, 1927. Serial No. 173,745. 5 Claims. (Cl. 280—33.12.)

1. In a tractor, a draw bar swingably mounted on the tractor, means for positively positioning the free end of the draw bar, said means comprising a screw, a drive shaft spaced from the screw, operative connections between the screw and the shaft whereby rotation of the shaft will cause rotation of the screw, a cross head depending from the screw and having threaded connections with the screw whereby rotation of the screw will cause

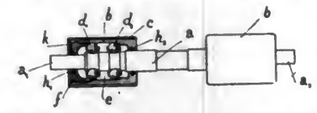


transverse movement of the cross head, the free end of the draw bar being received by the cross head below the screw.

1,665,134. COMB. HARRY HENRY HUTCHINGS, New York, N. Y. Filed May 10, 1927. Serial No. 190,266. 2 Claims. (Cl. 132—11.)

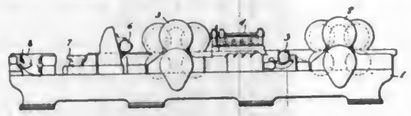
1. As an article of manufacture, a comb having longitudinal passages therein, through which a cord may be run, one of said passages being partially in the back of the comb and partially in the teeth at the bases thereof, and a cord in said passages and exposed at the spaces between the teeth.

1,665,135. EXTRACTOR FOR TUYÈRES AND TUYÈRE COOLERS. GEORGE J. JONES and EDWIN J. SUREN, Needham, Mass., assignor to The Gramewell BLANNING, New Castle, Pa. Filed Mar. 1, 1927. Serial No. 171,793. 5 Claims. (Cl. 29—88.2.)



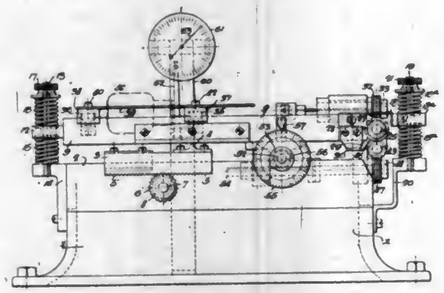
1. A tool for the purpose indicated comprising a gripper provided with radially movable jaws, a dolly bar on which the gripper is slidably mounted and which has means for effecting radial movement of the jaws upon relative axial movement of the bar and gripper, releasable means for locking the gripper at a point on the bar where the gripper jaws have their inmost radial positions, and means for imparting axial movement to the dolly bar.

1,665,136. PRESSURE AND DRAWING CYLINDER FOR SPINNING MACHINES. JEAN LAUFFER, Logelbach, France. Filed June 15, 1925, Serial No. 37,360, and in France June 20, 1924. 1 Claim. (Cl. 19—141.)



In a spinning machine, the combination of: a stationary spindle; a rotatable drawing cylinder mounted coaxially on the end-portion of said spindle and having a cavity for lubricating material formed therein; a tubular sleeve secured on the said end-portion of the spindle and

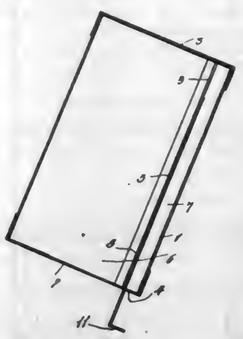
extending substantially along the whole length of the cavity of the hollow cylinder; a pair of ball-bearings interposed annularly between the said tubular sleeve and the inner surface of such hollow cylinder; a nut screwed into one end of the said cylinder for adjusting the posi-



tion of the latter on the end-portion of the spindle in a longitudinal direction, the said nut having its inner face adapted to form an annular abutment for the adjacent ball-bearing; and means for locking the said nut in adjusted position.

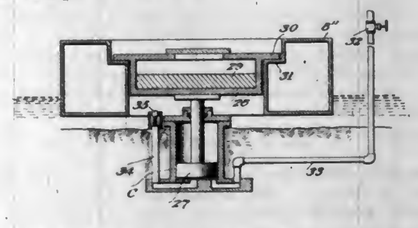
1,665,137. MACHINE FRAME. JOHAN OSCAR LIFFLANDER and CARL JOHAN AXEL JOHNSON, Stockholm, Sweden, assignors to J. & C. G., Bolinders Mekaniska Verkstads Aktiebolag, Stockholm, Sweden. Filed June 27, 1925, Serial No. 40,121, and in Sweden June 6, 1924. 1 Claim. (Cl. 144—114.)

A machine base of the general type, of a planer for supporting the machine parts having a plane top extending from side to side so that the machine parts may be placed thereon in various positions as regards length and width in combination with such machine parts having corresponding flat bases suitable for various positions.



1,665,138. BALANCING MACHINE. JACOB LUNDGREN, Philadelphia, Pa., assignor to Tinius Olsen Testing Machine Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 24, 1923. Serial No. 634,334. 16 Claims. (Cl. 73—51.)

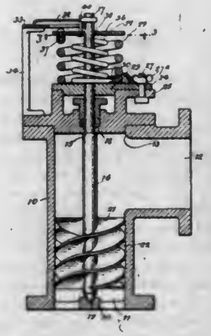
1. The combination in a balancing machine of a supporting structure providing a movable fulcrum; an oscillatory frame mounted on said structure; adjustable counterbalance weights on the frame; means also on the frame for supporting a body to be balanced; means for simultaneously rotating said body and the counterbalance weights; with means including a longitudinally adjustable shaft for varying the angular relation of said weights and the body to be balanced.



1,665,139. MEASURING DEVICE FOR CONTAINERS. CARL O. LUNDHOLM, Moiese, Mont. Filed Feb. 3, 1927. Serial No. 165,745. 5 Claims. (Cl. 221—98.)

1. A device of the character set forth, comprising a container, a partition separating the container into a supply compartment and a mensuring and dispensing compartment, the latter being open at its upper end, the partition being provided at its lower end with an opening, a valve plate slidably mounted in the measuring and

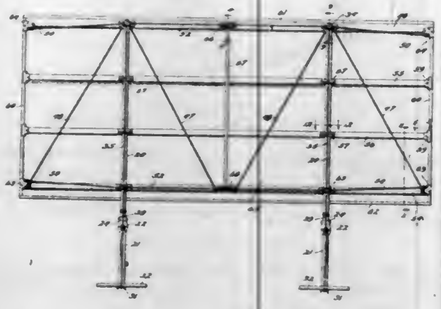
dispensing compartment and contacting with said partition for covering and uncovering the opening therein, and a closure for the upper end of the measuring and dispensing compartment and carried by the valve plate.



1,665,140. TIDE PUMP. SHAVUKSHA D. MASTER, Bombay, India. Filed Nov. 24, 1923. Serial No. 676,795. 3 Claims. (Cl. 103—68.)

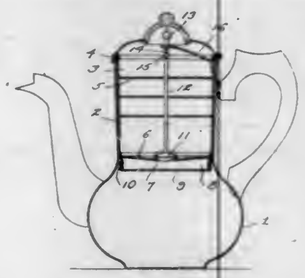
1. An apparatus of the class described comprising a pump, a float actuated by the tides, means for operating the pump by the movement of the float, means for holding the water in the pump cylinder under pressure while the tide is dropping and means for releasing the water when the tide recedes farther

---



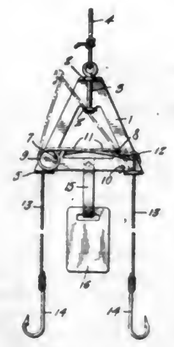
1,665,141. FLOW METER. CHARLES PETER MAYER, Elizabeth, N. J. Filed Feb. 9, 1927. Serial No. 166,994. 5 Claims. (Cl. 73—167.)

2. A casing having a passageway therein through which a fluid is adapted to flow and means for measuring the rate of such flow, including a shaft extending longi-



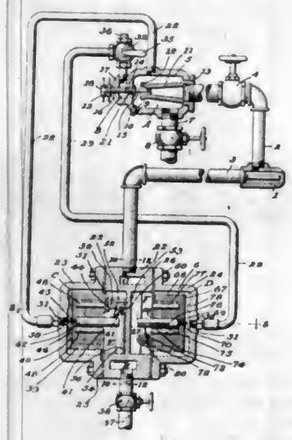
tudinally of the passage, an impelled member on the shaft acted on by the flowing fluid to turn the shaft, spring means opposing the turning movement of the shaft, a scale member, a cooperating indicating member carried by the shaft, the spring means including a spiral torsional spring, anchored at one end to the shaft, and a rotatably adjustable spring tensioning plate to which the other end of the spring is anchored.

1,665,142. BILLBOARD. MONTE C. MERKER, Reading, Pa. Filed May 20, 1924. Serial No. 714,585. 15 Claims. (Cl. 40—125.)



1. A billboard supporting frame comprising an upright supporting member, means crosswise relative to the upright member and connected thereto and adjusting means connecting opposite sides of the supporting member with the crosswise means at points distant from the supporting member.

1,665,143. COFFEEPOT. RANDAL MCMILLAN and MYRON R. SCHALL, Palo Alto, Calif. Filed June 24, 1927. Serial No. 201,210. 1 Claim. (Cl. 53—3.)

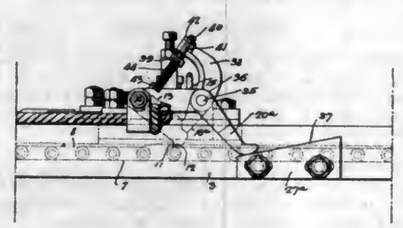


A coffee pot, a container inserted through the mouth and received through the neck thereof, said container having a flared bottom which is centrally formed with an opening and having a reduced extension beyond said bottom, a filtering fabric arranged around the extension, a clamping ring securing the fabric on the extension, a valve for closing the opening in the bottom of the container, an operating stem for the valve, said stem having laterally extending lugs and notches below the lugs, an arched combination guide and handle member having one end secured in the container and its other end provided with a notch which is centrally widened and in which the stem is received, and whereby when the stem is arranged in one position the said member will contact with the lugs and when raised and turned to a second position the walls provided by the notch will contact with the shoulders formed by the notches in the stem.

1,665,144. FISHING-TACKLE ATTACHMENT. MILTON MURRAY, Williams Wharf, Va. Filed Mar. 5, 1927. Serial No. 173,128. 3 Claims. (Cl. 43—15.)

1. A device of the class described comprising a frame, a coiled spring carried by the frame and having one end forming a spring arm, a hook on the frame for holding the arm in lowered position and under tension, said hook being offset from the arm so that the arm must be moved laterally to engage it with the hook, a hook carrying member connected with the free end of the arm and guiding means for said member offset from the arm when the arm is in engagement with the hook.

1,665,145. APPARATUS FOR DELIVERY OF FLUIDS TO BURNERS. GORDON M. PELTZ, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed Jan. 25, 1924. Serial No. 688,462. 27 Claims. (Cl. 158—36.)

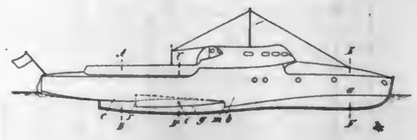


1. The combination with a burner having air supply and fuel supply lines, of an air feeder in the air supply line including a chamber subjected to the pressure in the air supply line, and a second chamber, means for obtaining a pressure difference between these chambers dependent on the quantity of air passing to the burner, and a fuel feeder in the fuel supply line through which the fuel passes, including an inlet valve having operating mechanism under control of the pressure in the first chamber, and an outlet valve having operating mechanism under control of the pressure in the second chamber.

1,665,146. PROCESS OF MAKING COMMERCIALLY-PURE IRON ALLOYS. LEO F. REINARTZ and JOHN H. NEAD, Middletown, Ohio, assignors to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Oct. 4, 1923. Serial No. 666,611. 1 Claim. (Cl. 75—27.)

The process for production of alloys of low carbon content which consists in forming a bath of molten iron having very low carbon and very low metalloid content under oxidizing conditions, said molten iron while purified and molten but without degasification being located in an electric furnace, degasifying the molten iron in the electric furnace, in such a way as to "kill" the iron, and without alloying the iron forming a reducing slag on the surface of the "killed" iron, and while maintaining the heat in the electric furnace adding a substantially carbon free alloying metal.

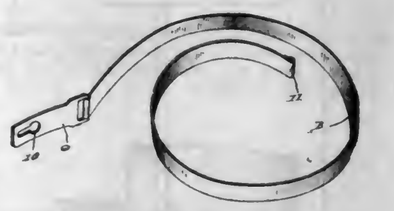
1,665,147. WIRE-CARRIAGE-RELEASE DOG FOR PILE-WIRE-CONTROLLING MECHANISM FOR LOOMS. WILLIAM E. SMITH, Milltown, N. J., assignor to Gulbenkian Seamless Rug Company, New Brunswick, N. J., a Corporation of New Jersey. Filed May 22, 1926. Serial No. 111,020. 5 Claims. (Cl. 139—42.)



1. In a pile wire controlling mechanism comprising a rail, a wire controlling carriage adapted to be reciprocated on said rail, a chain for moving the carriage in one direction, a driving latch pivotally mounted on the carriage and adapted to engage the chain, and a retaining lever pivotally mounted on said carriage and adapted to engage the driving latch, the combination of a release dog rigidly attached to said retaining lever, a projection on the rail, a cam path formed on one of said elements and adapted to be engaged by the other of said elements, and resilient means opposing the pivotal movement of said release dog for dampening the developed momentum of the carriage.

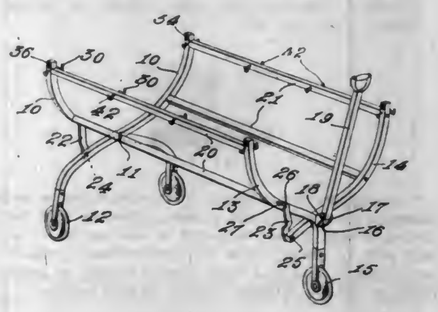
1,665,148. PROCESS FOR THE PRODUCTION OF ARTIFICIAL STONE AND ARTIFICIAL WOOD. FRANZ TRACHSEL and JAKOB WIEDMER, Bern, and PAUL ZIGERLI, Zurich, Switzerland. Filed May 3, 1926, Serial No. 106,589, and in Switzerland May 1, 1926. 3 Claims. (Cl. 106—27.)

1. The process of producing a plastic composition consisting in mixing organic fibrous material with a mixture of water glass and turpentine oil, incorporating a precipitating agent with the mass and adding Portland cement.



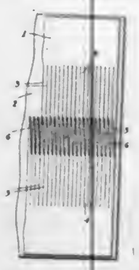
1,665,149. CONVERTIBLE SKIMMING BOAT OR LIKE WATER CRAFT. PIETER HENDRIK VAN WIENEN, Hamburg, Germany. Filed July 16, 1926, Serial No. 122,990, and in Germany Sept. 23, 1925. 5 Claims. (Cl. 114—66.5.)

1. A combined surface and displacement boat comprising a keel and a bottom portion having a recess therein; and a wedge-shaped member pivoted intermediate its ends in the recess and having a front sharp end and a rear blunt end, said member when entirely in the recess presenting a smooth bottom with the bottom of the boat to render the boat a displacement boat and



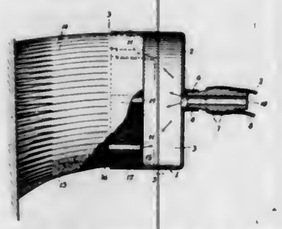
when the rear blunt end projects beyond the recess the front end of the recess and the rear blunt end of the member form projecting steps in the bottom of the boat to render the boat a surface boat.

1,665,150. BRAKE-BAND TOOL. LEONARD E. WATSON, St. Marys, W. Va. Filed Jan. 22, 1926. Serial No. 83,102. 8 Claims. (Cl. 29—87.1.)



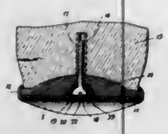
1. A tool for facilitating the removal of a transmission band from a transmission drum comprising a strip or band formed of spring metal and means at one end of the band for detachably engaging a part of a transmission band to connect the said transmission band to the tool, the tension of the spring strip causing it to follow the contour of the drum as the strip is pushed over the drum.

1,665,151. BASKET CART. JESSIE ETHYL WILLIAMS, Perry, Okla. Filed Sept. 1, 1926. Serial No. 133,068. 6 Claims. (Cl. 280—36.)



1. A device of the character described comprising a frame including reversely curved end members connected by longitudinally extending bars and pivoted in cross relation, the members at one end being equipped with rollers and one member at the other end being equipped with a roller, and a handle pivotally mounted at said second named end.

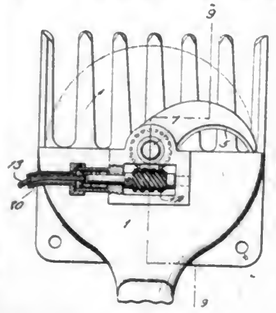
1,665,152. PROCESS OF MANUFACTURING BRUSHES. ROBERT MORSE WITHYCOMBE, Sydney, New South Wales, Australia. Filed Oct. 2, 1924, Serial No. 741,250, and in Australia May 2, 1924. 2 Claims. (Cl. 300—21.)



1. The process of making a filamentous rubber blank which consists in uniting one entire face of a strip of flexible elastic rubber to a relatively non-elastic backing, cutting said strip with slits while it is united to said backing, forming filaments, and removing said backing.

1,665,153. FOUNTAIN BRUSH FOR AUTOMOBILES. ROBERT MORSE WITHYCOMBE, Sydney, New South Wales, Australia. Filed Oct. 20, 1924. Serial No. 744,799. 5 Claims. (Cl. 15—128.)

1. A fountain brush, comprising a cup-shaped casing having a hose connection, and a head closing said casing and having a filamentous portion arranged in the form of convoluted laminæ and defining between said laminæ a convoluted passage in communication with the casing.

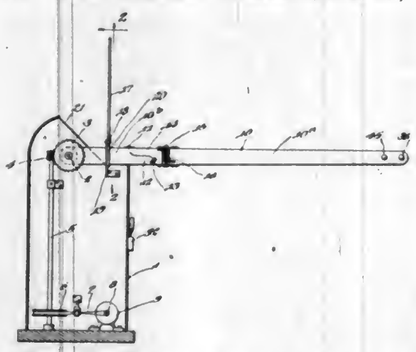


1,665,154. SUPPORT FOR YIELDABLE DENTURES. ROBERT MORSE WITHYCOMBE, Sydney, New South Wales, Australia. Filed Dec. 22, 1924. Serial No. 757,559. 8 Claims. (Cl. 32—9.)

1. A support for artificial teeth comprising a backing formed with a socket and a post carried by said backing having a head loosely mounted in said socket to permit said post to deviate from the perpendicular, relative to said backing, said post being adpted rigidly to support a tooth in movable relation relative to said backing.

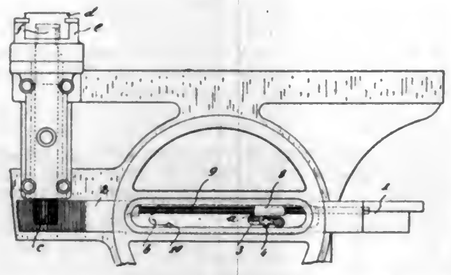
1,665,155. TRIMMER. WILL YERGER, West Philadelphia, Pa. Filed Dec. 10, 1924. Serial No. 755,052. 1 Claim. (Cl. 30—11.)

A device of the character described comprising a frame, a handle attached to the frame, a bottom plate on the frame formed with a plurality of spaced fingers, an arcuate housing at the inner end of the plate, a removable cover plate for the frame having an enlargement, a bolt extending through the bottom plate and through the enlargement, a sleeve mounted on the bolt, a worm gear



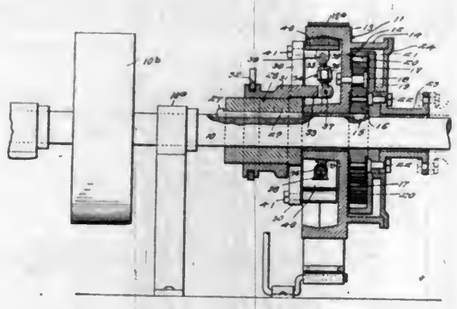
mounted upon the sleeve, nuts threaded on the upper end of the bolt and bearing against the sleeve, a driven shaft extending through the enlargement, a worm upon said shaft adapted to mesh with the first worm, and a rotary cutter carried by the inner end of the sleeve and rotatable over the fingers as and for the purpose specified.

1,665,156. SWITCH. AUGUST W. ALBERS, Philadelphia, Pa., assignor to Electro Dental Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 5, 1925. Serial No. 13,280. 46 Claims. (Cl. 32—5.)



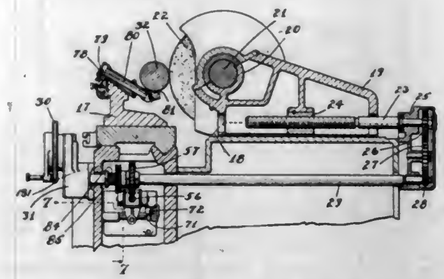
1. In combination, a drawer, a pivoted instrument support carried thereby, and an electrical switch, one contact element of which is movably carried by said drawer and adapted to be actuated in accordance with the pivotal movement of said instrument support.

1,665,157. TRAFFIC-CONTROLLING DEVICE. GEORGE HENRY DAHNKE, Benton Harbor, Mich. Filed Sept. 30, 1925. Serial No. 59,653. 1 Claim. (Cl. 39—1.)



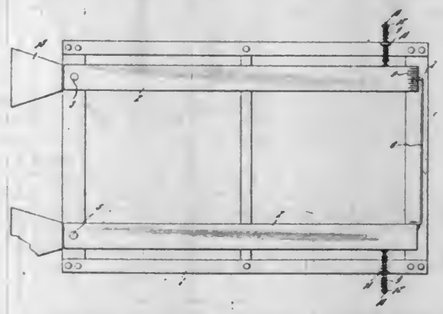
In traffic control means of the character described, a supporting structure, a main control arm pivotally associated with the supporting structure, means for raising and lowering said arm, and a supplemental arm pivotally mounted intermediate its end portions to the supporting structure, said supplemental arm having a portion extending beyond its pivotal connection with the supporting structure beneath the main arm whereby said supplemental arm is adapted to be operated by operation of the main arm, and said supplemental arm being adapted for movement through a plane substantially at right angles with respect to the plane through which said main arm is adapted to move.

1,665,158. FEED AND TRAVERSING MOTION FOR LATHES. FRITZ RICHARD DEURING, Munich-Gladbach, Germany. Filed Jan. 14, 1924, Serial No. 685,959½, and in Germany Mar. 24, 1923. 2 Claims. (Cl. 29—39.)



1. Feed motion mechanism for lathes having turret slides and cross slides, comprising two reciprocable racks for moving the turret slide and the cross slide respectively, means for reciprocating said turret slide rack, a catch pivoted to one of said racks, an abutment carried by the other rack, a member rotated stepwise by reciprocation of said turret slide rack, said rotatable member having means for moving said catch into position to engage said abutment in one position thereof, whereby said cross slide rack will be moved with said turret slide rack.

1,665,159. PLANETARY REVERSIBLE CLUTCH. FLOYD E. DONALD and CHARLES P. BOYCE, Corsicana, Tex. Filed Apr. 17, 1926. Serial No. 102,703. 1 Claim. (Cl. 74—34.)

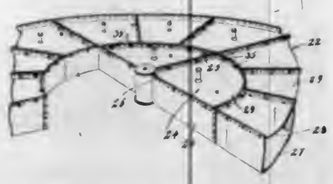


A device of the class described comprising a shaft, a bracket rigid with said shaft having outwardly extending arms, a gear wheel rigid with said shaft, a drum loose on said shaft disposed principally between said bracket and said gear wheel, a sleeve slidable on said bracket, brake shoes pivoted to said arms, operative connections between said arms and said sleeve, said drum having a main wall and first and second flanges extending laterally on opposite sides thereof, said shoes being engageable with the first flange, gear wheels pivoted to said main wall and in mesh with the first mentioned gear wheel, a planetary gear wheel having a laterally extending wall provided with teeth in mesh with those of the second mentioned gear wheel, a second flange extending outwardly of and across the said planetary gear wheel, and an attaching member extending from the planetary gear wheel.

1,665,160. AUTOMATIC SIZE-GRINDING MACHINE. SOL EINSTEIN, WILLETTS PEASLEE, and FRED S. HAAS, Cincinnati, Ohio, assignors, by mesne assignments, to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed July 29, 1925. Serial No. 46,818. 11 Claims. (Cl. 51—165.)

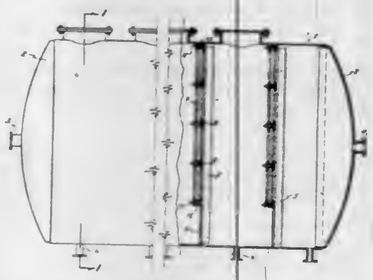
5. A control device for the return movement of a grinding wheel carriage including a drum frictionally coupled with the feed mechanism of the carriage, a member windable on the drum, means limiting the amount of winding movement thereof, whereby the frictional coupling will permit a slipage of the parts if the determined winding action has occurred, and means urging the unwinding of the connection to the amount of previous winding thereof, whereby said means will urge the movement of the carriage in a reverse direction when the feed mechanism is relieved of its impelling force.

1,665,161. WHEEL-ALIGNING TOOL. WILLIAM T. FRAZIER, Chase City, Va. Filed Nov. 30, 1925. Serial No. 72,329. 4 Claims. (Cl. 33—203.)



1. An apparatus of the class described, comprising a frame, a pair of track members each having one end pivoted thereto and the other end free so that said members will move with the wheels of a vehicle engaging the members, if said wheels are out of alignment one track member having a scale on its free end, means for normally holding the track members in parallel relation and an indicator connected with the other member and cooperating with said scale for indicating the amount of movement of the members.

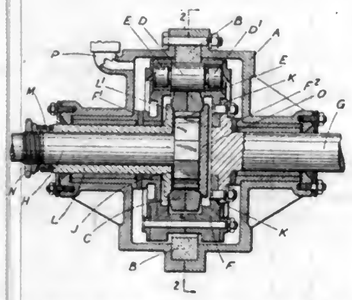
1,665,162. CALICO-PRINTING COLOR COMPOSITION AND PROCESS. MORITZ FREIBERGER and AUGUST HOLTMANN, Berlin-Charlottenburg, Germany. Filed Oct. 25, 1924, Serial No. 745,921, and in Germany Dec. 14, 1923. 11 Claims. (Cl. 8—6.)



1. A cloth or calico printing composition which includes a water insoluble organic body of high molecular weight and of high viscosity.

1,665,163. FLOATING DECK FOR OIL TANKS OR THE LIKE. CHARLES R. GALLAGHER, Los Angeles, Calif., assignor to Universal Holding Company, Los Angeles, Calif., a Corporation of Delaware. Filed June 12, 1926, Serial No. 115,453. Renewed Oct. 4, 1927. 21 Claims. (Cl. 220—26.)

1. A buoyant deck for oil tanks comprising a plurality of pontoons of sector shape in horizontal section and having marginal walls extending upwardly to provide water pans, the pontoons being placed in a circular series to form a circular deck, and means for attaching the pontoons together.

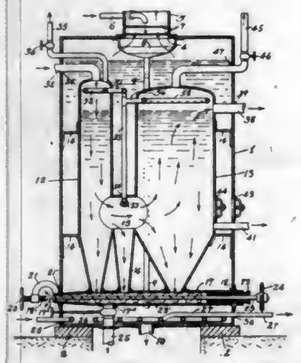


1,665,164. APPARATUS FOR SEPARATING LIQUID CONTAINING A DISPERSED PHASE OF ANOTHER LIQUID. EARLE W. GARD, Long Beach, BLAIR G. ALDRIDGE, Los Angeles County, and HUGH J. MULTER, Huntington Park, Calif. Filed Nov. 16, 1926. Serial No. 148,732. 5 Claims. (Cl. 210—43.)

1. An apparatus for separating one liquid dispersed in another, a chamber, an inlet at one end of said chamber and an outlet at the other end of said chamber, a plurality of grids in said chamber, means for attaching a plurality of foraminous plates to said gridwork, a liquid outlet between said grids.

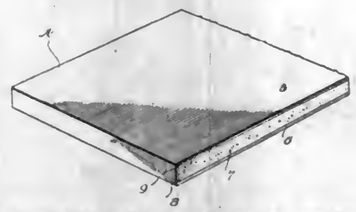
1,665,165. FRICTION OR ADHESION GEARING. EDWARD HENRY JAMES CECIL GILLETT, Hampstead, London, England. Filed Apr. 10, 1926, Serial No. 101,139, and in Great Britain Sept. 10, 1925. 5 Claims. (Cl. 74—34.)

1. Epicyclic frictional transmission gearing comprising a fixed and a movable race-ring, one of which is radially resilient, a plurality of planetary rollers running between said rings and an axially displaceable spring-loaded member provided with a tapered portion engaging the resilient ring in suchwise as to exert a radial pressure thereon, a plurality of wedging surfaces associated with the resilient ring and a set of devices such as rollers arranged between



the wedging surfaces and the resilient ring and acting to vary the radial pressure applied to the latter proportionally to the torque to be transmitted.

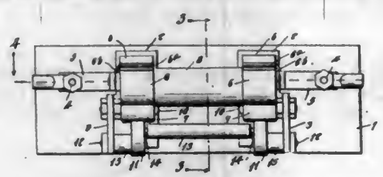
1,665,166. ELECTRICAL CONNECTER. JOHN ELPHINSTONE GRAHAM, London, England. Filed Oct. 21, 1925, Serial No. 63,934, and in Great Britain Oct. 31, 1924. 2 Claims. (Cl. 173—263.)



1. A sheet material connecter for facilitating the soldering of electric conductors together, said connecter being bent up and shaped from a blank shaped to include two parallel portions of similar formation joined by a strip and having cut away angles where said portions join the strip and other portions along the edges of the first named portions to form flanges adapted to extend towards each other at their free edges, the said bent up blank forming a chamber to hold the solder, and a plurality of openings in communication with said chamber for the passage and retention of electric conductors.

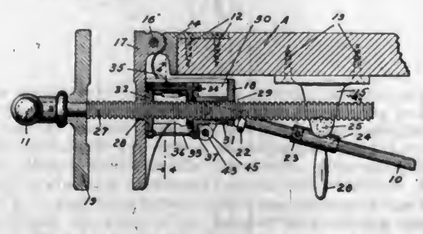
1,665,167. PROCESS FOR CLARIFYING LIQUIDS. ANTONIO VALLÉE Y GUMÁ, Habana, Cuba. Filed Nov. 7, 1921, Serial No. 513,421, and in Cuba Oct. 21, 1921. 4 Claims. (Cl. 127—57.)

1. A process for clarifying liquids which have been alcalinized and cleared of the air and vapors contained therein, which consists in subjecting a body of such liquids to the action of an external heating agent to maintain in the liquid the uniform temperature of 100 degrees C. or 212 degrees F. during the clarification and settling of the materials contained in suspension in the liquid mass.



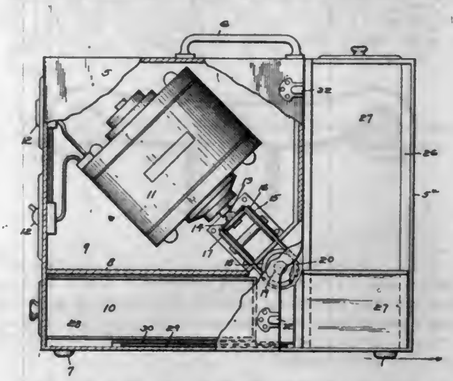
1,665,168. WALL BOARD. EDWIN L. GUSTAFSON, Fort Dodge, Iowa, assignor, by mesne assignments, to United States Gypsum Company. Filed Dec. 2, 1919, Serial No. 341,942. Renewed Oct. 21, 1921. Serial No. 509,366. 14 Claims. (Cl. 154—45.9.)

6. A composite board comprising, in combination, a plaster body, having an enveloping covering material, the side edges of which lie at the edge of the board.



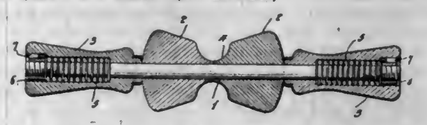
8. A plaster board of the kind described comprising a body and a covering sheet arranged at each face side thereof, one of said sheets folded over the edge and extending substantially to and terminating at the opposite face and inclosing the edge.

1,665,169. HOLDER FOR ELECTRIC FUSES. OREN E. HOLTSCLAW, Elwood, Ind., assignor of one-half to G. I. Sellers & Sons Company, Elwood, Ind., a Corporation. Filed Apr. 21, 1925. Serial No. 24,834. 5 Claims. (Cl. 200—134.)



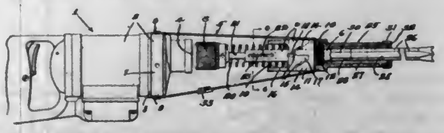
1. A fuse holder comprising a base fixed jaws secured to the base, movable jaws connected to the base, and simultaneously operable cams connected to the base and cooperating with the movable jaws to retain them in fuse clamping position.

1,665,170. VISE. OLE C. LARSEN, Minneapolis, Minn. Filed July 29, 1927. Serial No. 209,343. 8 Claims. (Cl. 81—36.)



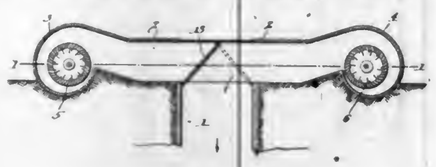
1. A vise comprising a bench plate, a pair of jaws tiltably mounted thereon, a screw for clamping said jaws toward each other, means for releasing the screw when the vise jaws are relatively movable in a horizontal direction, and means for automatically rendering the releasing means inoperative when the jaws are tilted.

1,665,171. ORTHO ROTOR PLANE. JESSE VANCE MATTESON, Jr., Santa Rosa, Calif. Filed Nov. 24, 1926. Serial No. 150,617. 9 Claims. (Cl. 125—3.)



1. A device of the character described comprising a casing, an assembly comprising an electric motor, a vertically disposed rotary plane blade and driving connections between the plane blade and the rotor, said assembly being disposed diagonally across said casing and a table slidable across said casing outside of said plane blade.

1,665,172. SHANK-FORMING TOOL. JOHN MICALL, Lawrence, Mass. Filed Apr. 29, 1924. Serial No. 709,842. 2 Claims. (Cl. 12—34.)

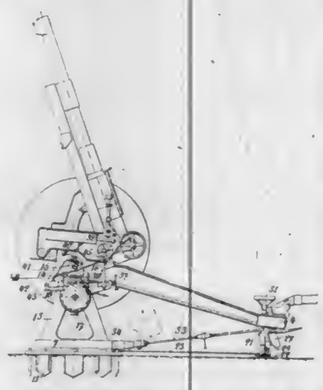


1. A tool for forming the shanks of shoes comprising a spindle, a pair of rolls mounted thereon having shank-forming surfaces and adapted for separating movement thereon, handles movable axially of the spindle to control the separating movement of the rolls, expansive springs within said handles abutting the handles, securing means threadedly engaging the spindle and abutted by said springs, interengaging means between said securing means and said handles, said springs serving to urge said rolls toward each other, and the tension of said springs being adjustable by rotating the handles relatively to the spindles.

1,665,173. HAMMER ATTACHMENT FOR ELECTRIC DRILLS AND THE LIKE. JOHN I. MISENER, Syracuse, N. Y. Filed Aug. 10, 1925. Serial No. 49,479. 2 Claims. (Cl. 255—42.)

2. A hammer mechanism comprising a casing, a tool holder fixed to one end of said casing, a revolving and reciprocating head in said casing having one end thereof extending into one end of said tool holder and provided with a noncircular portion, a tool having a noncircular portion extending into the other end of said tool holder, and a sleeve having a circular portion and a noncircular portion reversibly mounted in said tool holder so that the noncircular portion coacts with the noncircular portions of the head and tool or is reversed to coact with only one of said parts.

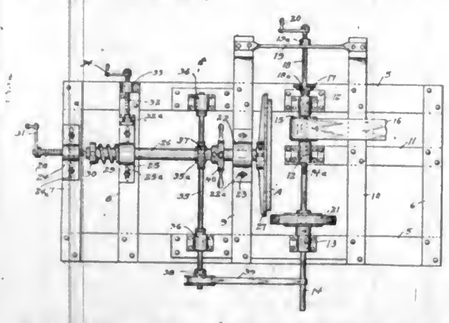
1,665,174. VENTILATING APPARATUS. WILLIAM J. MONTGOMERY, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, a Corporation of Ohio. Original application filed Oct. 28, 1922, Serial No. 597,669. Divided and this application filed Jan. 21, 1926. Serial No. 82,775. 4 Claims. (Cl. 98—50.)



1. In combination with two conjunctive conduits having an outlet at the point of juncture, a fan in each of said conduits selectively operable to develop a fluid current therein, and valve means at the point of juncture actuated automatically by the pressure in one conduit to close the other conduit.

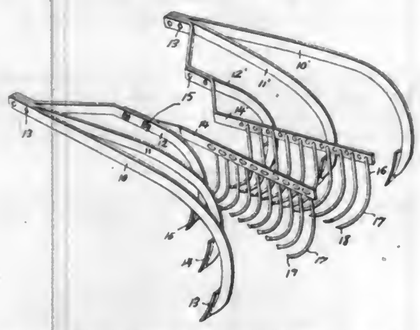
1,665,175. MANUFACTURE OF CATALYSTS. HARALD NIELSEN, Muswell Hill, London, England, assignor of one-half to Bryan Laing, Hatfield, England. Original application filed Nov. 27, 1922, Serial No. 603,696, and in Great Britain Dec. 3, 1921. Divided and this application filed Mar. 7, 1925. Serial No. 13,916. 4 Claims. (Cl. 23—237.)

1. A metallic catalyzer for use in the manufacture of formic acid or the treatment or conversion of hydrocarbons consisting of copper sub-oxide which has been precipitated from copper sulphate by means of metallic zinc.



3. A method of revivifying the copper sub-oxide catalyzer claimed in claim 1 which consists in moistening the vitiated or deoxidized copper sub-oxide with a weak solution of zinc sulphate.

1,665,176. ARRANGEMENT PROVIDING FOR THE AIMING OF AN ARTILLERY CARRIAGE IN ALL DIRECTIONS. EMILE RIMAILHO, Paris, France, assignor to Compagnie des Forges & Acieries de la Marine & d'Homecourt, Paris, France. Filed June 2, 1925, Serial No. 34,483, and in France June 14, 1924. 4 Claims. (Cl. 89—40.)

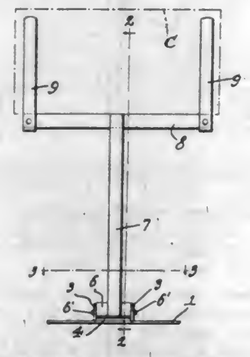


1. In an artillery arrangement, the combination of a gun carriage, an enlargement at the rear of said carriage, a circular roller path, rollers mounted on the enlargement and cooperating with the said roller path, means for the vertical adjustment of one of the said rollers, a base plate, a support mounted thereon and adapted to support the front part of the carriage, and bracing rods connecting the said base plate with the enlargement of the carriage.

1,665,177. GRINDING MACHINE FOR MILL BURRS OR OTHER ARTICLES. CONRAD A. RYAN, Canton, Minn. Filed Oct. 7, 1925. Serial No. 60,995. 4 Claims. (Cl. 51—50.)

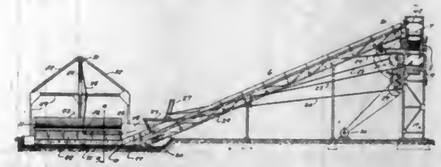
1. A machine of the class described comprising a support, a carrier shaft journaled on said support having a rotary carrier member mounted on the inner end thereof, a grinding shaft journaled on said support and extending transversely to said carrier shaft, a grinding wheel on said grinding shaft, means for moving said grinding wheel in both directions across a portion of said carrier member, and means for adjusting said carrier shaft longitudinally including a longitudinally movable worm engaging the outer end of said carrier shaft, driving connections between said grinding shaft and said carrier shaft, and resilient means for impelling said shaft outwardly away from said grinding wheel.

1,665,178. ATTACHMENT FOR CULTIVATORS OR PLOWS. PAUL RYAN, Dakota City, Nebr. Filed Dec. 18, 1925. Serial No. 76,318. 1 Claim. (Cl. 97—179.)



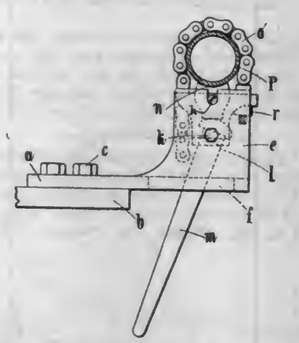
The combination with a bar for connection with a cultivator gang frame, said bar being apertured transversely, of a prong including a vertical shank portion, the upper part of which is adapted to engage the side of the bar, said prong being offset above the part thus engaging the bar, and the offset portion extending horizontally thru the bar at a right angle with the vertical portion of the shank and being of U-form, the extreme end projecting thru the bar and an aperture therein, in a direction opposite to that first engaged by the offset portion, in the same horizontal and said extreme end being headed in the apertured portion thru which it passes, the headed portion and the upper part of the shank engaging the bar on the frame side thereof.

1,665,179. HANDLED NESTED CUPS. GEORGE E. SAVAGE, Meriden, Conn., assignor, by mesne assignments, to Manning, Bowman & Co., Wilmington, Del., a Corporation of Delaware. Filed Jan. 22, 1925. Serial No. 3,943. 2 Claims. (Cl. 215—13.)



1. The combination of a plurality of nested cups fitted one upon another and having engaging external and internal screw-threaded portions, a spring wire handle for each cup having curved portions embracing the axis of said cup and engaging the external screw-threads thereof adjacent to the lip of the cup, each handle having an integral grip portion and being in its entirety in a plane approximately parallel to the lips of said cups.

1,665,180. CARD HOLDER. FREDERICK WILLIAM SCHEPMAN, Evansville, Ind., assignor to Edward Eugene Heer, Springfield, Mo., and myself. Filed Jan. 12, 1927. Serial No. 160,698. 1 Claim. (Cl. 40—146.)

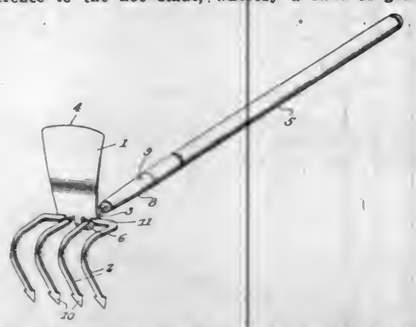


A device of the class described including a flat plate having an aperture, ears at opposite sides of the aperture and upstanding from the plate, said ears being formed of material removed in the formation of the aperture, a spring secured at one end flat upon the plate and having its other end portion extending partly across the aperture and between the ears, a cross strip journaled in the ears, said cross strip being angular in cross section, a standard secured to and movable with the cross strip, card holding means carried by one end of the standard, the other end of said standard being projected beyond the cross strip, there being an aperture in that portion of the spring overhanging the opening in the base plate, said spring constituting means for holding the cross strip in either of two positions, the aperture in the spring being adapted to receive the projecting end of the standard to fasten said standard in an upstanding position relative to the plate, said spring being depressible into the opening in the plate to release the standard.

1,665,181. BEET DUMP. JAMES W. SILVER, Ogden, Utah. Filed Jan. 18, 1926. Serial No. 82,031. 4 Claims. (Cl. 209—241.)

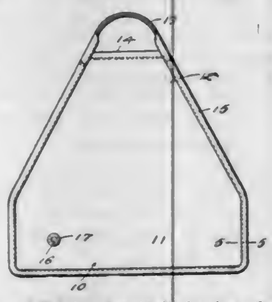
1. In beet dump apparatus, the combination of a main inclined conveyer, transverse conveyer means embodying screening means projected laterally of one side of said main conveyer at the upper end thereof for discharging the clean beets on that same side of the main conveyer, a substantially elevated tare receptacle mounted underneath said screening means for receiving and discharging the refuse from the beets also on the same side of said conveyer as the discharge of the clean beets, a beet load receiving hopper disposed at the lower end of said main conveyer in the longitudinal line thereof, and wagon dumping means associated with said hopper and likewise located on the same side of the apparatus as are said screening means and tare receptacle.

1,665,182. DEVICE CONVERTING PIPE WRENCHES INTO PIPE VISES. FRANK BERTRAM CHISWELL SUTTHERY, London, England. Filed Feb. 16, 1927, Serial No. 168,766, and in Great Britain Mar. 1, 1926. 4 Claims. (Cl. 81—41.)



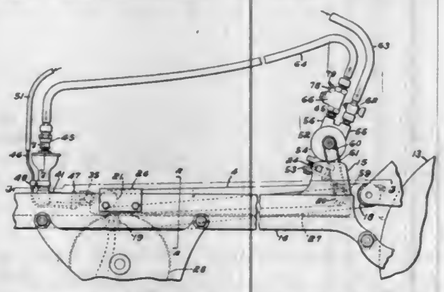
1. A device comprising a base provided with a slot, a bracket on each side of said slot, means for securing said base to a work table and means for securing a pipe wrench between said brackets with the handle of said wrench depending through said slot.

1,665,183. COMBINED HOE AND RAKE. EMIL URBAN, Comstock, Nebr. Filed Apr. 25, 1927. Serial No. 186,487. 1 Claim. (Cl. 97—62.)



A combined hoe and rake including a hoe blade and rake tines extending from the inner end of the hoe blade, the said blade and tines being formed from a single piece of metal, said tines comprising spaced bars, the outer ones of which extend laterally beyond the

plane of the side edges of the hoe blade and then project forwardly and downwardly to offset the rake with reference to the hoe blade, whereby a rake of greater

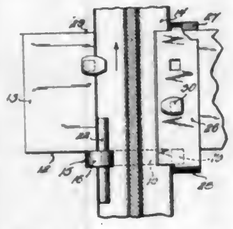


width than the hoe blade is provided, and a shank integral with the hoe blade and rake for connection with a handle.

1,665,184. RECEPTACLE. ALVIN H. THROWER, Waco, Tex., assignor to Clifton Manufacturing Company, Waco, Tex., a Copartnership composed of A. T. Clifton and W. R. Clifton. Filed Jan. 8, 1927. Serial No. 159,950. 1 Claim. (Cl. 224—45.)

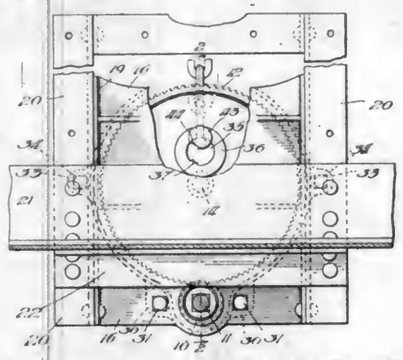
A waterproof fabric receptacle having the side walls thereof provided with extensions and the free ends of which are formed as handles, the side walls of the receptacle having openings permitting passage of the jaws of an ice tong to engage a cake of ice contained therein.

1,665,185. MEANS FOR TREATING SHEET MATERIAL WITH HEAT. LEO W. RAUNELL, Foxboro, Mass., assignor of one-third to Burt F. Upham and one-third to Edward W. Calkins, Boston, Mass. Filed Mar. 19, 1927. Serial No. 176,633. 15 Claims. (Cl. 34—18.)



1. In a printing press, the combination of a gas burner, means for causing a relative movement of the sheet of paper and the gas burner, a pump for pumping gas to said burner, and means to cause said pump to pump gas to said burner only when the press is operating.

1,665,186. PROCESS OF MAKING SULPHUR-CONTAINING PLASTICS. CARLETON ELLIS, Montclair, N. J., assignor to Ellis-Foster Company, a Corporation of New Jersey. Filed Feb. 25, 1926. Serial No. 90,621. 5 Claims. (Cl. 106—22.)

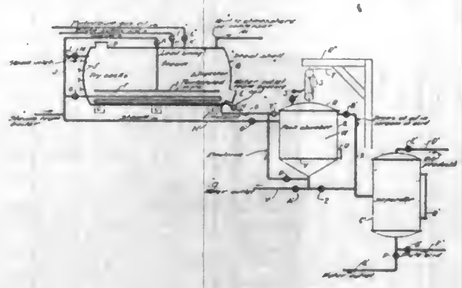


1. The process which comprises grinding together wood flour and sulphur, adding water to moisten the mass, and hot pressing the moist material.

1,665,187. RAIL ANCHOR. EMERY M. MCVICKER, Milwaukee, Wis., assignor to J. F. McVicker, Milwaukee County, Wis. Filed Aug. 2, 1926. Serial No. 126,440. 13 Claims. (Cl. 238—299.)

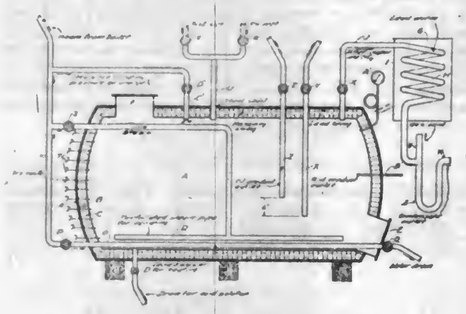
1. An anti-creeper for railway rails comprising a member having an integral portion engageable beneath a base flange of a rail, an integral portion overlying the flange, and a wedge interposed between said last named portion and the top face of the flange for effecting a vertical gripping pressure therebetween, said wedge having a transversely curved surface coacting with said last named portion to permit the wedge to accommodate itself to variations in the inclination of said face.

1,665,188. CHAIN ANCHOR FOR BRAKE GEARS. ARTHUR F. O'CONNOR, Chicago, Ill., assignor to Union Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 14, 1927. Serial No 167,930. 7 Claims. (Cl. 74—112.)



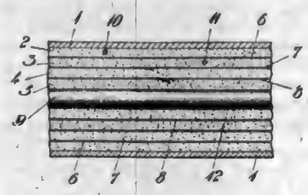
1. In a chain anchor for brake gears, the combination of a winding gear provided with a decentered aperture, means for imparting rotation thereto, a drum with which the gear is associated, a brake chain, and a hook-like member connected with the chain and having its free end entered through said aperture, substantially as described.

1,665,189. SEPARATION OF ACID-SLUDGE EMULSIONS. ERNEST W. ROTH, Los Angeles, Calif., assignor to General Petroleum Corporation of California, Los Angeles, Calif., a Corporation of Delaware. Filed Apr. 13, 1927. Serial No. 183,593. 1 Claim. (Cl. 23—173.)



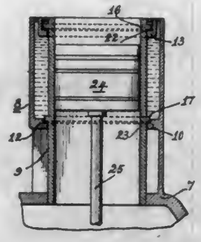
The method of breaking emulsions of tar and dilute acid resulting from the hydrolysis of acid sludge, which

comprises: passing a stream of such emulsion through a pack of granular inert material to produce coalescence of the particles of such emulsion, retarding the flow of



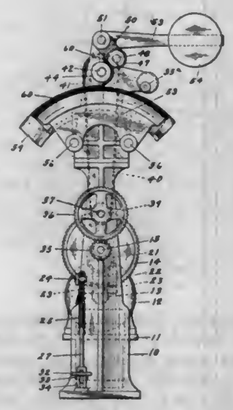
the efflux from said pack to permit further coalescence and stratification of the coalesced particles, and withdrawing separately the tar and the dilute acid.

1,665,190. HYDROLYSIS OF ACID SLUDGE. ERNEST W. ROTH, Los Angeles, Calif., assignor to General Petroleum Corporation of California. Los Angeles, Calif., a Corporation of Delaware. Filed Apr. 13, 1927. Serial No. 183,595. 9 Claims. (Cl. 23—173.)



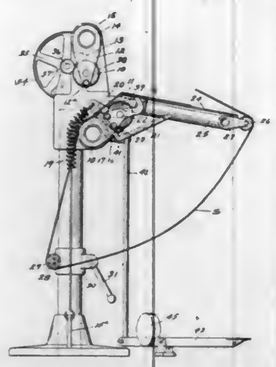
1. The method of separating acid sludge into useful constituents which comprises: digesting acid sludge with a solvent oil and dilute sulfuric acid, said acid having initially a density greater than that of the sludge.

1,665,191. HIGH-TENSION CABLE TO PREVENT A BREAKING DOWN OF THE INSULATION. ERNST GUSTAV SIEVERT and HENNING SVENSSON, Sundbyberg, near Stockholm, Sweden. Filed Nov. 9, 1925, Serial No. 67,949, and in Sweden Nov. 20, 1924. 1 Claim. (Cl. 173—264.)



A high-tension cable including an insulating layer, at least one tension equalizing layer arranged into said insulating layer, said tension equalizing layer being formed of asbestos.

1,665,192. INTERNAL-COMBUSTION ENGINE. MORTON SPENCE, Springfield, Ill., assignor of one-half to Earle T. Spence, Springfield, Ill. Filed Feb. 10, 1927. Serial No. 167,171. 2 Claims. (Cl. 123—173.)

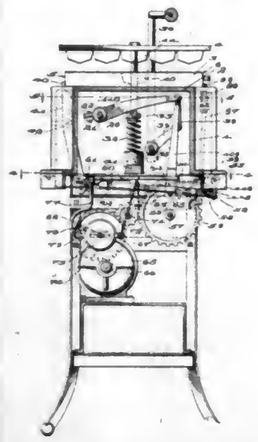


1. In conjunction with a cylinder body having at its upper part a recessed internally screw-threaded member, said cylinder body having also an upper internal circular flange and an intermediate circular member having a circular shoulder; a removable cylinder having external circular flanges co-operating with the respective inner flange-and-shoulder members of the cylinder body; washers interposed between the respective inner-flange-shoulder members of the cylinder body and the respective outer flanges of the removable cylinder; and an externally screw-threaded ring engaging the screw threads in the recess of said upper flange member of the cylinder body and rotative to make a tight connection of the removable cylinder with the cylinder body.

1,665,193. TREAD-REMOVING MACHINE. HORACE D. STEVENS, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Feb. 26, 1925. Serial No. 11,687. 3 Claims. (Cl. 154—9.)

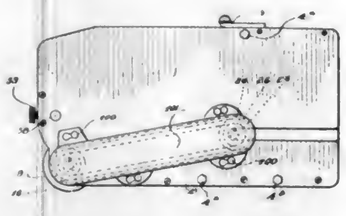
1. Apparatus of the class described comprising a support for pneumatic tires, a pair of gripping rollers, said support and gripping rollers being relatively movable into or out of the same plane, means for yieldingly urging one of said rollers toward the other and means for driving both of said rollers.

1,665,194. BAND-BUILDING MACHINE. HORACE D. STEVENS, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 8, 1926. Serial No. 93,083. 6 Claims. (Cl. 154—10.)



5. Apparatus for making endless bands of rubberized fabric, said apparatus comprising upper and lower pressure rollers, a support for swinging the lower pressure roller forwardly and downwardly from the upper pressure roller, and a table inclined toward the nip of said rollers.

1,665,195. REENFORCED SAFETY BAT. EDWARD COHN, Brooklyn, N. Y. Filed Jan. 14, 1927. Serial No. 161,228. 7 Claims. (Cl. 273—72.)



7. In a baseball bat, or stick, or other sporting body, or parts thereof, having a central hole extending therethrough, a solid shock absorbing rod extending through the central hole and said rod being secured at its ends, by washers and binding end members mounted on the ends of said rod.

1,665,196. ELECTRICAL DOUGH-IMPRINTING MACHINE. MEYER COLLIS, Charleston, S. C. Filed Apr. 29, 1926. Serial No. 105,554. 27 Claims. (Cl. 107—8.)

1. A machine of the character described comprising a pan having dough pockets and a presser head having dies; in combination, a movable yoke for advancing the presser head into an engaging position of the dies with dough blanks in said pockets, normally dormant mechanism by which the yoke is operable, and means actuated by engagement of a portion of the pan when in registering position with the presser head to put said mechanism in motion for operation of the yoke.

1,665,197. MARKING MACHINE. FRED J. LEDERER, Buffalo, N. Y. Filed Sept. 8, 1925. Serial No. 54,952. 17 Claims. (Cl. 101—330.)

1. An apparatus of the class described comprising a casing having an opening, a rotary impression roller of soft material mounted in the casing having its periphery operable through said opening, design roller engaging the soft impression roller and enclosed in the casing, a color receptacle connected with the casing, and distributing means interposed between the color receptacle and the design roller and enclosed by the casing.

Patents Nos. 1,665,198 to 1,666,061.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 369—No. 2. TUESDAY, APRIL 10, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Mar. 28, 1928.*

Spinks & McIlwain, their assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Edward F. Read, 1721 Lombard Street, Philadelphia, Pa., for registration of a trade-mark and trade-mark registered September 11, 1923, No. 172,502 to Spinks & McIlwain, 102 Washington Street, Selma, Ala., and a notice of such declaration sent by registered mail to said Spinks & McIlwain at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Spinks & McIlwain, their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, Mar. 30, 1928.*

Porter-Seitz Shoe Stores Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Edward J. Ramsey, 347 Rider Avenue, New York, N. Y., for registration of a trade-mark and trade-mark registered February 5, 1924, No. 179,325, to Porter-Seitz Shoe Stores Company, 203 Pittsburgh Life Building, Pittsburgh, Pa., and a notice of such declaration sent by registered mail to said Porter-Seitz Shoe Stores Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Porter-Seitz Shoe Stores Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, Mar. 16, 1928.*

Richard Raines, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application for patent of Thomas A. Bowers, 25 Seaview Apartments, Sheepshead Bay, Brooklyn, N. Y., and patent granted December 21, 1926, No. 1,611,677, to Richard Raines, 441 East 182d Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Raines at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Raines, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Notices of Cancellation.

U. S. PATENT OFFICE, *Washington, Mar. 29, 1928.*

The Chillicothe Packing Company, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of John Morrell & Co., of Ottumwa, Iowa, to effect the cancellation of the trade-mark registration of The Chillicothe Packing Company, of Chillicothe, Ohio, No. 40,832, dated July 28, 1908, and the notice of such proceeding sent by registered mail to The Chillicothe Packing Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless The Chillicothe Packing Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, Mar. 13, 1928.*

John E. Whitmore, his assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Bourjois, Inc., of No. 35 West 34th Street, New York, N. Y., to effect the cancellation of the trade-mark registration of John E. Whitmore, of 355 East Utica Street, Buffalo, N. Y., No. 98,027, dated June 30, 1914, and the notice of such proceeding sent by registered mail to the said John E. Whitmore at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said John E. Whitmore, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Condition of Applications Under Examination at Close of Business March 30, 1928.

(Total number of applications awaiting action, excluding Trade-Mark Division, 97,381; Trade-Mark Division, 2,341. Oldest new case, June 17, 1927; oldest amended, June 25, 1927. The dates given are 1927 except where † indicates 1928.)

Room No.	Divisions, Examiners, and Subjects of Inventions.	Oldest new application awaiting office action.	Oldest action by applicant awaiting office action.	No. of applications awaiting action.
		New.	Amended.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

BARLOW *v.* CRABB.

Decided April 24, 1926.

1. INTERFERENCE—PRIORITY—ABANDONED EXPERIMENT.

Where a device embodying the issue was built and installed upon an automobile, but such automobile was driven for only short distances and the inventor stated that considerable experimental work and alterations were made, the car being eventually junked and no longer operated, *Held* that this device constituted merely an abandoned experiment.

2. SAME—SAME—DILIGENCE.

Where B., who was the first to conceive, was doing nothing at the time C. entered the field and for nearly a year thereafter and made no showing why he could not earlier have resumed his activities, *Held* that he was not exercising diligence, and priority properly awarded to C., the first to reduce to practice.

[Decision affirmed by the Court of Appeals of the District of Columbia, 369 O. G. 234.]

APPEAL from Examiners in Chief.

Mr. Arthur P. Greeley for Barlow.

Mr. B. G. Foster for Crabb.

KINNAN, *First Assistant Commissioner:*

The party, Barlow, has appealed from the decision of the Board of Examiners in Chief affirming that of the Examiner of Interferences awarding priority to the senior party, Crabb, of the invention, which is set forth in some nine counts, of which counts 3 and 9 will serve for illustrative purposes.

3. In a steam generator, the method of causing positive circulation within the generator consisting in creating a difference in pressure between portions of the generator and causing such differential pressure to operate mechanical water forcing means for supplying water from the portion of lower pressure to the portion of higher pressure.

9. In a generator for generating steam, the combination of a pressure chamber, and a heating coil connected at both ends with the pressure chamber, and a unit steam pump having its steam end connected between the steam end of the heating coil and the upper part of the pressure chamber and having its water end connected between the lower part of the pressure chamber and the inlet end of the heating coil.

The invention in issue is a steam generator or steam-generator system from which the engine or other motor which the steam is used to operate or the vehicle or other machine which may be driven by such engine derives its energy. The gist of the invention resides in the provision of a positive forcing means or pump to prevent the water in the boiler from being forced back toward the water supply in a system in which the water is heated in the boiler or coil whereby the steam is created. This steam is utilized to operate a pump which feeds the water to the boiler, and thus prevents the expansion of the created steam from forcing any of the water backward in the opposite direction to which it should go in the cycle of the circulating generating system.

Both the Examiner of Interferences and the Examiners in Chief found Crabb, the senior party, who filed his application over a year and one-half before Barlow had conceived of the invention and reduced it to practice at least as early as midsummer of 1920. The reduction to practice consisted in the installation of apparatus, which differed from that disclosed in his application substantially only in the presence of a reciprocating rather than a rotary pump, on an automobile, where it was operated for a considerable time and successfully. Crabb's testimony, corroborated by that of his mechanic, Johnson, supported, as far as it goes, by the testimony of Wilson, is deemed sufficient to justify the conclusion of the tribunals below that Crabb is entitled to a date as early as June 30, 1920, for reduction to practice. He made some further changes, particularly the substitution of the rotary for the reciprocating pump, subsequent to this date, with the result that the apparatus worked somewhat better. He filed his application January 21, 1921. The foregoing facts and findings are not seriously controverted by the party Barlow.

[1] Barlow has been held to have established conception of the invention of the issue as early as 1917, and substantially all the testimony given by him, in addition to that of his brothers stipulated into the record, is not seriously controverted by Crabb. The inference to be drawn from what Barlow claims to have done in 1917 constitutes the real controversy here to be considered. The exhibits, Charts A, B, C, and D, are admitted to disclose the invention of the issue. Substantially the apparatus disclosed in these exhibits was installed upon an automobile and the latter was driven at different times for a total distance which is estimated to have been somewhere between 50 and 250 miles. Barlow states himself that "considerable experimental work and alterations were made from time to time," and that "eventually during the year 1918, the car was junked and no longer operated." What Barlow did at this time must be interpreted in view of his subsequent activities. There is clearly enough evidence that the installation did not work successfully. There was trouble and the experiments were, as one visualizes the testimony of Barlow, and even gives his statements full force and credit, regarded as unsuccessful and unsatisfactory. Barlow, quite evidently, regarded his work as unfinished. It is true he became interested in certain other activities in connection with the Government during the war, but there is no showing that he was prevented thereby from carrying on the development of the invention of the issue. If he had considered his experiments as demonstrating the practicability of the invention, it seems the usual course of human conduct would have been to take further steps in curing the defects and in either making a successful installation or applying for a patent. Barlow did not do any or either of

these things, but waited until some time after Crabb began his activities—in fact until December, 1920, or early in 1921—before again taking up the matter at all. Under these circumstances, no other conclusion seems sustainable than that what Barlow did in 1917 and 1918 constituted but an abandoned experiment.

[2] Since it must be held established that Barlow conceived the invention in 1917, which was prior to any date which can be given Crabb, the question of diligence arises, because what Barlow did in 1917 and 1918 is held not to be a reduction to practice. At the time Crabb entered the field and reduced to practice, in the summer of 1920, Barlow was doing absolutely nothing. The war was over in 1918 or at least long prior to December, 1920, when Barlow resumed his activities. There is no showing as to why he could not have taken up the matter again earlier. Under these circumstances it must be held the conclusion of the tribunals below that Barlow was nondiligent from the time just prior to Crabb's entrance into the field until Barlow reduced to practice is sound and, in consequence, Barlow can not prevail.

Barlow has alleged impropriety in the action of the Examiner in suggesting the allowable claims of Barlow to the party Crabb in whose application no allowable claims existed. There does not appear to have been anything improper in connection with the procedure followed by the Examiner. Where two parties are seeking patents with claims covering substantially the same patentable invention and one has formulated an allowable claim to that invention, it is proper procedure to suggest such claim to the other party to the end that the claim shall be finally allowed to the party first to make the invention. It is immaterial that the second party, while attempting to obtain allowable claims to that same invention, has not yet succeeded in so formulating his claims as to receive favorable consideration of them by the Office tribunals.

The decision of the Examiners in Chief awarding priority to the senior party, Crabb, is affirmed.

Court of Appeals of the District of Columbia.

BARLOW *v.* CRABB.

No. 1,963. Decided December 5, 1927.

INTERFERENCE—PRIORITY.

B. *Held* to have been the first to conceive the invention, but the last to reduce to practice and not diligent, and priority properly awarded to C.

[For Commissioner's decision see 369 O. G. 233.]

APPEAL from the Commissioner of Patents. Affirmed.

Mr. A. P. Greeley for Barlow.

Mr. B. G. Foster for Crabb.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

MARTIN, *C. J.*:

The invention in controversy is a method and apparatus for generating steam, and is primarily intended for use in connection with motor vehicles.

The invention as a method is stated in count 1 as follows:

1. In a steam generator, the method of causing positive circulation within the generator consisting in creating a difference in pressure between portions of the generator and causing such differential pressure to operate mechanical water forcing means for supplying water from the portion of lower pressure to the portion of higher pressure.

And as apparatus is stated in count 9 as follows:

9. In a generator for generating steam, the combination of a pressure chamber, and a heating coil connected at both ends with the pressure chamber, and a unit steam pump having its steam end connected between the steam end of the heating coil and the upper part of the pressure chamber and having its water end connected between the lower part of the pressure chamber and the inlet end of the heating coil.

Crabb filed his application on January 21, 1921, and is the senior party. Barlow filed on August 30, 1922, and the burden of proof is accordingly upon him. The Examiner of Interferences found upon the evidence that Crabb had actually reduced the invention to practice not later than June 30, 1920, by installing and successfully operating the same upon an automobile, but under the evidence found no earlier date than this for Crabb's conception. It is the claim of Barlow that he conceived the invention and reduced it to practice in the year 1917 by a like successful use upon an automobile. It was found, however, by the Examiner that this alleged operation was but an unsuccessful experiment, and did not amount to an actual reduction to practice. The Examiner therefore found that Barlow had not reduced the invention to practice prior either to Crabb's actual reduction to practice in 1920, or his constructive reduction to practice on January 21, 1921; and that Barlow was lacking in the necessary diligence during that period; and for this reason the Examiner awarded priority to Crabb.

An appeal was taken by Barlow to the Board of Examiners in Chief who affirmed the decision of the Examiner of Interferences; and the decision of the Board was affirmed upon appeal by the Commissioner of Patents, from whose decision the present appeal was taken.

We have examined the evidence in the case, together with the briefs of the respective counsel, and we find no reason apparent in the record to require a reversal of the concurrent decisions below.

The decision of the Commissioner of Patents is therefore affirmed.

Court of Appeals of the District of Columbia.

LEVER BROTHERS COMPANY *v.* ARMOUR AND COMPANY.

No. 2,027. Decided February 6, 1928.

1. TRADE-MARKS—DESCRIPTIVENESS.

The terms "Supercream" and "Supercreamed," as applied to hard soaps, are not descriptive, but fanciful and arbitrary.

2. SAME—SIMILARITY.

The words "Supercream" and "Supercreamed" are obviously so similar in appearance and sound as to lead to confusion, if used as trade-marks for different kinds of soap packed and sold as hard cakes or sticks in cases or cartons.

3. SAME—GOODS OF SAME DESCRIPTIVE PROPERTIES.

Soap, no particular kind or variety of soap being specified, *Held* to be goods of the same descriptive properties as shaving soap put up in cakes and sticks.

APPEAL from the Commissioner of Patents. Affirmed.

Mr. Archibald Cox and *Mr. W. G. Henderson* for Lever Brothers Company.

Mr. G. P. Fisher for Armour & Company.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

MARTIN, *C. J.*:

This appeal is from a decision of the Commissioner of Patents sustaining an opposition to the registration of a trade-mark.

The Lever Brothers Company sought to register the name "Supercreamed," as a trade-mark for soap, no particular kind or variety of soap being specified. It was stipulated into the record that applicant—

had continuously used the mark of the application upon and in connection with the goods mentioned in the application since September 13, 1924, and had largely advertised the said goods bearing the said trade-mark in the manner illustrated by typical specimens filed herewith marked Exhibits A, B and C.

These exhibits need not be reproduced here.

An opposition was entered by Armour and Company, who showed that for the past 15 years they had continuously manufactured and sold large quantities of cakes and sticks (not paste) of shaving soap under the trade-mark "Supercream." It was also shown that they had extensively advertised their product by that name.

The opposition was sustained by the Examiner of Interferences and the Commissioner of Patents, upon the ground that the words "Supercream" and "Supercreamed" as thus applied are purely arbitrary and fanciful; that they are confusingly similar in appearance and sound; that the goods of the respective parties have the same descriptive properties; and that confusion in trade would likely result from the registration applied for, to the prejudice of opposer.

[1, 2, 3] We think the rulings entered below are right. It is not denied that opposer has established priority of time in the use of its trade-mark. We think that the words "Supercream" and "Supercreamed," when applied to hard soaps, are not descriptive, but fanciful and arbitrary. Such soaps are not made of cream; they have none of the qualities of cream; and they do not resemble cream in point of consistency or otherwise. The words in question are obviously so similar in appearance and sound as to lead to confusion if used as trade-marks for different kinds of soap packed and sold as hard cakes or sticks in cases or cartons. Moreover in *Waltke & Co. v. Schafer & Co.*, 273 O. G. 630, 49 App. D. C. 254, this court held that toilet soap and shaving soap or cream are related materials, and where opposer has a right to use its mark on toilet soap, it may prevent the use of it by others on shaving soap or shaving cream. To grant applicant a registration of its name for soaps without restriction, would result in denying opposer the right to use its mark upon shaving soaps, the names being confusingly similar as aforesaid. Furthermore—

Opposer is not bound to establish damages in order that it may succeed. It is sufficient for it to show that the applicant's mark would "be likely to cause confusion or mistake in the mind of the public," * * * but where there is doubt the courts resolve it against the newcomer. *Waltke & Co. v. Schafer & Co.*, supra. *Coca-Cola Co. v. Chero-Cola Co.*, 288 O. G. 432, 51 App. D. C. 27; *Guggenheim v. Cantrell & Cochrane*, 352 O. G. 533, 56 App. D. C. 100.

The decision of the Commissioner of Patents is affirmed.

Patent Suits.

Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Design Pat. 73,393, A. Weber, Lantern, decided February 21, 1928, single claim.

Pat. 1,553,570. C. G. Strandlund, Hitch device, decided March 19, 1928, claim 1.

Pat. 1,555,942, R. E. Cartzdafner, Bolster construction, decided February 25, 1928, claims 1, 9, 10, 11, 13, 14, 16, 17, 18, 19, and 21 to 25, inclusive.

Pat. 1,593,272, C. S. Smith, Machine for correcting splined shafts, decided February 28, 1928, claims 1 to 7, inclusive.

Pat. 1,614,561, A. A. Kramer, Tank, decided March 17, 1928, claim 9.

Pat. 1,615,347, J. D. Schakel, Leveling attachment for elevator-car switches, decided February 27, 1928, claims 1, 4, and 7.

Pat. 1,625,050, L. A. Page, Extendible spectacle temple, decided March 2, 1928, claims 1 and 2.

Pat. 1,629,783, H. Finkle, Connecter, decided March 3, 1928, claims 1 and 2.

Pat. 1,631,832, M. A. Penrod, Railway controlling apparatus, decided February 29, 1928, claim 1.

Adjudicated Patent.

(D. C. Me.) The Sulman, Greenway & Higgins patent, No. 962,678, for process of concentrating ores, claims 1 and 2, *Held* valid and infringed. *Minerals Separation North American Corporation* v. *Magma Copper Co.*, 23 F. (2d) 931.

Disclaimer.

1,597,955.—*Paul L. Coyle*, Pittsburgh, Pa. METHOD OF DIE ROLLING. Patent dated August 31, 1926. Disclaimer filed March 28, 1928, by the assignee, by mesne assignments, *The Colonial Trust Company*, trustee.

Hereby disclaims from claim 6 any method of using a die roll except where the matrix portions of the die roll are so proportioned relatively to one another that flash is produced along both sides of at least a part of the article during the die rolling operation.

TRADE-MARKS

OFFICIAL GAZETTE, APRIL 10, 1928.

[VOL. 369. No. 2.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

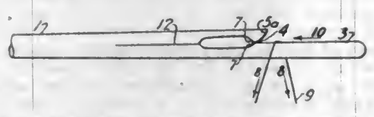
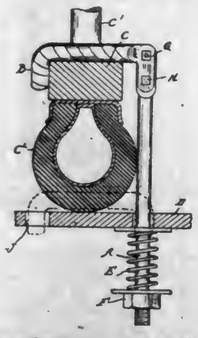
REISSUES



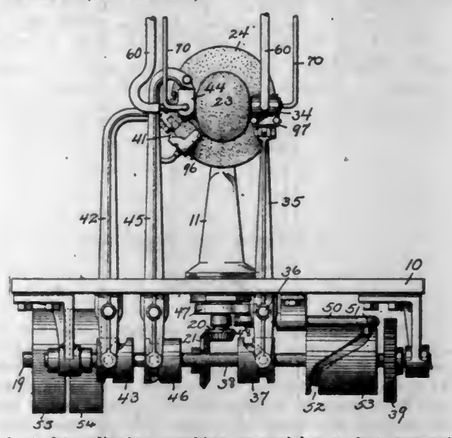
APRIL 10, 1928.

16,925. MACHINE FOR SETTING OR APPLYING BELT FASTENERS AND THE LIKE. JAMES K. DIAMOND, Grand Rapids, Mich., assignor to Clipper Belt Lacer Company, Grand Rapids, Mich. Filed Apr. 23, 1926. Serial No. 104,221. Original No. 1,563,845, dated Dec. 1, 1925, Serial No. 19,480, filed Mar. 30, 1925. 27 Claims. (Cl. 1—49.4.)

1. In a structure of the class described, the combination of a bed, a shaft-like anvil jaw member rotatably mounted at the rear side of said bed, a fastener holder adapted to support a plurality of fasteners operatively associated with said anvil jaw member, means for giving said anvil jaw member a step by step adjustment, a way disposed at the front of said bed in approximately the horizontal plane of and in parallel relation to said anvil jaw member, a track disposed in a plane below and adjacent to said anvil jaw member, a carriage provided with supporting rollers traveling on said way and track and with inner and outer thrust rollers coacting with the edges of said way, and a cylindrical disk-like closing jaw rotatably mounted on said carriage in supporting engagement with the inner thrust roller.



16,926. SEWING NEEDLE. HERMAN I. LIPPARD, Upper Darby, Pa. Filed Apr. 6, 1927. Serial No. 181,577. Original No. 1,619,142, dated Mar. 1, 1927, Serial No. 100,338, filed Apr. 7, 1926. 5 Claims. (Cl. 233—37.)

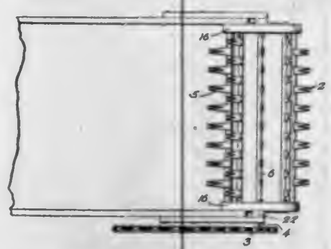


1. A tagging needle having an eye at the head end thereof, a slit at the rear end of said eye, a slit at the front end of said eye extending towards the point or front end of said needle, a beveled edge at the rear end of said eye, the said bevel sloping towards the slit at the rear end, arms formed by the said slits, one of the arms being longer than the other.

16,927. SECURING DEVICE FOR VEHICLES. JOHN H. ROSENCRANS, Detroit, Mich., assignor of one-half to James W. Smith, Detroit, Mich. Filed Jan. 26, 1925. Serial No. 4,974. Original No. 1,495,442, dated May 27, 1924, Serial No. 539,344, filed Feb. 27, 1922. 5 Claims. (Cl. 280—179.)

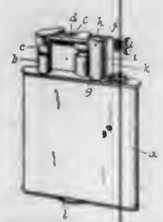
1. The combination with an article of merchandise, of a support therefor having spaced openings therethrough, a stem extending through one of said openings, a hook carried by said stem, and yieldable means engaging said stem below said support and normally retaining said hook in engagement with said article of merchandise said yieldable means being adapted to cause said hook to engage the other opening in said support when said hook is removed from said support.

16,928. HAT-CLIPPING MACHINE. FERDINAND E. KAUFFMANN, Rahway, N. J., assignor to Doran Brothers, Danbury, Conn., a Copartnership consisting of James F. Doran and John C. Doran. Filed Sept. 20, 1927. Serial No. 220,781. Original No. 1,452,048, dated Apr. 17, 1923, Serial No. 422,205, filed Nov. 6, 1920. 25 Claims. (Cl. 223—30.)



1. A hat clipping machine comprising a hat support including a block to hold a hat with its crown taut and shaped, a clipping device, and means for moving the parts so that the clipping device traverses the entire crown of the hat.

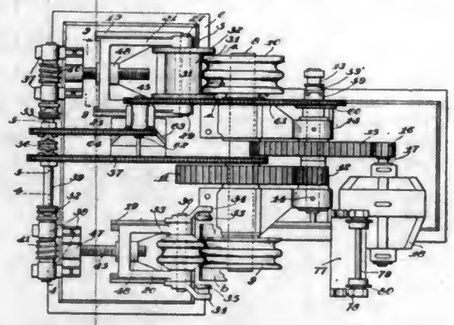
16,929. MANURE SPREADER. EDWARD C. F. SCHAEFER, York, Pa. Filed Feb. 11, 1928. Serial No. 253,749. Original No. 1,646,878, dated Oct. 25, 1927, Serial No. 101,987, filed Apr. 14, 1926. 10 Claims. (Cl. 275—3.)



1. In a manure spreader of the class described, an elevating and ejecting rotor, embodying a pair of end heads in the form of disks provided with angularly dis-

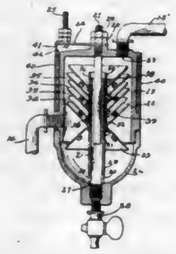
posed peripheral flanges, a shaft upon which the heads are keyed, a plurality of bars arranged at circumferentially spaced points and located between the peripheral portions of said heads, said bars being provided at their opposite ends with journals, and said heads being provided with bearings in which said journals are rotated, teeth carried by said bars, crank arms on the ends of said bars, a pair of hollow drum structures including peripheral rims, said flanges being stationary and fitting telescopically into said rims, said crank arms being

located between said heads and drums, said drums being provided with endless eccentric channels, and rollers carried by the ends of said crank arms and movable in said channels, the aforesaid rotor being adapted to be mounted in the body of a manure spreader for forward rotation at the discharge end of said body, the eccentricity of said channel being such that the teeth on the drum as they approach the load from the lower side are rearwardly inclined and gradually assume a radial position as they mount to the top of the drum, from which they gradually assume an inclined position.



16,930. FLINT LIGHTER. FREDERICK CHARLES WISE and WILLEY GREENWOOD, London, England, assignors to Alfred Dunhill of London, Inc., New York, N. Y., a Corporation of Delaware. Filed June 30, 1927. Serial No. 202,730. Original No. 1,550,859, dated Aug. 25, 1925, Serial No. 23,160, filed Apr. 14, 1925. 3 Claims. (Cl. 67—7.1.)

1. In a flint lighter of the character described, the combination with a wick tube, a hood for covering the end of said tube, and a pivoted lever carrying said hood, of a steel spring bearing against said lever so as to hold the hood either in open or closed position, and a blade of non-corrosive metal superposed on said steel spring so as to cover and conceal the same, substantially as and for the purpose set forth.



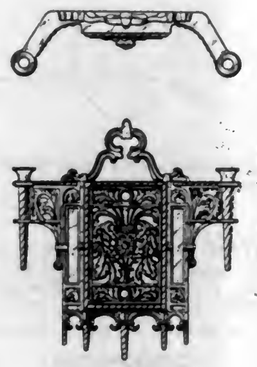
16,931. COMBINATION BAND OR TUBE CORRUGATING AND FLANGING MACHINE. CARL B. PRITCHARD, Scottdale, Pa. Filed May 8, 1925. Serial No. 28,979. Original No. 1,507,424, dated Sept. 2, 1924, Serial No. 673,102, filed Nov. 6, 1923. 10 Claims. (Cl. 153—2.)

1. In a corrugating and flanging machine of the character described, a base, corrugating and flanging driving rolls mounted for rotation upon said base, corrugating and flanging forming rolls also mounted upon said base and adapted for respective cooperation with said driving rolls, means for actuating said driving rolls and simul-

taneously actuated means for controlling the slow movement of said forming rolls in a direction toward said driving rolls, and means for stopping the movement of said forming rolls either jointly or singly.

16,932. CLARIFYING DEVICE FOR LIQUIDS. ALBERT L. RASEY, Milwaukee, Wis. Filed Jan. 30, 1928. Serial No. 250,648. Original application filed June 26, 1922, Serial No. 570,880. Divided and application filed Jan. 7, 1924, Serial No. 684,734. Original No. 1,602,935, dated Oct. 12, 1926. 24 Claims. (Cl. 209—215.)

18. The combination with an internal combustion engine having a circulatory lubrication system and an electric generator, of electromagnetic means operated from said generator associated with said system and adapted wholly to remove magnetically attractable particles from the path of fluid in said system, whereby upon the stopping of the engine and the consequent cessation of the current supply of said generator to the electromagnetic means such particles will not be restored to said system.



16,933. PROCESS OF MAKING ARSENATES OF MANGANESE AND PRODUCT THEREOF. WELLINGTON LEE TANNER, El Molino, Sonora, Mexico, assignor to The Grasselli Chemical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 9, 1927. Serial No. 211,844. Original No. 1,591,795, dated July 6, 1926, Serial No. 654,781, filed July 30, 1923. Renewed Nov. 12, 1925. 14 Claims. (Cl. 23—5.)

11. As an insecticide, a product substantially identical with the reaction product obtainable by heating to reacting temperature in the presence of water a mixture of arsenious oxid with a compound of manganese capable of oxidizing arsenious oxid, said reaction product being a complex aggregate containing a plurality of manganese compounds in various hydration stages.

DESIGNS

APRIL 10, 1928.

74,853. WALL-BRACKET LIGHTING FIXTURE. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Dec. 29, 1927. Serial No. 24,689. Term of patent 7 years.

The ornamental design for a wall bracket lighting fixture, as shown.

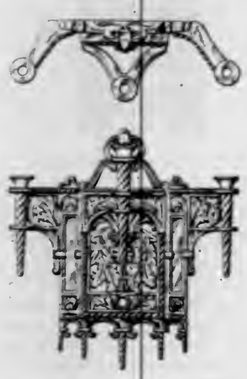
74,854. CANDLE CUP FOR LIGHTING FIXTURES. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Company, Reading, Pa., a Corporation of Pennsylvania. Filed Dec. 29, 1927. Serial No. 24,690. Term of patent 7 years.

The ornamental design for a candle cup for lighting fixtures, as shown.

74,855. WALL-BRACKET LIGHTING FIXTURE. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Dec. 29, 1927. Serial No. 24,691. Term of patent 7 years.

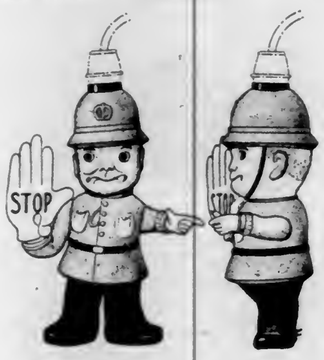
The ornamental design for a wall-bracket lighting fixture, as shown.

74,856. PLATE FOR LIGHTING FIXTURES. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Dec. 29, 1927. Serial No. 24,692. Term of patent 7 years.



The ornamental design for a plate for lighting fixtures, as shown.

74,857. LOOP FOR LIGHTING FIXTURES. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Company, Reading, Pa., a Corporation of Pennsylvania. Filed Dec. 29, 1927. Serial No. 24,693. Term of patent 7 years.



The ornamental design for a loop for lighting fixtures, as shown.

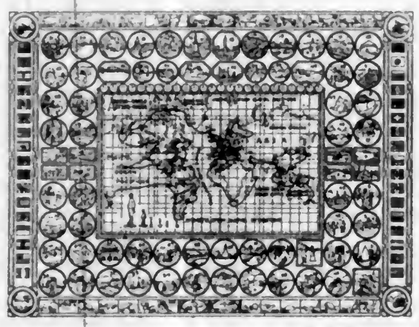
74,858. WALL-BRACKET LIGHTING FIXTURE. HERMAN ABRAMS, Philadelphia, Pa., assignor to Crescent Brass Mfg. Co., Reading, Pa., a Corporation of Pennsylvania. Filed Dec. 29, 1927. Serial No. 24,695. Term of patent 7 years.

The ornamental design for a wall bracket lighting fixture, as shown.

74,859. SIGNAL LAMP. IRVING ALEXANDER, New York, N. Y. Filed Dec. 30, 1927. Serial No. 24,704. Term of patent 7 years.

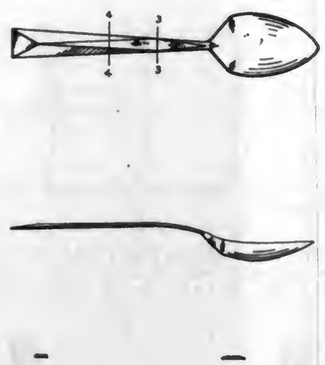
The ornamental design for a signal lamp, as shown.

74,860. SPOON OR SIMILAR ARTICLE. GROSVENOR N. ALLEN, Oneida, N. Y., assignor to Oneida Community, Limited, Oneida, N. Y., a Corporation of New York. Filed Dec. 17, 1927. Serial No. 24,511. Term of patent 14 years.



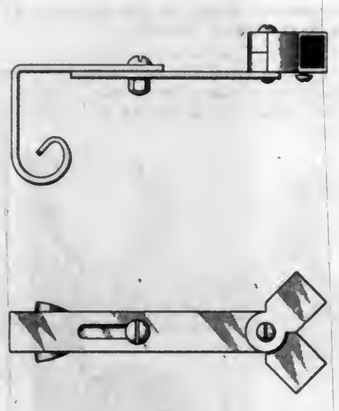
The ornamental design for a spoon or similar article as shown and described.

74,861. KNITTED FABRIC. MILLARD D. BROWN, Philadelphia, Pa., assignor to Continental Mills, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 24, 1927. Serial No. 21,288. Term of patent 7 years.



The ornamental design for a knitted fabric, substantially as shown.

74,862. GAME BOARD. JOSEPH CHADILLON, Montreal, Quebec, Canada. Filed Aug. 29, 1927, Serial No. 23,235, and in Canada May 27, 1927. Term of patent 3½ years.



The ornamental design for a game board, as shown, and described.

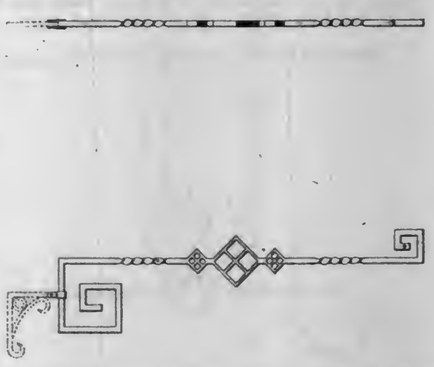
74,863. SPOON OR SIMILAR ARTICLE. ELWOOD N. CORNELL, Hempstead, N. Y., assignor to The Middletown Silver Company, Middletown, Conn., a Corporation of Connecticut. Filed Jan. 25, 1928. Serial No. 25,023. Term of patent 14 years.

The ornamental design for a spoon or similar article as shown.

74,864. CURTAIN-POLE BRACKET OR SIMILAR ARTICLE. JAMES O. CRAWFORD, Oakland, Calif., assignor to The John Kroder and Henry Reubel Company, New York, N. Y., a Corporation of New York. Filed Nov. 26, 1927. Serial No. 24,289. Term of patent 3½ years.

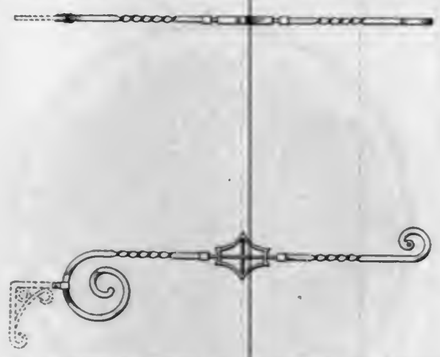
The ornamental design for a curtain pole bracket or similar article, substantially as shown.

74,865. PILLOWCASE. JOSEPH DERK, Doylestown, Pa., assignor to The Derk Manufacturing Company, Doylestown, Pa., a Corporation of Pennsylvania. Filed Jan. 26, 1928. Serial No. 25,045. Term of patent 3½ years.



The ornamental design for a pillowcase, as shown.

74,866. HEAD FOR LIGHTING STANDARDS. ANDREW DE VRIES, South Bend, Ind., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 29, 1927. Serial No. 23,240. Term of patent 14 years.



The ornamental design for a head for lighting standards, as shown.

74,867. AWNING ARM. CHARLES H. DIETZ, Chicago, Ill., assignor to United States Tent & Awning Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 21, 1928. Serial No. 24,962. Term of patent 7 years.

The ornamental design for an awning arm substantially as shown.

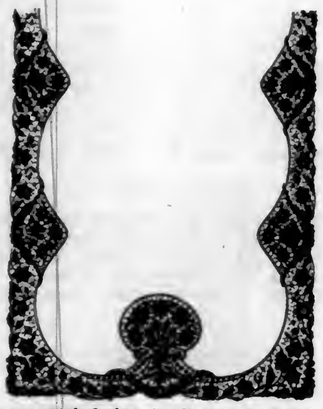
74,868. AWNING ARM. CHARLES H. DIETZ, Chicago, Ill., assignor to United States Tent & Awning Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 23, 1928. Serial No. 24,999. Term of patent 7 years.

The ornamental design for an awning arm substantially as shown.

74,869. AWNING ARM. CHARLES H. DIETZ, Chicago, Ill., assignor to United States Tent & Awning Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 25, 1928. Serial No. 25,018. Term of patent 7 years.

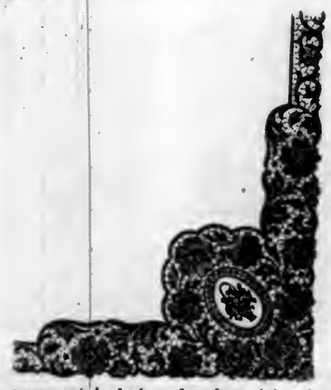
The ornamental design for an awning arm substantially as shown.

74,870. AWNING ARM. CHARLES H. DIETZ, Chicago, Ill., assignor to United States Tent & Awning Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 27, 1928. Serial No. 25,057. Term of patent 7 years.



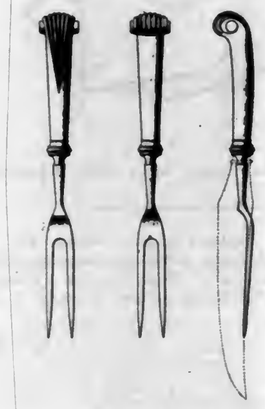
The ornamental design for an awning arm substantially as shown.

74,871. AWNING ARM. CHARLES H. DIETZ, Chicago, Ill., assignor to United States Tent & Awning Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 28, 1928. Serial No. 25,072. Term of patent 7 years.



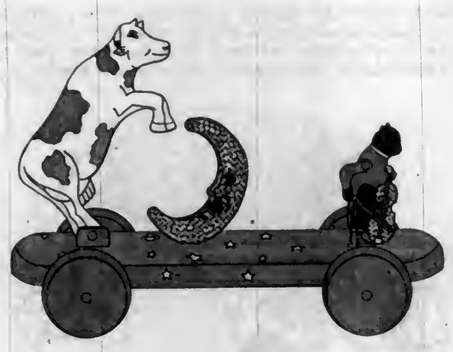
The ornamental design for an awning arm substantially as shown.

74,872. LACE TRIMMING FOR DOILY OR THE LIKE. LAWRENCE DINKELSPIEL, West New York, N. J. Filed Jan. 10, 1928. Serial No. 24,800. Term of patent 3½ years.



The ornamental design for lace trimming for doily or the like, as shown and deacribed.

74,873. LACE TRIMMING FOR DOILY OR THE LIKE. LAWRENCE DINKELSPIEL, West New York, N. J. Filed Jan. 10, 1928. Serial No. 24,801. Term of patent 3½ years.

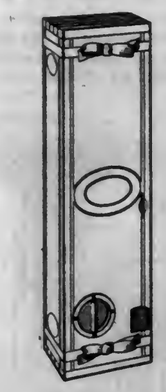


The ornamental design for lace trimming for doily or the like, as shown and described.

74,874. FORK OR SIMILAR ARTICLE. BERNARD A. DOLAN, Brookline, Mass., assignor to Tuttle Silver Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 12, 1928. Serial No. 24,830. Term of patent 14 years.

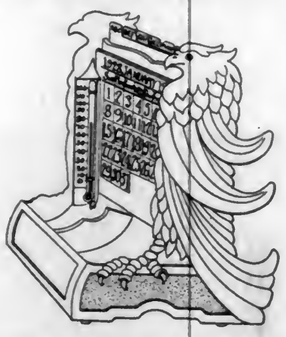
The ornamental design for a fork or similar article, as shown.

74,875. WHEELED TOY. JOSEPH EKSTEIN, New York, N. Y. Filed Nov. 17, 1927. Serial No. 24,196. Term of patent 8½ years.



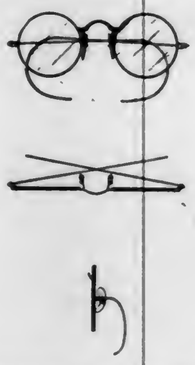
The ornamental design for a wheeled toy as shown.

74,876. TEXTILE FABRIC. GUSTAVE F. ERHARD, Scranton, Pa., assignor to The Scranton Lace Company, Scranton, Pa., a Corporation of Pennsylvania. Filed Jan. 31, 1928. Serial No. 25,102. Term of patent 7 years.



The ornamental design for a textile fabric, substantially as shown.

74,877. VENDING-MACHINE CASING. JOSEPH W. EDWORTHY, Binghamton, N. Y., assignor to Beech-Nut Packing Company, Canajoharie, N. Y., a Corporation of New York. Filed Sept. 21, 1927. Serial No. 23,485. Term of patent 14 years.

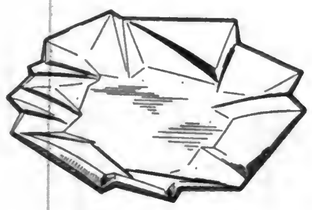


The ornamental design for a vending machine casing as shown.

74,878. DESK ACCESSORY. HERMAN A. FEIGELMAN, Paterson, N. J. Filed Jan. 30, 1928. Serial No. 25,085. Term of patent 14 years.

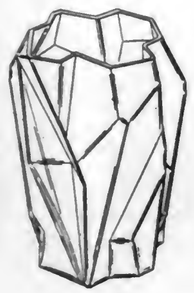
The ornamental design for a desk accessory, as shown.

74,879. EYEGLASSES. JOSEPH GASPARI, New York, N. Y. Filed Jan. 18, 1928. Serial No. 24,909. Term of patent 7 years.



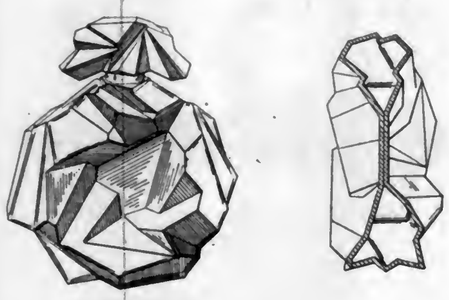
The ornamental design for eyeglasses as shown.

74,880. LAVATORY. JOHN C. GRIFFIS, Los Angeles, Calif., assignor to Pacific Pipe and Supply Company, Los Angeles, Calif., a Corporation of California. Filed Feb. 13, 1928. Serial No. 25,419. Term of patent 14 years.



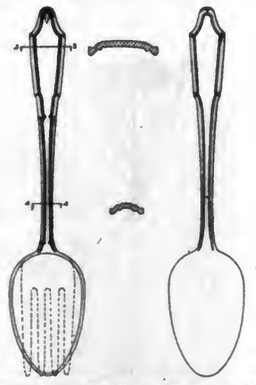
The ornamental design for a lavatory as shown.

74,881. PLATE. REUBEN HALEY, Beaver, Pa., assignor to Consolidated Lamp and Glass Company, Coraopolis, Pa., a Corporation of West Virginia. Filed Feb. 1, 1928. Serial No. 25,126. Term of patent 7 years.



The ornamental design for a plate substantially as shown.

74,882. VASE. REUBEN HALEY, Beaver, Pa., assignor to Consolidated Lamp and Glass Company, Coraopolis, Pa., a Corporation of West Virginia. Filed Feb. 1, 1928. Serial No. 25,127. Term of patent 7 years.

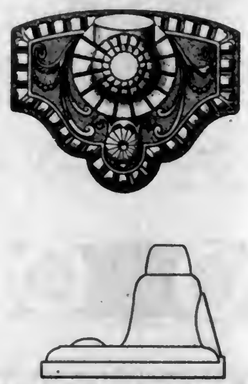


The ornamental design for a vase substantially as shown.

74,883. BOTTLE. REUBEN HALEY, Beaver, Pa., assignor to Consolidated Lamp and Glass Company, Coraopolis, Pa., a Corporation of West Virginia. Filed Feb. 1, 1928. Serial No. 25,128. Term of patent 7 years.

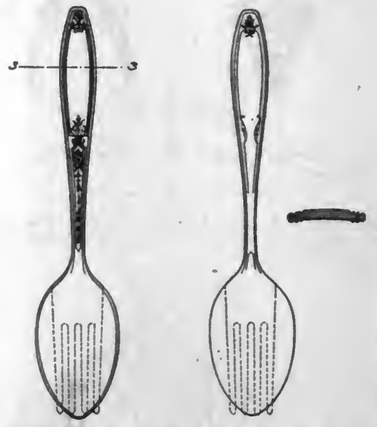
The ornamental design for a bottle substantially as shown.

74,884. SPOON OR SIMILAR ARTICLE. HARRISON HEBBARD, East Orange, N. J., assignor to Dominick & Haff, Inc., Newark, N. J., a Corporation of Delaware. Filed Dec. 12, 1927. Serial No. 24,457. Term of patent 7 years.



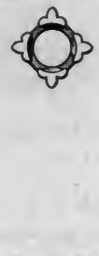
The ornamental design for a spoon or similar article, as shown.

74,885. BRACKET PLATE FOR LIGHTING FIXTURES OR ANALOGOUS ARTICLES. JULIUS HOROWITZ, New York, N. Y., assignor to Eagle Lites, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 24, 1927. Serial No. 23,195. Term of patent 3½ years.



The ornamental design for a bracket plate for lighting fixtures or analogous articles substantially as shown.

74,886. LAMP BASE OR ARTICLE OF SIMILAR NATURE. WILLIAM HURSTER, Richmond Hill, N. Y., assignor to The Ovalite Company, Incorporated, a Corporation of New York. Filed Jan. 28, 1928. Serial No. 25,070. Term of patent 3½ years.



The ornamental design for a lamp base or article of similar nature substantially as shown.

74,887. SPOON OR SIMILAR ARTICLE. SIDNEY V. JAMES, Niagara Falls, N. Y., assignor to Sheets-Rockford Silver Company, Rockford, Ill., a Corporation of Illinois. Filed Feb. 25, 1927. Serial No. 20,895. Term of patent 8½ years.

The ornamental design for a spoon or similar article as shown.

74,888. JEWELRY SETTING. FRED C. JOSEPH, New York, N. Y. Filed Oct. 19, 1927. Serial No. 28,789. Term of patent 7 years.

The ornamental design for a jewelry setting, as shown.

74,889. COMBINATION CONTAINER AND PICTURE FRAME. HENRY AUGUST KRETSCHMER, La Grange Park, Ill. Filed Jan. 3, 1928. Serial No. 24,726. Term of patent 14 years.

The ornamental design for a combination container and picture frame, as shown.

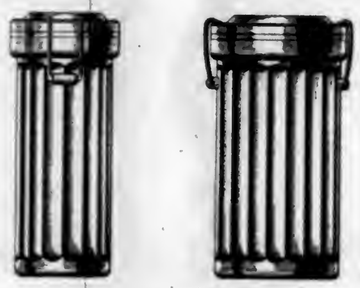
74,890. FINGER RING. MAXWELL C. LANG, Indianapolis, Ind. Filed Dec. 30, 1927. Serial No. 24,699. Term of patent 3½ years.

The ornamental design for a finger ring, as shown and described.

74,891. BIRD CAGE. LEWICKI J. LEON, West Chicago, Ill. Filed Dec. 21, 1927. Serial No. 24,568. Term of patent 14 years.

The ornamental design for a bird cage, as shown.

74,892. STAKE RETAINER OR THE LIKE. MARGUERITE E. MOORE, New York, N. Y. Filed June 30, 1927. Serial No. 22,625. Term of patent 7 years.

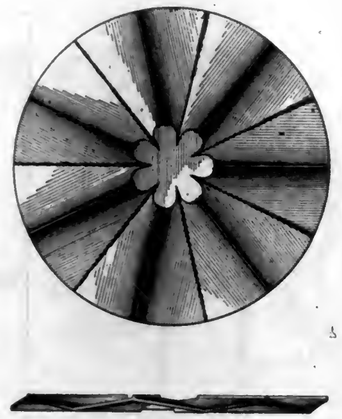


The ornamental design for a stake retainer or the like, as shown and described.

74,893. GOBLET OR SIMILAR ARTICLE. CHARLES O. NORTHWOOD, Dormont, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 16, 1927. Serial No. 24,139. Term of patent 14 years.

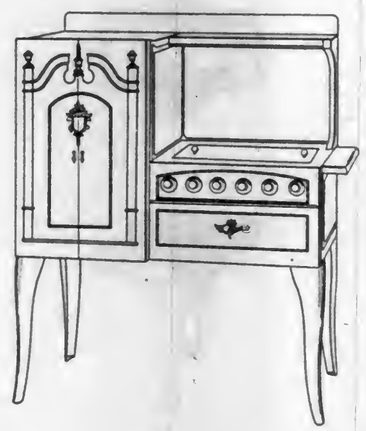
The ornamental design for a goblet or similar article substantially as shown and described.

74,894. OVAL JAR. CHARLES FRANKLIN ONTHANK, Newton, Mass. Filed Jan. 24, 1927. Serial No. 20,485. Term of patent 14 years.



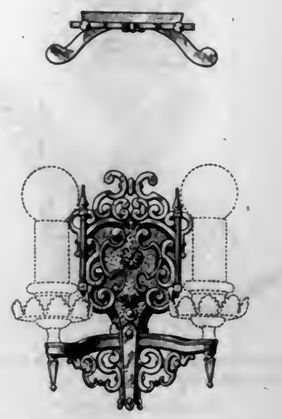
The ornamental design for an oval jar.

74,895. SIGN PLATE. CLARENCE H. ORR, Providence, R. I. Filed July 14, 1925. Serial No. 14,084. Term of patent 3½ years.



The ornamental design for a sign plate, substantially as shown.

74,896. HOT PLATE. EDMUND R. RAYBURN, Findlay, Ohio. Filed Jan. 31, 1927. Serial No. 20,555. Term of patent 7 years.

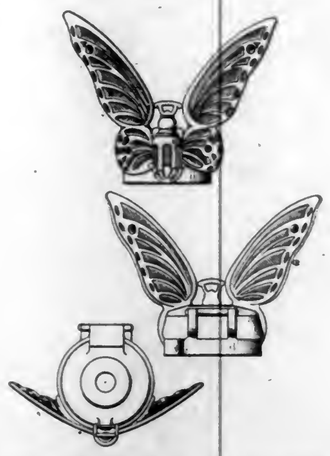


The ornamental design for a hot plate as shown.

74,897. GAS STOVE. ALFRED J. REEDY, Battle Creek, Mich., assignor to A-B Stove Company, Battle Creek, Mich. Filed Jan. 11, 1928. Serial No. 24,813. Term of patent 14 years.

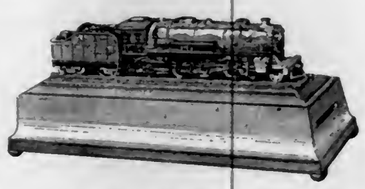
The ornamental design for a gas stove, as shown.

74,898. LIGHTING-FIXTURE WALL BRACKET. THEODORE SHAPIRO, Brooklyn, N. Y., assignor to Artcraft Metal Stamping Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 20, 1927. Serial No. 23,810. Term of patent 3½ years.



The ornamental design for a lighting fixture wall bracket as shown.

74,899. LINOLEUM FLOOR MAT. ALFRED C. SLOATE, Wynnewood, Pa., and JAMES C. WHYTE, Wenonah, N. J., assignors to Congoleum-Nairn Inc., Philadelphia, Pa., a Corporation of New York. Filed June 22, 1927. Serial No. 22,531. Term of patent 7 years.

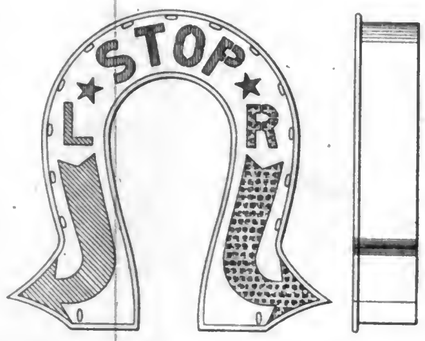


The ornamental design for a linoleum floor mat, substantially as shown.

74,900. AUTOMOBILE RADIATOR ORNAMENT. ALFRED L. SOHM, Chicago, Ill. Filed July 20, 1927. Serial No. 22,815. Term of patent 14 years.

The ornamental design for an automobile radiator ornament, substantially as shown.

74,901. COIN BANK. JOHN H. STAPP, San Francisco, Calif. Filed May 31, 1927. Serial No. 22,244. Term of patent 14 years.

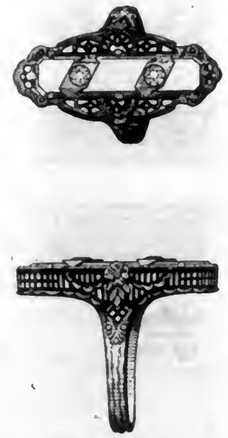


The ornamental design for a coin bank as shown.

74,902. STAND FOR AQUARIUM OR THE LIKE. BERNARD TAUMAN, Chicago, Ill. Filed Dec. 27, 1927. Serial No. 24,663. Term of patent 3½ years.

The ornamental design for a stand for aquarium or the like, as shown.

74,903. AUTOMOBILE SIGNAL. IPE A. VIERSEN, Okmulgee, Okla. Filed Jan. 10, 1928. Serial No. 24,795. Term of patent 14 years.



The ornamental design for an automobile signal as shown.

74,904. RING OR SIMILAR ARTICLE OF MANUFACTURE. JOSEPH J. WHITE, Providence, R. I., assignor to J. J. White Manufacturing Company, Providence, R. I. Filed Jan. 8, 1927. Serial No. 20,310. Term of patent 3½ years.

The ornamental design for a ring or similar article of manufacture, as shown.

74,905. RING OR SIMILAR ARTICLE OF MANUFACTURE. JOSEPH J. WHITE, Providence, R. I., assignor to J. J. White Manufacturing Company, Providence, R. I. Filed Jan. 8, 1927. Serial No. 20,311. Term of patent 3½ years.

The ornamental design for a ring or similar article of manufacture, as shown and described.

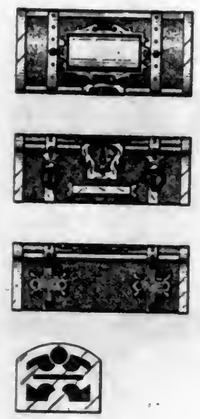
74,906. RING OR SIMILAR ARTICLE OF MANUFACTURE. JOSEPH J. WHITE, Providence, R. I., assignor to J. J. White Manufacturing Company, Providence, R. I. Filed Jan. 8, 1927. Serial No. 20,312. Term of patent 3½ years.

The ornamental design for a ring or similar article of manufacture, as shown.

74,907. RING OR SIMILAR ARTICLE OF MANUFACTURE. JOSEPH J. WHITE, Providence, R. I., assignor to J. J. White Manufacturing Company, Providence, R. I. Filed Jan. 8, 1927. Serial No. 20,314. Term of patent 3½ years.

The ornamental design for a ring or similar article of manufacture, as shown and described.

74,908. RING OR SIMILAR ARTICLE OF MANUFACTURE. JOSEPH J. WHITE, Providence, R. I., assignor to J. J. White Manufacturing Company, Providence, R. I. Filed Jan. 8, 1927. Serial No. 20,316. Term of patent 3½ years.

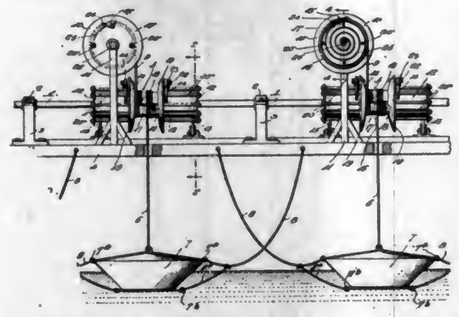


The ornamental design for a ring or similar article of manufacture, as shown and described.

74,909. RING OR SIMILAR ARTICLE OF MANUFACTURE. JOSEPH J. WHITE, Providence, R. I., assignor to J. J. White Manufacturing Company, Providence, R. I. Filed Jan. 8, 1927. Serial No. 20,318. Term of patent 3½ years.

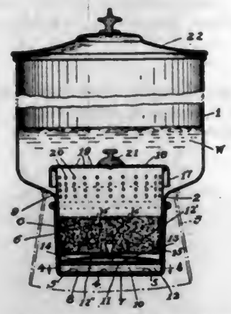
The ornamental design for a ring or similar article of manufacture, as shown and described.

74,910. COIN BANK. DAVID H. ZELL, Brooklyn, N. Y. Filed Jan. 27, 1928. Serial No. 25,058. Term of patent 7 years.



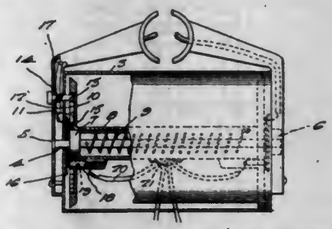
The ornamental design for a coin bank, as shown.

PATENTS



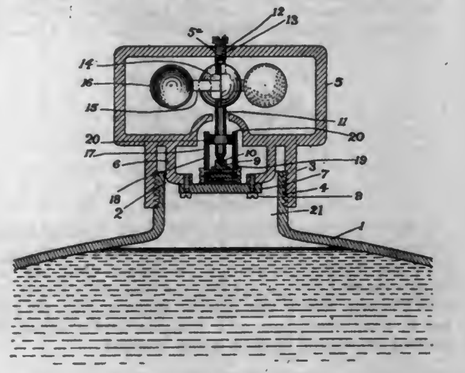
GRANTED APRIL 10, 1928.

1,665,198. WAVE MOTOR. ARTHUR J. ADAMS, Huntington Park, Calif. Filed Aug. 27, 1925. Serial No. 52,900. 2 Claims. (Cl. 253—8.)



1. In a wave motor, a supporting structure, a drum rotatably mounted on said structure, a cable wound on and depending from said drum for rotating it, a float on the lower end of said cable having a relatively large diameter at its top, a comparatively small diameter at its bottom and an inwardly declined side wall from said top to said bottom, and anchoring cables connected with the supporting structure and extending radially from the float to said structure, said cables having bifurcated lower ends connected with the periphery of the float at the upper and lower edges of said side wall respectively.

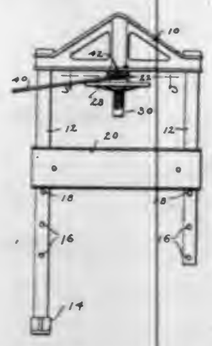
1,665,199. APPARATUS FOR INFUSING AND FILTERING COFFEE, TEA, AND THE LIKE. ELMER N. BACHELDER, Portland, Me. Filed June 15, 1927. Serial No. 198,970. 3 Claims. (Cl. 53—3.)



1. In apparatus of the class described, comprising a water container having a perforate bottom end, a coffee receptacle within and closely fitting the wall of said water container and having relatively large perforations in its bottom end, said bottom end being disposed in vertically spaced relation to the bottom end of said water container, a porous filtering element superjacent and completely covering the bottom end of said coffee receptacle, an upwardly-dished disc having contact with the marginal portions only of said filtering element and being provided with relatively small, closely spaced perforations over its entire dished surface, a perforate cover overlying said coffee receptacle, a weight on said cover, and a relatively deep, downwardly extending flange on said cover adapted to slidably engage and enclose the upper, cylindrical portion of said coffee receptacle.

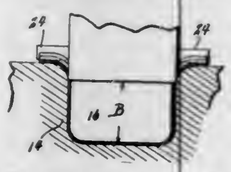
1,665,200. CORD HOLDER FOR VACUUM CLEANERS, LAMPS, AND THE LIKE. HOWARD O. BRIGGS, Minneapolis, Minn. Filed Apr. 9, 1925. Serial No. 21,889. 1 Claim. (Cl. 173—367.)

A take up reel of the class described, including a casing, a reel rotatable in the casing, rings mounted in the casing concentrically in respect to the axis of the reel, and one at each end thereof, a pair of housings on the reel one at each end thereof, spring pressed wipers slidably mounted in the housings to engage the rings, wires engaged with the wipers, and a loop on the central portion of the reel through which the wires pass.



1,665,201. THERMOSTATIC BRAKE. FREDERICK N. CONNET, Providence, R. I., assignor to Builders Iron Foundry, Providence, R. I., a Corporation of Rhode Island. Filed Jan. 4, 1927. Serial No. 159,007. 6 Claims. (Cl. 116—114.)

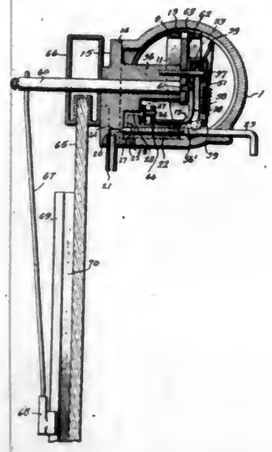
3. In a vehicle having a system for indicating abnormal conditions in its internal combustion engine provided with a liquid circulation cooling system for the cylinders of the engine, said cooling system including a radiator having an air space at the top thereof and an opening in the upper end thereof, a cap for said radiator opening having a hole therein, a bracket attached to said cap exterior of said radiator having an adjustable bearing point therein directly above said hole, a detachable bracket at-



tached to said cap below the top thereof having a bearing point therein directly below said hole, a rotatable shaft mounted on said bearing points and extending through said hole having indicating blades mounted thereon above said cap adapted to cause rotation of said shaft on impingement of air thereon on normal movement of said vehicle, a brake drum mounted on said shaft within said radiator, and thermo-responsive means mounted within said air space at the top of said radiator comprising strips of metal of different selected co-efficients of expansion adapted to contract against said brake drum on excessive overheating of said radiator to stop the rotation of said shaft.

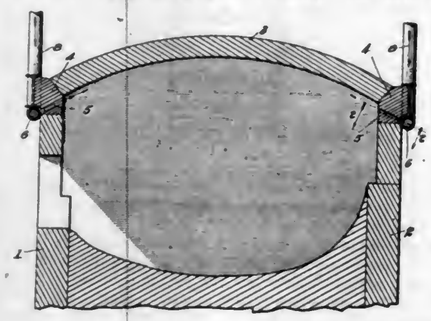
1,665,202. SCREW PRESS. ROBERT CRAIG, Dayton, Ohio. Filed May 10, 1926. Serial No. 107,910. 2 Claims. (Cl. 29—85.)

1. In a screw press, in combination, a vertical screw, a hand wheel threaded on said screw, and a lever; said wheel being provided with a rim and a plurality of openings through the wheel adjacent the rim, said lever being provided with a boss normally extending downwardly through one of said openings; said wheel and lever being so arranged that the weight of the lever tends to maintain said boss in contact with said rim for the purpose described.



1,665,203. DIE. GEORGE A. DELP, St. Louis, Mo., assignor to Joseph Pavelka, St. Louis, Mo. Filed Feb. 26, 1926. Serial No. 90,818. 4 Claims. (Cl. 113—42.)

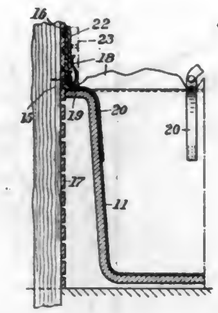
1. In a die the combination of a die member having an outwarly curved mouth, a punch member having a marginal shoulder adapted to cooperate with the outwardly curved side wall portions of said die member and fitting snugly within the straight walls of said die member to trim the flanges of a stamped article during the forming movement of said punch member.



1,665,204. WINDSHIELD CLEANER. FREDERICK G. FOLBERTH and WILLIAM M. FOLBERTH, Cleveland, Ohio, assignors to Trico Products Corporation, Buffalo, N. Y., a Corporation of New York. Filed Oct. 29, 1923. Serial No. 671,493. 10 Claims. (Cl. 121—164.)

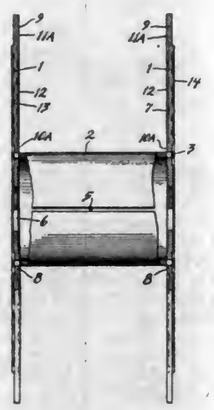
2. In a windshield cleaner, a cylinder provided with a relatively large opening intermediate its ends, the wall of the cylinder being extended to form flat faces, conduits extending from said opening to the opposite ends of the cylinder and arranged outwardly of said faces, the ends of said conduits being beveled, and a closure plate arranged over said opening, said closure plate being provided with passages aligning with said conduit, and being further provided with beveled portions contacting with the beveled ends of said conduits.

10. In a fluid pressure motor for windshield cleaners, a motor including a casing, a piston operable in the casing, a gear element fixed on said shaft and having an opening therein, said element being operatively connected and driven by the piston for operating the rock shaft, a pivot member secured to said casing and projecting freely through the opening of said element whereby the latter may oscillate uninterrupted by said pivot members, and automatic valve mechanism for operatively admitting fluid pressure to the motor, said valve mechanism including a lever pivoted on said pivot member, said gear element being guidingly interposed between said casing part and said valve mechanism lever, a second pivotally mounted lever, a spring connecting the two levers and movable under tension by one lever to opposite sides of the pivot member for effecting movement of the other lever, and a valve operable by the latter lever, said former lever being operable by and during movement of the piston.



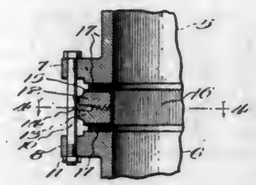
1,665,205. MEANS FOR COOLING BRICKWORK OF FURNACES. ALPHID E. GETZ, Peoria, Ill. Filed Mar. 27, 1926. Serial No. 97,942. 2 Claims. (Cl. 263—44.)

1. A furnace, certain of the walls of which are provided with air ducts in proximity to the roof and inclined towards the same, and means for supplying relatively



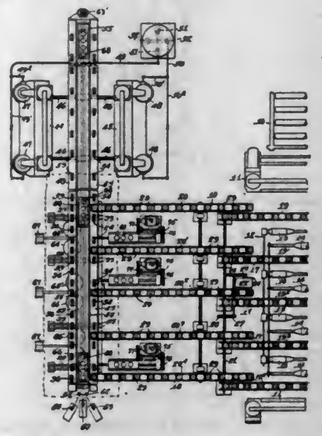
cold air to said air ducts, the latter, due to their inclination, adapted to discharge such air as to cause it to travel interiorly over a part of such walls and roof surface.

1,665,206. PROTECTIVE COVERING FOR BATHTUBS AND METHOD OF UTILIZING THE SAME. ROBERT E. HENRY, Pittsburgh, Pa. Filed Nov. 29, 1926. Serial No. 151,525. 6 Claims. (Cl. 72—18.)



1. The method of tiling-in rimmed bath tubs having flexible liners provided with tape-like extensions, which comprises securing said tapes to the wall against which the tub is to be tiled, exposing the rim at the edge of the cover, and tiling against the rim.

1,665,207. PHOTOGRAPHIC-FILM REEL AND PROCESS OF MANUFACTURING THE SAME. ALBERT S. HOWELL, Chicago, Ill., assignor to The Bell & Howell Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 15, 1927. Serial No. 184,009. 20 Claims. (Cl. 242—71.)

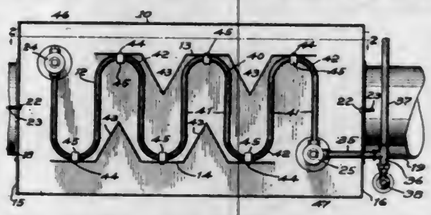


18. As an article of manufacture, a film reel assembled from two flange plates and a spacing hub therebetween, said flange plates having the inside faces of central portions outwardly adjacent the hub and marginal portions thereof disposed inwardly of the inside faces of the portions of the flange plates between said central and marginal portions.

1,665,208. PIPE JOINT. LYMAN C. HUFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed June 15, 1925. Serial No. 37,123. 2 Claims. (Cl. 288—1.)

1. A joint packing adapted for use in connecting lengths of tubing through which a heated medium is passed comprising relatively movable interengaging annular rings, a corrugated annular gasket enclosing portions of the rings, the corrugations in the gasket being adapted to take up movement of the joint.

1,665,209. TRANSFER SYSTEM FOR HEAVY METAL PLATES. CHARLES L. HUSTON, Coatesville, Pa. Filed Feb. 2, 1923. Serial No. 616,563. 52 Claims. (Cl. 164—49.)

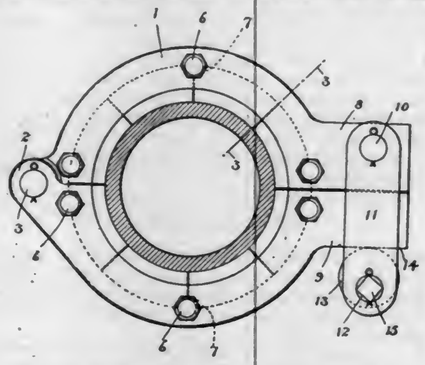


1. The method of handling and shearing a sheet of heavy plate using a conveyor and oppositely facing heavy duty vertical movable shears which consists in centering and aligning the plate in position to be engaged by the conveyor, engaging and holding it by the conveyor at a plurality of points and feeding it between the shears spaced to the desired distance to operate concurrently on both sides of the plate, operating upon the plate concurrently by the shears while the conveyor maintains its hold upon the plate to maintain alignment and successively advancing the plate by the conveyor and operating upon it by the shears.

1,665,210. WATER HEATER. LAWRENCE E. JOHNSON, Melrose, Mass., assignor of one-half to Boston Machine Works Company, Lynn, Mass., a Corporation of Massachusetts. Filed Mar. 12, 1927. Serial No. 174,931. 4 Claims. (Cl. 122—20.)

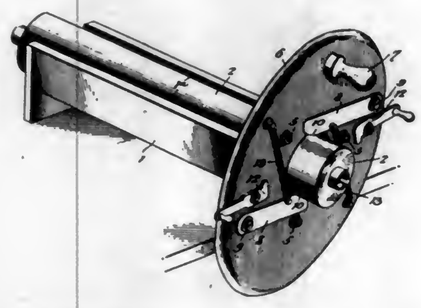
1. A stack water heater comprising a casing adapted to be interposed between sections of the smoke pipe of a heater, having inlet and outlet openings for connection with said sections, spaced baffle plates within the casing arranged to provide a tortuous passage between them for

the flue gases, said plates being also spaced inwardly from the walls of the casing and constructed and arranged to provide an uninterrupted passage adjacent said



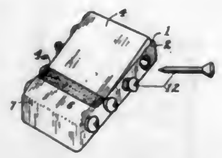
tortuous passage from one of said pipe sections to the other, and a water distributing coil arranged within said tortuous passage and having inlet and outlet terminals accessible from the exterior of the casing.

1,665,211. SOUND-NEUTRALIZING VENTILATOR. AUBREY M. KENNEDY, New York, N. Y. Filed Jan. 20, 1926. Serial No. 82,418. 1 Claim. (Cl. 98—99.)



As a new article of manufacture, a device for permitting the passage of air from one point to another whilst neutralizing sound waves accompanying the same, which consists of a casing, an inlet at one face of the casing and an outlet at another face thereof, and a plurality of deflecting walls intermediate the inlet and outlet, each wall having an overhanging curved extension, the curvature being directed toward the inlet, and the deflecting walls being alternately opposed in the curvature of their extensions, as and for the purpose set forth.

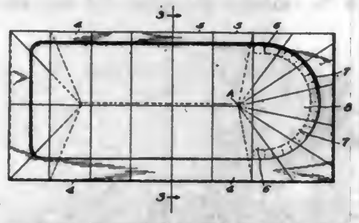
1,665,212. PIPE CUTTER. CHARLES H. LA MOTTE, South Porcupine, Ontario, Canada. Filed June 21, 1926. Serial No. 117,420. 5 Claims. (Cl. 81—187.)



1. A pipe cutter comprising a pipe-encircling member of circular form, means for constricting said member around a pipe, and sharp blades carried by said encircling member adapted upon the constriction of the latter member to present a circumferential edge in rigid contact continuous with the periphery of the pipe.

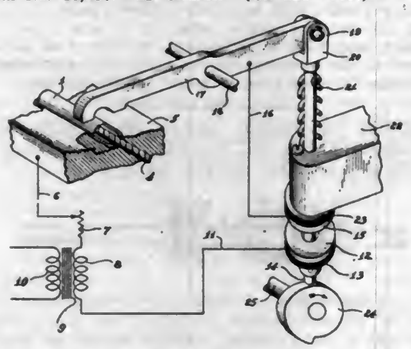
1,665,213. CUTTING MACHINE. LAWRENCE EDWARD LENTZ, Harrisburg, Pa., assignor to Elliott-Fisher Company, a Corporation of Delaware. Filed Apr. 30, 1923. Serial No. 635,662. 3 Claims. (Cl. 164—60.)

1. A cutting machine including a work holding trough, a circular track secured at one end thereof, and a cutting head having a central opening and provided at one side with flanged guide rollers engaging the circular track and, at the opposite side, with spring urged cutting blades pivoted at their outer ends and having their inner ends located in diametrical opposition to the center of the head and formed with terminal cutting edges disposed at an angle with respect to the blades.



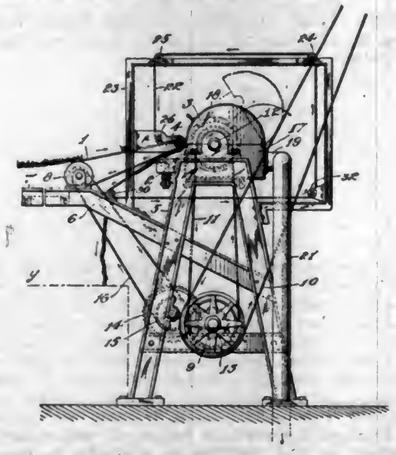
1,665,214. RECEPTACLE FOR GOLF-PLAYERS' ACCESSORIES. EDWARD J. MCGRAW, Saginaw, Mich. Filed Apr. 18, 1927. Serial No. 184,483. 4 Claims. (Cl. 206—38.)

1. A container of the class described comprising a body formed with holes to receive tees, a face of said body provided at one end with a pocket having an outer wall of flexible material, the inner face of said wall provided with a marginal rib thinner at the side edges of said pocket, stop pieces within the pocket adjacent its side walls, the edge walls of said container formed with tee-receiving holes, each hole providing an air space along a tee received therein, the inner end of each hole of substantially rectangular cross section adapted to releasably hold the tapered end of said tee when wedged therein, for the purposes set forth.



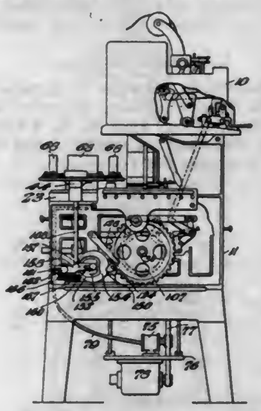
1,665,215. MEANS FOR PROTECTING PORCELAIN AND ENAMELED WARE. THEODOR H. MITTENDORF, Chicago, Ill., assignor to Mid-States Gummed Paper Co., Chicago, Ill., a Corporation of Illinois. Filed June 14, 1926. Serial No. 115,728. 2 Claims. (Cl. 4—173.)

1. In a protective covering for porcelain fixtures, the combination of a fixture with a plurality of relatively narrow strips of unsized paper covering parts having curvature in one direction and a plurality of narrow strips of unsized paper of triangular form covering parts



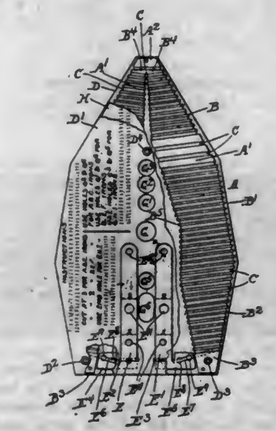
having curvature in more than one direction, and a layer of adhesive soluble in water, securing said strips to said fixture.

1,665,216. METHOD OF MAKING NEEDLE-AND-SUTURE ASSEMBLY. HARRY D. MORTON and MORGAN PARKER, New York, N. Y. Filed July 30, 1925. Serial No. 46,937. 12 Claims. (Cl. 128—339.)



1. The method of attaching a suture to a needle which consists in forming in said needle a recess constricted in diameter near the opening thereof, inserting an end of the suture in said recess and applying heat to the wall of said recess, whereby the inserted portion of said suture is expanded.

1,665,217. FUR-SHEARING MACHINE. MORRIS S. NEWMAN, Middletown, N. Y. Filed Dec. 22, 1924. Serial No. 757,458. 5 Claims. (Cl. 149—26.)



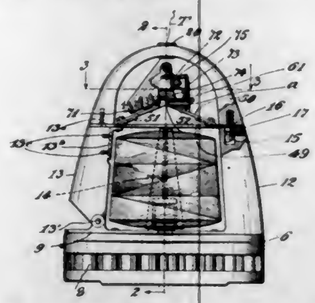
1. In a fur shearing machine, the combination with shearing knives and an endless conveyor having a portion over which a skin is run in downward direction and sharply bent for presentation to said knives, of spaced cords extending longitudinally of said conveyor over said portion and having portions extending backwardly above and forwardly below the same, upper and lower rollers pressing said cords at the outer ends of their said portions against said conveyor at yieldable points of the conveyor, both said rollers engaging a skin as it is sheared and holding the cords against the skin and the skin against the conveyor, and means for driving the said conveyor.

1,665,218. FEEDING MECHANISM FOR TABULATING MACHINES. JAMES POWERS, Los Angeles, Calif., assignor, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Original application filed Oct. 16, 1924, Serial No. 743,940. Divided and this application filed May 11, 1925. Serial No. 29,470. 20 Claims. (Cl. 271—44.)

1. In combination, a magazine for holding groups of cards, a feeding means for feeding the respective cards of each group from said magazine, and means associated with said magazine for delaying co-operation of said feeding means with the group next succeeding the group being fed, whereby an interruption of feeding automatically takes place between groups.

1,665,219. HEATING ELEMENT FOR ELECTRIC IRONS. WILLIAM A. RANKIN, Rochester, N. Y. Filed May 19, 1923. Serial No. 640,017. 7 Claims. (Cl. 219—25.)

1. A heating element for electric irons comprising a plurality of flat, resistance coils, and converging sup-



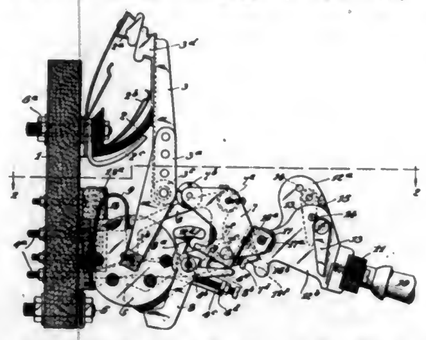
porting elements therefor, a plurality of heat resistant, insulating plates inclosing said coils, contact elements for said coils, said plates being penetrated along the central axis of the heating element by a plurality of circular, substantially tangential apertures.

1,665,220. LUMBER-STAMPING DEVICE. JACOB J. REITMER, Lufkin, Tex. Filed May 8, 1926. Serial No. 107,766. 9 Claims. (Cl. 101—4.)

1. A device for stamping lumber comprising a body, a rod extending through said body, a stamp on the forward end of the body, a cylinder on the rear end of the rod forming a hammer slidable against the end of the body to force the same against an object being stamped, and spring means for maintaining the rod in retracted position relative to the body, substantially as set forth.

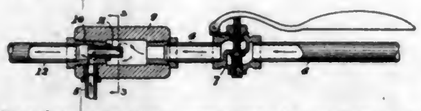
1,665,221. SHUTTLE. EDWARD C. RICHARD and HARGRAVES GILL, Westboro, Mass., assignors to Westboro Weaving Company, New York, N. Y., a Corporation of New York. Filed Aug. 27, 1924. Serial No. 734,366. 9 Claims. (Cl. 139—201.)

1. A shuttle having a tensioning device and also a take-up device comprising an arm having a plurality of thread-engaging loops, a shaft on which said arm is mounted, a pinion on said shaft, and a spring actuated sector engaging said pinion.



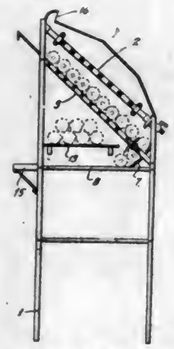
1,665,222. ROOFING ELEMENT AND PROCESS OF MAKING SAME. THOMAS ROBINSON, Babylon, N. Y., assignor to Anaconda Sales Company, a Corporation of Delaware. Filed July 19, 1923. Serial No. 652,563. 4 Claims. (Cl. 154—2.)

1. A roofing element comprising the combination of a base of a hardened plastic material, a layer of granular material embedded into one surface of the base and producing irregularities over that surface, and a preformed coating of a malleable metal adhering directly to the granular layer and conforming to the irregularities, the said coating of metal to extending into the interstices between the particles of the granular coating.



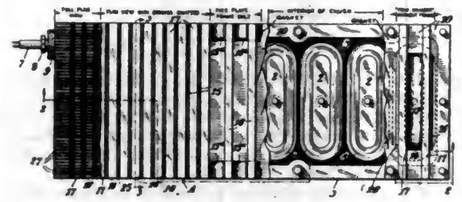
3. In a process of preparing roofing elements of the class described, the steps of partially embedding a layer of crushed slate in the surface of a base formed of a hardened plastic material, placing a preformed layer of copper upon the base, and subjecting the base and the layer to pressure to cause the metal to enter the interstices between the particles of the layer and thus conform to the irregularities of the surface of the base.

1,665,223. CIRCUIT BREAKER. FRANK W. ROLLER, East Orange, N. J., assignor to Roller-Smith Company, a Corporation of New York. Filed Oct. 24, 1924. Serial No. 745,556. 12 Claims. (Cl. 200—107.)



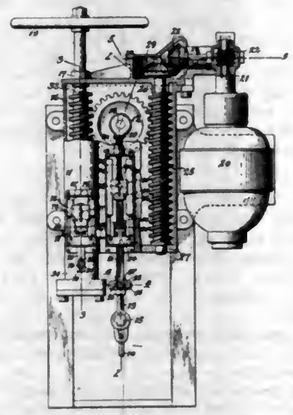
1. A circuit breaker comprising a plurality of separately closable and separately openable poles, a controlling element, and means controlled by said element for closing said poles successively by movement of said element in one direction and for opening said poles by movement of said element in the reverse direction.

1,665,224. SPRAYING APPARATUS. CLARENCE G. SHIELDS, Floreffe, Pa. Filed Apr. 17, 1926. Serial No. 102,676. 1 Claim. (Cl. 299—140.)



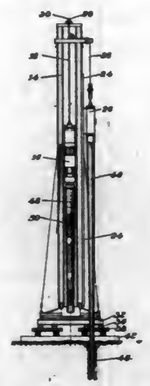
Spraying apparatus comprising a chambered block, an air pressure conduit extending into said block at one end, a spray chamber disposed within the block at the other end and having screw-threaded connection with the wall of the latter-named end, so as to be removable therefrom, a spray pipe communicating with the forward end of said chamber, an air nozzle disposed within said block and extending into the other end of said chamber, and a liquid inlet communicating with the said chamber at a point approximately mid-way of its ends, through openings in the side wall of said block and the adjacent wall of the chamber, the air nozzle being supported by and removable with the said spray chamber.

1,665,225. CORN ROASTER. WENDEL ŠIMEK, Guttenberg, N. J. Filed Dec. 20, 1926. Serial No. 155,816. 4 Claims. (Cl. 53—5.)



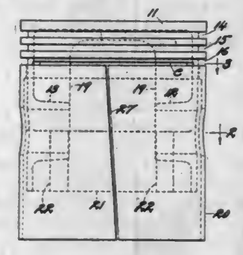
1. In a corn roaster, a source of radiant heat, a stationary inclined platform in proximity to the said source of radiant heat so constructed as to engage the corn and cause it to roll as it gravitates down the platform, and means disposed near the lower end of the platform in the path of the rolling corn and actuated by the weight of the corn coming in contact therewith and thereby given a step by step movement.

1,665,226. MAGNETIC CHUCK. FRANK L. SIMMONS, Woonsocket, R. I., assignor to The Taft-Pierce Manufacturing Company, Woonsocket, R. I., a Corporation of Rhode Island. Filed Jan. 10, 1927. Serial No. 160,267. 17 Claims. (Cl. 175—367.)



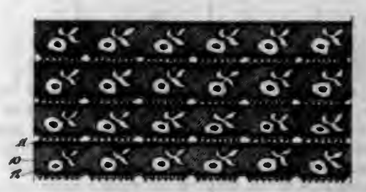
1. A pole member for magnetic chuck face plates comprising a base portion having a plane surface adapted to cooperate with a chuck core; a pair of separated edgewise positioned bar-like pole pieces extending upwardly from said portion, the upper edges of said pole pieces being formed into surfaces adapted to form pole faces in the work face of a face plate; and laterally projecting means to form an interlock with material molded about the pole member.

1,665,227. ELECTRIC BRAKE-OPERATING MECHANISM. CHARLES E. B. SMITH, Buffalo, N. Y., assignor, by mesne assignments, to John H. Weidemiller, Buffalo, N. Y. Filed Nov. 5, 1921, Serial No. 513,179. Renewed Sept. 10, 1927. 13 Claims. (Cl. 188—107.)



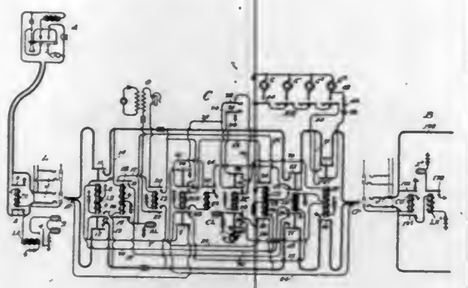
1. An electric brake mechanism comprising an electric motor adapted to be operatively connected with a brake rigging, a main electric circuit which includes said motor and a magnetic switch having an operating coil, a shunt circuit around said motor which includes said operating coil and a hand operated switch, and a shunt circuit around said operating coil and containing a limit switch which is responsive to the pressure of applying the brakes and operates to short circuit said coil and stop the motor when a predetermined brake pressure is reached.

1,665,228. METHOD OF DRIVING COMPOSITE PILES. HERMAN R. SMITH, Douglaston, N. Y., assignor to Raymond Concrete Pile Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 30, 1926. Serial No. 98,441. 12 Claims. (Cl. 61—76.)



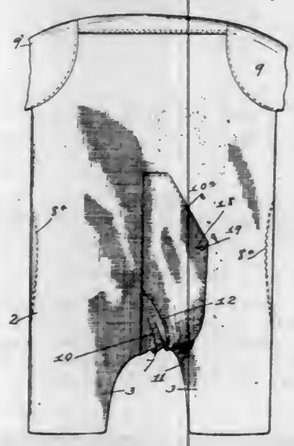
1. In an apparatus for forming and driving a composite pile, in combination, a plurality of hammers and means to align any of said hammers with the pile.

1,665,229. PISTON. GEORGE A. TAYLOR, Boston, Mass. Filed June 17, 1922. Serial No. 569,104. 5 Claims. (Cl. 74—108.)



1. A piston having a head, and a flexible rib suspended from the head and supporting a skirt extending upwardly therefrom and spaced from said head.

1,665,230. LACE WEB AND PROCESS OF MAKING THE SAME. JOHN SPALDING, Stamford, Conn., assignor to Albert T. Otto & Sons, New York, N. Y., a Corporation of New York. Filed Jan. 19, 1926. Serial No. 82,185. 11 Claims. (Cl. 96—24.)



8. A lace web including a plurality of flat lace strips connected together edge to edge by draw strings, the draw strings being formed of cellulose acetate.

1,665,231. TELEPHONE SYSTEM. MICHAEL B. STAZAK, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 29, 1924. Serial No. 746,458. 14 Claims. (Cl. 179—41.)

1. A telephone system including a calling subscriber's line and a called subscriber's line, a cord circuit and a two-way trunk circuit for connecting said lines, disconnect means for automatically disconnecting said cord circuit from the trunk circuit, recall means in said trunk circuit controlled by the called subscriber, and trunk operator controlled means for releasing said recall means permitting the operation of a signal associated with said trunk circuit to signal the operator associated with said cord circuit.

1,665,232. GARMENT. LILLIAN FORD TRAVER, Sand Lake, N. Y. Filed Oct. 5, 1926. Serial No. 139,649. 3 Claims. (Cl. 2—78.)

1. In combination with a bifurcated garment having a crotch opening extending upwardly to front and rear points substantially above the crotch, a rear edge of said opening running downwardly on a straight line from said rear point, and the continuing front edge running upwardly to said front point, a gusset comprising a main portion extending throughout said opening and secured at said front and rear points, and a triangular supplementary portion adjacent the front extremity of the latter, the intersecting edges of said portions forming a reentrant angle, said last named edges being secured to said rear edge of the garment opening to cause a gathering of the gusset at the crotch, the remaining edge of said supplementary portion being secured to said front edge of the garment opening.

1,665,233. PROCESS FOR MAKING FURFURAL RESINS. JOHN P. TRICKEY, Evanston, and CARL S. MINER, Chicago, Ill., assignors to The Quaker Oats Company, Chicago, Ill., a Corporation of New Jersey. Filed May 26, 1924, Serial No. 715,816. Renewed Feb. 27, 1928. 6 Claims. (Cl. 260—2.)

2. The process of obtaining a resinous substance which comprises treating furfural with a metallic salt that serves as a catalyst for the reaction.

1,665,234. PROCESS FOR MAKING FURFURAL RESINS. JOHN P. TRICKEY, Evanston, and CARL S. MINER, Chicago, Ill., assignors to The Quaker Oats Company, Chicago, Ill., a Corporation of New Jersey. Filed May 26, 1924, Serial No. 715,816. Renewed Feb. 27, 1928. 6 Claims. (Cl. 260—2.)

2. The process of obtaining a resinous substance which comprises treating furfural with a metal that serves as a catalyst for this reaction.

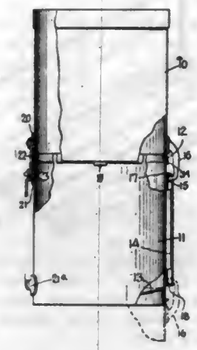
1,665,235. FURFURALCOHOL RESINS. JOHN P. TRICKEY, Evanston, and CARL S. MINER, Chicago, Ill., assignors to The Quaker Oats Company, Chicago, Ill., a Corporation of New Jersey. Filed May 31, 1924. Serial No. 716,951. 7 Claims. (Cl. 260—2.)

1. A resinous substance comprising the final substantially infusible and insoluble reaction product of furfuralcohol alone.

1,665,236. PROCESS FOR OBTAINING FURANE DERIVATIVES. JOHN P. TRICKEY, Evanston, and CARL S. MINER, Chicago, Ill., assignors to The Quaker Oats Company, Chicago, Ill., a Corporation of New Jersey. Filed July 5, 1924, Serial No. 724,428. Renewed Feb. 27, 1928. 14 Claims. (Cl. 260—2.)

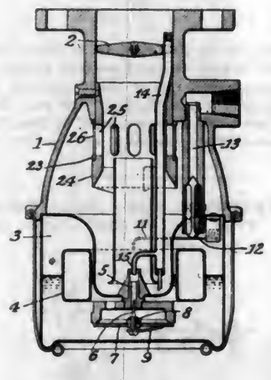
1. The process of obtaining furane derivatives which comprises mixing furfural and an alkali in a manner whereby furfuralcohol and a salt of pyromucic acid are produced, and then adding a quantity of an acid sufficient to liberate substantially all of the pyromucic acid and to cause resinification in situ of the alcohol when the mixture is heated.

1,665,237. COMPOUND RESINOUS SUBSTANCE AND PROCESS OF MAKING SAME. JOHN P. TRICKEY, Evanston, and CARL S. MINER, Chicago, Ill., assignors to The Quaker Oats Company, Chicago, Ill., a Corporation of New Jersey. Filed Aug. 23, 1924, Serial No. 733,762. Renewed Feb. 27, 1928. 19 Claims. (Cl. 260—2.)



4. The compound resinous reaction product of a mixture of an alcoholic furane derivative and an aldehydic furane derivative.

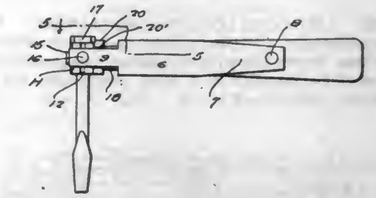
17. The process of obtaining a compound resin which comprises subjecting a solution of a plurality of furane derivatives to catalysis, said furane derivatives severally and of themselves being capable of producing by themselves dissimilar resinous reaction products.



1,665,238. CONTAINER. LOUIS TURAN, Brooklyn, N. Y. Filed Apr. 12, 1926. Serial No. 101,266. 5 Claims. (Cl. 220—4.)

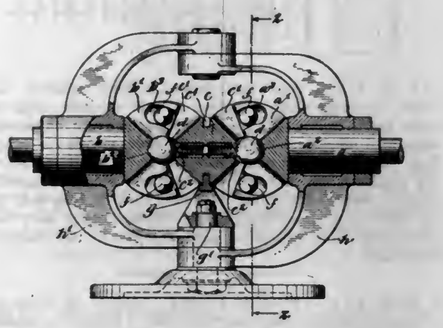
1. A container of the class described comprising two parts of substantially the same dimensions throughout, means for coupling said parts together and permitting of relative movement of the parts one upon the other

whereby a normal top part may be moved into position to assume a bottom part of the complete device, means for securing the separate parts together against displacement in the several positions thereof, one of said parts having a transverse wall and the movable coupling of the several parts being of universal joint construction.



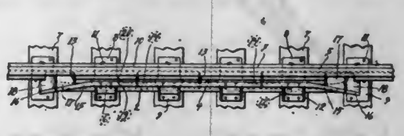
1,665,239. CARBURETOR. CHARLES F. WALLACE, Westfield, N. J., assignor to Wallace & Tiernan Co., Inc., Belleville, N. J., a Corporation of New York. Filed Mar. 15, 1922. Serial No. 543,996. 8 Claims. (Cl. 261—63.)

1. In a carburetor, a throttle, a means for regulating the ratio of fuel and air, comprising, in combination, a cylinder connected with the vacuum space above the throttle, a piston therein, two springs of different tension adapted to be successively compressed by the piston, and an air damper controlled by said piston for varying the proportion of air in the charges according to the vacuum which controls the position of said piston.



1,665,240. SCREW DRIVER. WILLIAM D. WEAVER, Hillsville, Pa. Filed Dec. 23, 1926. Serial No. 156,634. 2 Claims. (Cl. 145—71.)

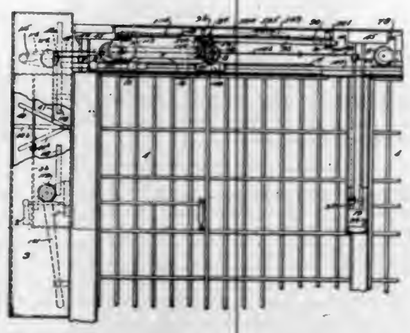
1. A tool of the class described including a handle having a tubular extension terminating in a pair of spaced parallel arms, a tool shank having a cylindrical head at one end, said head being formed with an annular groove intermediate its ends and longitudinally extending grooves forming teeth and a tongue extending from the extremity thereof, a frame rotatable in the annular groove, means for pivoting the frame between the arms, a spring pressed plunger in the tubular extension and



formed with a head having a groove to receive the tongue and a ratchet tooth for association with the teeth of the head of the shank.

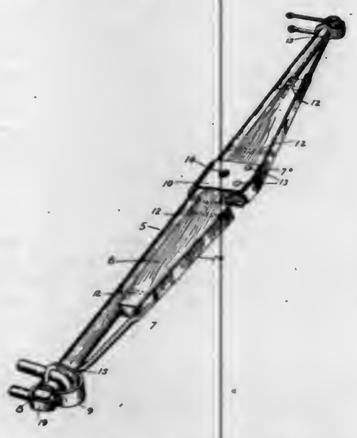
1,665,241. UNIVERSAL JOINT. CARL W. WEISS, Brooklyn, N. Y. Filed Feb. 18, 1927. Serial No. 169,152. 4 Claims. (Cl. 64—91.)

1. A universal joint having two main members capable of relative angular displacement, an intermediate member also capable of relative angular displacement, the said several members having coacting portions with their proximate faces formed with non-concentric grooves with their longitudinal axes intersecting at an angle, a relatively movable body received partly in each groove of each pair and through which force is transmitted from one member to another, and means to support the intermediate member in operative relation with the two main members with freedom for angular displacement.



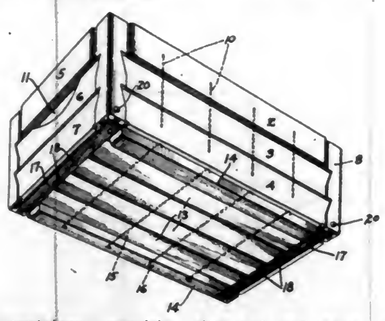
1,665,242. TRACK GUARD RAIL. JAY V. WESCOTT, Chicago, Ill., assignor to Du-Wel Steel Products Co., Chicago, Ill., a Corporation of Illinois. Filed July 29, 1926. Serial No. 125,653. 8 Claims. (Cl. 238—19.)

1. In a track guard rail, in combination, a body portion of angle cross section, one leg of said angle section forming a base and the other leg extending upwardly from the base, said base having longitudinally spaced portions downwardly offset from the intervening portions of the base for engagement with respective ties of a track structure and extended laterally to underlie a traffic rail of the track structure, said downwardly



offset portions being widened at the outer edges of said intervening portions and outwardly beyond the same and said intervening portions merging with said widened portions.

1,665,243. JAIL-DOOR-LOCKING MECHANISM. JOHN T. WHITEHOUSE, Cleveland, Ohio, assignor to The Van Dorn Iron Works Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 9, 1926. Serial No. 114,722. 8 Claims. (Cl. 189—7.)

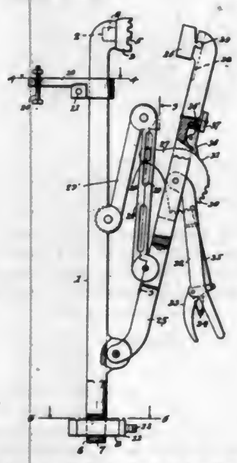


1. In a jail door mechanism, a door slidable on a track, a reciprocable member, a bolt movable with said door and adapted for separate movement to engagement with said member for sliding said door, means for controlling the engagement of said bolt with said member in all positions of said door, a pair of detents adapted to engage members movable with said door to lock said door in fully open or closed position thereof, said door being releasable from either of said detents by movement of said bolt.

1,665,244. WHIFFLETREE. JAMES E. WILLIAMS, Denver, Colo. Filed May 10, 1926. Serial No. 108,069. 3 Claims. (Cl. 278—93.)

1. A whiffle tree comprising a hollow bar apertured adjacent its ends, a brace-block engaging the bar, a truss-rod engaging the brace-block and extending through the apertures and the ends of the bar, the bar, the block and the truss-rod being fastened together and the block having a central opening, nuts on the ends of the truss-rod, and U-shaped guard-pieces secured by the nuts and having alined openings to receive the end portions of the bar and the rod, the outer legs of the guard-pieces being extended and bent over the respective nuts.

1,665,245. CRATE. CHARLES A. WOOLSEY, Minneapolis, Minn. Filed Jan. 20, 1925. Serial No. 5,501. 10 Claims. (Cl. 217—36.)



1. A container comprising side and end walls, rails having seats for the ends of the bottom of the container, and means extending across said container and mounted in the side walls thereof outside the end walls and supporting said rails.

1,665,246. ELECTRICAL CONNECTION AND METHOD OF MAKING THE SAME. HARVEY L. YOUNG, Akron, Ohio, assignor to John R. Gammeter, Akron, Ohio. Filed Mar. 9, 1925. Serial No. 13,936. 10 Claims. (Cl. 173—259.)

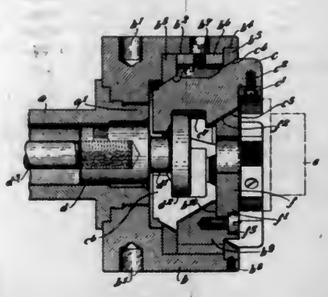
1. A member of an electrical connection comprising an insulated wire having the end portion thereof bared, the insulation being a soft-rubber sheath on the wire, and a binding fixed on the sheath near the end thereof, leaving a portion adapted to be enlarged by longitudinal compression between the extremity of the sheath and the binding.

1,665,247. LEVERAGE VISE. HUGH YOUNG, Mirando City, Tex. Filed Mar. 30, 1927. Serial No. 179,611. 8 Claims. (Cl. 81—25.)

1. A vise comprising a standard, an arm pivoted thereto, links pivotally connected together at their inner ends

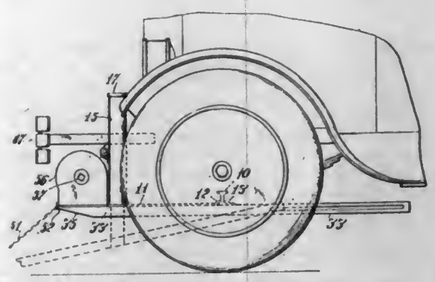
and pivotally connected at their outer ends with the standard and the arm respectively, and a lever mechanism mounted upon the arm and operatively engaging the links to swing the same with relation to each other.

1,665,248. QUAD BLOCK FOR SLUG-CASTING MACHINES. ALFRED ARCHER, Caldwell, N. J., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Oct. 6, 1926. Serial No. 139,791. 8 Claims. (Cl. 199—66.)



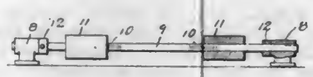
1. A quad block for producing a ruled form, comprising a series of independent matrix sections, a series of independent blank spacing sections, and a binding strip for holding the sections together as a unit.

1,665,249. DRY SEPARATING TABLE. RAY W. ARMS, Chicago, Ill., assignor to Roberts and Shaefer Company, Chicago, Ill., a Corporation of Illinois. Filed May 1, 1924. Serial No. 710,219. 2 Claims. (Cl. 209—467.)



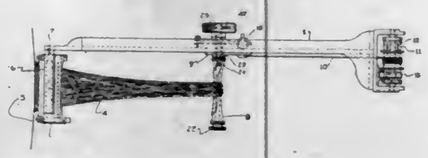
1. In an air cleaning table, a material supporting deck, having an irregularly shaped air pervious surface, means for feeding a continuous supply of fragmentary material thereto, and means for vibrating the deck to feed such material thereacross in a continuous flowing sheet, means for feeding a blast of air upwardly through the deck and the bed of material thereon, comprising an air supply pipe located and terminating below the deck, a fixed, rigid funnel leading from the discharge end of the pipe upwardly toward the under side of the deck and expanding gradually from general conformity with the supply pipe to accurate conformity with the size and shape of the pervious surface of the deck in a plane immediately below the deck, a bellows joining the extreme upper end of the funnel and the pervious portion of the deck, the body of the bellows being substantially parallel at all points with the path of air flow from the funnel end to the deck.

1,665,250. SPRING COLLET CHUCK. EARL F. ATKINS, Plainfield, N. J., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed May 10, 1927. Serial No. 190,329. 7 Claims. (Cl. 279—58.)



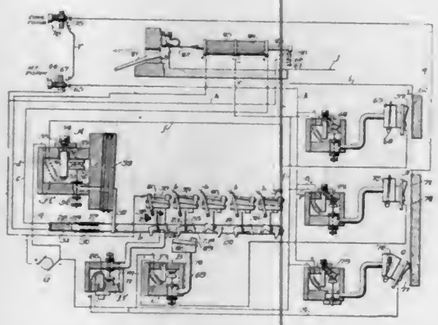
2. A collet chuck comprising a shell, a jaw movably carried to the shell, means to move the jaw axially with respect to the shell, removable cam rings on the interior of the shell, a spacer ring therebetween, and co-operating cam surfaces on the exterior of the jaw for moving the jaw into engagement with the work in its axial movement.

1,665,251. SAFETY FENDER. HELMUTH BRUSCH, Chicago, Ill. Filed May 28, 1927. Serial No. 195,010. 5 Claims. (Cl. 293—25.)



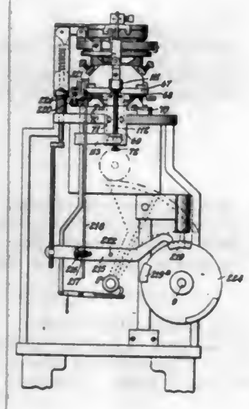
1. In a device of the class described a strip of fabric, a roller arranged at the front end of the automobile, and extending crosswise thereof said roller being rotatably supported the fabric being attached with one of its edges to said roller and adapted to be rolled up on said roller, a rod fastened to the front edge of the fabric, a pair of sliding members supported by the front axle of the automobile, said rod being fastened to the forward end of said sliding members and means for imparting to said sliding members a forward and downward movement.

1,665,252. MISALIGNMENT INDICATOR FOR WHEELS. HOMER A. BUCKERT, St. Louis, and EARL K. HALL, University City, Mo. Filed June 1, 1926. Serial No. 112,842. 6 Claims. (Cl. 33—203.)



1. A misalignment indicator comprising a shaft, a rotatable cylindrical member mounted thereon, said member adapted to have movement in the direction of its axis of rotation on said shaft imparted thereto by the thrust of a misaligned wheel.

1,665,253. PERMANENT-WAVE APPARATUS. AMBROSE L. BURLESON, Berkeley, and NICHOLAS P. SAMANTAS, San Francisco, Calif. Filed July 20, 1927. Serial No. 207,247. 18 Claims. (Cl. 132—36.)

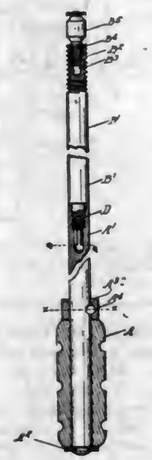


1. Hair waving apparatus comprising a device adapted to clamp a strand of hair adjacent the scalp, a member upon which the hair is adapted to be wound, and means for tensioning the hair strand between said device and said member while winding the hair upon the member.

1,665,254. ELECTROPNEUMATIC COMBINATION STOP ACTION FOR ORGANS. GEORGE H. CHAPMAN, Chicago, Ill. Filed June 13, 1927. Serial No. 198,355. 12 Claims. (Cl. 84—345.)

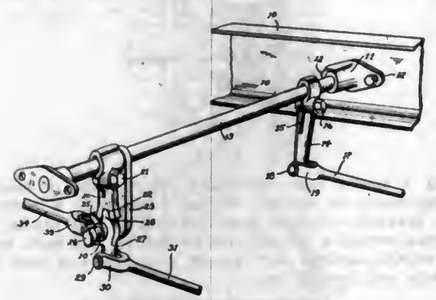
2. In a combination stop action for organs, the combination of a group of endwise movable trace-bars, selective means for moving said trace-bars, a pair of conductors on, and extending lengthwise of, each of said trace-bars, switch-jacks pivoted on said trace-bar adapted when tilted, to make contact with one or the other of said conductors, "on" and "off" magnets for the stop-keys having their windings respectively wired to said conductors, switch-jack setters disposed crosswise of said trace-bars, selective means for actuating said setters, and selective means for opening and closing electric circuits through transverse rows of switch-jacks.

1,665,255. CIRCULAR-KNITTING MACHINE. HAMILTON LEE DAVIS, Martinsburg, W. Va., assignor to The Interwoven Mills, Inc., New Brunswick, N. J., a Corporation of New Jersey. Filed Sept. 30, 1925. Serial No. 59,470. 9 Claims. (Cl. 66—54.)



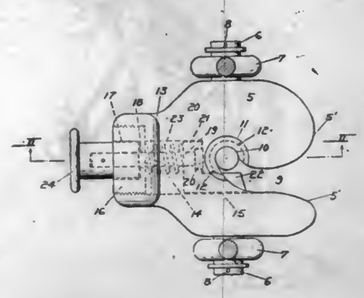
9. In a circular stocking knitting machine, the combination with vertically movable secondary knitting cams, means for elevating the cams and adjustable means for arresting the descent of the cams to determine the size of the stitch drawn thereby, of mechanism for positively drawing down said cams at a predetermined point in the cycle of the operation of the machine into contact with said arresting means, and means included in said mechanism for yieldingly accommodating the adjustment of said arresting means.

1,665,256. COMBINATION HOLDER AND GUARD FOR TOOLS. FREDERICK GOERTZ and WILLIAM C. ROTHE, Newark, N. J., assignors to August Goertz & Co., a Corporation of New Jersey. Filed Dec. 27, 1924. Serial No. 758,402. 2 Claims. (Cl. 30—9.)



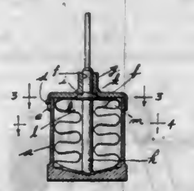
1. The herein-described tool, comprising a flat main body formed with longitudinally extending marginal walls and guide flanges extending laterally inward from said walls, an inclined transverse member between the outer ends of said flanges, said member inclining toward said underlying main body to provide at the free end portion of the latter a wedge-shaped opening, a blade movably disposed intermediate said main body and its guide flanges and between said marginal walls, said blade being adapted to be outwardly projected through said wedge-shaped opening, and a clamping slide longitudinally movable in said main body to cooperate with said blade and said inclined transverse member for maintaining the blade fixed in desired longitudinal projection from said wedge-shaped opening.

1,665,257. GUN-CLEANING ROD. CHARLES W. DAKE, Chicago, Ill. Filed Jan. 29, 1927. Serial No. 164,399. 1 Claim. (Cl. 42—91.)



A cleaning tool for fire arms and the like comprising a rod, a handle in which the rod is mounted for rotation, the end of the rod removed from the handle being cylindrical, a thread formed in the extreme forward end of the cylindrical portion of the rod and extending clear to the extreme end thereof, the outside diameter of the thread and of the cylindrical portion of the rod being the same and means associated with the handle whereby the rod may be given a positive rotation to screw the threaded end thereof out of engagement with a patch in the barrel.

1,665,258. BRAKE EQUALIZER. HENRY FORD, Dearborn, Mich. Filed Oct. 14, 1926. Serial No. 141,548. 12 Claims. (Cl. 188—204.)

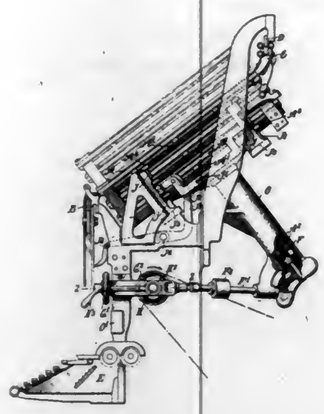


1. In an equalizing device, a frame, a rock shaft journalled thereon, a pair of operating members mounted on said frame, a pair of arms fixed to said rock shaft means for operatively connecting one of said operating members to one of said arms, an operated member, an arm pivotally mounted on said shaft, means for operatively connecting said operated member with the pivoted arm, a second arm pivotally mounted on said first pivoted arm, and means for operatively connecting the second pivoted arm with the second fixed arm and the second operating member whereby pressure from the operated member may be transmitted substantially equally to the operating members and said members may be moved unequal distances by said pressure.

1,665,259. SUCKER-ROD ELEVATOR. EDGAR E. GREVE, Bellevue, Pa. Filed Jan. 29, 1924. Serial No. 689,266. 10 Claims. (Cl. 294—91.)

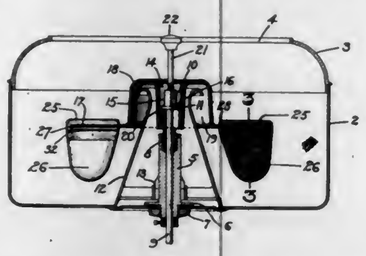
7. A sucker rod elevator having a vertical rod receiving opening, and a vertical outwardly extending leading-in slot communicating with the vertical opening in non-radial relation thereto.

1,665,260. MIXING APPARATUS. ALBERT P. GRUNN, Chicago, Ill. Filed Mar. 15, 1927. Serial No. 175,498. 1 Claim. (Cl. 259—107.)



In a device of the class described, a cylindrical vessel open at one end, a cover for said open end, means for detachably securing the cover to the vessel, the cover being provided with a central bearing aperture, a rotary spatula comprising a shaft and radial blades projecting therefrom, said shaft extending through and projecting beyond said bearing aperture and having thereon an annular shoulder of greater diameter than the aperture and adapted to bear against the inner side of the cover thereby restraining the spatula against outward movement but permitting the spatula and cover to be separated, blades on opposite sides of said shaft being oppositely inclined whereby rotation of said spatula in one direction forces said shoulder against the inner side of said cover thereby sealing said vessel during rotation of said spatula.

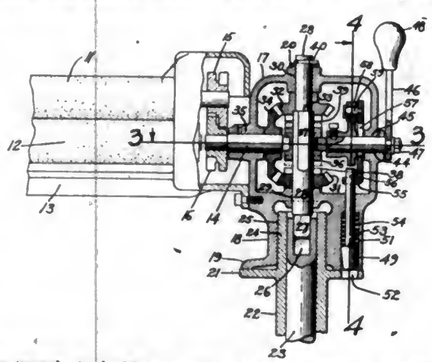
1,665,261. TYPOGRAPHICAL MACHINE. ALFRED W. F. GUEST, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed May 7, 1927. Serial No. 189,509. 11 Claims. (Cl. 199—45.)



1. In a linotype machine, the combination with a plurality of magazines, a shift frame wherein the magazines are mounted and a screw for raising and lowering the shift frame to bring a selected magazine into operation position, of means for rotating the screw comprising the

intermediate shaft, the assembler drive shaft, a lay shaft geared to the screw, and intermediate reversible gear mechanism for connecting the lay shaft directly with the

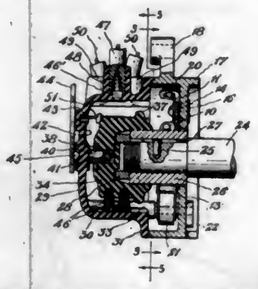
intermediate shaft or with the assembler drive shaft, whereby the screw may be rotated in one direction or the other, as desired.



1,665,262. WASHING MACHINE. HERMAN C. HIRSCHY, Duluth, Minn., assignor to The Hirschy Company, Duluth, Minn., a Corporation of Minnesota. Filed Sept. 15, 1924. Serial No. 737,832. 5 Claims. (Cl. 259—128.)

1. A washing machine agitator comprising a disc having a plurality of radial slots, and blades having grooves to receive the edges of said slots at the sides and inner ends thereof, the side grooves of said blades extending only partially across the same and forming shoulders or stops against which said disc at the outer edges of said slots is seated and concealed.

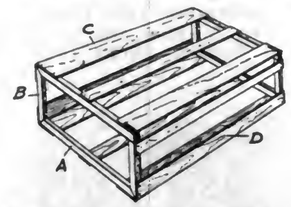
1,665,263. WRINGER-CONTROL MECHANISM. HERMAN C. HIRSCHY, Duluth, and RALPH C. HITCHCOCK, Minneapolis, Minn., assignors to The Hirschy Company, Duluth, Minn., a Corporation of Minnesota. Filed Apr. 17, 1925. Serial No. 23,905. 13 Claims. (Cl. 68—32.)



1. A wringer adapted for adjustment to different working positions and having a roll-driving mechanism including a control-clutch, a locking member for holding said wringer in adjusted positions, a rock-shaft for operating the clutch and having a cam thereon, means for normally holding said locking member in its locking position, means connected with the locking member and adapted to be actuated by the movement of the cam for moving said locking member to unlocking position when said shaft is rotated to disengage the clutch, said connecting means being further adapted for entrainment by the locking member toward the cam as said locking member travels to locking position, and said connecting member being engageable with the cam to limit shaft rotation.

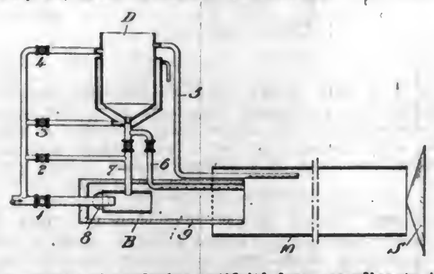
1,665,264. SILICA GELS AND PROCESS OF MAKING THE SAME. HARRY N. HOLMES and JOHN A. ANDERSON, Oberlin, Ohio. Filed Aug. 10, 1923. Serial No. 656,716. 7 Claims. (Cl. 23—182.)

1. The process of preparing hard silica gel with great porosity, comprising mixing a soluble silicate solution with a solution of a metallic salt to form hydrated silica, a soluble salt, and an insoluble metallic oxide, drying in a manner to produce and preserve in a rigid structure and without material shrinkage the usual ultra-microscopic pores, adding an acid to convert the insoluble metallic oxide into a soluble metallic salt, and washing out soluble metallic and other salts, thereby producing additional pores and increasing the total porosity.



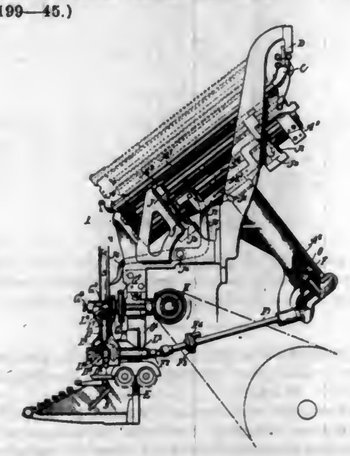
1,665,265. IGNITION TIMER AND DISTRIBUTOR. HARRY L. HOSTERMAN, Akron, Ohio, assignor to John R. Gammeter, Akron, Ohio. Filed Aug. 15, 1924. Serial No. 732,187. 4 Claims. (Cl. 200—30.)

3. A breaker arm construction for the primary circuit interrupters of ignition devices comprising, a casing, an inwardly-extending stud mounted in said casing, a spring-controlled breaker arm pivoted on said stud, and a suitably-mounted boss axially overlying said stud to retain said breaker arm.



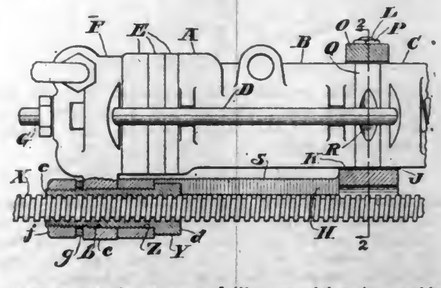
1,665,266. COLLAPSIBLE CRATE. THOMAS S. HUSTON, Denver, Colo. Filed Jan. 19, 1925. Serial No. 3,391. 2 Claims. (Cl. 217—43.)

1. An open ended folding crate composed of only four sections connected by pliable straps, the sections being of uniform width and each composed of parallel side strips connected by widely spaced slats, the pliable straps being held between the slats adjacent the ends of the sections and the side strips, said straps being adapted to furnish a hinged connection for the sections and pliable straps held between the last slat and the side strips at the free end of one of the end sections, said last mentioned straps lapping over and being fastened to the outside of the end slat of the other end



section when the crate is in its folded condition, the sections being relatively arranged so that they can be placed in alignment in one plane for shipping or storage, or placed at right angles to each other to form a crate of rectangular form.

1,665,267. PROCESS OF PRODUCING ARTIFICIAL FOGS. AXEL VIDAR JERNBERG, Tidaholm, Sweden. Filed July 14, 1925. Serial No. 43,655, and in Sweden July 22, 1924. 1 Claim. (Cl. 252—1.)



A process of producing artificial fogs according to the smoke syringe method, which comprises introducing melted phosphorus, repeatedly effecting a fine division of the phosphorus by the application of fluid pressure, and thereafter delivering the finely divided material to the open air.

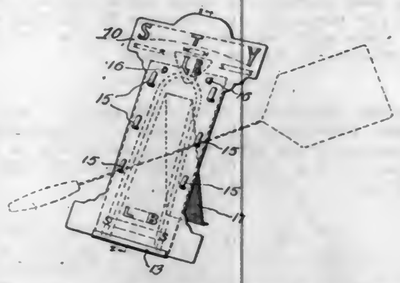
1,665,268. TYPOGRAPHICAL MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Dec. 16, 1926. Serial No. 155,122. 10 Claims. (Cl. 199—45.)

1. In a linotype machine, the combination with a plurality of magazines, a shift frame wherein the magazines are mounted, and a screw for raising and lowering the shift frame to bring a selected magazine into operative position, of means for rotating the screw comprising the intermediate shaft, a shift driven thereby, a lay shaft geared to the screw, and intermediate reversible gear mechanism for connecting the lay shaft with said driven shaft, whereby the screw may be rotated in one direction or the other as desired.

1,665,269. MOUNTING FOR ROCK DRILLS. EARL B. LEAR, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 25, 1927. Serial No. 201,426. 1 Claim. (Cl. 255—45.)

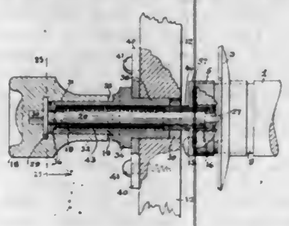
A mounting for a rock drill, comprising in combination with a cylinder and back head, side bolts for securing the back head to the cylinder, a lug on the back head having an aperture, a carriage, a bearing on the carriage to receive the cylinder, a clamping plate, bolts in the bearing and the clamping plate for securing the cylinder to the carriage, said bolts extending between the cylinder and the side bolts, ribs on the carriage for slidably engaging a rock drill shell, said carriage having an aperture registering with the aperture in the lug, a feed screw, a feed nut in the apertures in threaded engagement with the feed scre wfor moving the carriage longitudinally of the feed screw, and a nut on the feed nut for clamping the rearward end of the carriage to the lug.

1,665,270. FLY SWATTER. JOHN A. LUBBERS, Clinton, Iowa, assignor to Lubbers & Bell Manufacturing Co., Clinton, Iowa, a Corporation of Iowa. Filed Mar. 14, 1927. Serial No. 175,107. 7 Claims. (Cl. 43—137.)



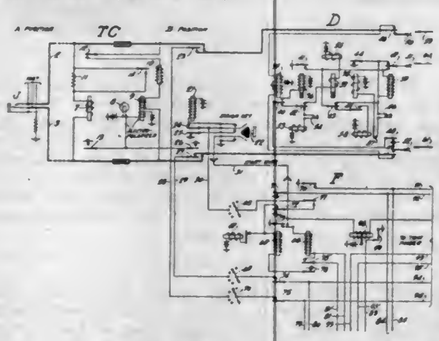
1. In a fly swatter, a relatively heavy-wire handle base having diverging sides, a wire netting having its lower edges folded laterally over said sides, a flat metal reinforcing strip interwoven with said netting to support opposite surfaces thereof beyond said base, said strip having an offset portion disposed adjacent said base, and wire clips extending through said netting and interlocking with said offset portion of said reinforcing strip to anchor the same to said base.

1,665,271. DISPLAY STAND. JOHN A. LUBBERS, Clinton, Iowa, assignor to Lubbers & Bell Manufacturing Company, Clinton, Iowa, a Corporation of Iowa. Filed May 11, 1927. Serial No. 190,494. 1 Claim. (Cl. 211—156.)



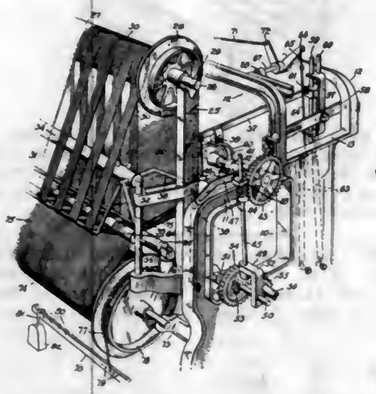
In a display stand, the combination of a sheet metal easel member having its lower supporting edge bent upwardly to form a groove, and provided with one or

more projections on its front face, and a stiff board of fibrous material or the like having one or more apertures therethrough and adapted to be detachably mounted on said easel member, with its lower edge fitting in



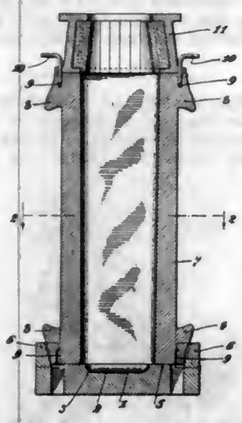
said groove and its apertures registering with the projections on said easel, whereby said projections extend beyond the face of said board to form rigid supports for advertised articles.

1,665,272. DETACHABLE SCROLL SUPPORT. LEWIS E. MYERS, Valparaiso, Ind., assignor, by mesne assignments, to The Northern Trust Company and Harold H. Rockwell as trustees. Filed Apr. 16, 1926. Serial No. 102,595. 5 Claims. (Cl. 242—68.)



2. In unitary scroll rollers, a spring barrel, a knob rotatable and slidable on the barrel, a stem from the knob passing through the barrel and projecting therefrom, a spring on the stem, and means on the stem for limiting the sliding movement of the knob.

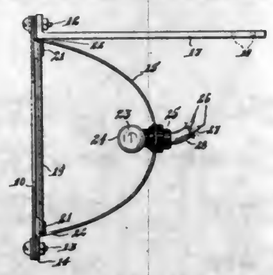
1,665,273. MULTIOFFICE TELEPHONE SYSTEM. MARTIN L. NELSON, Park Ridge, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Jan. 18, 1924, Serial No. 686,946. Renewed Aug. 20, 1927. 21 Claims. (Cl. 179—27.)



1. In a telephone system, a plurality of trunk lines, a plurality of sending mechanisms, a set of number keys, a signal individual to said keys, operator controlled automatic means for connecting said key set with an idle sender and for connecting said sender with a calling trunk line, and means responsive only to the completion of both operations for operating said signal.

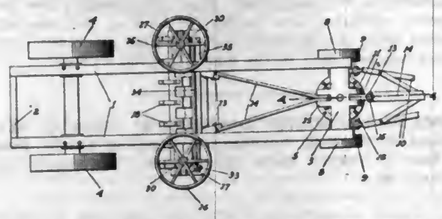
1,665,274. ATTACHMENT FOR LOOMS. CHARLES EUGENE NEISLER, Jr., Kings Mountain, N. C. Filed Aug. 9, 1923. Serial No. 656,615. 20 Claims. (Cl. 139—25.)

1. In a loom of the character described, the combination with a top slack warp beam, of a slacking bar to receive sets of ends of the warp alternately on opposite sides thereof, and means co-operating with said slacking bar to let off a positive amount of slack yarn.



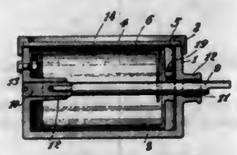
1,665,275. INGOT MOLD AND STOOL. JOHN H. PERRY, Sharon, Pa., assignor to Valley Mould & Iron Corporation, Sharpsville, Pa., a Corporation of New York. Filed Jan. 18, 1926. Serial No. 81,884. 8 Claims. (Cl. 22—139.)

1. As an article of manufacture, an ingot mold comprising an integral body portion with the matrix thereof having a taper not to exceed one and one half percent.



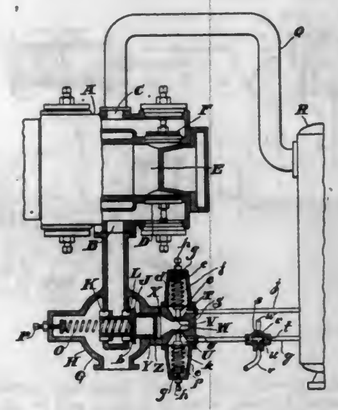
1,665,276. LICENSE-PLATE LAMP. BRYAN B. PFEIFER, Chicago, Ill. Filed Jan. 26, 1927. Serial No. 163,645. 3 Claims. (Cl. 40—133.)

1. The combination of a license plate lamp, the inside thereof forming an elongated parabolic reflector, a stenciled license plate mounted thereon; a sheet of opalescent glass mounted behind said stenciled plate; a source of light mounted in said lamp at the focus of said reflector for reflecting light through said glass and the openings in said plate; a flange on said lamp having a portion thereof punched out and bent back to hold backwardly on said glass; portions punched out of said reflector and bent down to hold forwardly on said glass; means for



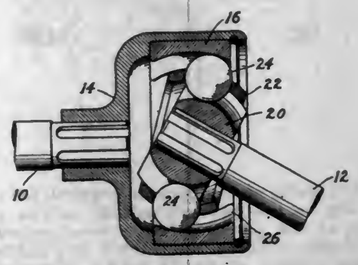
securing said license plate to said flange; a lens plate mounted at one end of said reflector and having a lens therein; a source of light mounted behind said lens; means for securing one end of said lens plate to said flange; means on the other end of said lens plate engaging under said license plate for securing said lens plate in position.

1,665,277. ROAD SCARIFIER. DANIEL V. RAMAZZOTTI, Sutter Creek, Calif., assignor to The Knight Company, Sutter Creek, Calif., a Corporation. Filed Sept. 21, 1926. Serial No. 136,779. 2 Claims. (Cl. 262—8.)



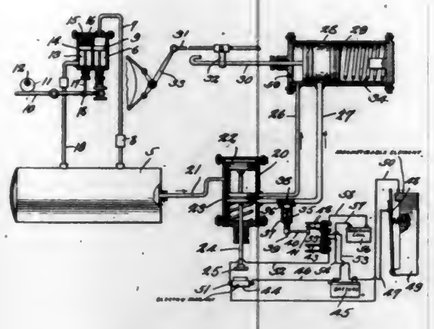
1. A scarifier including a frame, wheels supporting the frame, a bolster mounted at the front end of the frame, a tooth-supporting block extending transversely of and under the frame rearwardly of the bolster, arms projecting from the block and pivoted onto the bolster, means for moving the block vertically, a transversely extending brace member pivoted at one end onto the block adjacent one end thereof and extending thence toward the opposite end of the block, and means for pivoting the opposite end of said brace member in connection with the frame.

1,665,278. OPTICAL SPEEDOMETER. GEORGE RAMSEY, Brooklyn, N. Y. Filed Aug. 23, 1922. Serial No. 583,764. 15 Claims. (Cl. 116—57.)



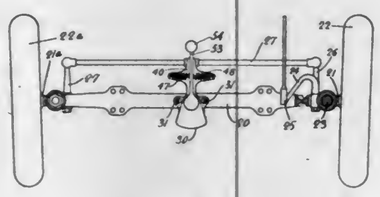
13. A speedometer comprising a rotating member of a violet-green color, said member being provided with windows of progressive lengths arranged in bands with the windows in each band being substantially the same length, an orange-red bar arranged relatively to said member to be viewed through the said windows when the member is rotated and characters in white on said orange-red bar.

1,665,279. MULTIPRESSURE REGULATOR. SNOWDEN B. REDFIELD, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Sept. 19, 1927. Serial No. 220,361. 2 Claims. (Cl. 230—25.)



1. In a multi-pressure regulator, the combination of a compressor cylinder having an inlet opening and a discharge opening, a receiver tank connected to the discharge opening, an intake unloading valve controlling the inlet opening, a casing interposed between the intake unloader and the receiver tank having a pair of valve chambers, valves controlling communication between the chambers and the unloader valve, diaphragms connected to the valves exposed to receiver pressure, and springs acting on the diaphragms tending to hold the valve closed, one of said springs being adapted to yield to a lower receiver pressure than the other spring for admitting pressure fluid to the unloader valve for closing said unloader valve and thus cut off the intake supply to the compressor cylinder.

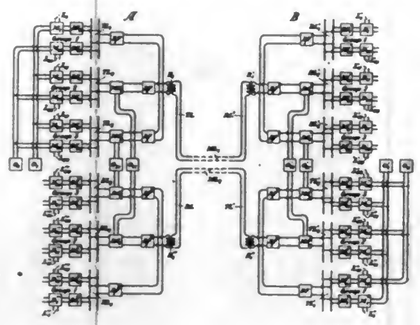
1,665,280. UNIVERSAL JOINT. ALFRED H. RZEPPA, Detroit, Mich. Filed Apr. 2, 1927. Serial No. 180,359. 10 Claims. (Cl. 64—91.)



1. In combination with a pair of shafts, an independent universal connection unit for such shafts comprising an outer ball race member and an inner ball race member, said members provided with registering curved ball receiving grooves, a ball cage between said members, balls carried by said cage within the grooves of said race members to lock said members to rotate together, a socket on one shaft receivable over said universal connection unit and means to lock the outer ball race member thereto to rotate therewith, and a part on the other shaft engageable within the inner race member to lock it to rotate therewith.

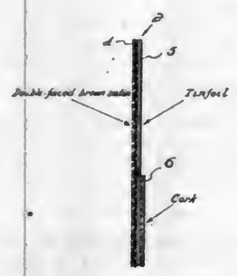
1,665,281. SAFETY AUTO CONTROL. CHARLES E. SHEARON, JOHN D. ALEXANDER, and LESLIE M. PEARCEY, Hattiesburg, Miss. Filed Sept. 13, 1926. Serial No. 135,268. 9 Claims. (Cl. 246—194.)

1. A safety device for railway crossings including a switch member between rails of a track and in the path of travel of the wheels of a train passing over the rails, a magnet positioned in a road surface crossing the railway and in circuit with the switch, a brake operating mechanism carried by a motor vehicle passing over the road surface, and said brake operating mechanism including a magnet and fluid pressure controlled means actuated by the action of the magnet for applying the brakes of the motor vehicle.



1,665,282. STEERING MECHANISM. CHARLES R. SHORT, Dayton, Ohio, assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 29, 1926. Serial No. 112,586. 5 Claims. (Cl. 280—90.)

1. In a device of the character described, the combination with an axle having a spindle, carrying a wheel, pivoted at each end thereof; of steering mechanism for said wheels; a dashpot filled with a fluid and including a piston member, one end of which is connected to the steering mechanism, said piston having a port which permits the flow of fluid from one side of the piston to the other; a valve controlling said port and a weighted arm on the valve elastically connected to the piston member.

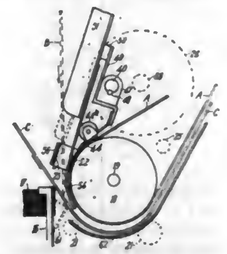


1,665,283. SIGNALING SYSTEM. FRED J. SINGER, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 2, 1927. Serial No. 180,521. 6 Claims. (Cl. 179—15.)

1. In a system in which signals are to be transmitted substantially free from the distortion introduced by transformers, loading coils, and the like, the combination of a plurality of sources of low frequency signals, a plurality of low frequency oscillators each of a different odd harmonic of a fundamental frequency, one corresponding to each low frequency signaling source, a plurality of high frequency oscillators each of a different even

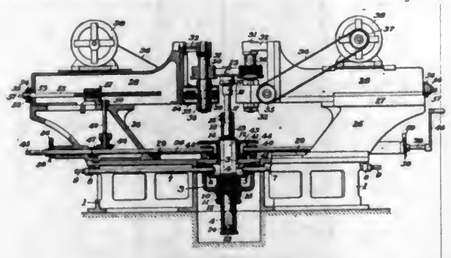
harmonic of the same fundamental frequency, one corresponding to each low frequency signaling source, means for beating the signals of each low frequency signaling source with the oscillations of a corresponding low frequency oscillator, and means for beating the resultant waves with the oscillations of the high frequency oscillator corresponding to the same signaling source.

1,665,284. ACOUSTIC DIAPHRAGM. JOHN Q. STYE and RICHARD H. COFFREN, Washington, D. C. Filed Dec. 16, 1926. Serial No. 155,220. 3 Claims. (Cl. 181—32.)



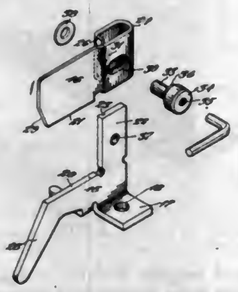
1. A laminted diaphragm for sound reproducers comprising at least three layers, one layer of textile fabric, one of metallic foil, and one of sound dampening material, and adhesive securing said layers together.

1,665,285. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed June 3, 1924. Serial No. 717,463. 39 Claims. (Cl. 197—158.)



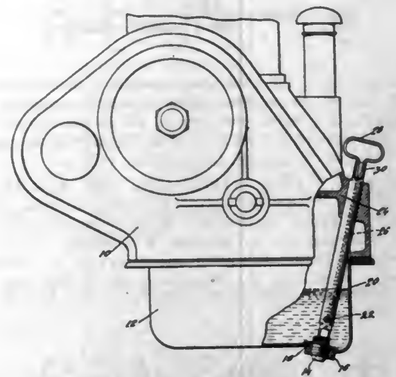
1. In a typewriting machine, the combination of a carriage, a ribbon-carrier mounted upon the carriage and

movable thereon to shift a pair of superposed inking ribbons to and away from the printing position, and means



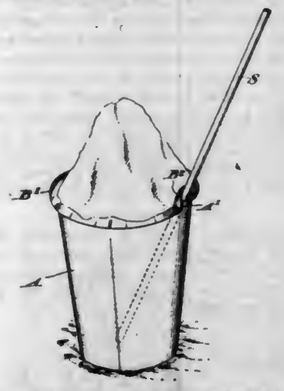
automatically operative during the movement of said carrier in one direction to effect a relative separation of the two ribbons.

1,665,286. METHOD AND MACHINE FOR FINISHING CIRCULAR CASTINGS. WILLIAM Y. STROH and GEORGE W. KLAGES, Pittsburgh, Pa., assignors to Catherine Strayer, Pittsburgh, Pa. Filed Aug. 30, 1921. Serial No. 496,805. 22 Claims. (Cl. 80—5.)



20. A machine for finishing circular castings, comprising a bed plate, a casting support, a plurality of casting finishing elements adjustably carried by said bed plate for circumferential adjustment thereon relative to a casting on said support, means for simultaneously and independently adjusting said finishing elements toward or away from the casting on said support, means for changing the angular position of said elements, and means for rotating said elements, substantially as described.

1,665,287. SLUB CATCHER OR YARN CLEANER. ERNEST R. SWANSON, Cranston, R. I., assignor to Universal Winding Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 19, 1927. Serial No. 176,702. 12 Claims. (Cl. 28—71.)

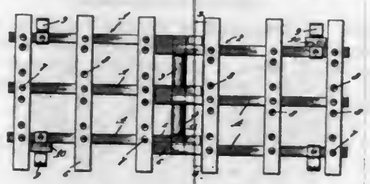


1. In a device of the type specified, the combination of a pair of blades arranged with their edges in opposite spaced relation to provide an opening therebetween through which the yarn draws, means for adjusting the relative position of said blades to vary the width of the opening, and resilient means integral with one blade and engaging the other blade to frictionally resist the adjustment between the blades.

1,665,288. HYDROCARBON ENGINE. PAUL B. TAYLOR, Pontiac, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Sept. 11, 1924. Serial No. 737,153. 11 Claims. (Cl. 184—1.5.)

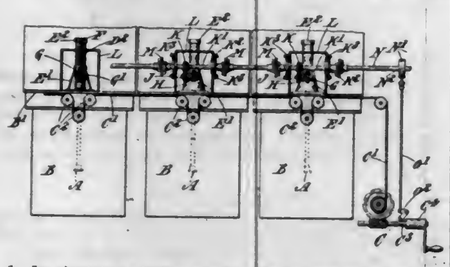
1. An engine having a crankcase, a drainplug threaded in the crankcase, a tubular sleeve secured to said plug, and an oil gage in the sleeve, the sleeve and gage having interengaging portions of non-circular cross-section, so that the gage may be used when in the sleeve to unscrew the plug.

1,665,289. MEANS FOR SERVING FOOD AND DRINK. MARVIN S. WEAVER, Aberdeen, N. C. Filed May 26, 1925. Serial No. 33,013. 4 Claims. (Cl. 65—13.)



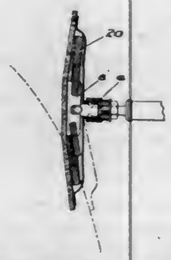
1. A structure comprising two members, one being a cup and the other being a dish shaped to extend into the upper part of the cup and to seat loosely on the rim of the cup and having all of its lip higher than the lip of the cup and one of said members having a lip fold whereby an orifice is formed between the cup and the dish for the insertion of a straw.

1,665,290. POULTRY ROOST. IRA CLAY WHITE, Brownsville, Ark. Filed June 7, 1923. Serial No. 643,989. 1 Claim. (Cl. 119—22.)



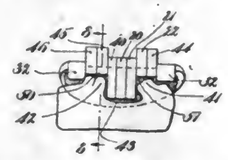
In a roost, a pair of sections, each of the sections including longitudinally extended outer bars and inner bars arranged in spaced relation with each other, spaced cross

bars having their ends extended beyond the outer longitudinal bars to provide supports for the roost, hangers on the roost, the first mentioned bars having aligning openings, a pintle extending through the aligning openings to



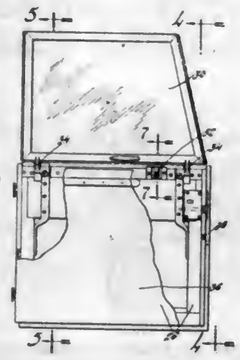
removably connect the sections, removable members extending through the pintles adjacent to the outer longitudinal bars to restrict movement of the sections over the pintle, and said cross bars having openings defining cups.

1,665,291. OPERATING GEAR OF ELECTRIC SWITCHES. ARCHIBALD ALLAN, North Shields, and HENRY WILLIAM CLOTHIER, Wallsend-on-Tyne, England, assignors to A. Reyrolle & Company Limited, Hebburn-on-Tyne, England, a Company of Great Britain. Filed Jan. 21, 1926, Serial No. 82,880, and in Great Britain Mar. 20, 1925. 3 Claims. (Cl. 200—150.)



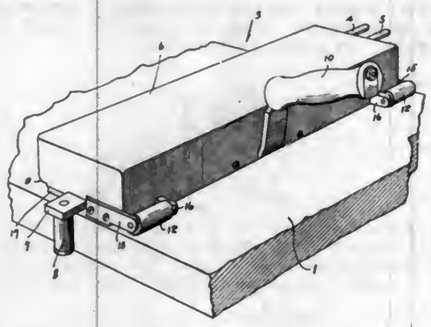
1. In electric switchgear of the kind in which the main switch is removable from the rest of the switchgear, the combination of a main switch contact-operating member, a pinion operatively connected to said member and removable with the main switch, a driving pinion adapted to mesh with the first pinion, a shaft for said driving pinion, a frame or support which does not move when the main switch is removed, bearings for said shaft in said support, means for adjusting said bearings to secure proper engagement between said two pinions, and means for rotating said shaft to open and close the main switch.

1,665,292. BUFFER. HAZEN S. ANDERSON, Rochester, and JESSE B. BROWN, Flint, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Nov. 27, 1925. Serial No. 71,712. 4 Claims. (Cl. 51—195.)



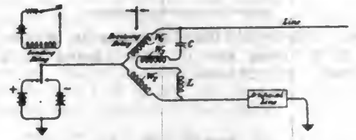
1. In a buffer of the class described, holder, a buffing pad and a plurality of coiled springs radially arranged secured at their inner ends to the holder and carried at their outer ends by the outer portion on the pad.

1,665,293. SECTIONAL IMPRESSION TRAY. DAVID BARATT, Roxbury, Mass. Filed Mar. 9, 1925. Serial No. 14,214. 6 Claims. (Cl. 32—6.)



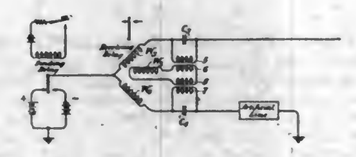
1. A sectional impression tray, comprising two interlocking sides, and a plurality of medial ridge forming plates carried between said sides, said plates being movable into and out of operative position.

1,665,294. CONVERTIBLE BODY. ROSCOE BERINGER, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 1, 1924. Serial No. 753,248. 4 Claims. (Cl. 296—45.)



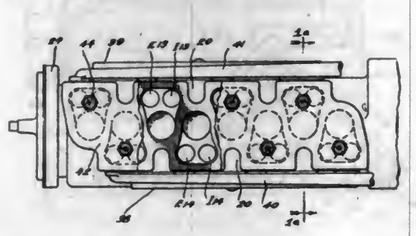
1. A vehicle door having a panel hinged to its upper edge, a cover for the panel in its lower position, a latch for the door, and an operating handle for the latch arranged to hold the cover closed when in its operative position and movable to a position permitting opening of the cover.

1,665,295. FLATIRON. ELLIOTT D. CAMPBELL, San Francisco, Calif. Filed July 7, 1926. Serial No. 121,017. 2 Claims. (Cl. 68—9.)



1. A flat iron provided with rollers adjacent its trailing edge, said iron being substantially co-extensive in length with the width of the ironing board on which it is used and provided at its ends with guide rollers extending downwardly, the distance between said rollers being slightly greater than the width of the ironing board.

1,665,296. GROUNDED DUPLEX TELEGRAPH SYSTEM. SAMUEL I. CORY, Towaco, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 26, 1926. Serial No. 118,753. 3 Claims. (Cl. 178—58.)

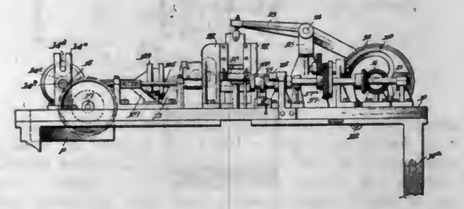


1. In a grounded duplex telegraph system, a sending relay, a receiving relay, a line, an artificial line, and a shunt path therebetween including an inductance and a capacity, said receiving relay including an operating winding and an additional winding in series with the inductance and capacity of the shunt path, said inductance and said capacity being of such values that the shunt forms a tuned circuit resonant to interfering alternating currents in the line and the effect on incoming and outgoing signals is slight, the interfering current in the operating winding of the receiving relay being substantially neutralized by the flow of the interfering current in the additional winding.

1,665,297. GROUNDED DUPLEX TELEGRAPH SYSTEM. SAMUEL I. CORY, Towaco, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed June 26, 1926. Serial No. 118,754. 4 Claims. (Cl. 178—58.)

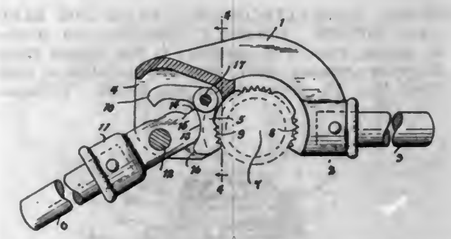
1. In a duplex telegraph repeater system, a line, an artificial line, a sending relay, a receiving relay, a transformer arrangement associated with the line and the artificial line, tuned circuit in the line anti-resonant at the frequencies of interfering currents, and a tuned circuit in the artificial line anti-resonant at said frequencies, each of said tuned circuits including as one of its elements one winding of said transformer arrangement.

1,665,298. ENGINE. HENRY M. CRANE, New York, N. Y., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 31, 1926. Serial No. 126,189. 7 Claims. (Cl. 123—59.)



1. An engine comprising L-head cylinders arranged side by side, the valve ports of adjacent cylinders being disposed on opposite sides of the cylinder axes.

1,665,299. PALLET AND METHOD OF MAKING THE SAME. CHARLES B. CUSHWA, Youngstown, Ohio, assignor to The Commercial Shearing and Stamping Company, Youngstown, Ohio, a Corporation of Ohio. Filed Jan. 10, 1925. Serial No. 1,537. 13 Claims. (Cl. 34—17.)

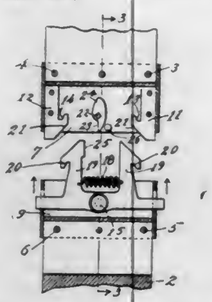


1. As an article of manufacture, a pallet comprising a body portion having a continuously extending downwardly projecting peripheral reinforcing means formed thereon, and secondary reinforcing means extending longitudinally a substantial part of the length of at least one side of the body portion and formed by rolling the first mentioned means inwardly and upwardly so that the upper inner edge thereof abuts the body portion, said upper inner edge being welded to said body portion, substantially as described.

1,665,300. FIRECRACKER MACHINE. JOSEF B. DECKER, Elkton, Md. Filed June 21, 1927. Serial No. 200,467. 20 Claims. (Cl. 86—20.)

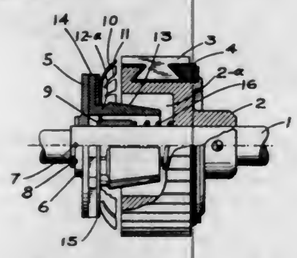
1. A machine for making firecrackers of the type having a bag of explosive material arranged in a tube, comprising a magazine for receiving a bag of explosive material, means for holding a tube adjacent one end of the magazine, and means for forcing the bag from the magazine into the tube.

1,665,301. PASSING OR BACK-UP TONGS. BENJAMIN P. HOFFMAN, Tulsa, Okla., assignor to The Pierce Development Company, Tulsa, Okla., a Corporation of Oklahoma. Filed Dec. 18, 1926. Serial No. 155,618. 3 Claims. (Cl. 81—78.)



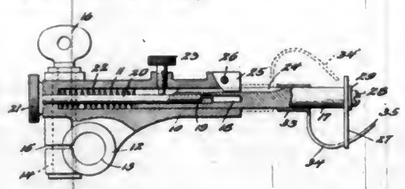
1. A tool of the character specified comprising a frame having a work receiving recess and a slot at one side of said recess, a jaw pivoted at one end within the slot and having a projection at its outer end, an arm projecting from the pivotal end of the jaw, and a lever pivoted within said slot and operating between the jaw and the arm projecting therefrom, and having a projection to coact with the arm and a recess adjacent said projection to receive the projection at the outer end of the jaw and automatically lock the jaw when projected into the work-receiving recess to the limit of its throw.

1,665,302. MULTIPLANE TRACTION DEVICE. ALPHEUS E. HOLCOMB, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis. Filed Dec. 19, 1921. Serial No. 523,530. 2 Claims. (Cl. 305—9.)



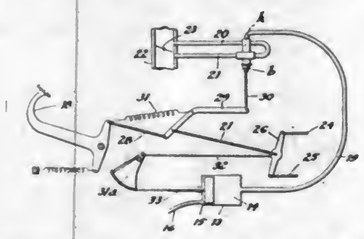
1. In endless traction structure of the class described, the combination of a main frame, axles on the main frame, a traction unit detachably mounted on the axles, an axle carried by the traction unit detachably connected to the main frame, and a driving connection between the traction unit and frame associated with the last-named axle.

1,665,303. FASTENER. WILLIAM N. HUNTER, Blanchester, Ohio. Filed Feb. 13, 1925. Serial No. 8,887. 2 Claims. (Cl. 292—31.)



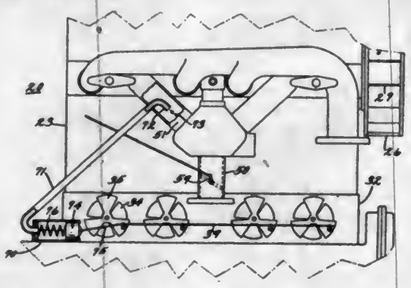
1. In a fastener of the character specified comprising two casing members, one member provided with a pair of permanently fixed hooks spaced apart and facing each other, and the other member provided with a corresponding pair of L-shaped latches pivoted together, with one arm of the L-shaped latches provided with hooked ends turned in opposite directions to be inserted between the fixed hooks and the other arm projecting from the sides of the casing and a spring to hold the hooked end of the latches separated, the interengaging hooks being beveled to draw the two casing members together upon engagement.

1,665,304. SHORT-CIRCUITING DEVICE FOR ELECTRIC MOTORS. HERBERT L. JOHNSTON and MILTON K. AKERS, Troy, Ohio, assignors to The Hobart Manufacturing Company, Troy, Ohio, a Corporation of Ohio. Filed Mar. 23, 1925. Serial No. 17,522. 3 Claims. (Cl. 172—279.)



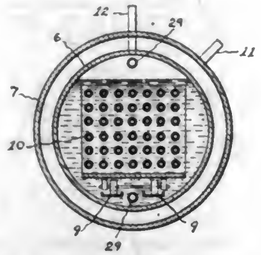
1. In combination with an armature shaft, a commutator having bars, a sleeve on the shaft, a short circuiting disk on the sleeve, spring means to hold the disk away from short circuiting position, centrifugal means and a relatively fixed member on the shaft, between which and the short circuiting device the centrifugal means acts, said member being adjustable along the shaft, said adjustment comprising a pin in the shaft and a hub having a series of opposed notches to engage the pin, said notches having varying depth.

1,665,305. DROP GUIDE. WILLIAM M. KELLY, Westfield, N. J. Filed Apr. 15, 1927. Serial No. 184,119. 7 Claims. (Cl. 271—60.)



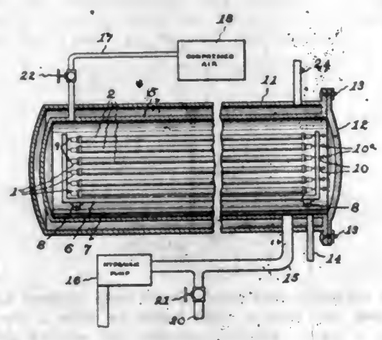
1. In combination with a front stop having a stem, a top guide slidably and rotatably mounted on said stem, and adapted to be moved from its operative position below the stem, to an inoperative position above the stem.

1,665,306. BRAKE MECHANISM OPERATED BY SUCTION. WILLIAM OSCAR KENNINGTON, London, England. Filed Nov. 8, 1926, Serial No. 147,130, and in Great Britain Nov. 13, 1925. 5 Claims. (Cl. 192—3.)



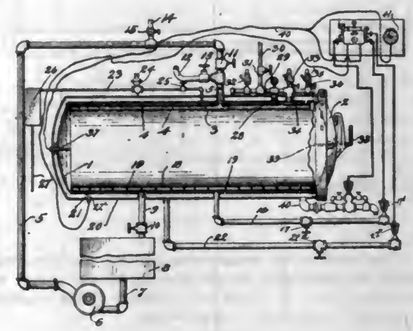
2. Suction control mechanism wherein two valves are provided in the induction pipe, the space between said valves constituting the controlled space and one of said valves serving as the engine throttle valve during ordinary running of the engine.

1,665,307. COOLING SYSTEM FOR INTERNAL COMBUSTION ENGINES. CHARLES F. KETTERING, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 2, 1923. Serial No. 629,337. 4 Claims. (Cl. 123—171.)



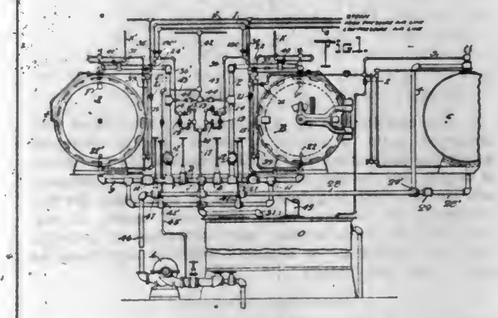
1. In a multiple cylinder air cooled internal combustion engine and in combination with the cylinders thereof, a casing enclosing said cylinders, and a fan for producing a flow of air past said cylinders; a plurality of separate and independent ports leading into said casing; a plurality of dampers cooperating with said ports and adapted to control the flow of air into said casing; a cylinder; a suction pipe leading from said cylinder and opening into the engine intake conduit; a piston operating in said cylinder, and operatively connected with all of said dampers; and a spring acting to hold said dampers in normally closed positions; one port and one damper being associated with each engine cylinder, to thereby control several separate streams of air flowing through said ports and into said casing adjacent the several cylinders of the engine.

1,665,308. PROCESS OF VULCANIZING RUBBER TUBES AND RUBBER TUBE PRODUCED THEREBY. LAURITS A. LAURSEN, Eau Claire, Wis., assignor of one-fourth to Pearl Fisher Laursen, Akron, Ohio. Filed Mar. 14, 1923. Serial No. 624,977. 13 Claims. (Cl. 18—53.)



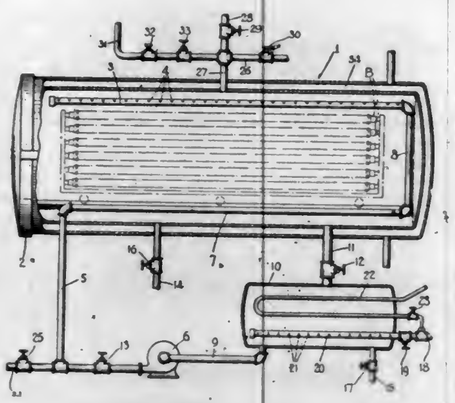
1. The method of vulcanizing rubber tubes for vehicle tires, which consists in placing the tubes to be vulcanized upon poles or mandrels, sealing the open ends of the tubes to the mandrels, and vulcanizing the tubes while upon the mandrels and in the absence of external confining means solely by direct contact with water or a similar liquid heated to the desired temperature for vulcanization.

1,665,309. PROCESS OF VULCANIZING RUBBER. LAURITS A. LAURSEN, Eau Claire, Wis., assignor of one-fourth to Pearl Fisher Laursen, Akron, Ohio. Filed Dec. 28, 1923. Serial No. 683,096. 14 Claims. (Cl. 18—53.)



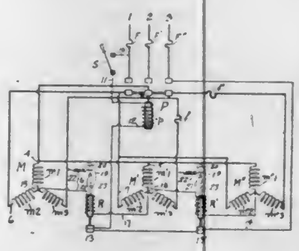
2. The process of vulcanizing rubber articles which consists in placing an uncured rubber article on a core, softening the uncured rubber by heat less than required to cure it, submerging it in a liquid at a temperature too low for vulcanization, subjecting the liquid to sufficient pressure to force the rubber into an intimate contact with the core and expel or compress any unconfined air to prevent the formation of blemishes, and then vulcanizing the article at the proper temperature.

1,665,310. PROCESS AND APPARATUS FOR VULCANIZING RUBBER ARTICLES. LAURITS A. LAURSEN, Eau Claire, Wis., assignor of one-fourth to Pearl Fisher Laursen, Akron, Ohio. Filed Sept. 27, 1924. Serial No. 740,308. 31 Claims. (Cl. 18—53.)



7. The method of vulcanizing rubber articles, which consists in placing the articles to be vulcanized in a suitable receptacle, admitting steam into said receptacle while vented to the atmosphere to soften the articles, then admitting into the receptacle while closed to the amosphere water or an equivalent liquid to submerge the articles, and then heating the water sufficiently to raise it to the desired vulcanizing temperature.

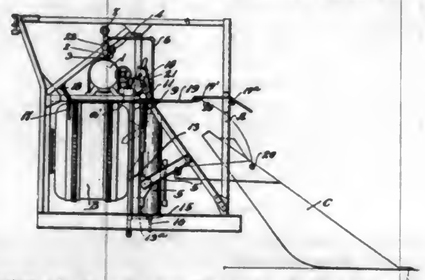
1,665,311. VULCANIZING METHOD AND APPARATUS FOR RUBBER ARTICLES. LAURITS A. LAURSEN, Eau Claire, Wis., assignor of one-fourth to Pearl Fisher Laursen, Akron, Ohio. Filed Jan. 16, 1925. Serial No. 2,904. 28 Claims. (Cl. 18—53.)



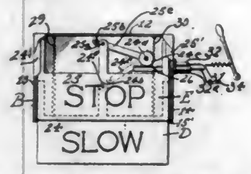
1. The method of curing rubber articles which consists in placing the articles in a closed chamber, introducing water heated to vulcanizing temperature into said chamber by causing it to be sprayed down upon said rubber articles, and heating the water to curing temperature.

1,665,312. METHOD OF AND APPARATUS FOR VULCANIZING RUBBER ARTICLES. LAURITS A. LAURSEN, Akron, Ohio, assignor of one-fourth to Pearl Fisher Laursen, Akron, Ohio. Filed Apr. 29, 1926. Serial No. 105,867. 27 Claims. (Cl. 18—53.)

1. The method of vulcanizing rubber articles, which consists in subjecting the articles to be vulcanized to a continuous spray of water or a similar liquid heated to the desired vulcanizing temperature.



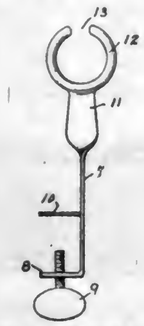
1,665,313. PROTECTIVE DEVICE FOR THREE-PHASE ALTERNATING-CURRENT UNITS. JACOB D. LEWIS, Yonkers, N. Y., assignor to Otis Elevator Company, Jersey City, N. J., a Corporation of New Jersey. Filed Apr. 27, 1923. Serial No. 634,931. 4 Claims. (Cl. 175—294.)



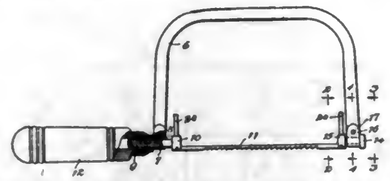
1. The combination of a plurality of three phase star connected units, a source of power supply, switching means for connecting the units in parallel to the source of supply, means responsive to a difference of potential between the neutral points of two of said units for disconnecting all of said units from said source of supply, and means for causing such difference of potential upon the occurrence of balanced overload conditions on one of said two units.

1,665,314. WATER-INTRODUCING MEANS FOR CONCRETE MIXERS. ERICH H. LICHTENBERG and GEORGE EVANS WEAN, Milwaukee, Wis., assignors to Koehring Company, Milwaukee, Wis. Filed May 26, 1925. Serial No. 33,068. 22 Claims. (Cl. 83—73.)

1. In combination, a concrete mixer, comprising a mixing drum, a water tank for supplying water to said drum, a water line to supply water under pressure to said tank, the said mixing machine including a loading means for charging solid aggregates into the drum, and means operated by the last mentioned means for compressing air to act upon the water in the water tank for forcing the water from said tank into the mixing drum.

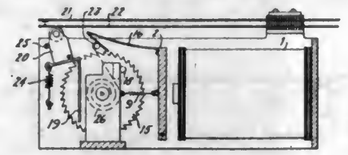


1,665,315. VEHICLE SIGNAL. ALEXANDER J. MASSEY, Los Angeles, Calif. Filed May 26, 1922. Serial No. 563,760. 8 Claims. (Cl. 116—44.)



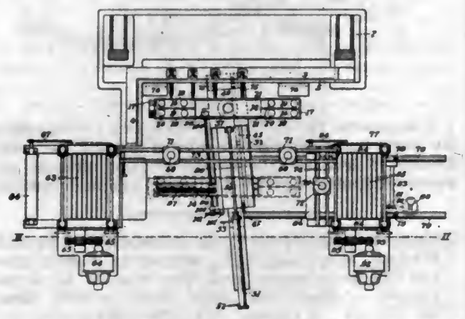
1. A vehicle turning signal comprising a casing having an indicating portion extending from side to side thereof and representng the shank of an arrow, a normally obscured index member mounted for reciprocation in said casing to project the same at the right or left hand side thereof and an arrow head pointing to the left and adapted to form with said shank an arrow pointing toward the left when projected at the left hand side of said casing and displaying an arrow head pointing to the right and adapted to form with said shank an arrow pointing toward the right when projected at the right hand side of said casing, and means for controlling the movements of said member.

1,665,316. ELECTRIC-IRON CORD CONTROL. BLANCHE E. MATTHEWS, Los Angeles, Calif. Filed Feb. 8, 1927. Serial No. 166,711. 2 Claims. (Cl. 248—30.5.)



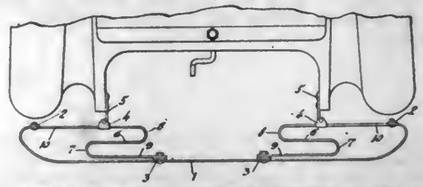
1. A bracket formed from a single strip of metal having its lower end bent a right angle to form a lip and having a portion partially severed, the severed portion being bent to extend parallel to said lip at a distance above the same, and its other end formed into a ring open at its upper end; and a securing screw passing through said first lip in screwthreaded engagement therewith and at right angles thereto.

1,665,317. COPING SAW. FRANK P. MAXSON, Chicago, Ill. Filed Dec. 6, 1924. Serial No. 754,283. 1 Claim. (Cl. 145—33.)



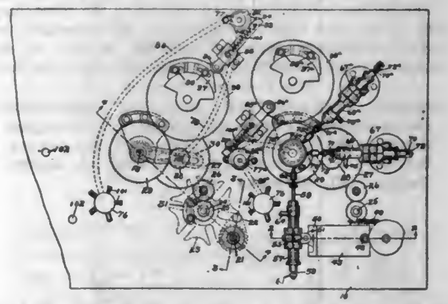
In combination in a coping saw, a U-shaped frame, a cylindrical securing member provided at each end with an enlarged permanent head, a resilient strap snapped over the securing member between said heads and secured to one end of the frame, the inner head of said member being adapted for reception of a cooperating securing element at one end of a saw blade, and means at the other end of the frame adapted for cooperation with a securing element at the other end of the saw blade.

1,665,318. ELECTROMAGNETIC DEVICE. EDWARD D. MEAD, Caldwell, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed June 18, 1925. Serial No. 37,956. 2 Claims. (Cl. 200—97.)



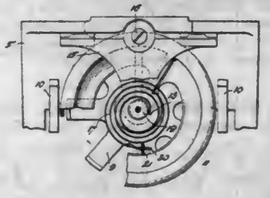
2. A relay for controlling a circuit during successive time intervals comprising an armature, an electromagnet for controlling said armature, a contact arm operated by said armature upon the energization of said electromagnet, an inertia wheel operated by said armature upon the denergization of said electromagnet and upon the restoration of said armature, means for assuring the complete restoration of said armature, unvarying means for assuring the restoration of said inertia wheel during a desired interval of time, a circuit normally closed, and means for intermittently opening and closing said circuit during successive identical time intervals by the operation of said armature in combination with said contact arm and inertia wheel.

1,665,319. SHEARING METAL SHEETS. GEORGE E. MIRFIELD, Youngstown, Ohio. Filed Jan. 10, 1925. Serial No. 1,563. 14 Claims. (Cl. 164—48.)



1. Shearing mechanism for metal sheets, comprising a shear adapted to simultaneously shear two edges of a pack or sheet, a support for holding the pack or sheet while being sheared, and means for turning the support into different operative positions whereby to first present two edges of the pack or sheet to the shear and then the other two edges, substantially as described.

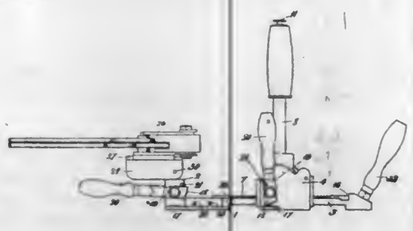
1,665,320. BUMPER. FRANK N. NUTT, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Oct. 21, 1926. Serial No. 143,190. 6 Claims. (Cl. 293—55.)



1. A vehicle bumper including an ogee curved brace bar, one leg of which is longer than the other leg, and an impact bar carried by the brace bar and attached to the respective legs, the relation of the attachments being reversible to accommodate various vehicle frame widths.

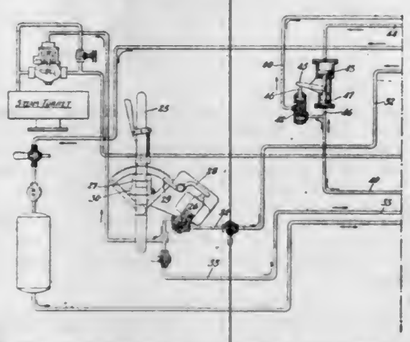
1,665,321. DECORATING APPARATUS. ALVAH C. PARKER, Toledo, Ohio, assignor to The Libbey Glass Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 25, 1926. Serial No. 97,255. 3 Claims. (Cl. 33—21.)

1. In apparatus of the character described, a bracket having a slideway therein, a slide mounted for reciprocation in said slideway, said slide having a slideway therein at right angles to the first said slideway, a carrier mounted for reciprocation in the second said slideway, and stylus points carried by said carrier, shafts mounted parallel with said slideways, gears connecting said shafts for rotation, and a cam on each of said shafts, the cams being in position to operate the slide and carrier respectively.



1,665,322. TEMPERATURE-COMPENSATING SPRING. JOSHUA PATRICK, Detroit, Mich. Filed Oct. 10, 1921. Serial No. 506,771. 5 Claims. (Cl. 264—13.)

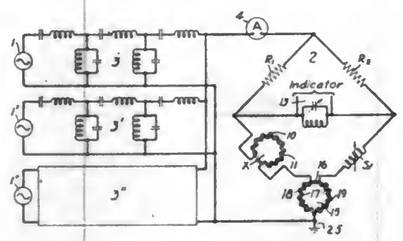
1. In an indicating instrument the indications of which are subject to error due to envirohing temperature, the



readings being progressively lower as the temperature increases, a biasing spring the elasticity of which becomes less as temperature increases to such an extent as to afford compensation for the said error.

1,665,323. APPARATUS FOR TENSIONING AND SEALING METAL BANDS AROUND PACKING CASES AND OTHER PACKAGES. ARTHUR CHARLES PAYNE, London, England, assignor to Packers' Supply Company Limited, London, England, a Company of Great Britain and Ireland. Filed Feb. 17, 1926, Serial No. 88,945, and in Great Britain Apr. 9, 1925. 9 Claims. (Cl. 81—9.1.)

1. Apparatus for tensioning and sealing metal bands around packages comprising a base member, a fixed band clamp thereon, a second band clamp slidable on said base, means for causing said slidable clamp to be fed towards said fixed clamp, guiding means for maintaining the ends of the band in correct lateral position for sealing and of such a height as to allow of the projecting edges of the sealing strip being wrapped around the overlapping ends of the band before the operation of deformation and sealing mechanism mounted adjacent to one of said clamps so as to enable it to be moved down on to the band.

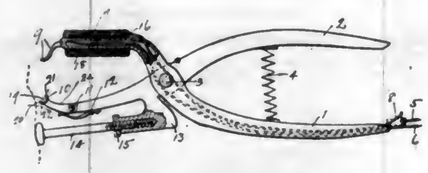


1,665,324. LOCOMOTIVE BOOSTER APPARATUS. FRANK RICHARD PETERS, New York, N. Y., assignor to Franklin Railway Supply Company, a Corporation of Delaware. Filed June 6, 1925. Serial No. 35,398. 9 Claims. (Cl. 105—48.)

1. The combination of a normally inoperative, locomotive booster motor; a controlling system for causing and stopping operation of said motor; and a supplementary means under the control of said system which automatically prevents attempted operation by said system in the event of disorder therein.

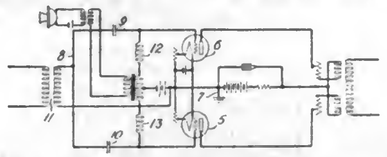
1,665,325. ELECTRICAL NETWORK AND ITS OPERATION. EUGENE PETERSON, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 18, 1926. Serial No. 95,810. 12 Claims. (Cl. 175—183.)

1. An electrical circuit comprising impedance whose value varies in response to current variations therethrough, closed paths terminating at said impedance, a source of electro-motive force connected to said circuit for causing current variations and consequently impedance variations in said impedance, and impedance in series with said first impedance with respect to said paths, for substantially preventing any flow of current tending to occur due to said impedance changes.



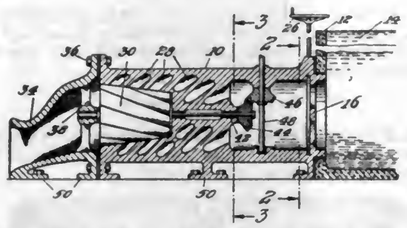
1,665,326. WEATHER STRIP. CHARLES E. REYBURN, Peru, Ind. Filed Mar. 22, 1927. Serial No. 177,371. 2 Claims. (Cl. 20—69.)

1. A weatherstrip comprising a resilient element, consisting of a single length of wire bent to provide spaced coils for disposition in longitudinal alinement, the terminals of which are extended in opposite directions and in the same plane, and a packing enclosing the element.



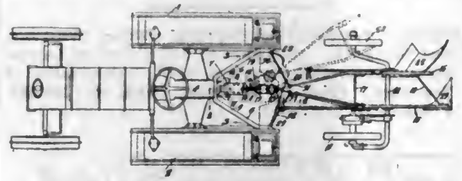
1,665,327. CURLING INSTRUMENT. THOMAS T. RISINGER, Compton, Calif. Filed July 31, 1926. Serial No. 126,232. 9 Claims. (Cl. 132—32.)

1. Apparatus for curling hair including a compression bar, and a compression socket, pivoted together, the radial distance of each from the pivot point being different, and means to cause said radial distances to approach equality.



1,665,328. CARRIER-WAVE TRANSMISSION. HUGO R. SCHMITT, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 12, 1923. Serial No. 638,461. 6 Claims. (Cl. 179—171.)

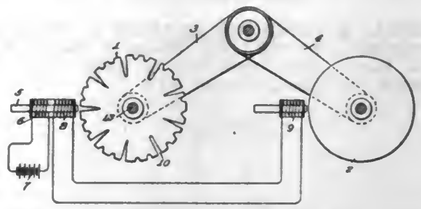
1. The method of efficiently modulating two waves wherein is used an electronic valve modulator having a grounded cathode and a control electrode, which comprises impressing one of said waves on the cathode and control electrode, and independently and directly applying the other wave to said cathode and control electrode,



whereby any shunting to ground of either wave at a point anterior to said control electrode cannot affect the potential impressed thereon.

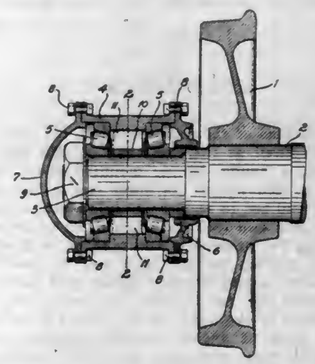
1,665,329. WATER TURBINE. ARNE STORBACKA, Vancouver, British Columbia, Canada. Filed Mar. 18, 1925. Serial No. 16,294. 1 Claim. (Cl. 253—157.)

In a fluid turbine, the combination of a casing, a frusto-conical rotor in the casing, a plurality of blades integral with the rotor and spirally arranged thereon, and means for conveying and directing fluid to the rotor, said means including passages spirally arranged in the casing, together with means for regulating the flow of water through said passages, said means comprising an apertured disk integral with one end of the casing, and a co-operating rotatable similarly apertured disk adjacent thereto.



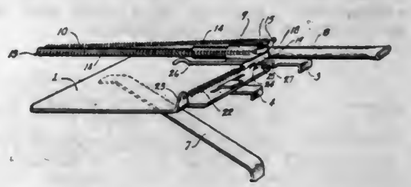
1,665,330. LATERAL-SWING CONTROL FOR TRACTOR-DRAWN PLOWS. CARL G. STRANDLUND, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Oct. 1, 1923. Serial No. 665,898. 5 Claims. (Cl. 280—33.12.)

1. The combination with a tractor, of a plow pivotally connected therewith for vertical and horizontal movement and free to swing vertically, a member secured to the tractor having diverging portions extending rearwardly toward the tractor and secured thereto, and a chain attached to the rear of said portions respectively and extending in slack condition to the plow frame and attachable thereto rearward of the horizontal pivot thereof.



1,665,331. PRODUCING AND REPRODUCING SOUND RECORDS. ELIHU THOMSON, Swampscott, Mass., assignor of one-half to John A. McManus, Lynn, Mass. Filed Oct. 29, 1924. Serial No. 746,606. 9 Claims. (Cl. 179—100.2.)

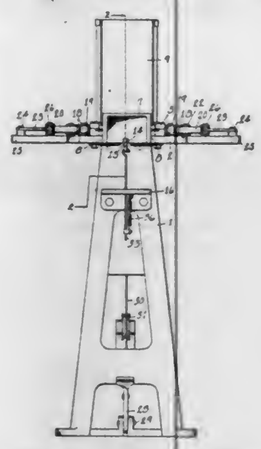
1. The method of recording or originating sound, consisting in impressing an electrically conducting surface with a plurality of incisions of varying depth and contour to correspond accurately to its fundamental and principal harmonics, then revolving the incised surface at a speed to induce electric waves corresponding in pitch to the sound to effect faithful reproduction in electric



currents of the wave-form of the sound, and recording said waves by magnetic induction on a companion surface of hard steel driven coordinately with it, whereby a true impression of the originated sound may be permanently preserved.

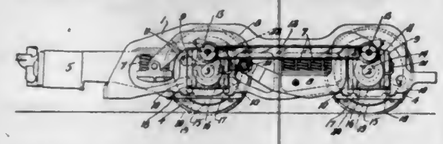
1,665,332. AXLE CONSTRUCTION. HENRY H. TIMKEN, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed July 16, 1926. Serial No. 122,746. 3 Claims. (Cl. 308—173.)

1. A car axle construction comprising an axle, a housing therefor and a roller bearing interposed between said housing and said axle, said housing having an annular portion of steel or iron surrounding said axle and normally slightly spaced therefrom, whereby, in the event of failure of said roller bearing, said annular portion engages said axle to prevent rotation thereof.



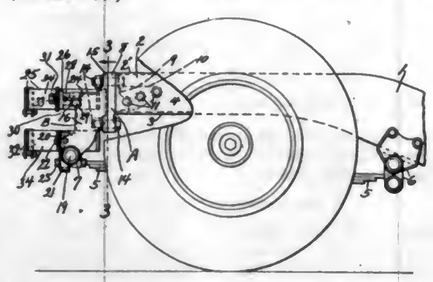
1,665,333. AUTOMATIC LIGHTER FOR STOVES. GEORGE M. TODD, Snoqualmie, Wash. Filed Mar. 30, 1927. Serial No. 179,562. 4 Claims. (Cl. 44—36.)

1. A device of the character described comprising a support, a tube on the support, a match holder movable in the tube, a match striker in the tube adapted to be engaged by matches in the holder and whereby said matches will be struck incidental to its withdrawal from the tube, means for normally retaining the striker in the



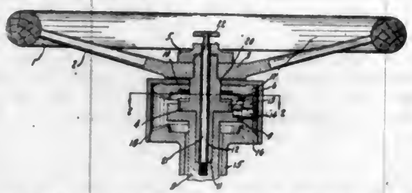
tube, means for releasing it from the said retaining means and means for actuating the match holder as the striker is removed from the tube to cause the matches to be projected from the tube.

1,665,334. MACHINE FOR APPLYING HANDLES TO BASKETS AND THE LIKE. ERNEST M. VERSAW, Benton Harbor, Mich. Filed Sept. 10, 1925. Serial No. 55,535. 12 Claims. (Cl. 140—93.)



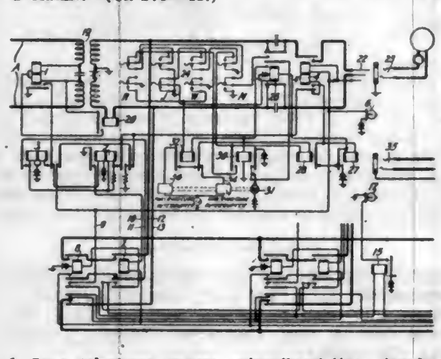
1. In a machine of the class described, the combination of a bed, an anvil at the front end of said bed having lateral faces, a handle hopper mounted above said bed and having a feed slot at its lower end, a feed plunger mounted on said bed to reciprocate below said hopper and adapted to close said feed slot when in its projected position, a spring for projecting said plunger, a handle stop mounted to project through said bed to position the handles relative to the anvil, a basket rest mounted below said anvil for facilitating the positioning of the baskets relative to the anvil, prong setting jaws comprising spaced pairs of angled link-like members pivotally mounted in coacting relation to the anvil, clinching jaws pivotally mounted between the swinging ends of said prong setting jaw members, supporting links pivotally connected to the outer ends of said clinching jaws, actuating links connecting said clinching jaws with said feed plunger, an actuating lever connected to said feed plunger, and a lost motion operating connection for said actuating lever to said stop whereby the setting members are actuated prior to the retracting of the stop.

1,665,335. BOOSTER MOTOR-TRUCK CONSTRUCTION. HARRY S. VINCENT, Ridgewood, N. J., assignor to Franklin Railway Supply Company, New York, N. Y., a Corporation of Delaware. Filed July 9, 1926. Serial No. 121,332. 5 Claims. (Cl. 105—26.)



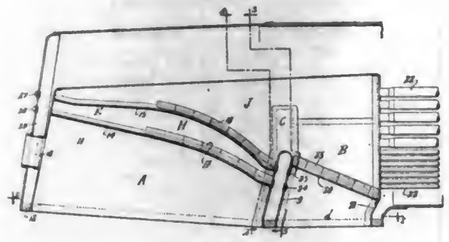
1. In truck construction the combination of an axle, a wheel, a crank at the end of the axle, a journal box between the wheel and the crank, and a lubricating cellar in the box removable outwardly below the crank when the latter is in its upper position.

1,665,336. MOTOR VEHICLE BUMPER AND MOUNTING THEREFOR. HUBERT WALKER, Royal Oak, Mich., assignor to American Car and Foundry Motors Company, New York, N. Y., a Corporation of Delaware. Filed June 25, 1927. Serial No. 201,352. 15 Claims. (Cl. 293—55.)



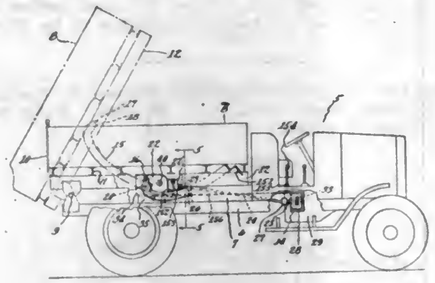
2. A motor vehicle bumper mounting comprising a main bracket secured to the vehicle chassis frame, and an auxiliary bracket rigidly secured to said main bracket and depending therefrom.

1,665,337. STEERING WHEEL. ARTHUR L. WARMINGTON, Oakland, Calif. Filed Apr. 27, 1927. Serial No. 186,929. 3 Claims. (Cl. 74—79.)



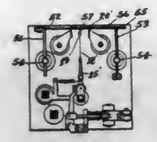
1. A steering device comprising a steering wheel, a clutch attached thereto, a steering column having means thereon to be engaged by said clutch, a gear attached to the stationary member of the steering device, radially protruding pinions, rotatably secured to the column, and meshing with said gear, a floating gear to mesh with said pinions and to be supported thereon, and means to alternately engage said clutch with said column and said floating gear.

1,665,338. TELEPHONE SYSTEM. WILEY WHITNEY, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 19, 1926. Serial No. 142,557. 4 Claims. (Cl. 179—41.)



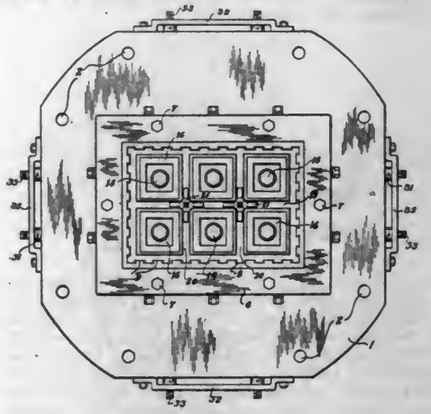
1. In a telephone system, subscribers' lines, trunks of different character arranged to transmit a signal during the connection of a subscriber's line thereto, and a listening circuit including a marginally responsive device for differentiating between said different character trunks, means coacting with said device when the listening circuit is connected to a trunk of a certain character to prevent the transmission of a signal by said trunk, and means coacting with said device when the listening circuit is connected to a trunk of a different character to prevent the transmission of a signal by said second mentioned trunk.

1,665,339. BOILER FIRE BOX. JAMES T. ANTHONY, East Orange, N. J., assignor to American Arch Company, a Corporation of Delaware. Filed Dec. 26, 1922. Serial No. 608,807. 5 Claims. (Cl. 122—64.)



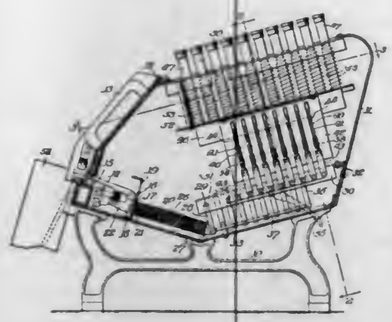
1. A locomotive fire-box having a transverse water leg occluding its lower forward portion behind the throat with passage thereover for the products of combustion, a circulation tube extending rearward from the inside wall of said water leg, a plug in the outside wall of said water leg opposite the end of said tube, and a floor extending forwardly from said water leg above said plug to the throat.

1,665,340. AUTO TRUCK MECHANICAL DUMP HOIST. WILLIAM N. BIRNEY, Willoughby, Ohio, assignor of one-half to Michael H. McKenna, Cleveland, Ohio. Filed Sept. 18, 1926. Serial No. 136,839. 2 Claims. (Cl. 298—21.)



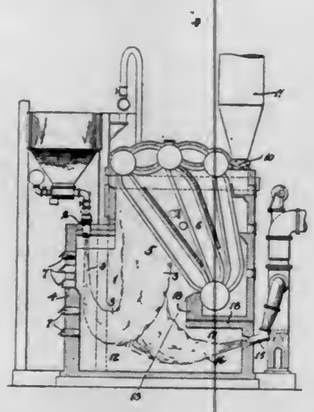
2. The combination of a tilting vehicle body and frame, racks and pinions for tilting the body, a gear for driving the pinions, a clutch controlling the gear, and a gear and the pinions, a clutch controlling the gear, and a gear and clutch box mounted together on the frame, between the racks, the gear including a shaft projecting through opposie sides of the box and carrying the pinions at its opposite ends, the clutch being provided with a shifting lever including a rock shaft extending through the side of the box and having an arm at its outer end adapted to be engaged by projections on one of the rack bars, and a spring latch engaging the lever to hold it in shifted positions.

1,665,341. THERMOSTAT. VITUS A. BOKER, Minneapolis, Minn. Filed Apr. 2, 1925. Serial No. 20,242. 3 Claims. (Cl. 200—139.)



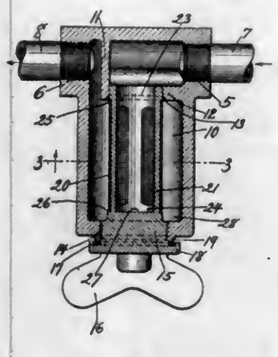
1. In a thermostat, the combination with a frame, of an expansible element carried thereby, a bell crank hinged to said frame and having one end contacting with the free end of said expansible element, resilient means for maintaining contact between said expansible element and said bell crank arm, a link hinged to the opposite end of said bell crank, a second lever hinged to said frame and having one end thereof hinged to the free end of said link, a contact lever arm hinged to said frame, a roller carried by said contact lever arm, the free end of said second named lever contacting with said roller and resilient means for maintaining said roller in contact with said lever arm.

1,665,342. DIE FOR HOLLOW TILE. EMIL E. BORSENBERGER, Waynesburg, Ohio, assignor to The Whitacre-Greer Fireproofing Company, Waynesburg, Ohio, a Corporation of Ohio. Filed Jan. 8, 1927. Serial No. 159,916. 9 Claims. (Cl. 25—17.)



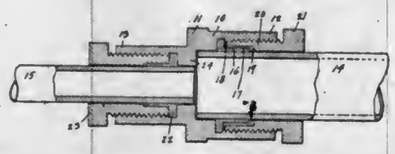
1. A die for making hollow tiles comprising a die block having a central opening, a bridge across said opening upon the inner side of the die block and comprising longitudinal and transverse arms, and spaced cores carried by said bridge and located within said central opening, the legs of said bridge being located directly in line with the spaces between said cores for the purpose of evenly and uniformly distributing the flow of clay through the interior portion of the die.

1,665,343. COIN-PAYING MACHINE. EDWARD J. BRANDT, Watertown, Wis., assignor to Brandt Automatic Cashier Co., Watertown, Wis., a Corporation of Wisconsin. Filed Apr. 18, 1921, Serial No. 462,193. Renewed June 19, 1925. 14 Claims. (Cl. 133—4.)



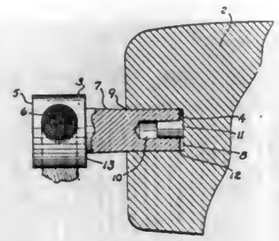
8. A machine of the class described, comprising a plurality of coin receptacles, coin ejecting mechanism associated therewith, a plurality of crank shafts, connections between said crank shafts and said coin ejecting mechanism, a plurality of floating change-combination-forming bars arranged above said crank shafts and connected to the latter for actuating the same, and a plurality of operating plates arranged above said change-combination-forming bars for operating the latter when operating pressure is applied to said plates.

1,665,344. COMBUSTION METHOD AND APPARATUS. VIRGINIUS Z. CARACRISTI, Bronxville, N. Y., assignor to Locomotive Pulverized Fuel Company, a Corporation of Delaware. Filed Dec. 23, 1922. Serial No. 608,626. 3 Claims. (Cl. 110—22.)



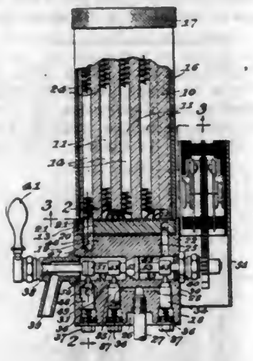
1. The method of burning pulverized fuel in conjunction with other fuel, which comprises directing a pulverized fuel stream downward at one side of a combustion chamber having an outlet in an upper part, to descend therein and then rise to said outlet; introducing air at the same side of said combustion chamber as said pulverized fuel stream, to form a cooling blanket in front of and beneath the descending portion of said stream below the lowest level of air admission as aforesaid, and to aid combustion; and introducing another fuel stream, to form a cooling blanket beneath and behind the ascending portion of the pulverized fuel stream, and to join in the combustion of the latter.

1,665,345. FILTER. ROBERT CLADE, Newark, N. J., and HENRY B. ENSION, St. Louis, Mo., assignors to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 13, 1926. Serial No. 128,944. 3 Claims. (Cl. 210—165.)



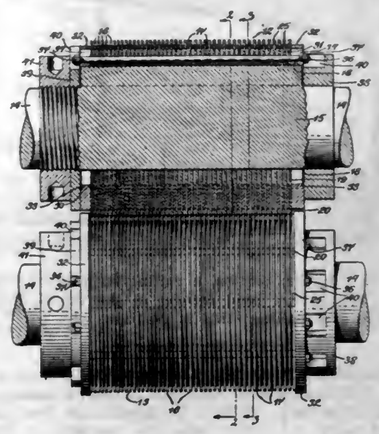
1. In a filter comprising a casing having a partitioned upper end defining an inlet chamber and an outlet passage, said inlet chamber being provided with an apertured base portion, a filtering tube in said casing and consisting of a solid plug for closing the open end of said casing, said plug having a reduced inner end extending into the casing and defining with the casing a sediment receiving portion therebetween, an open frame carried by said reduced end and terminating at its upper end in a retaining flange positioned within the apertured base of the inlet chamber, and a filtering medium secured around the outside of said frame and extending from the upper surface of the reduced end of the plug to the flanged end of said frame, the upper surface of the reduced inner end forming the bottom of the filtering tube.

1,665,346. PIPE CONNECTION. HARRY W. CLARKE, Longview, Wash. Filed June 28, 1926. Serial No. 118,949. 2 Claims. (Cl. 285—122.)



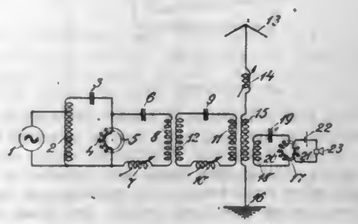
1. A pipe connection having, in combination, a body member provided with a threaded recess through which a pipe can be passed; a lead cylindrical sleeve adapted to be slipped over said pipe into said recess; a cylindrical compression sleeve having its outer end inturned behind said lead sleeve and its inner end out-turned toward the threads in said recess; and a gland adapted to loosely receive said pipe and to be threaded into said recess, said gland having a counterbore formed therein whose inner end engages the inturned edge of said compression sleeve and whose outer end engages the out-turned edge of said sleeve in a manner to flow the metal in said lead sleeve between said pipe and its surrounding connection and between said pipe and the threads of said body member.

1,665,347. RAIL BOND. EDWARD M. DEEMS, Forest Hills, N. Y. Filed Oct. 15, 1925. Serial No. 62,528. 2 Claims. (Cl. 173—280.)



1. In a plug for a railbond for railway rails, in combination; a shank formed with an orifice in one end; a rift-pin entered in the orifice and tinning metal holding the rift-pin in place and preventing entrance of foreign matter in the orifice when the plug is in transit and also serving as a lubricant as the pin is driven into the rail.

1,665,348. ELECTRICAL WATER HEATER. HANS E. DINESON, Bridgeport, Conn., assignor, by mesne assignments, to Maurice Scholman, Bridgeport, Conn. Filed June 11, 1926. Serial No. 115,181. 4 Claims. (Cl. 219—39.)

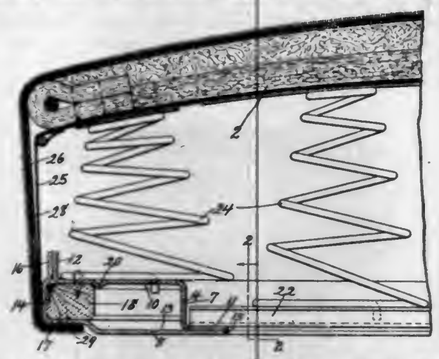


1. An electric water heater comprising a member having a tortuous water passage, a resistance device in said passage, means to control the flow of water from said passage, means to control the flow of water under pressure to said passage, and mechanism for actuating both of said means to simultaneously cut off the flow of water to and from said passage.

1,665,349. SLITTING ROLL OF MACHINES FOR FORMING EXPANDED METAL. HARVEY M. GERSMAN, Buffalo, and WILLIAM H. KLOCKE, New York, N. Y., assignors to Kalman Steel Company, Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 19, 1926. Serial No. 96,024. 14 Claims. (Cl. 164—6.6.)

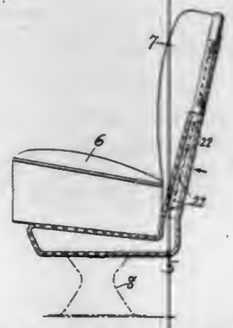
2. A slitting roll for use in metal expanding machines having cutting rings, each consisting of cutting elements mounted for radial adjustment and of reciprocal wedge form.

1,665,350. MODULATION SYSTEM. FELIX GERTH, Berlin-Tempelhof, Germany, assignor to C. Lorenz Aktiengesellschaft, Berlin-Tempelhof, Germany. Filed June 28, 1927, Serial No. 202,057, and in Germany July 5, 1926. 2 Claims. (Cl. 179—171.)



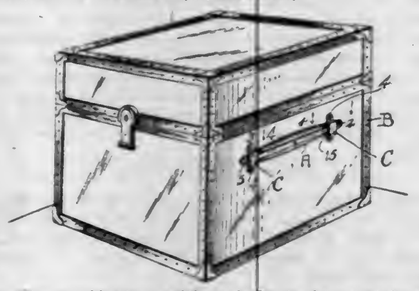
1. A radio transmission system of the character described comprising in combination a circuit carrying a fundamental frequency, an iron-cored high-frequency transformer for raising said fundamental frequency to a useful higher operating frequency, a load or antenna circuit being in operative relation with the transformer output circuit and an auxiliary resonant circuit being in coupling relationship with a circuit carrying high-frequency currents and containing an iron-cored auxiliary magnetized choke device for modulating the high frequency currents in accordance with signals to be transmitted.

1,665,351. SEAT FRAME. FREDERICK H. GIBBS, Brooklyn, N. Y., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 2, 1926. Serial No. 126,681. 6 Claims. (Cl. 155—180.)



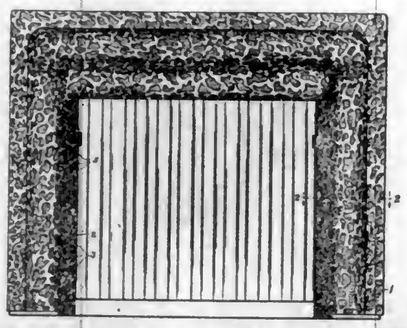
1. In a seat cushion, a hollow frame comprising complemental connected members each having extended

flanges by which said members are connected together, one of said members forming a top portion and one side portion, the other member forming the other side por-



tion and a bottom portion, a nailing strip in said frame, and a longitudinal bead formed in the top portion for retaining said nailing strip in position.

1,665,352. SEAT BACK. FREDERICK H. GIBBS, Brooklyn, N. Y., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 17, 1926. Serial No. 136,092. 5 Claims. (Cl. 155—195.)

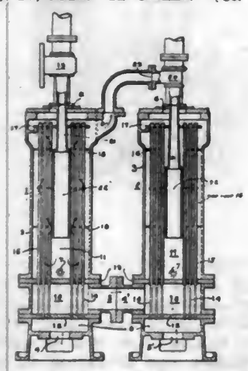


1. A seat back comprising a frame and a sheet metal plate secured thereto, said plate having marginal flanges and an integral horizontal reinforcing brace extending from side to side of the frame and defining a recess above and below said brace, said recesses and said integral brace being positioned within the plane of the frame.

1,665,353. TRUNK HANDLE. MORRIS GREENBERG, Jersey City, N. J. Filed May 10, 1927. Serial No. 190,187. 2 Claims. (Cl. 190—39.)

1. The combination with a body to be carried, of a handle comprising a flexible grip portion having longitudinal slots in its ends, metal reinforcing eyelets in said slots, means including a stud disposed in each of said slots for securing said grip portion to said body so that said grip portion may lie substantially flat against said body or be flexed outwardly therefrom, and a spring strip extending longitudinally of said grip portion and having its ends connected to said eyelets for relative movement.

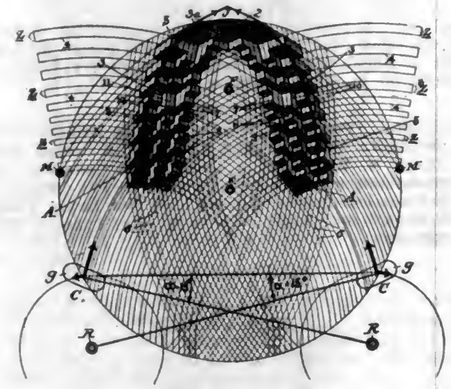
1,665,354. ORNAMENTED SURFACE AND METHOD OF FORMING THE SAME. RAYMOND J. GREENE, Sebring, Ohio, assignor to The Gem Clay Forming Company, Sebring, Ohio, a Corporation of Ohio. Filed Mar. 29, 1927. Serial No. 179,292. 2 Claims. (Cl. 41—24.)



1. The ornamenting process which consists in applying a plastic coating to a surface to be ornamented, forming ribs and valleys in said coating and rolling down the high points of said ribs so that the edges thereof project over the valleys to produce an undercut effect.

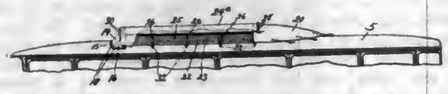
1,665,355. METHOD OF PRODUCING ARTICLES FROM RUBBER AND OTHER THERMOPLASTIC SUBSTANCES. AXEL TEODOR GUSTAFSON, Gottenborg, Sweden. Filed Jan. 4, 1926, Serial No. 79,268, and in Sweden Feb. 12, 1925. 2 Claims. (Cl. 18—47.)

1. The method of producing articles in a casting mould or a pressure mould from rubber or other substances which become plastic when heated, consisting in the interposition between the mould and the mass to be moulded of a ready-made foil of cellulose derivatives.



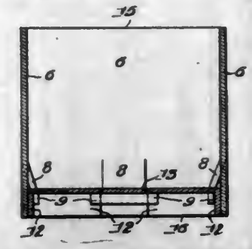
1,665,356. HEATER. HENRY LEWIS GUY, Manchester, England, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 18, 1924, Serial No. 726,777, and in Great Britain Aug. 17, 1923. 12 Claims. (Cl. 257—224.)

1. A device of the type described, comprising a shell, a nest of tubes within the shell, said nest being arranged



to provide a longitudinally extending space therein, connections for passing circulating media through the tubes, an ejector associated with one end of said nest of tubes, the diffuser of said ejector extending within said space, and a baffle for directing media discharged from the diffuser through said space.

1,665,357. ARTIFICIAL MOLAR TOOTH AND METHOD OF MAKING SAME. ALFRED GYSI, Zurich, Switzerland; Filed Feb. 26, 1926, Serial No. 90,726, and in Germany Mar. 14, 1925. 14 Claims. (Cl. 32—9.)

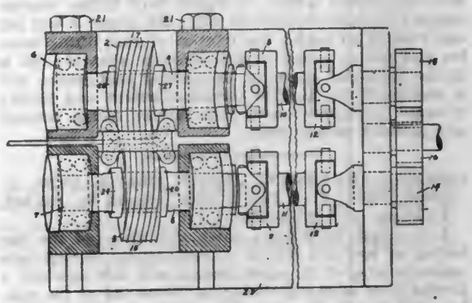


1. The method for the mechanical production of primordial forms of the back teeth to constitute a portion of an artificial denture, which consists in securing to one member of an articulator two rows of cutting knives arranged in a curve corresponding to a natural back tooth row at one side of the jaw and in more or less parallel relation and having cutting edges which slope backward and downward with a gradual lessening obliquity from front to rear, applying plaster to the other member of the articulator, and thereafter causing a relative movement between the knives and the plaster corresponding to the left and to the right side bite movements and to the forward or protrusive movement and backward or retrusive movement and to all possible movements of the articulator corresponding to intermediary masticatory directions so that angular depression and elevations each formed of three planes inclined to each other are cut in and upon the plaster block and which then serve as the primordial form of the masticatory surfaces of the back tooth row.

1,665,358. BAGGAGE RACK FOR MOTOR VEHICLES. ELBERT J. HALL and ARTHUR G. HAWKES, Detroit, Mich., assignors to American Car and Foundry Motors Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 30, 1927. Serial No. 179,577. 19 Claims. (Cl. 224—29.)

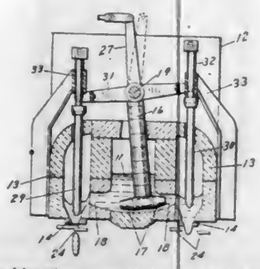
17. In a device of the kind described, a baggage rack, a cover for the same, and means for preventing the building up of air pressure beneath the cover whereby the latter is retained in close covering engagement with the rack.

1,665,359. BERRY BOX. FERDINAND G. HAAS, St. Paul, Minn. Filed Feb. 14, 1927. Serial No. 168,028. 5 Claims. (Cl. 229—28.)



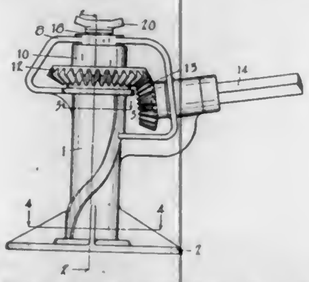
1. In a box formed from foldable sheet material, the combination with four side walls, a rectangular bottom panel fitting within the four walls and having a downwardly projecting flange on each side edge, a tongue secured to a side wall above said bottom panel and projecting downward beneath said bottom panel, said bottom panel being formed with an opening to receive said tongue and means on said tongue beneath said bottom panel to support the same.

1,665,360. REENFORCEMENT FOR WELDED SEAMS. CHARLES GILBERT HAWLEY, Cleveland, Ohio. Filed May 18, 1922, Serial No. 560,671. Renewed Feb. 28, 1928. 8 Claims. (Cl. 189—36.)



1. In combination with a butt welded seam connecting marginal plate portions, a sinuous bar disposed in flat engagement with parts of said plate portions and crossing and recrossing said seam and being embedded in welding material upon said marginal plate portions and said seam.

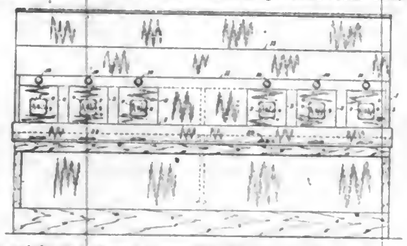
1,665,361. MACHINE FOR FORMING BALLS. GEORGE ORVIL HODGE, Bristol, Conn. Filed Feb. 24, 1925. Serial No. 11,171. 11 Claims. (Cl. 80—23.)



1. A ball forming machine comprising a pair of spirally grooved rolls, means for rotatively driving said rolls, balls serving as means for guiding the work, and ball track and casing structures serving as means for operatively housing said balls.

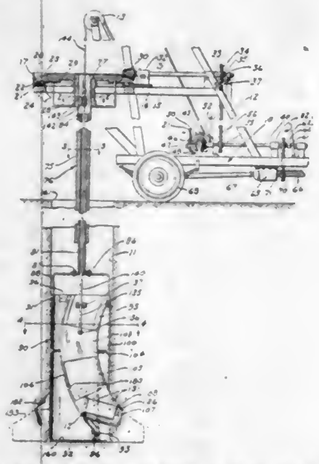
1,665,362. GLASS FEEDER. VICTOR E. HOFMANN and LEONARD D. SOUBIER, Toledo, Ohio, assignors to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 27, 1924. Serial No. 702,281. 28 Claims. (Cl. 49—55.)

17. In combination, containing means for molten glass having downwardly directed outlets, regulating plugs projecting downward into the glass over said outlets, and means actuated by a pendulum regulator operating within the glass between the said openings for periodically reciprocating said plugs, including connections between the plugs, whereby as each plug is moved downward, the other plug is moved upward.



1,665,363. LIFTING JACK. ARTHUR C. HOPKINS, Niles, Mich., assignor to National Standard Company, Niles, Mich. Filed Mar. 26, 1927. Serial No. 178,588. 3 Claims. (Cl. 254—102.)

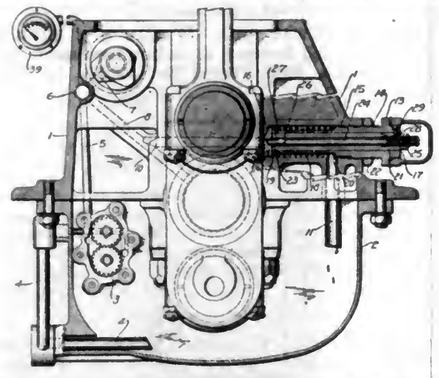
3. In a lifting jack, the combination of a standard having a longitudinal bore with an internal spiral groove therein, a nut rotatably mounted on said standard and provided with a gear, a driving gear mounted on said standard coacting wtih said gear on said nut, a tubular lifting member disposed in said standard and externally threaded to coact with said nut, a yieldingly supported pin disposed radially in said lifting member and coacting with said spiral groove to rotate said lifting member during its longitudinal travel under the action of said nut and yielding to permit the rotation of said lifting member and nut as a unit in one direction when the pin is in the horizontal planes of the ends of said groove, and a second lifting member disposed within and having threaded engagement with said tubular lifting member and provided with a head.



1,665,364. AMUSEMENT DEVICE. MILO E. HUTH, Alliance, Ohio. Filed June 2, 1927. Serial No. 195,977. 3 Claims. (Cl. 273—102.)

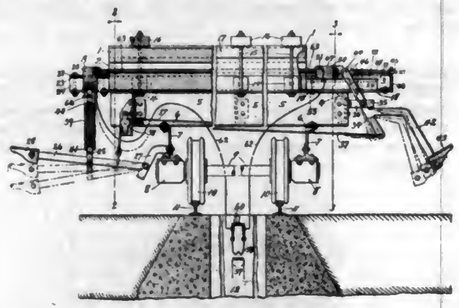
1. A target including a sheet of rubber and the like having an aperture therein, a substantially vertical tube communicating at its upper portion with said aperture, a pivoted plate normally closing the lower end of the tube, a contact arm fixed upon said pivoted plate, an electrically operated signal associated with the target, a second pivoted contact arm adjacent to the first named contact arm, means for normally holding the second contact arm against movement, a circuit connected to the signal, said circuit being broken and connected to both pivoted contact arms, whereby a projectile entering the tube through said aperture will fall upon the pivoted plate and tilt the same to move the first named pivoted arm into con-

tact with the second pivoted arm to close the circuit to the signal, and means for tilting the second pivoted arm to permit the pivoted plate to swing downward to release the projectile therefrom.



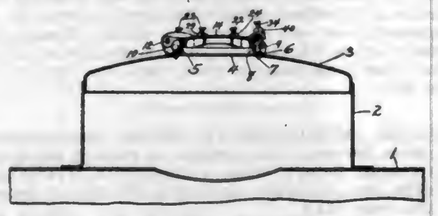
1,665,365. APPARATUS FOR FORMING MOLDS FOR COLUMNS WITH BASES. FRANCIS H. HUNT and FRANK N. ROPP, Los Angeles, Calif., assignors, by mesne assignments, to Raymond Concrete Pile Company, Los Angeles, Calif., a Corporation of New Jersey. Filed Apr. 26, 1926. Serial No. 104,582. 22 Claims. (Cl. 255—21.)

1. In an apparatus for forming a mold for a column with a base, means for removing material surrounding the extreme lower portion of said mold in order to form an enlarged base portion for the mold, said removing means including a cutting device and a receptacle for receiving material direct from said cutting device.



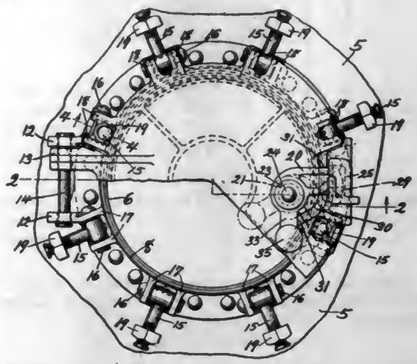
1,665,366. LUBRICATION SYSTEM FOR INTERNAL-COMBUSTION ENGINES. FERDINAND JEHLE, Cleveland Heights, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 26, 1926. Serial No. 104,649. 5 Claims. (Cl. 184—6.)

5. In a mechanism for regulating the pressure in the lubricating system of an automotive engine, the combination with an engine crank case, of a source of lubricant under pressure, a plug screw-threaded into a wall of the crank case and comprising a cylinder, a piston reciprocable therein, said crank case wall having a lubricant conduit through a portion thereof and comprising a portion leading from the said source to a face of the piston, and a portion leading from the cylinder lateral wall at an intermediate portion thereof, said piston being spring-pressed toward a position to restrict flow of fluid under pressure from the said first portion to the said second portion of the lubricant conduit, and being responsive to the effect of lubricant pressure exerted against its said face to decrease the restrictive effect exerted upon such lubricant flow, said plug having a duct for fluid flow



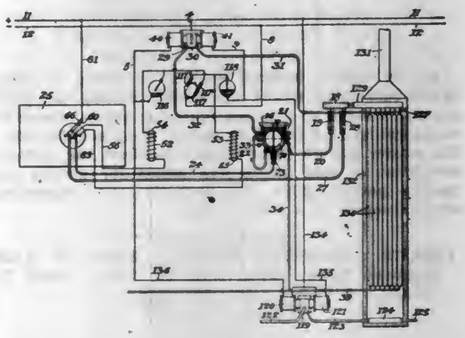
extending from its inner end to the said conduit second portion, said duct adapted to by-pass a portion of the lubricant flow, the resistance to fluid flow through the said duct being at all times independent of the movements of the piston.

1,665,367. ELECTRIC HEATER. WILLIAM S. JOHNSON and JOHN W. SHEFFER, Berwick, Pa., assignors to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 25, 1921. Serial No. 455,598. 22 Claims. (Cl. 219—11.)



22. In an apparatus of the class described, a heater provided with a heating chamber, relatively movable work contacting electrodes located outside of and beyond the opposite ends of said chamber, and means for operating said electrodes to move the same to engage them with or disengage them from the work.

1,665,368. TANK-CAR-DOME CLOSURE. ROBERT W. JOY, Brooklyn, N. Y., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 8, 1925. Serial No. 49,048. 19 Claims. (Cl. 220—55.)

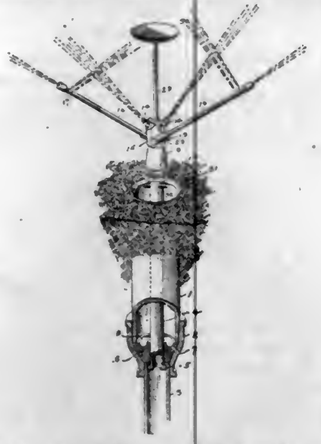


1. In combination, a tank closure, and fastenings normally holding said closure in closed position and necessitating the raising of the cover to a predetermined partly open position before they can be disengaged from the closure to allow complete removal of the latter.

1,665,369. CAR-TANK CLOSURE. ROBERT W. JOY, Brooklyn, N. Y., and VICTOR WILLOUGHBY, Ridgewood, N. J., assignors to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 4, 1926. Serial No. 133,638. 9 Claims. (Cl. 220—55.)

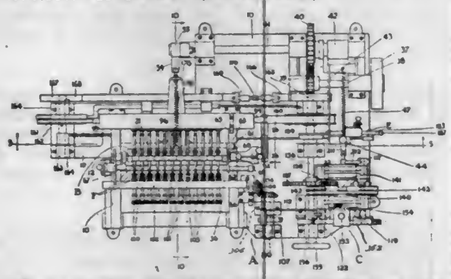
1. The combination with a tank opening cover of the character described, of restraining means movably mounted on the cover for limiting the rise thereof, and co-operating engaging means on the tank, said restraining means being releasable only when the cover is partly raised.

1,665,370. REFRIGERATING APPARATUS. FREDERICK G. KEYES, Cambridge, Mass., assignor, by mesne assignments, to National Refrigerating Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 4, 1923. Serial No. 678,538. 9 Claims. (Cl. 62—118.)



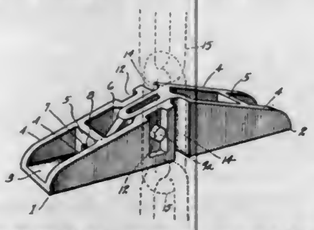
1. In a refrigerating apparatus, a still comprising an outer casing, inner casings, a cooling coil in each of said inner casings, a manifold, a delivery pipe from said manifold to each of said inner casings, and a heat source in said outer casing.

1,665,371. SPRINKLER. JOHN H. KEYS, Dayton, Ohio, assignor to The Dayton Irrigation Company, Dayton, Ohio, a Corporation of Ohio. Filed Aug. 7, 1922. Serial No. 580,257. 18 Claims. (Cl. 299—61.)



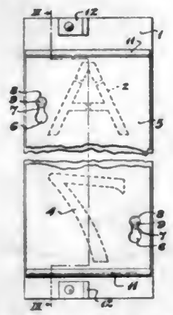
1. In a disappearing sprinkler, a vertically movable nozzle, fluid pressure means for raising and lowering

the nozzle, yielding jet propulsion arms for the nozzle, an enclosure for said nozzle when lowered into which



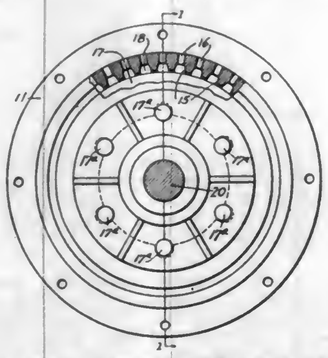
the arms are yieldingly retracted, and a closure lid fixedly attached to the nozzle for up and down movement therewith.

1,665,372. ENGINE-TURNING MACHINE. FRANK J. KRISTOPEK and WALTER F. BENSON, St. Paul, Minn., assignors to Brown & Bigelow, St. Paul, Minn., a Corporation of Minnesota. Filed Mar. 24, 1923. Serial No. 627,337. 43 Claims. (Cl. 90—24.3.)



42. An engine turning machine including, a pencil barrel supporting means, means for rotating the pencil barrels, a series of diamond engraving points, means for reciprocating said engraving points along said barrels, a flat master pattern plate adapted to direct the operating movement of said points and means for moving said master pattern plate longitudinally and transversely simultaneously in a single plane.

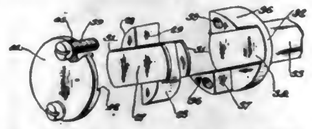
1,665,373. CONVEYER FLIGHT. FRANK H. LAMB, Hoquiam, Wash. Filed Aug. 30, 1926. Serial No. 132,504. 3 Claims. (Cl. 198—176.)



1. A conveyer flight comprising opposite end sections; one having spaced side flanges and a connecting web toward its outer end provided with an opening, the other end section having a continuing shank at its inner end removably fitted between the said spaced side flanges of the first section with its end fitted in said web opening and a removable locking bolt extended through the said flanges and shank near the base of the latter.

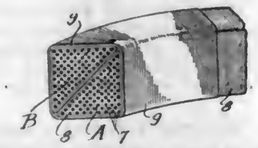
1,665,374. RAILWAY SIGN. WILLIAM H. B. LAVARACK, Pine Bush, and BEVERLY A. LUNDY, Larchmont, N. Y. Filed Apr. 6, 1926. Serial No. 100,011. 1 Claim. (Cl. 40—135.)

In a sign, in combination; a plate formed with cut-away portions extending through the plate in the form of letter or figure characters, fastening means extending rearwardly from the plate, headed lugs projecting from the rear face of the plate, and a backing plate having a light-reflecting surface and provided with slots having enlarged portions to receive said headed lugs to thereby removably hold the plates together, said backing plate having rearwardly projecting flange portions forming handholds for positioning it upon the front plate or removing it therefrom.



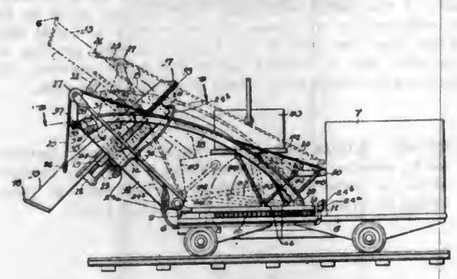
1,665,375. METHOD OF PRODUCING CLUTCH DRUMS. HAROLD S. MACCHESNEY, New York, N. Y., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed May 6, 1927. Serial No. 189,293. 4 Claims. (Cl. 29—159.)

1. The method of forming clutch drums, consisting of casting a cylindrical blank with spaced grooves in its peripheral face, and subsequently cutting through the blank from its interior into all of such grooves to provide spaced longitudinal teeth upon the interior of the blank.



1,665,376. MOTOR-VEHICLE BRAKE. ALFRED MOORHOUSE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 21, 1924. Serial No. 687,460. 9 Claims. (Cl. 188—194.)

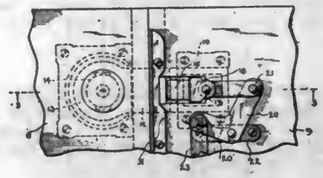
1. In a motor vehicle brake mechanism having a brake drum and a pair of pivoted shoes adapted to be moved apart into contact with the drum, the combination of a slotted member having projecting portions with oppositely disposed faces forming abutments, an actuating shaft integral with the head, a cap member secured to the head having a slot parallel to and spaced from the slot in the head member, and a two lobed



cam slidably mounted in the head member to actuate the shoes and adapted to be turned by the head member, said cam having spaced parallel wings adapted to co-operate with the slots and oppositely disposed shoulders engaging the abutments to limit the sliding travel of the cam in the head.

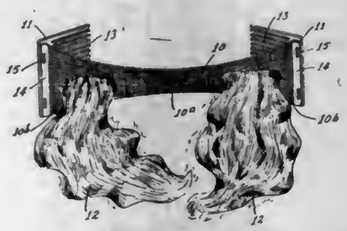
1,665,377. PACKING. GEORGE F. MURPHY, Philadelphia, Pa. Filed Mar. 4, 1927. Serial No. 172,846. 5 Claims. (Cl. 154—45.5.)

1. A substantially rectangular flexible packing having a core composed of two bundles of wire, each bundle being triangular, and a covering for holding the triangular bundles together.



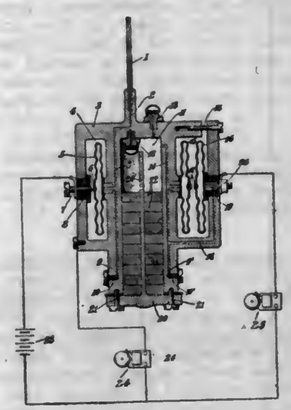
1,665,378. POWER SHOVEL. ERNEST E. PETERSON, Carson Lake, Minn. Filed Oct. 17, 1924. Serial No. 744,146. 11 Claims. (Cl. 214—90.)

1. In a power shovel adapted for tunneling in restricted space, a turn table, a boom extending obliquely from said table and pivoted upon a horizontal axis thereon, a scoop and a chute communicating with said scoop, pivoted on said boom, a substantial distance above said table, said scoop being adapted to project upward above the upper end of said boom to operate upon the roof of a tunnel, means for extending and retracting said scoop and chute on said boom, means for tilting said chute on said boom and a receptacle arranged to receive excavated material directly from said chute, when said scoop is elevated.



1,665,379. TRUNK LOCK. JULIUS RITTER, Jr., and MARTIN RASMUSSEN, Racine, Wis., assignors to Hartmann Trunk Company, Racine, Wis., a Corporation of Wisconsin. Filed Nov. 6, 1925. Serial No. 67,312. 5 Claims. (Cl. 70—115.)

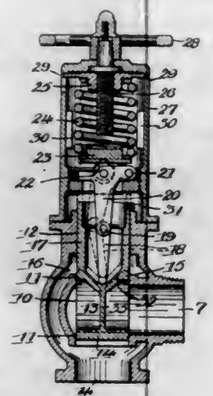
1. In a trunk lock, a pair of spaced securing mechanisms, one of which is provided with a pivoted hasp portion, a slidable member moved by the hasp portion, a bell crank lever connected to the slidable member, the other of the securing mechanisms having a hook member and a latch member for receiving the hook mem-



ber, and a bar member pivotally connected to the bell crank lever and rigidly connected to the latch member for moving said latch member into locking engagement with the hook member.

1,665,380. WOMAN'S HEADDRESS. LOUIS RUFFIO, New York, N. Y. Filed Apr. 11, 1925. Serial No. 22,290. 5 Claims. (Cl. 132—53.)

1. A head-dress comprising a two part elastic body portion adapted to pass partially about the head of the wearer, means interposed between the said body parts for adjusting the normal length of the body portion, tufts of hair secured to each elastic part and attaching means carried by the free end of each part for insertion on the head of a wearer.

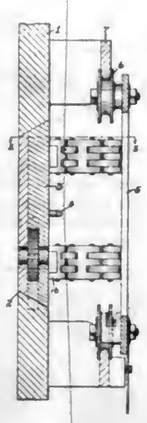


1,665,381. AUTOMATIC FIRE ALARM. JOSEPH SIDDALL, Arlington, and WILLIAM HENRY SIDDALL, Kearny, N. J., assignors to New Jersey Fire Alarm Company, a Corporation of New Jersey. Filed Nov. 10, 1921. Serial No. 514,168. 19 Claims. (Cl. 177—355.)

18. A pressure fire alarm system comprising tubing located through the area to be protected, a pressure chamber of materially greater capacity per unit of length

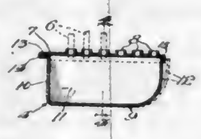
than said tubing, said tubing being in communication with said pressure chamber through a restricted orifice, a signal and fluid operated signal control means communicating with said chamber through another orifice, said means being subject to the pressure in said chamber and responsive to increase of pressure therein to operate said signal, said system having a vent to atmosphere.

1,665,382. RELIEF MECHANISM FOR PUMPS. LEONIDAS P. STOREY, St. Paul, Minn., assignor of one-half to Waterous Fire Engine Works, a Corporation of Minnesota. Filed Apr. 24, 1926. Serial No. 104,315. 3 Claims. (Cl. 137—53.)



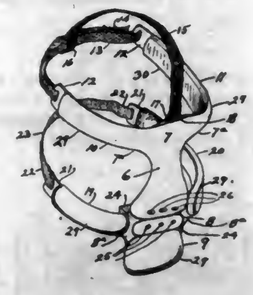
1. The combination in relief mechanism for a pump, of a fluid delivery conduit, a relief valve having inlet and outlet openings, said inlet opening communicating with the delivery conduit of said pump, a closure in said valve, a spring arranged to normally maintain said closure in closed position and adapted to permit opening of said valve when a predetermined pressure is applied in said delivery conduit, a lever and a toggle finger pivotally joined, end to end, and interposed between said spring and closure to transmit movement of said closure to said spring, and a laterally projecting portion of said lever having a pivotal support in the valve, said spring being arranged to normally maintain said finger in alignment with a portion of said lever and said lever and finger being arranged to be thrown out of alignment one with the other to thereby increase the leverage of said closure on said spring when said spring is deflected.

1,665,383. FLOOR FILLER WITH PYROXYLIN BASE. ARNOLD M. TAYLOR and FRANK A. BUOTE, Stamford, Conn., assignors to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 29, 1925. Serial No. 5,620. 6 Claims. (Cl. 134—79.)



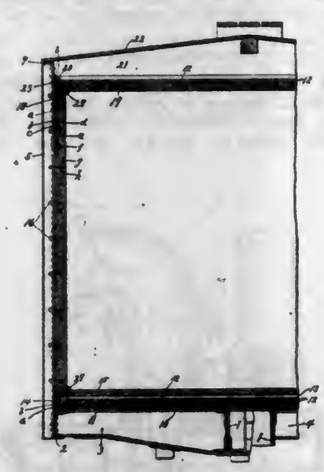
3. A filling composition for use in preparing porous wooden surfaces for the reception of pyroxylin finishing coatings, which comprises a pyroxylin base, a solvent for the same, a diluent and a soft, non-crystalline starch, and wherein the solvent and diluents are so adjusted that on drying, the lacquer solids are precipitated in a fine state of division and envelop and bind the starch particles in the pores of the wood.

1,665,384. DOOR MOUNTING. CHARLES O. VIERS and LOVELL D. SHELDON, Toledo, Ohio. Filed June 28, 1926. Serial No. 117,956. 1 Claim. (Cl. 16—179.)



A hinge for connecting a door to a support spaced from and parallel to the door opening for movement of the door in a plane parallel to the plane of the door opening and the support, composed of a pair of oppositely disposed plates, one of which is formed to be connected to the outer face of a side of the door and to extend beyond the said side of the door, and the other of which plates is formed to be secured to the inner face of the adjacent side of the support and to project beyond said side of the support and toward the first named plate, and links pivotally connecting the said projecting inner ends of the plates, said links being formed so as to lie in substantially the plane of and between the said side of the door and that of the support in open position of the door, and to extend across the space between the door and its support in closed position of the door.

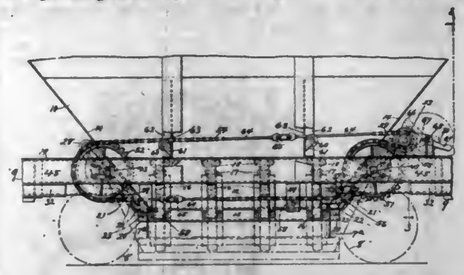
1,665,385. RADIATOR. WILLIAM G. WALLACE, Detroit, Mich., assignor to McCord Radiator & Mfg. Co., Detroit, Mich., a Corporation of Maine. Filed Sept. 8, 1924. Serial No. 736,394. 4 Claims. (Cl. 257—125.)



1. A tank for use in a motor vehicle radiator core, having a convex front, said tank comprising a body and a tube sheet covering therefor, both being stamped from sheet metal, said tank body and tube sheet having their front edges curved to conform to the curvature of the convex front of the core, said tank body and tube sheet having interlocking flanges on their rear edges, said tube sheet having a flange on its curved front edge to overlap the curved front wall of the tank body on the outside thereof, the front wall of the tank body being sprung back of said tube sheet flange to engage the same for holding the parts together on being assembled.

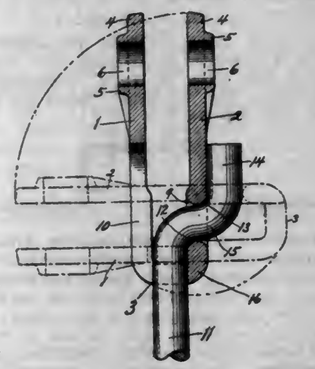
1,665,386. FACE GUARD OR MASK. IRVING G. WALMER and JOHN A. SAWYER, Albany, N. Y. Filed Feb. 21, 1924. Serial No. 694,883. 3 Claims. (Cl. 2—9.)

1. In a face guard having a continuous sheet metal frame, portions to said frame including forehead, nose, temple and jaw guard portions, said temple and said jaw portions being of strip formation, forming horns, projecting independently, rearward, having a clear unobstructed space between said jaw portions and said temple portions, thruout their length, means for holding said horns to the head of the wearer, and other means for supporting said frame from the top of the head of the wearer.



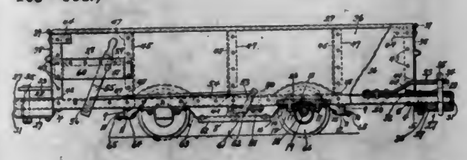
1,665,387. REFRIGERATOR CAR. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed May 21, 1923. Serial No. 640,411. 25 Claims. (Cl. 105—423.)

1. In a refrigerator car, posts and a laminated outer heat insulating wall formed of a plurality of fabricated cellular sheets carried by said posts, the laminations adjacent transversely of the wall contacting with each other.



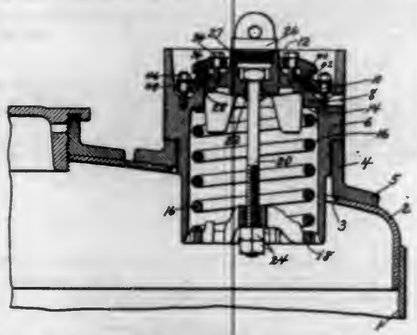
1,665,388. HOPPER CAR. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed July 20, 1923. Serial No. 652,733. 25 Claims. (Cl. 105—250.)

1. A hopper car having a single discharge opening, a pair of drop doors closing said opening and hinged longitudinally of the car, crank shafts mounted at opposite ends of the discharge opening and connected to the doors, an operating shaft, sprockets on said crank and operating



shafts, a continuous chain power transmission connecting all of said sprockets and loose connections between said crank shafts and their respective sprockets.

1,665,389. BRAKE-ROD JAW. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 23, 1923. Serial No. 670,294. 9 Claims. (Cl. 287—20.5.)

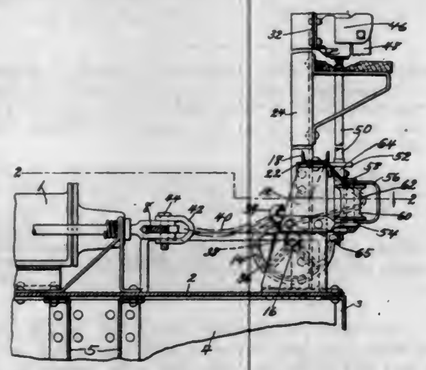


1. In combination, a brake rod jaw comprising a unitary open-ended U shaped member with an opening in one leg to receive the end of a brake rod and a slot in the other leg to permit insertion of the brake rod in the opening of the first leg; and a brake rod with a rigid offset extremity parallel to the body of the rod and engaged in the opening of the first leg, but leaving the space between the legs free to accommodate the member to which the jaw is to be connected in service.

1,665,390. MINE CAR. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed May 11, 1925. Serial No. 29,462. 18 Claims. (Cl. 105—364.)

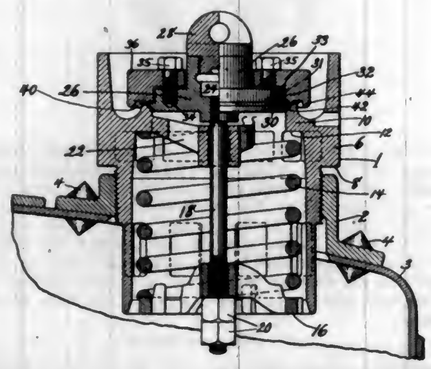
1. In a mine car, side sille forming the car side walls, end angles and ties connecting said sills, a floor carried by said end angles and ties, end walls connecting said side walls and having bottom flanges lapping and being connected with said floor.

1,665,391. SAFETY VALVE. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed May 22, 1925. Serial No. 32,095. 15 Claims. (Cl. 137—53.)



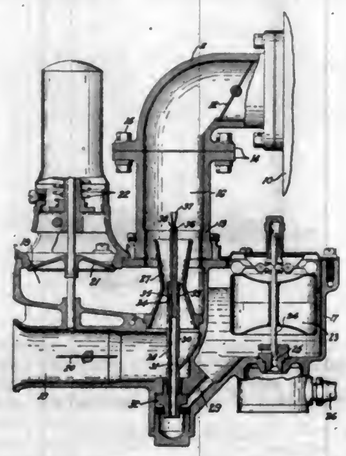
13. In a safety valve, a casing having a valve seat, a valve yieldingly held to said seat, and a frangible seal secured to said casing and said valve on the side of the valve normally free from pressure, said seal being broken by said valve upon opening thereof to permit release of excess fluid under pressure.

1,665,392. CAR ROOF. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 17, 1925. Serial No. 56,991. 3 Claims. (Cl. 108—54.)



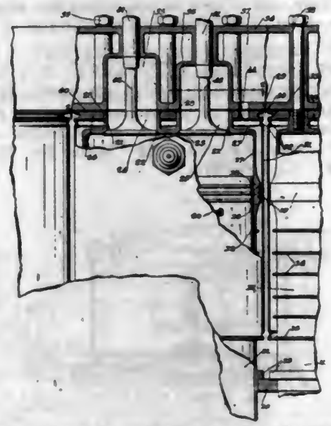
1. In a roof for railway cars, inverted carlines having a web portion, sides and outwardly extending flanges, a plate resting upon one of said flanges and extending over the adjacent side and said web with the end thereof extended beyond said web, a second plate resting upon the other flange and extending along the side of the web adjacent said other flange, the ends of said two plates being seamed with the seam folded to lie substantially parallel with one side of said carlines.

1,665,393. BRAKE MECHANISM. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 18, 1925. Serial No. 76,197. 4 Claims. (Cl. 254—149.)



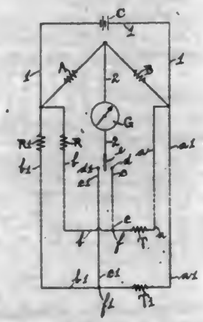
1. In a car brake mechanism having a brake lever, a power multiplying device, a power transmitting connection between the brake lever and the power multiplying device, a brake staff mounted out-of-line with said device, a second power transmitting connection between said device and staff, a brake staff step, and direction changing means for said second power transmitting connection carried by said brake staff step.

1,665,394. SAFETY VALVE. VICTOR WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 1, 1927. Serial No. 165,150. 13 Claims. (Cl. 137—53.)



1. In a safety valve, a casing, a valve portion normally cooperating with said casing to effect a closure and a gasket cooperating with said valve portion and casing to prevent leakage, said gasket being replaceable while the valve portion is in its closing position for retaining pressure.

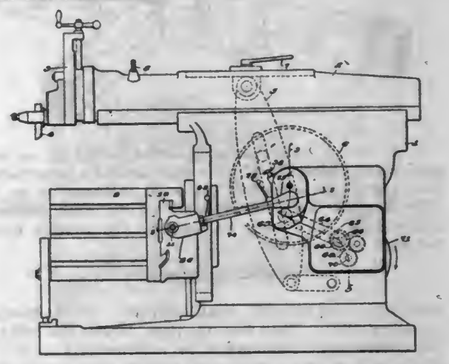
1,665,395. CARBURETOR. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed July 11, 1921. Serial No. 483,994. 10 Claims. (Cl. 261—41.)



4. A carburetor comprising a float chamber, a mixture tube adjacent thereto, and a fuel nozzle connected to the float chamber and having a well with its only outlet means opening into the mixture tube slightly above the liquid level and having a second opening somewhat above the top of the well and in the main air-stream.

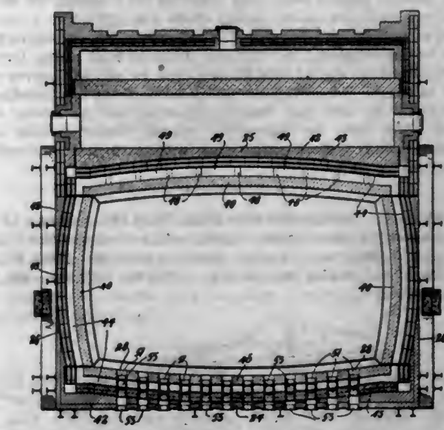
1,665,396. INTERNAL-COMBUSTION ENGINE. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 7, 1923. Serial No. 679,065. 14 Claims. (Cl. 123—173.)

1. In an internal combustion engine, the combination of a cylinder, having upwardly extending bosses forming the cylinder ports, a plate welded to said bosses and extending substantially parallel to the top of the cylinder and beyond the cylinder barrel, a water jacket casing secured to the periphery of said plate and extending downwardly parallel to the wall of the cylinder and secured thereto near its lower end, and a valve supporting element secured to the cylinder above said plate and having a water jacket in communication with the water jacket of the cylinder.



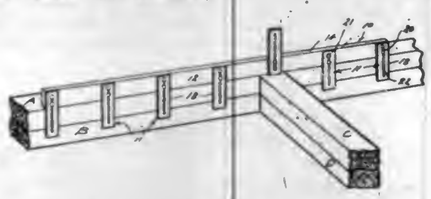
1,665,397. ELECTRICAL MEASURING APPARATUS. FELIX WUNSCH, Philadelphia, Pa., assignor to Leeds & Northrup Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 9, 1923. Serial No. 637,711. 14 Claims. (Cl. 73—32.)

1. A Wheatstone bridge comprising ratio arms, a plurality of third and fourth arm paths permanently connected with said ratio arms, and conjugate conductors, there being an unknown resistance in each third arm path, and switching mechanism in one of said conjugate conductors for connecting it with any third and fourth arm junction.



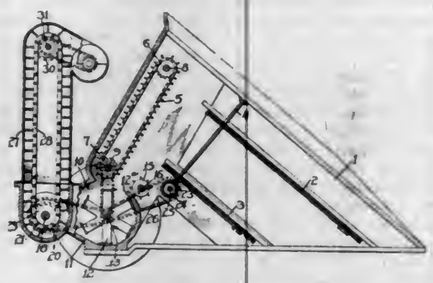
1,665,398. SHAPING MACHINE HAVING CONSTANT POWER TRAVERSE. WILLIAM F. ZIMMERMANN, Maplewood, N. J., assignor to Gould & Eberhardt, Newark, N. J., a Corporation of New Jersey. Filed Mar. 13, 1926. Serial No. 94,451. 18 Claims. (Cl. 90—39.)

1. A shaper combining a table; a table propelling-transmission therefor; a feed transmission adapted to impart intermittent motion to said table-transmission in a given direction; a quick-traverse transmission adapted to impart continuous motion to said table transmission; and a shift-mechanism arranged only so to connect said quick-traverse transmission that it will drive said table in a direction opposite to that previously imparted by said feed-transmission.



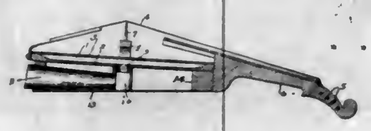
14. A shaper combining a body-casting; a ram; a unidirectional bull-gear; a cross-rail; a table; a transmission-system leading to said table and comprising a common shaft from the side of said body-casting adjacent said bull-gear to said cross-rail; a bull-gear transmission; a master-clutch therefor; an intermittent-motion transmission driven synchronously with said bull-gear and comprising a feed-stroke regulator located adjacent said bull-gear; a fast-motion transmission driven continuously independently of said master-clutch; a second clutch adjacent said bull-gear for causing either of said two transmissions to convey motion to said common shaft; means for normally maintaining said second clutch in operative relation with said intermittent motion transmission but enabling it manually to be held in operative relation with said continuous motion transmission; and a single motion-reverser located at the cross-rail for simultaneously reversing the directional effects on the table of both of said transmissions.

1,665,399. PULVERIZED-FUEL-BURNING FURNACE. JOHN ANDERSON, Milwaukee, Wis., assignor to Combustion Engineering Corporation, a Corporation of New York. Filed May 13, 1921. Serial No. 469,131. 12 Claims. (Cl. 110—28.)



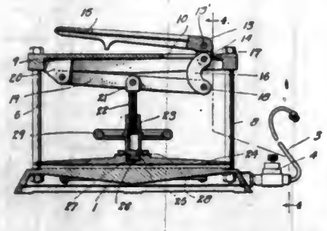
1. A quadrangular pulverized fuel combustion chamber with substantially isolated refractory walls flat-curved horizontally for strength and stability.

1,665,400. MARKING TOOL. FREDWILL BITTNER, Los Angeles, Calif. Filed Feb. 3, 1927. Serial No. 165,560. 2 Claims. (Cl. 33—174.)



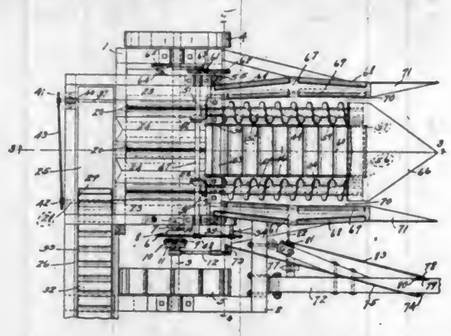
1. A tool of the character described including, an elongate body, a plurality of arms each having a longitudinal slot, and means mounting the arms transversely on the body to slide freely transversely of the body including guides fixed transversely on the body and slidably fitting the slots in the arms.

1,665,401. ENSILAGE HARVESTER. FRED BLECKE, Luckey, Ohio. Filed Dec. 11, 1926. Serial No. 154,162. 3 Claims. (Cl. 146—118.)



3. In an ensilage harvester, a casing having a chamber extending transversely thereof, a shaft extending through said chamber, wheels mounted on the ends of said shaft, a rotary cutter on said shaft, means for feeding ensilage to said chamber, a housing connected to said casing in rear thereof and having an interior in free communication with said chamber and so arranged that said rotary cutter expels the cut ensilage from the chamber directly into the housing, said housing being of slightly greater length than said chamber and having its discharge end spaced outwardly from the chamber, a conveyor within said housing for delivering the cut ensilage to one side thereof, a vertically disposed tube rising from the discharge end of said housing and an endless conveyor in said tube for elevating the material from the housing, whereby in case the endless conveyor should break, it will drop into the outwardly spaced discharge end of the housing without interfering with said first conveyor and rotary cutter.

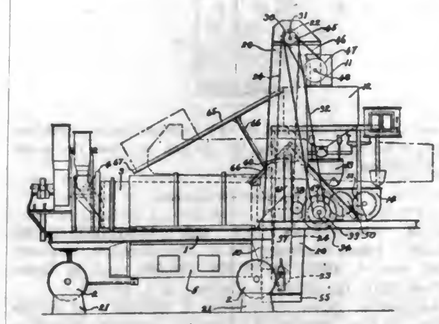
1,665,402. HORN-RESONATOR VIOLIN. GLENN D. BOTHWELL, Springport, Mich., assignor of one-third to Guy J. Bothwell, London, Ontario, Canada. Filed Feb. 26, 1923. Serial No. 621,272. 1 Claim. (Cl. 84—296.)



A horn resonator violin comprising a body having one surface thereof, formed with a depression extending to the marginal regions of said surface, a diaphragm member mounted upon said marginal portions, and extending across said depression, a bridge member extending across said diaphragm and secured terminally to opposite marginal portions of said body, strings supported upon said bridge member intermediately and terminally connected to said body, and a horn in communication with the depression of said body substantially centrally of said depression.

1,665,403. DRYING PRESS. ARTHUR W. CAPE, Kansas City, Mo., assignor, by mesne assignments, to Photostat Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Apr. 20, 1925. Serial No. 24,691. 4 Claims. (Cl. 100—67.)

1. A drying press comprising a base providing a fixed platen, vertical rods on the base, a bar connecting the rods, a movable platen guided by the rods, an elbow lever pivoted to the bar and having an arm extending above the bar, a lever pivoted at one end to a part beneath the bar, a crescent shaped link connecting the first lever to the second, a screw nonrotatably carried by the second lever and a rotatable sleeve carried by the movable platen and having threaded connection with the screw.

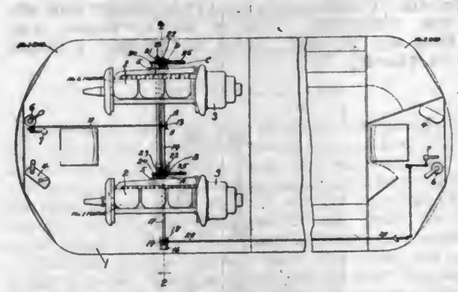


1,665,404. CORN-SHUCKING MACHINE. JOHN F. CRABILL, La Harpe, Ill. Filed June 13, 1924. Serial No. 719,731. 1 Claim. (Cl. 56—110.)

In a corn harvesting machine embodying a wheel borne chassis and drafting means therefor, the combination of a spaced and parallel pair of upwardly and rearwardly inclined snapping rolls journaled in the chassis, a plurality of horizontally arranged pairs of husking rolls journaled in the chassis immediately back of and under the elevated rear ends of the said snapping rolls and in parallelism with the extended vertical planes passing down through the said snapping rolls, V-shaped corn guides mounted over the junctures of the several pairs of shucking rolls, a perforated shuck handling plate oscillatably mounted below the said husking rolls, a sloping kernel catching bottom arranged below the said shuck handling plate, an elevator shoe arranged transversely at the rear of the chassis and adapted to catch the ears of shucked corn from the husking rolls and the kernels from the sloping bottom, means for catching and elevating

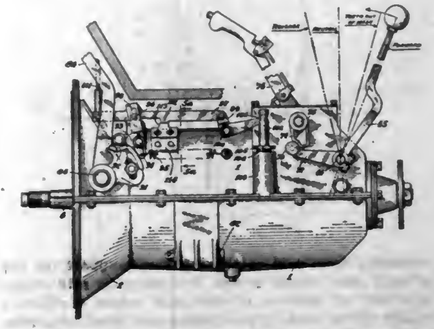
the ears of unhusked corn from the snapping rolls over onto the husking rolls, means for supporting the upper free ends of corn stalks with their ears of corn to the action of the machine, and means for driving the several working elements of the machine.

1,665,405. PORTABLE ASPHALT-MIXING PLANT. FREDERICK H. CUMMER, Los Angeles, Calif. Filed Feb. 27, 1926. Serial No. 91,097. 9 Claims. (Cl. 94—43.)



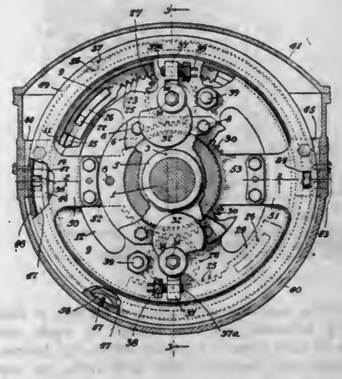
1. A portable mixing plant for road material, comprising a main frame, an elevator unit including elevating mechanism and a supporting frame therefor, said elevator unit being pivotally mounted at approximately its own center of gravity upon said main frame, whereby it may be swung about its pivot either to a substantially vertical operative position or to a substantially horizontal inoperative position without disassembling said unit.

1,665,406. METHOD OF RECOVERING ALUMINUM CHLORIDE FROM SLUDGE. PAUL DANCKWARDT, La Junta, Colo. Filed Apr. 23, 1927. Serial No. 186,054. 10 Claims. (Cl. 23—96.)



1. The process of producing aluminum chloride, which consists in injecting "sludge", a compound of aluminum chloride and hydrocarbon, and a gas into a body of molten metal, and condensing the aluminum chloride.

1,665,407. THROTTLE CONTROL FOR CARBURETORS. FREDERICK E. DAYES, Brooklyn, N. Y., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 17, 1925. Serial No. 56,981. 27 Claims. (Cl. 180—77.)

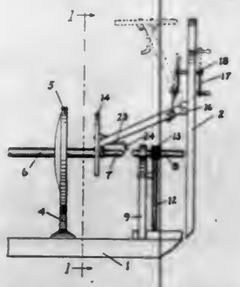


1. In combination, a plurality of carburetors, a plurality of cams adapted to operate each of said carburetors, and a plurality of devices each adapted to operate one cam associated with each carburetor, said devices operating the cams to effect operation of the carburetors in different orders from different points.

1,665,408. VARIABLE-SPEED POWER TRANSMISSION. ALEXANDER DOW, New York, N. Y., assignor to Dow Transmission Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 9, 1925. Serial No. 61,509. 14 Claims. (Cl. 74—34.)

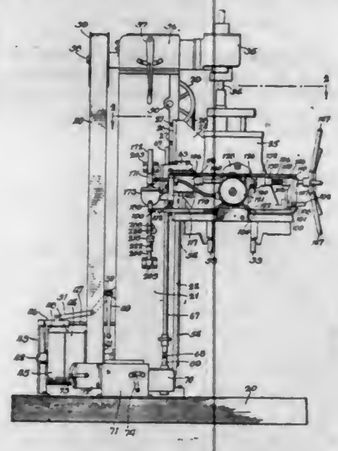
1. In a transmission of the character described, the combination with driving and driven shafts of variable change speed gearing for interconnecting them, with means responsive to a reversal of driving relations between the said shafts for controlling and varying its transmission ratio, and selective means for controlling and varying the operation of said ratio-controlling means and thereby varying the order and number of transmission ratios in the operation of the transmission.

1,665,409. CLUTCH MECHANISM. ALEXANDER DOW, New York, N. Y., assignor to Dow Transmission Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 11, 1925. Serial No. 74,804. 15 Claims. (Cl. 192—105.)



15. In a clutch mechanism, the combination of driving and driven members; centrifugal clutch means for interconnecting and releasing them; and means carried by one of the members for initially actuating said clutch means, to connect or release said members, according to the direction of rotation.

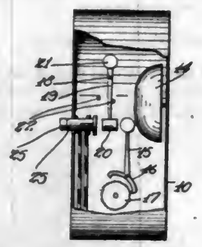
1,665,410. PROJECTION APPARATUS. CECIL M. FOX, Toledo, Ohio, assignor to The Rollaway Motor Company, a Corporation of Ohio. Filed Feb. 14, 1927. Serial No. 167,889. 5 Claims. (Cl. 176—51.)



1. In a projection apparatus, a reflector, a pair of electrodes having their arc-producing ends in front of said reflector, a shield interposed between said reflector and

the arc-producing ends of the electrodes for preventing particles of the electrodes from injuring the reflector while the arc is being struck, an arm fixed to and extend-

ing outwardly from said shield, a pivotal support for the end of said arm, crank means for swinging said shield into and out of position of use, and means carried by said shield for accurately positioning said electrodes relative to the reflector.

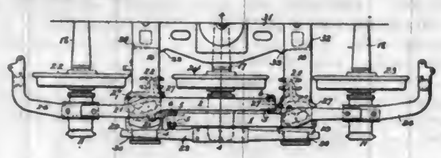


1,665,411. DRILLING MACHINE. ROBERT M. GALLOWAY and PAUL C. BURTON, Richmond, Ind., assignors to The National Automatic Tool Company, Richmond, Ind., a Corporation of Indiana. Filed Sept. 7, 1923. Serial No. 661,447. 30 Claims. (Cl. 77—32.)

1. A drilling machine combining a frame; a drill-head translatably mounted on the frame; a rack arranged lengthwise of said frame; a pinion rotatably journaled in said drill-head and meshing with said rack; an eccentric motor mounted on said head; an operative connection between said motor and said pinion whereby the former may rotate the latter to effect rapid traverse of the drill head; a motor controlling switch carried by said drill-head; manual means to actuate said switch to cause said motor rapidly to traverse said head; and automatic means controlled by the movement of said head to actuate said switch to discontinue the rotation of said motor and thereby the movement of said head.

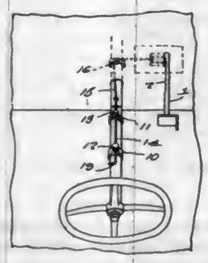
1,665,412. COMBINED ALARM CLOCK AND LAMP. FREDERICK J. T. HALL, Akron, Ohio. Filed Feb. 24, 1925. Serial No. 170,640. 2 Claims. (Cl. 161—22.)

1. In a combined clock and lamp, an alarm mechanism including a hammer, a lamp and circuit therefor, a switch positioned adjacent the hammer and adapted for operation through movement of said hammer, and a swinging member suspended between the switch and hammer



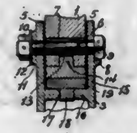
and having a head engaged by the hammer upon actuation thereof, said head engaging the switch to close the same upon actuation by the hammer.

1,665,413. MANUFACTURE OF STRENGTHENED GLASS. PERCY HERBERT HEAD, Attenborough, England. Filed Apr. 4, 1927, Serial No. 180,992, and in Great Britain Mar. 15, 1926. 7 Claims. (Cl. 49—81.)



6. Laminated glass, comprising a plurality of sheets of glass having interposed between adjacent sheets a celluloid strengthening sheet, a cementing material for uniting said celluloid sheet to the glass shets, and a combined solvent and cromatic stabilizing mixture comprising industrial spirit, amyl acetate, and tetrachlorethane.

1,665,414. SIX-WHEEL CAR-TRUCK CONSTRUCTION. GEORGE T. JOHNSON, Columbus, Ohio, assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Filed Feb. 10, 1927. Serial No. 167,279. 9 Claims. (Cl. 105—195.)

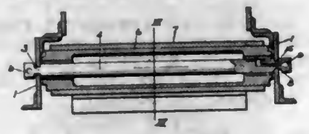


1. A car truck comprising side frames, two transverse bolsters mounted in the side frames, and a longitudinal bolster mounted within the transverse bolsters and having a key connection at its end portions therewith.

1,665,415. PARKING-BRAKE ATTACHMENT FOR MOTOR VEHICLES. MICHAEL KEHOE, Tucson, Ariz. Filed May 19, 1927. Serial No. 192,729. 4 Claims. (Cl. 74—89.)

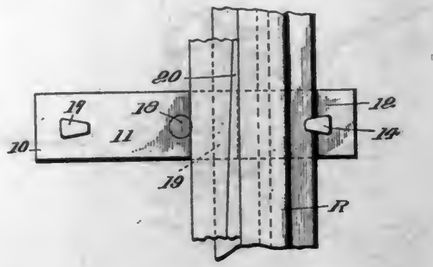
1. In combination, a foot brake pedal provided with a series of ratchet teeth, a spring pressed pawl slidably mounted on the under side of an automobile floor board and adapted for engagement with the ratchet teeth to hold the foot brake pedal in a brake applying position, means for releasing the pawl from a remote point, and additional means for locking the pawl in an inoperative position.

1,665,416. SIX-WHEEL CAR-TRUCK CONSTRUCTION. JACOB C. LARSEN and CLAUDE L. ORR, Columbus, Ohio, assignors to The Buckeye Steel Castings Company, Columbus, Ohio. Filed Feb. 10, 1927. Serial No. 167,316. 9 Claims. (Cl. 105—195.)



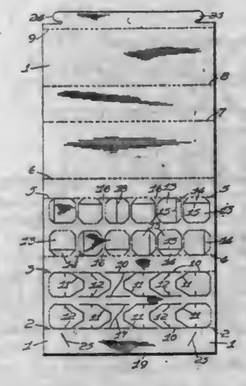
1. A six wheel truck in which each side frame comprises two end members flexibly connected respectively with ends of a central equalizing member, and wear means interposed in the flexible connections between said end and flexible members.

1,665,417. CAR-TRUCK CONSTRUCTION. JACOB C. LARSEN, Columbus, Ohio, assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Filed Feb. 10, 1927. Serial No. 167,317. 6 Claims. (Cl. 105—195.)



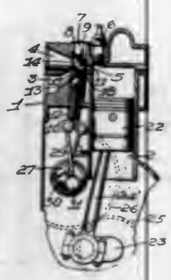
1. In a car truck structure, the combination with relatively movable members, of a flanged wear plate on one of said members, a wear plate mounted on the other member, a swinging link extending from one of said members and through the wear plates and the other member, and a bolt passing through the flanges of the flanged wear plate, through the member to which it is applied and through the upper portion of said link.

1,665,418. ROLLER SUPPORT. WILLIAM K. LIGGETT, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Original application filed Mar. 15, 1922, Serial No. 543,984. Divided and this application filed June 8, 1923. Serial No. 644,170. 6 Claims. (Cl. 308—12.)



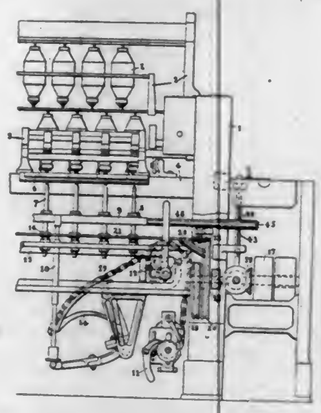
1. In a machine of the class described, the combination with side plates each having a circular aperture, and a slot of a width materially less than the diameter of said apertures extending therefrom, a cylindrical shaft the diameter of which is only slightly less than the diameter of said apertures whereby said shaft can be moved longitudinally through said apertures for removal or insertion, notches in said shaft positioned and arranged to permit lateral movement of said shaft into said slots and to engage the edges thereof to prevent either longitudinal or rotary movement of said shaft relative to said plates, a pulley journaled on said shaft, and a belt engaging said pulley, the tension of the belt acting to hold said shaft in said slots as and for the purpose set forth.

1,665,419. MINE AND RAILWAY TIE PLATE. JOHN THOMAS MORRIS, Glen Morrison, W. Va. Filed June 15, 1927. Serial No. 199,010. 2 Claims. (Cl. 246—453.)



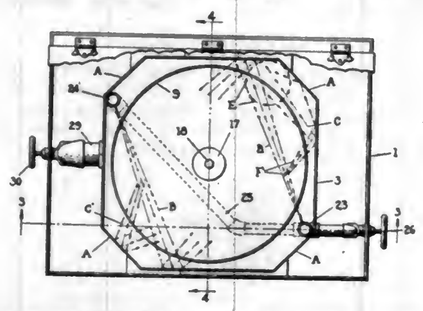
1. A railway tie plate comprising a body member of metal having an integral bent over portion overlapping the body portion and presenting a smooth, uninterrupted surface upon which a switch point may slide, said overlapping portion being of shorter length than the said body portion so that the free extremity of the bent over portion is spaced from the adjacent free end of the body portion to provide a rail supporting area, the said free extremity of said bent over portion being positioned to engage an adjacent flange of a rail resting upon said rail supporting area, the overlapped portions of the tie plate being provided with registering spike receiving holes, said rail supporting area also having a spike receiving hole so positioned that a spike driven therethrough will cooperate with said bent over portion to retain the rail in place.

1,665,420. EGG HOLDER. EDWARD ELLSWORTH PINKERTON, Chicago, Ill., assignor to Mary A. Pinkerton, Chicago, Ill. Filed Mar. 21, 1927. Serial No. 177,109. 3 Claims. (Cl. 229—29.)



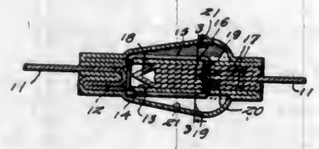
1. An egg holder, comprising an upper sheet having slits arranged to form tongues therein, said tongues having slits extending inwardly from the edges thereof, a bottom, a central sheet disposed between the bottom and the upper sheet and having slits to form tongues, integral brace members carried by said central sheet adjacent to the bases of said tongues, the tongues of the central sheet being in registration with the tongues of the upper sheet and the slits of the tongues in the upper sheet being arranged to receive said brace members when said slitted tongues are forced downwardly by the insertion of eggs in the openings left by the tongues.

1,665,421. INTERNAL-COMBUSTION ENGINE. GARLAND H. ROOSE, Chicago, Ill. Filed Jan. 28, 1927. Serial No. 164,283. 2 Claims. (Cl. 123—188.)



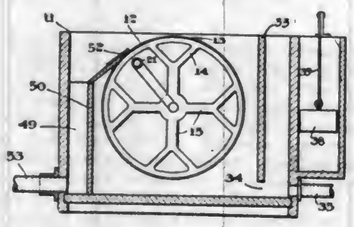
1. In a device of the type described, a cylinder having an opening therein, an intake port, an exhaust port, an outer reciprocating valve having an intake opening and an exhaust opening therein, an inner reciprocating valve having a passageway therethrough, a valve guide having a single passageway therethrough and positioned in alignment with the opening in said cylinder, and means for actuating said outer reciprocating valve for bringing said intake opening into and out of alignment with said intake port and passageway in said valve guide and for bringing said exhaust opening into and out of alignment with said exhaust port and the passageway in said valve guide, said means being adapted to move said inner valve for bringing the passageway therein into and out of communication with the opening in said cylinder and the opening in said valve guide.

1,665,422. DEVICE RELATING TO RING SPINNING AND TWISTING FRAMES. RUDOLF SETZER, Munich-Trudering, Germany. Filed May 2, 1927, Serial No. 188,272, and in Germany Apr. 1, 1927. 4 Claims. (Cl. 118—47.)



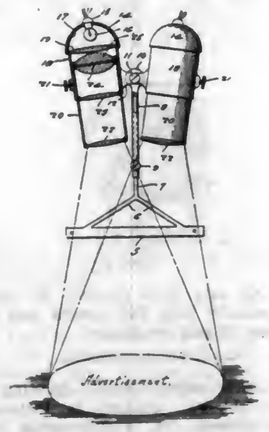
1. In a spinning and twisting frame a plurality of spindles arranged in a row and having a friction roller to drive them by means of an endless belt arranged to travel tangentially on one side and return on the other, means for driving the said belt continuously at a suitable speed and keeping it under tension, in combination with spring-actuated, yielding and alternately arranged tension rolls, the upper and lower flanges of the said tension rolls overlapping the whorves of the spindles and thus simultaneously limiting the lift of the spindles.

1,665,423. DISHWASHER. PRENTICE E. SKELTON, Indianapolis, Ind. Filed Feb. 28, 1927. Serial No. 171,561. 5 Claims. (Cl. 141—0.)



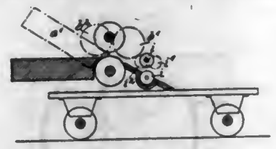
1. In dish washing machine, a revolvably mounted basket, said basket having perforated walls; vertical water conveying pipes adjacent the outer walls of said basket; said pipes having nozzle openings therein, the nozzle openings in one pipe being at different altitudes or in staggered relation with the nozzle openings of the other pipe, said nozzle openings being positioned for causing streams of water therefrom to strike the walls of said basket in a manner to set up rotation of the basket; and means for controlling the water passing thru said pipes.

1,665,424. CAR SEAL. FREDERICK STRAHM, Lawrence, Kans. Filed Jan. 15, 1927. Serial No. 161,899. 2 Claims. (Cl. 292—324.)



1. A car seal including a casing having one end open and its other end provided with a plurality of folds, a ribbon having one end secured within said folds and having its other end provided with a transverse opening and arranged to be inserted into the open end of the casing, and a yoke held within the folded end of the casing and having the outer ends of its arms arranged to be spread apart by the apertured end of the ribbon and to subsequently snap into said opening.

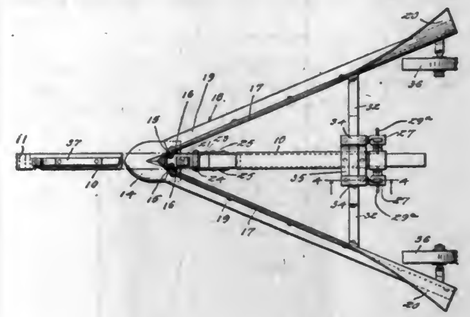
1,665,425. METHOD AND APPARATUS FOR REGULATING THE CONSISTENCY OF PULP STOCK AND THE LIKE. CHARLES R. VAN DE CARR, Jr., Quebec, Quebec, Canada. Filed Jan. 10, 1927. Serial No. 160,249. 10 Claims. (Cl. 92—46.)



1. A method of regulating the consistency of stock in a system, which consists in passing a relatively small quantity of the stock from the system into a vat, screening the stock as it passes through the vat, allowing the deposit on the screen to regulate the level of the fluid in the vat and utilizing the differences in the levels of the fluid in the vat to regulate the supply of fluid to the system.

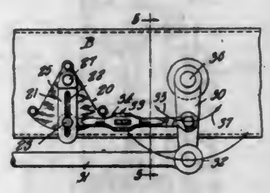
1,665,426. ADVERTISING LIGHT. HANS PETER VERDICH, Ellendale, N. Dak. Filed Mar. 12, 1927. Serial No. 174,933. 1 Claim. (Cl. 88—24.)

A device of the class described comprising a concavo-convex casing, a socket for a lamp in the casing, a reflector in the casing, a lens in the casing, said casing merging into a tubular member, said reflector and lens being arranged to direct rays from the lamp to the tubular member, a second tubular member threaded in the first tubular member, means for locking the second tubular member in different adjusted positions in relation to the first tubular member, a transparent panel in the second tubular member at the inner end thereof, a pair of plano-convex glasses one to each side of the panel with their plano sides against the panel, a lens in the intermediate portion of the second tubular member, and a lens in the outer end of the second tubular member.



1,665,427. MANUFACTURE OF RAW PLATE GLASS ON MULTIROLLER GLASS-ROLLING MACHINES. LAMBERT VON REIS, Herzogenrath, Germany, assignor to Maatschappij tot Beheer en Exploitatie van Octrooien, Amsterdam, Netherlands. Filed Nov. 5, 1926, Serial No. 146,406, and in Germany Dec. 30, 1925. 4 Claims. (Cl. 49—33.)

1. A multi-roller glass rolling machine for manufacturing raw plate glass, comprising a tiltable receiver for the molten glass mass to be rolled out, a tiltable rolling mechanism, and adjustable chutes and guide rollers for guiding the rolled glass plates to conveying means.



4. The combination in a glass plate roll machine of a receiver for molten glas, a pair of sheet forming rolls with a pass between them, adapted to receive glass from the receiver, and to make it into sheet form, the receiver and the forming rolls being independently movable about a common axis.

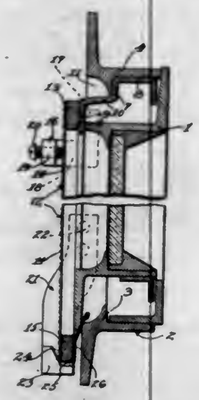
1,665,428. DITCHER. CARL WAGNER, Fort Morgan, Colo. Filed Mar. 26, 1927. Serial No. 178,738. 5 Claims. (Cl. 37—98.)

1. In a ditcher, a beam, a support extending downwardly from the beam adjacent the forward end thereof, a share secured to the lower end of the support, rearwardly diverging mold boards pivoted to the support, means connecting the rear ends of the mold boards with the beam whereby said mold boards may be secured in adjusted angular relation thereto, a second beam having its forward end pivotally connected to the lower end of the support at the rear thereof, a shoe upon the lower face of said beam at the free end thereof and means connecting the free end of the last named beam with the first named beam for vertically adjusting said free end.

1,665,429. SWITCH MECHANISM. WILLIAM S. ANDERSON, Atlanta, Ga. Filed Oct. 26, 1923. Serial No. 670,986. 1 Claim. (Cl. 200—59.)

A switch mechanism of the class described including a casing, contact members arranged in the casing, a switch arm carrying a switch blade operating within the casing, said switch arm having a right angled end portion extended through the casing, a shaft on which the arm is secured, an arm mounted on the shaft, a control lever having an elongated opening formed therein, spaced lugs on the control lever and engaging on opposite sides of the right angled end portion of the switch arm, an operating rod having one end fitted in the elongated opening, and means for moving the operating rod to operate the switch blade over the contacts of the casing.

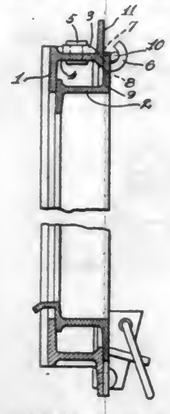
1,665,430. FLOOR JOINTING OR TIGHTENING DEVICE. FREDERICK WILLIAM ARZT, Homestead, Fla. Filed Feb. 11, 1927. Serial No. 167,482. 2 Claims. (Cl. 254—17.)



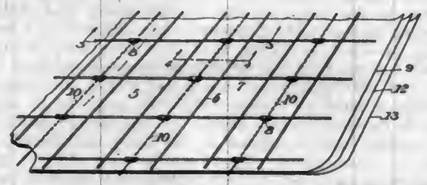
2. A floor jointing device comprising a body of inverted U-shape equipped on its upright portions with means to take hold of a beam, a lever pivotally connected adjacent to its lower end to one upright portion of the body and having its upper portion spaced from the adjacent side of the body, and plates disposed at opposite

sides of the lever and connected thereto and extended laterally from the lever; the said plates being extended laterally beyond both sides of the lever, and the plates

being secured on the lever through the medium of bolts disposed at opposite sides of the lever and extended through the plates and equipped with heads and nuts.



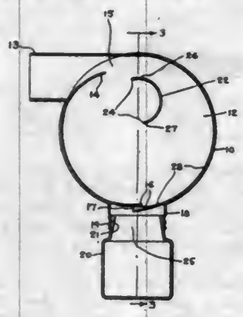
1,665,431. WINDOW. GUSTAF IVAR BARCLAY, Detroit, Mich., assignor to Detroit Steel Products Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 3, 1927. Serial No. 158,744. 5 Claims. (Cl. 189—69.)



1. A screen attachable to a window having a frame, and means for detachably securing said screen to the frame, including means adjustably engageable with one end of said screen to laterally force the same toward the frame, and means engageable with the other end of said screen for automatically forcing said screen laterally toward the frame.

1,665,432. WINDOW. GUSTAF IVAR BARCLAY, Detroit, Mich., assignor to Detroit, Steel Products Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 7, 1927. Serial No. 166,517. 2 Claims. (Cl. 189—69.)

1. In a window, the combination with a sash having a head bar formed with an elongated slot adjacent the inner edge thereof, of a swinging ventilator having a head bar with an inner transverse flange formed with an elongated slot in alignment with the slot aforesaid, a member pivotally mounted upon the head bar of the sash having a hook at the end thereof extending through the said slots, the upper edge of the slot in said ventilator head bar being turned inwardly forming a pintle for said hook operable to automatically move said ventilator head bar toward said sash head bar upon closing of said ventilator.

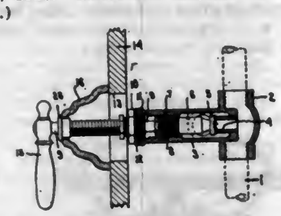


1,665,433. FABRIC STRUCTURE. EDWARD L. BENEDICT, Pittsburgh, Pa., assignor to Pittsburgh Steel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 13, 1926. Serial No. 128,943. 7 Claims. (Cl. 72—120.)

7. Fabric structure composed of wires, a main backing sheet, attaching members extending from points rearwardly of said sheet and connected to said wires, for holding the sheet in place, a supplemental backing sheet, and means for securing said supplemental sheet in position against the rear sides of the main backing sheet and the attaching members.

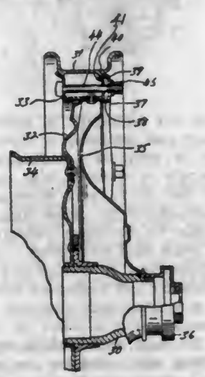
1,665,434. AIR CLEANER FOR CARBURETORS. ASHLEY C. BENNETT, Minneapolis, Minn. Filed June 17, 1925. Serial No. 37,766. 5 Claims. (Cl. 183—82.)

1. An air cleaner comprising a cylindrical casing member adapted to be positioned with its axis horizontal and having its ends closed, an air inlet arranged tangentially



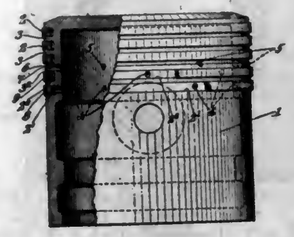
with relation to the cylinder wall, a dust-discharge passage at the lower portion of the cylinder wall, and an air outlet pipe extending through one of the end walls of the cylinder, said outlet pipe extending across the cylinder and having a portion of its wall removed toward the side of the cylindrical casing through which said air inlet passes.

1,665,435. NONFERROUS CASTING. RALPH L. BINNEY, Toledo, Ohio, assignor to The Binney Castings Company, Toledo, Ohio, a Corporation of Ohio. Filed July 6, 1925. Serial No. 41,821. 4 Claims. (Cl. 75—1.)



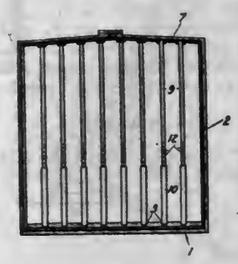
1. A refractory alloy of approximately one part manganese, two parts zinc, eighteen parts copper, and one-third part of aluminum.

1,665,436. VALVE CONSTRUCTION. LEON BLOCH, Cleveland, Ohio, assignor to The Republic Brass Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 30, 1926. Serial No. 151,699. 5 Claims. (Cl. 251—50.)



1. In a valve structure, the combination of a valve casing having an extension, a valve in said casing, a stem for operating said valve, said stem being disposed in said extension an auxiliary stem non-rotatably secured within said first-named stem, and means for varying the relative longitudinal positions of said first-named stem and said auxiliary stem.

1,665,437. VEHICLE WHEEL. WILLIAM N. BOOTH, Detroit, Mich. Filed Mar. 16, 1925. Serial No. 15,946. 5 Claims. (Cl. 301—22.)

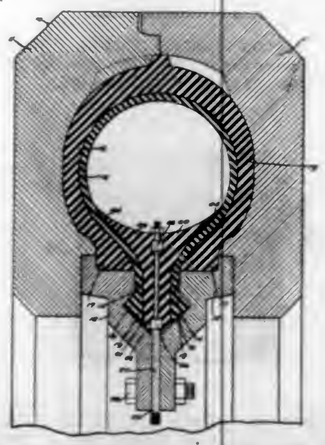


1. In a vehicle wheel, the combination with a wheel body and a demountable rim mounted upon said wheel body, of a ring for securing said rim upon said wheel body, said ring having a wavy profile and being transversely split intermediate the crests of adjacent waves and means for adjusting said ring toward said wheel body, including members engaging said ring at the crests of the waves.

1,665,438. PISTON CONSTRUCTION. WILLIAM C. BROWER, Gloversville, N. Y. Filed Nov. 18, 1925. Serial No. 69,742. 2 Claims. (Cl. 74—108.)

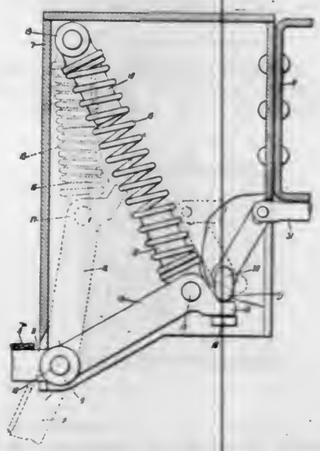
1. In combination, a piston head having a plurality of piston ring grooves formed therein with a plurality of annular walls or ribs located between said grooves, the lowermost of said grooves being provided with a plurality of holes or apertures extending from the bottom of said groove through the wall of the piston and opening into the hollow interior thereof, one of the walls or ribs above said last-mentioned groove being provided with a plurality of openings therethrough leading from the outer face thereof to the interior of the hollow piston so as to afford means of communication between the cylinder and the crank-case, said wall or rib having a reduced portion and the openings extending through both the reduced portion and the main portion of this rib or wall.

1,665,439. ADJUSTABLE BLOCKING FOR CARS. WILLIAM J. BROWN, Savanna, Ill. Filed July 6, 1925. Serial No. 41,689. 3 Claims. (Cl. 105—369.)



1. In a car having a floor and ceiling, each provided with a plurality of openings, the openings in the floor and ceiling being arranged opposite each other in pairs, a plurality of posts adapted to cooperate with the floor and ceiling openings, said posts being adapted to enter said openings and being retained therein and each post being adapted to be moved individually and independently of all other posts from one pair of openings to any other pair of openings.

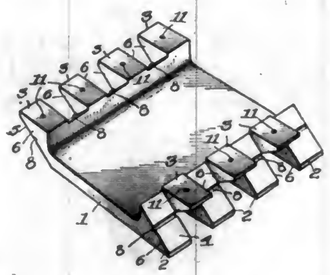
1,665,440. VULCANIZATION. WILLIAM A. BRUBAKER, Akron, Ohio. Filed Feb. 28, 1927. Serial No. 171,440. 18 Claims. (Cl. 18—45.)



1. A tire vulcanizing mold comprising: a pair of mold sides spaced from each other at the base of the tire cavity to provide spaced opposed faces one on one of said sides

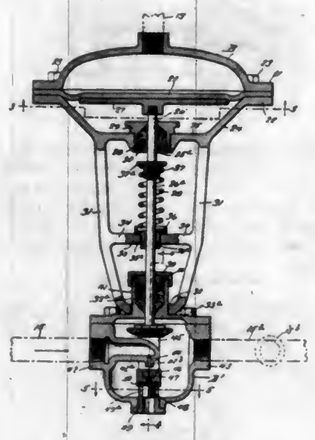
and the other on the other of said sides, but contoured to define otherwise at least the base portion of said cavity; a flexible flap adapted to be disposed within a tire within

said mold with its edges overlapping said faces; and a compressible bull ring interposed between said faces effective to seal said edges tightly to itself.



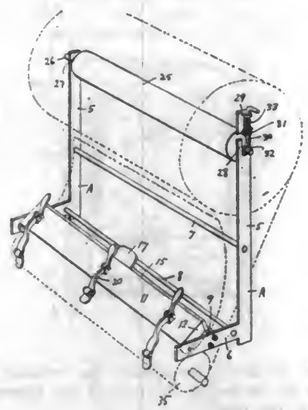
1,665,441. AUTOMOBILE. HELMUTH BRUSCH, Chicago, Ill. Filed Aug. 16, 1926. Serial No. 129,304. 3 Claims. (Cl. 280—166.)

1. On an automobile a running board, a plurality of bell crank levers supporting said board and pivotally mounted on said automobile, a shaft rotatably mounted on said automobile, eccentric portions on said shaft as means for securing the bell cranks in supporting position and for releasing the same.



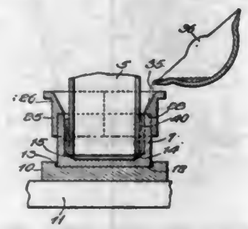
1,665,442. BUILDING BLOCK. LEON JAY CAMPBELL, Buchanan, Mich. Filed June 20, 1925. Serial No. 38,419. 6 Claims. (Cl. 72—38.)

1. A building wall composed of an upright rear structure and a plurality of blocks laid in substantially parallel rows in front of said structure, said blocks having a plurality of oppositely inclined front and rear projections at the opposite ends thereof, the projections at each end of the block having their inclined surfaces in planes intersecting between the ends of the projections and with the rear projections alternating with the front ones, said



rear projections of each block having holes extending therethrough from front to rear and covered at their outer ends by the overlapping front projections of the adjacent blocks, and fastening members inserted through said holes for securing each block at its opposite ends to said rear structure.

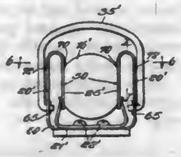
1,665,443. OIL-BURNING SYSTEM. JOHN W. CANNON, Providence, R. I. Filed Jan. 30, 1928. Serial No. 250,517. 8 Claims. (Cl. 158—73.)



1. In a system for supplying a mixture of oil and steam to a burner and including a generator for steam to which water is supplied; a diaphragm valve for controlling the supply of water to said generator through the pressure of the oil in said system, the said diaphragm valve comprising an upper diaphragm chamber having a connection for oil under pressure, a diaphragm in said chamber below said connection, a valve stem connected to said diaphragm, a water-valve chamber below the diaphragm chamber and having an inlet for the water supplied to the generator and provided with an outlet connection for such water, a valve in the water-valve chamber carried by said stem and controlling the supply of water from said chamber to the said outlet connection, and a lower diaphragm chamber beneath the diaphragm and above the water-valve chamber and closed except for a substantially leak-proof opening for said valve stem.

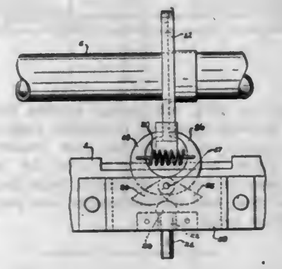
1,665,444. PAPER FEED AND CUTTING MECHANISM. SAMUEL E. CHAPMAN, Ontario, Oreg. Filed May 9, 1927. Serial No. 190,123. 8 Claims. (Cl. 197—133.)

1. A device of the class described comprising a pair of L-shaped side members each including a vertical long arm and a horizontal short arm, a roller journalled between the upper extremities of the long arms, a rockable member mounted between the ends of the short arms, a cutter mounted on the rockable member, a stationary cutter mounted between the short arms, and a spring between the rockable member and the stationary cutter for normally holding the other cutter spaced therefrom, fingers rockably mounted on the rockable member for engaging the platen of a typewriter or the like.



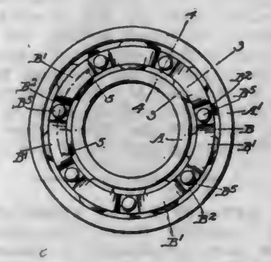
1,665,445. FUSE. NICHOLAS J. CONRAD, Chicago, Ill., assignor to Schweitzer & Conrad, Chicago, Ill., a Corporation of Illinois. Filed Aug. 14, 1924. Serial No. 731,954. 9 Claims. (Cl. 22—202.)

5. The method of sealing a metal ferrule upon a glass container which comprises clamping the container centered within the ferrule, heating the ferrule to expand it, pouring a sealing substance in molten condition between the ferrule and container and quenching the ferrule to cool it while the sealing substance is molten.



1,665,446. FUSE CLIP. NICHOLAS J. CONRAD, Wilmette, Ill., assignor to Schweitzer & Conrad, Chicago, Ill., a Corporation of Illinois. Filed May 25, 1926. Serial No. 82,741. 21 Claims. (Cl. 200—134.)

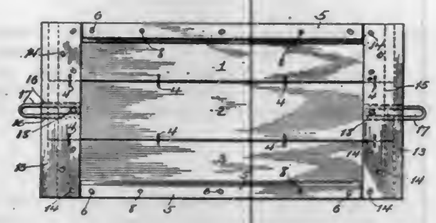
1. In a clip of the class described, the combination of a pair of spring jaws adapted to receive a device for mounting therein, said jaws being held in close contact with the device by their inherent resiliency, and a swingably mounted bail adapted to be swung into position em-



bracing said jaws to press same upon the device and having a portion lying in the path of removal of the device when in jaw embracing position.

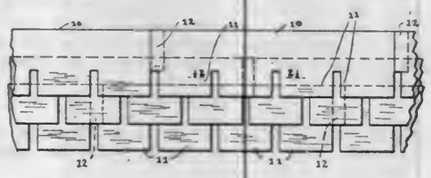
1,665,447. LOOM TUBE FRAME AND SPOOL. JOSEPH A. COYLE and WELLESLEY B. COOPER, Amsterdam, N. Y., assignors to Stephen Sanford & Sons, Inc., Amsterdam, N. Y., a Corporation of New York. Filed June 23, 1927. Serial No. 200,957. 14 Claims. (Cl. 139—10.)

1. The combination with a tube frame, of a yarn spool supported at opposite ends on the tube frame, and cooperating means, part of which is on the spool intermediate the ends of the latter, and part of which is suitably arranged to cooperate with the spool part for holding the spool against sagging between its ends relatively to the frame when the latter is in wiping in position.



1,665,448. BALL BEARING. CHARLES W. DAKE, Chicago, Ill. Filed Apr. 5, 1926. Serial No. 99,779. 6 Claims. (Cl. 308—201.)

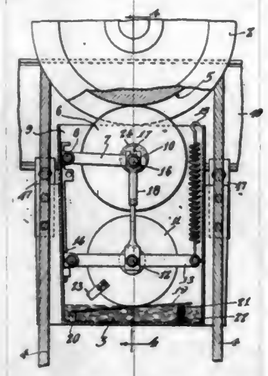
1. A ball bearing comprising inner and outer races, balls interposed between them, a plurality of separate curved segmental solid spacer blocks, one between each



adjacent pair of balls, said blocks having curved end surfaces to engage and conform to the surface of the ball, retainer rings one on each side of the group of balls, the rings being laterally displaced to bring them into engagement with spacer blocks at points intermediate thereof, and being spread out to bring them into engagement with diametrically opposed points on the balls, the rings when spread being parallel throughout a portion of their length, the balls being free to move longitudinally between the retainer rings as far as the rings are concerned without changing the relation between the ball and the ring.

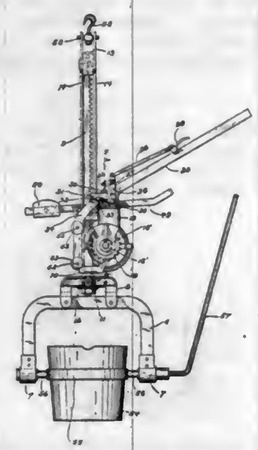
1,665,449. WOODEN BOAT OR DRAG. HARRY A. DRAKE, West Nyack, N. Y. Filed Dec. 17, 1925. Serial No. 76,049. 2 Claims. (Cl. 280—19.)

1. A boat or drag comprising wooden floor members, transverse wooden beams at respective ends of said floor members, wooden pins securing said transverse wooden beams in place, a draft pin carried by each of said wooden transverse beams, and draft links disposed loosely between the floor and the end beams and engaged around the respective draft pins.



1,665,450. COMPOSITION SHINGLE. HARVEY A. GARBER, Milwaukee, Wis. Filed Oct. 12, 1922. Serial No. 594,100. 2 Claims. (Cl. 108—8.)

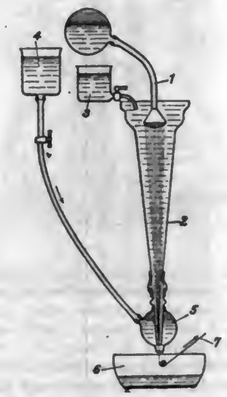
1. A composition strip shingle comprising a substantially rectangular strip one edge of which is provided with a plurality of spaced notches, and the ends of which are each provided with a lip portion of reduced thickness, one of said lip portions being flush with one surface of the strip and of a width substantially equal to that of said notches, and the other of said lip portions being flush with the other surface of the strip and of a width greater than that of said notches.



1,665,451. APPARATUS FOR LUBRICATING WIRE CABLES. LEROY G. GATES, Bakersfield, Calif., assignor, by mesne assignments, to Standard Oil Company of California, San Francisco, Calif., a Corporation of Delaware. Filed Feb. 9, 1926. Serial No. 87,037. 18 Claims. (Cl. 184—15.)

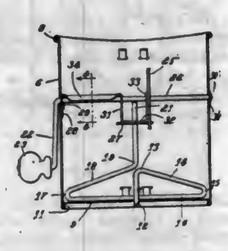
1. In apparatus for lubricating a wire rope passing around a drum or sheave, with runs hanging from its opposite sides, the combination of a lubricant holder, transfer mechanism located between the runs of the rope, and means for periodically moving the transfer

mechanism to effect periodically the transfer of lubricant from the holder to the face of the sheave between the runs of the rope.



1,665,452. POURING AND LIFTING DEVICE. MAX W. GOLDBERG, Port Washington, Wis., assignor to Modern Pouring Device Co., Port Washington, Wis., a Corporation of Wisconsin. Filed Sept. 7, 1926. Serial No. 133,986. 8 Claims. (Cl. 22—82.)

1. In a pouring and lifting device, the combination of load carrying mechanism, a rack bar to which the load carrying mechanism is connected, a shaft, a ratchet wheel mounted fast on the shaft, a toothed wheel also mounted fast on the shaft and engaging the rack bar, another ratchet wheel mounted fast on the shaft, sleeves loosely surrounding the shaft, one of said sleeves formed with an extension provided with a recess, and the other of said sleeves formed with a brake drum, a spring-actuated rod extending into the recess of the extension of the first referred to sleeve, the inner end of said rod provided with a pawl normally engaging the teeth of the ratchet wheel with which it cooperates, a finger turnably mounted, but non vertically movable on the rod, a pin with which said finger is adapted to be swung into engagement whereby the pawl is held out of engagement with this ratchet wheel, a spring-pressed pawl extending

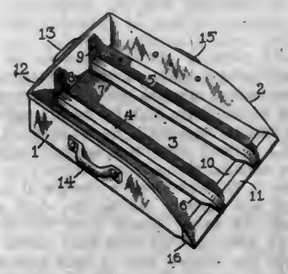


laterally from the side of the brake drum and engaging the ratchet wheel with which it cooperates, the periphery of the brake drum surrounding this ratchet wheel and the pawl, an upright arm, a pin upon which said upright arm is movably mounted, a weighted lever fulcrumed on the upright arm, and a brake band surrounding the periphery of the brake drum and having one end fast, and its opposite end secured to the upright arm.

1,665,453. PROCESS OF PRODUCING ARTIFICIAL-SILK FILAMENTS BY DRAWING. KURT GRUNERT, Turin, Italy. Filed Oct. 4, 1926, Serial No. 139,509, and in Germany Oct. 8, 1925. 2 Claims. (Cl. 18—54.)

1. The herein described process of producing artificial silk filaments, especially from cuprammonium cellulose solutions, by drawing, which consists in causing the solution, on leaving a spinneret, to enter a spinning funnel with a precipitating liquid, the spinning funnel having an open top, keeping the precipitating liquid and threads under atmospheric pressure therein, and regulating the outlet velocity of the precepitating liquid by the counteraction of a second liquid meeting the first liquid at the point, where it comes from the funnel whereupon both liquids jointly flow into a basin and the filament is taken off.

1,665,454. FLOUR SIFTER. ADAM GSCHWINDT, Rockford, Ill., assignor to Roseland Can & Wire Goods Co., Rockford, Ill., a Corporation of Illinois. Filed May 29, 1925. Serial No. 33,668. 6 Claims. (Cl. 209—358.)

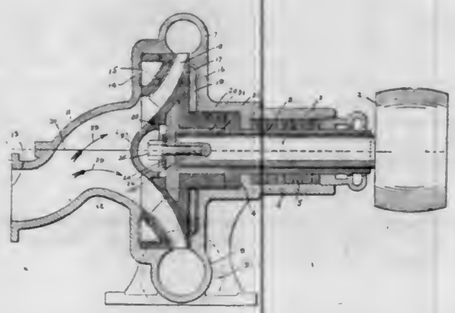


1. A sifter of the character described comprising, in combination, a container having a sieve, an agitator for the sieve having an upper end equipped with a toothed wheel, a shaft passing diametrically through the container above the agitator and having a hand crank at one end outside of the container and a toothed wheel inside of the container meshing with said toothed wheel on the agitator, and a bracket formed of a strip of sheet metal secured at one end to the container wall and bent to extend inwardly along the crank shaft and thence downwardly to provide bearing support for the upper end of the agitator and thence upwardly and having a bearing on the crank shaft.

1,665,455. HUMIDIFYING DEVICE. DANIEL HANDELAN, Minneapolis, Minn. Filed May 26, 1925, Serial No. 32,936. Renewed Feb. 12, 1927. 6 Claims. (Cl. 261—116.)

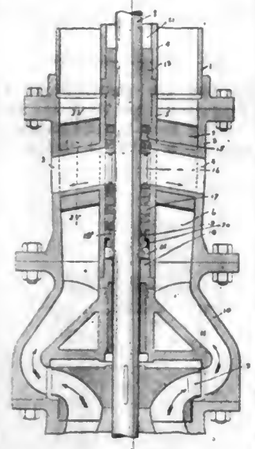
6. A humidifying device comprising a vertically extending case having upper and lower register openings, register supports mounted in proximity to said register openings, registers movably carried by said supports whereby the interior of said vertical case may be exposed, a water supply pipe extending into the upper end of said case, a nozzle in said water pipe within said case and a regulating cock for said nozzle opposite one of said register openings.

1,665,456. ICE TRAY. ANDREW HANSSON, Brooklyn, N. Y. Filed Apr. 19, 1927. Serial No. 184,910. 8 Claims. (Cl. 220—1.)



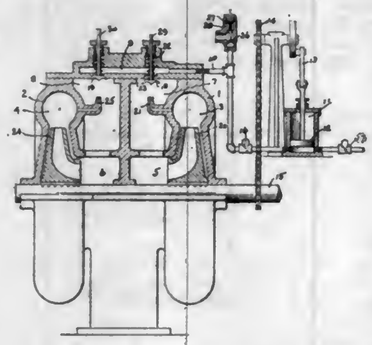
1. A tray comprising a bottom member having a pair of sides and a back secured thereto, a raised lip upon the edge of said bottom, secured thereto by an intermediate inclined portion, and a handle upon said back.

1,665,457. ROTARY DISK DRILL. HALL H. HOLDAWAY, Sawtelle, Calif. Filed Aug. 26, 1925. Serial No. 52,534. 3 Claims. (Cl. 255—71.)



1. A rotary disk drill having a shank with a downwardly extending fork with an integral threaded pin on its inner face, a disk cutter, a washer between the disk cutter and the inner face of the fork and constituting a bearing for the cutter, a collar received on the threaded pin having means for retaining the washer on the fork and having means for retaining the cutter on the washer, said collar having a plurality of spaced circumferentially disposed sockets on its inner face, a locking-plate with means for securing the same at the inner end of the pin, said locking-plate having a finger to co-operate with one of said sockets to lock the collar in place, said finger being offset from the axis of the plate whereby the locking-plate may be attached in a reversed position to co-operate with a socket in a different angular position.

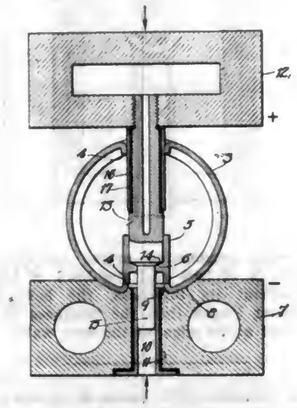
1,665,458. ACID PUMP. ALADAR HOLLANDER, Berkeley, Calif., assignor to Byron Jackson Pump Mfg. Co., Berkeley, Calif., a Corporation of California. Filed May 3, 1926. Serial No. 106,340. 1 Claim. (Cl. 103—114.)



In an acid pump, a casing parted on an axial plane into an upper and a lower section, a suction nozzle and a discharge nozzle integral with said lower section, a hub member of relatively high tensile strength and means fixing said hub to said shaft, an impeller of acid resisting material formed over and integral with said hub member, an opening through the impeller to enable said fixing means to be introduced, a closure of acid resisting material for said opening sealing the shaft and the hub member and the fixing means from the impeller compartment, an acid resisting ring fixed inside said casing and adjacent the suction side of said impeller, an acid resisting sleeve surrounding said shaft and having an end collar effecting closure against said impeller and forming a running joint against said casing, packing carried in said casing and within which the sleeve and shaft are adapted to rotate.

1,665,459. PUMP-PACKING MEANS. ALADAR HOLLANDER, Berkeley, and WALTER L. FORWARD, Oakland, Calif., assignors to Byron Jackson Pump Mfg. Co., Berkeley, Calif., a Corporation of California. Filed May 3, 1926. Serial No. 106,342. 4 Claims. (Cl. 103—102.)

1. Means for maintaining the lubrication of fluid pumps having impeller shaft and bearing means, and comprising a tubular shield surrounding and spaced from said shaft, said bearing means positioned between said shield and said shaft, a discharge duct from said shield adapted to discharge excess fluid or excess lubricant from the space between the shaft and the shield, packing means between the duct and the bearing means and other packing means between the duct and the impeller means, said first named packing means adapted to restrain the escape of lubricant through the duct and said other packing means adapted to restrain the escape of pressure fluid through the duct, and a piston adapted to automatically compress both packings simultaneously and actuated by discharge pressure of said pump, and a spacing cage between said packing and said other packing.



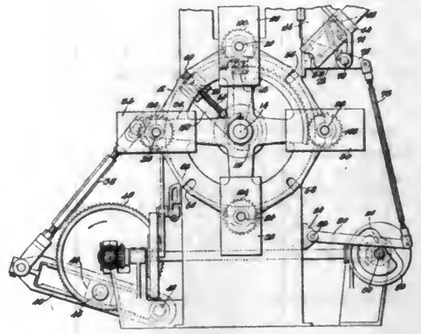
1,665,460. PRIMING MEANS. ALADAR HOLLANDER, Berkeley, and WALTER L. FORWARD, Oakland, Calif., assignors to Byron Jackson Pump Mfg. Co., Berkeley, Calif., a Corporation of California. Filed July 16, 1927. Serial No. 206,252. 18 Claims. (Cl. 103—113.)

1. Priming means comprising a vacuum chamber, suction means, an air valve and port between said chamber and said means, a pressure compartment and a rotor

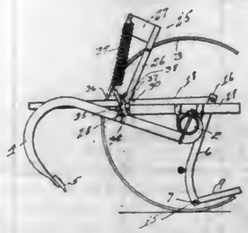
between said chamber and said compartment, a nozzle adapted to discharge a pressure jet from said compartment against said air valve and tending to actuate said valve to close said port when pressure has been established in said compartment by said rotor.

1,665,461. WELDING TUBES TO PLATES OR CYLINDERS. HENRY S. HOLMES, New York, N. Y., assignor to Thomas E. Murray, Brooklyn, N. Y. Filed Mar. 27, 1926. Serial No. 97,867. 13 Claims. (Cl. 219—4.)

8. In the welding of a pipe to the inside of a cylinder the method which consists in providing a projection on the inside of the pipe and pressing the latter against the cylinder by pressure applied to said projection.



1,665,462. PILING. MARSHALL HOWARD, Lincoln, Nebr., assignor to Woods Brothers Construction Co., Lincoln, Nebr., a Corporation of Nebraska. Filed Apr. 2, 1926. Serial No. 99,104. 7 Claims. (Cl. 61—59.)

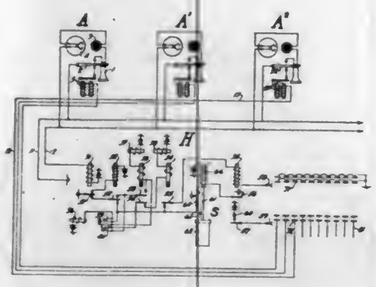


1. Sheet piling comprising a series of pile elements having guiding means comprising a tongue and groove in each of said elements whereby an element may be driven adjacent to and in alinement with an adjacent driven element, and means to aid said guiding action, said latter means having an inclined member cooperating with an eye in the adjacent driven element to hold the adjacent elements together.

1,665,463. DRIVING MECHANISM. STANLEY R. HOWARD, East Milton, Mass., assignor to Pneumatic Scale Corporation, Limited, Quincy, Mass., a Corporation of Massachusetts. Filed Jan. 5, 1927. Serial No. 159,099. 6 Claims. (Cl. 93—54.)

1. The combination with a supporting member, having an article holding device rotatably mounted therein, of mechanism for intermittently revolving the supporting member and for rotating the article holding device, including an oscillatory element, connections between the oscillatory element and supporting member, and connection between the oscillatory element and the article holding device.

1,665,464. WEEDER. CLAUDE L. KEY, Milton, Oreg. Filed June 4, 1925. Serial No. 34,840. 6 Claims. (Cl. 97—169.)



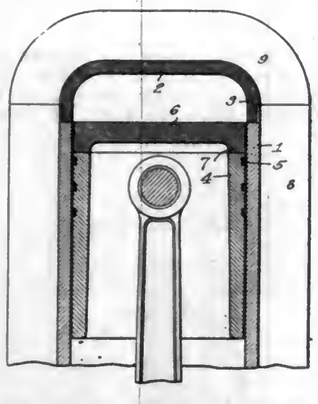
1. In a weeder, a rockably supported beam rigidly carrying goosenecks, and a blade rigidly attached to said goosenecks, uprights rigidly attached to and rockable with said beam, a draft means pivotally attached to the uprights to rock the latter in a clockwise or anticlockwise direction, a trailer pivotally attached to said upright and provided with means to adjustably control the anticlockwise movement of said uprights, a cleaning hammer pivotally attached to said goosenecks to strike said blade, and means to automatically operate said hammer.

6. The combination with a weeder, having a blade and having a dumping means, comprising means to raise the blade out of the ground, of a cleaning means comprising a hammer pivotally attached to said weeder and operable by the movement of said blade.

1,665,465. PREPARATION FOR CLEANING METAL PREPARATORY TO PAINTING. JAMES D. KLINGER and CLETE L. BOYLE, Detroit, Mich. Filed Dec. 26, 1925. Serial No. 77,879. 2 Claims. (Cl. 148—6.)

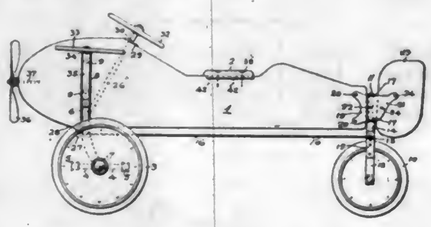
2. A preparation for cleaning metal for painting, comprising an admixture of a dilute rust attacking and removing acid, and ethyl methyl ketone in substantially the portions herein set forth.

1,665,466 AUTOMATIC TELEPHONE SYSTEM. DONALD R. MIDDLETON, Detroit, Mich., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Aug. 24, 1923. Serial No. 659,066. 10 Claims. (Cl. 179—84.)



2. In a telephone system, the combination with a common talking line provided with a plurality of subscribers' stations, of an automatic switch, a plurality of individual signalling conductors extending to said stations, respectively, and automatic means controlled over said lines for connecting said switch to any one of said signalling conductors to signal the station individual to that conductor.

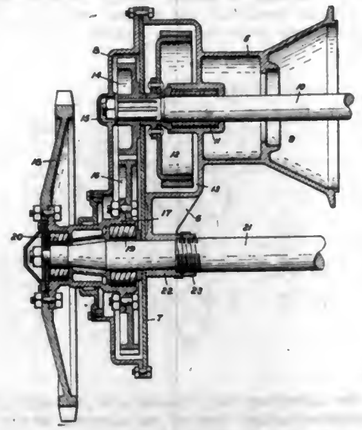
1,665,467. STAMPING DEVICE. DAVID B. MILLER, Greenfield, Mass. Filed Oct. 26, 1926. Serial No. 144,265. 11 Claims. (Cl. 101—19.)



1. In a stamping device, the combination with a stamp member having characters formed thereon, a hammer, means for moving the hammer against the said member comprising a rotatable and an eccentrically mounted disk, a latch carried by the disk for engaging the hammer for elevating the hammer, means for actuating the eccentric disk, and means for releasing the hammer supporting latch at a predetermined point in the travel of the disk, a spring for retracting the hammer when released for moving it against the member having characters, the spring operating to retain the hammer normally out of contact with the stamp member, whereby the flap of a carton may be insered between the hammer and the characters on the stamp member.

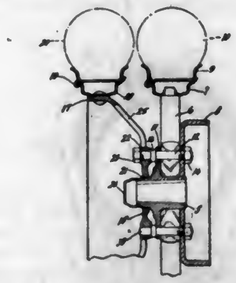
1,665,468. INTERNAL-COMBUSTION ENGINE. THOMAS E. MURRAY, Jr., New York, N. Y. Filed Apr. 5, 1922. Serial No. 549,877. 3 Claims. (Cl. 123—193.)

1. An internal combustion engine cylinder the side wall of which is of iron and the head of which is of copper throughout its thickness, the head having a flange of greater length than the thickness of the head and butt-welded at its edge to the side wall.



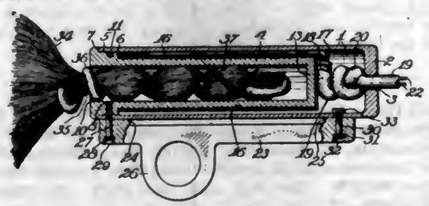
1,665,469. WHEELED TOY. LEWIS E. MYERS and ARTIE C. CARLSON, Valparaiso, Ind., and CARL S. BATES, Chicago, Ill., assignors, by mesne assignments, to The Northern Trust Company and Harold H. Rockwell as trustees. Filed Dec. 21, 1925. Serial No. 76,597. 3 Claims. (Cl. 208—42.)

1. As an article of manufacture, a body simulating a desired object, a crank shaft beneath the body at its front end, suitable separate unitary supports from the body to opposite ends of the crank shaft, a rigidly connected wheel and a free wheel on the crank shaft, a trailing steering wheel pivotally attached to the rear end of the body, an adjustable seat located on the body between the front and rear end, a steerng rod and attached wheel positioned in the body forward of the seat, and a link connecting the steering rod and the steering wheel respectively on opposite sides of the body.



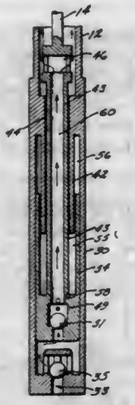
1,665,470. REAR-END ASSEMBLY FOR POWER-DRIVEN VEHICLES. EMIL F. NORELIUS, Davenport, Iowa. Filed Nov. 6, 1925. Serial No. 67,418. 7 Claims. (Cl. 180—9.1.) (Granted under the provisions of the act of Mar. 3, 1883, 22 Stat. L., 625.)

7. In a vehicle, a rear assembly embodying axle housings adapted to be secured one to each side of a central housing, said housings formed at their outer ends with extending portions, a final drive casing formed by the end piece of each housing, counter-shafts within the housings, a pinion fixed on each shaft and disposed in the final drive casing, a gear wheel in said casing meshing with the pinion, a through shaft exterior of the axle housings but passing through their extending portions



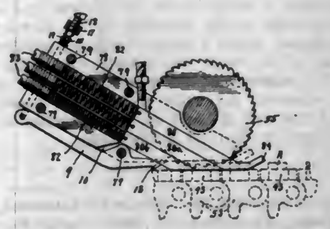
for supporting said gear wheels, and wheels supported by said through shaft exteriorly of the casing and mounted to be rotated with the gear-wheels.

1,665,471. VEHICLE WHEEL. NELS L. OLSON, Highland Park, Mich., assignor to Swedish Crucible Steel Company, a Corporation of Michigan. Filed Feb. 16, 1927. Serial No. 168,506. 4 Claims. (Cl. 301—36.)



2. A device of the class described comprising a wheel having a hub portion, a plurality of bolts engaged in the hub portion having heads intermediate their ends engaging the hub and an auxiliary wheel secured on said bolts bearing against and separated from the first wheel by said heads; said auxiliary wheel having an apertured central portion engaged over the hub.

1,665,472. ELECTRICAL HAIR CURLER. AUGUST H. OPPERMAN, Indianapolis, Ind. Filed Apr. 25, 1925. Serial No. 25,952. 2 Claims. (Cl. 219—24.)



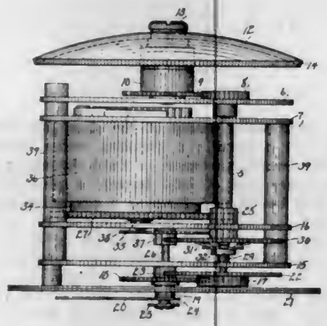
2. In an electrical heater, the combination of a tubular non-electrical casing, a tubular core in the casing secured to and supported solely at one end by one end of the casing, the core being composed of lava and having a head in the opposite inner end thereof and an open outer end, an electrical heater coil directly on the exterior of the core, an electrical conductor connected with the coil and extending through the opposite end of the casing, a handle provided with a base bar having two foot portions arranged on the outside of the casing adjacent to its ends respectively, and screws in the foot portions respectively and securing them to the casing, one of the screws being connected to the core and the other having a nut thereon at the inside of the casing.

1,665,473. PRESSURE-PACKED PUMP. EDGAR W. PATTERSON, Los Angeles, Calif. Filed Mar. 21, 1927. Serial No. 177,000. 3 Claims. (Cl. 103—179.)

1. In a reciprocating pump of the class described, the combination of: a barrel; a standing valve adapted to prevent a downward movement of fluid through an opening at the lower end of said barrel; a plunger fitting tightly in said barrel and forming a pressure-tight joinder therewith; a working valve adapted to prevent a downward movement of fluid through a fluid course formed through said plunger; and walls forming a pressure chamber which decreases in volume on the up stroke of the pump, said chamber being at all times in communication with the space above said working valve through an opening so constricted as to allow pressure in excess of the tubing pressure to be built up in said pressure chamber on the up stroke of the pump.

1,665,474. BURR CUTTER. CHARLES E. PELLOW, Detroit, Mich. Filed Mar. 14, 1927. Serial No. 175,252. 4 Claims. (Cl. 10—72.)

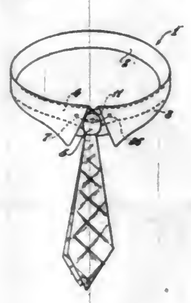
2. In a machine for cutting grooves in metal parts in which the work is carried along in engagement with cutters to permit the cutters to cut grooves across the



work, a burr cutter pivotally mounted in alinement with and in the rear of the groove cutter and comprising an inclined head adapted to slide along the groove cut in the work, said head having a cutting edge adapted to cut the burr at the exit end of such groove, and means to press said head against the work comprising a yoke engaging the cutter and a spring to tension the cutter.

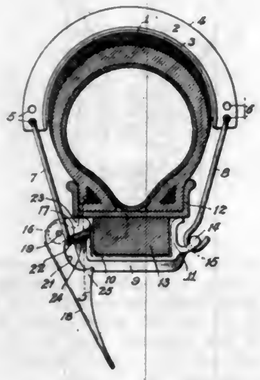
1,665,475. SCREEN. FRANCIS J. PLYM, Niles, Mich., assignor to The Kawneer Company, Niles, Mich., a Corporation of Michigan. Filed Jan. 26, 1926. Serial No. 83,849. 3 Claims. (Cl. 156—14.)

1. A screen construction comprising an integral frame composed of a single sheet of metal bent upon itself to form a flat back and side portions, said side portions being parallel throughout their length, the end of one side provided with a rolled dull edge and the end of the other side provided with a lateral projection for clamping the screen between said edge and projection.



1,665,476. CLOCK WITH ROTARY OPERATING MEMBERS. WILSON E. PORTER, New Haven, Conn., assignor to The New Haven Clock Co., New Haven, Conn., a Corporation. Filed June 20, 1925. Serial No. 38,423. 1 Claim. (Cl. 58—125.)

A clock, having a main-spring, a main-wheel driven thereby, a second arbor, a first pinion, a first wheel secured thereto and rotating therewith upon the said second arbor, friction means for yieldingly coupling the said first pinion and first wheel with the said second arbor, a center pinion driven by the said first wheel, a stationary dial, hour and minute hands therefor, a dial-train for driving the said hour and minute hands and including a minute-hand drive-wheel and an hour-hand drive-wheel rigidly mounted on the forward end of the said second arbor, a rotary operating-member located at the rear of the clock, and a train connecting the rear end of the said second arbor with the said operating-member, whereby the hour and minute hands of the stationary dial and the said operating-member are driven synchronously by the said second arbor.

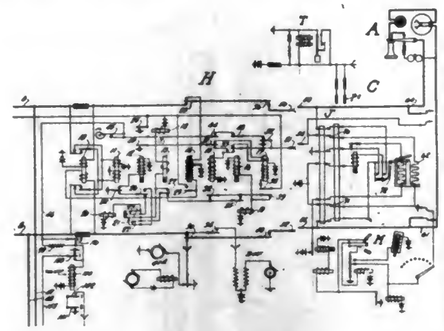


1,665,477. TIE HOLDER. RALPH H. RIDGEWAY, Springfield, Mass. Filed Sept. 30, 1927. Serial No. 223,072. 2 Claims. (Cl. 24—50.)

1. In combination, a member which is formed with an inclined inner surface and having an opening at one end, a spring actuated plunger member within said member formed with recesses to receive spherical balls, a reduced tubular portion on the plunger member to provide a shoulder part, a spring bearing against the shoulder part at one end, a washer loosely mounted on the reduced tubular extension and against which the other end of the spring bears, a knob located on the tubular

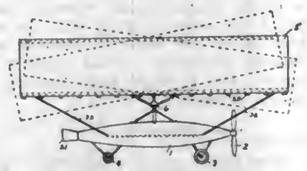
member for operating the plunger, a clutch pin located in the tubular member and in the opening of the first mentioned member, a plurality of clutch devices in the plunger member, and movably against the clutch pin by action of the spring, a tie engaging hook attached to the clutch pin member and a hook attached to the first mentioned member.

1,665,478. TRACTION DEVICE. SAMUEL G. SCHOLZ, Hutchinson, Kans. Filed Oct. 18, 1923. Serial No. 669,198. 6 Claims. (Cl. 152—14.)



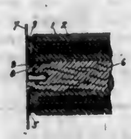
2. A traction device comprising a member adapted to be clamped to the tire of a wheel and clamping means for detachably holding the member in place, said clamping means comprising a bracket on the wheel, the bracket being formed with a lateral boss, a lever connected to the bracket and frictionally engaging the boss for holding the lever in ultimately moved position.

1,665,479. INTERCEPTING-TRUNK SYSTEM. MICHAEL SCHWARTZ, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 9, 1924, Serial No. 691,679. Renewed Aug. 26, 1927. 21 Claims. (Cl. 179—27.)



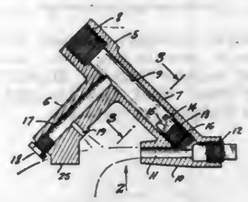
1. In a telephone system, a calling line, called lines, unassigned called lines, other called lines assigned but temporarily out of service, means including automatic

switches for extending a connection to any of said called lines, means responsive when a connection is extended to either of the latter type of called lines for automati-



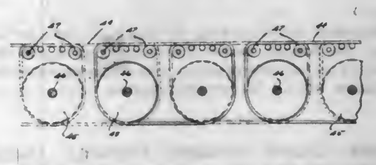
cally trunking the call to an operator's switchboard, and means whereby an operator upon answering is immediately informed of the class of line called.

1,665,480. AIRPLANE. NED M. SLEEPER, Upper Lake, Calif. Filed Apr. 13, 1927. Serial No. 183,494. 13 Claims. (Cl. 244—12.)



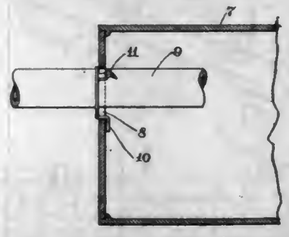
1. An airplane comprising a fuselage, a tubular aerofoil providing the main lifting and sustaining surface of the airplane mounted longitudinally above the fuselage, the mounting including a universal connection whereby the aerofoil may be angularly displaced laterally and vertically with reference to the fuselage.

1,665,481. PHOTOGRAPHIC-FILM CARTRIDGE. BENJAMIN A. SLOCUM, Binghamton, N. Y., assignor to Ansco Photo-Products, Inc., Binghamton, N. Y. Filed Oct. 30, 1925. Serial No. 65,789. 1 Claim. (Cl. 95—9.)



A film cartridge comprising a spool provided with spaced flanges and having interwound strips of sensitized film and protective material thereon, said material being wider than said film, and single longitudinal V grooves adjacent the edges of said material beyond the edges of said film, the outer sloping sides of said grooves terminating at the edges of said protective material and bearing against said flanges.

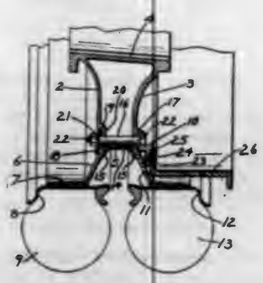
1,665,482. SPRAY NOZZLE. ROBERT M. STRONG, Los Angeles, Calif. Filed Jan. 12, 1926. Serial No. 80,696. 7 Claims. (Cl. 299—143.)



1. A nozzle structure comprising water courses having orifices directing streams of water at an angle to each other and intersecting at a substantial distance beyond the outlets of said orifices, the orifice of one of said streams producing a jet of less cross-sectional area and greater velocity than the other whereby intersecting walls of water are formed.

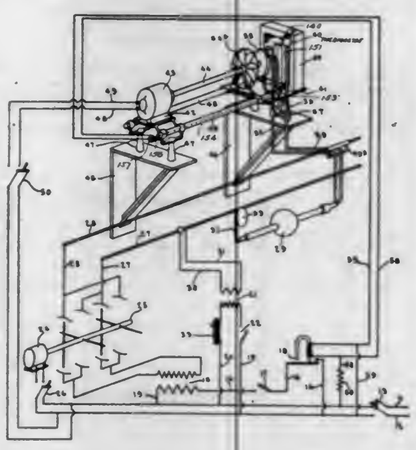
1,665,483. TRANSPORTATION SYSTEM. HERMAN E. TAYLOR, Detroit, Mich. Filed Dec. 13, 1926. Serial No. 154,559. 7 Claims. (Cl. 104—25.)

1. In a transportation system, a platform comprising a plurality of endless belt-like elements arranged in substantial longitudinal alignment and spaced drums engaged respectively by the adjacent ends of successive elements said drums being of different diameters whereby the speed of successive elements differ.



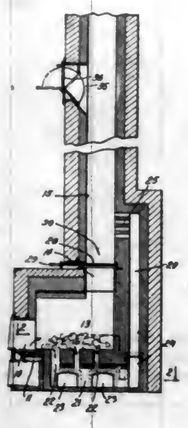
1,665,484. DEVICE FOR APPLICATION TO THE OPENINGS OF OUTLET BOXES AND THE LIKE. RALPH D. THOMPSON, Toledo, Ohio. Filed Oct. 19, 1923. Serial No. 669,482. 1 Claim. (Cl. 247—25.)

A device for application to the opening of an outlet box or the like consisting of a crotched flat sheet metal member, means therein to engage a loom, said crotched member provided at one point of its margin with a rigid tongue integral therewith to lockingly engage the edge of said box opening at one point, and a spring tongue also integral with the flat sheet metal member to engage the edge of said opening at another point, said rigid tongue first engaging the edge of the opening as a ful-



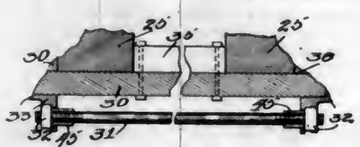
crum whereby said spring tongue may be pressed into locking engagement with the edge of the opening to cooperate with the rigid tongue to retain said crotched member to said opening.

1,665,485. METAL WHEEL. GEORGE WALTHER, Montgomery County, near Dayton, Ohio, assignor to The Dayton Steel Foundry Company, Dayton, Ohio, a Corporation of Ohio. Filed Apr. 14, 1924. Serial No. 706,237. 14 Claims. (Cl. 301—9.)



1. A metal wheel having an extended hub portion, a pair of rim flanges, means for securing said rim flanges to said extended hub portion, and a spaced between the rim flanges beyond the securing means.

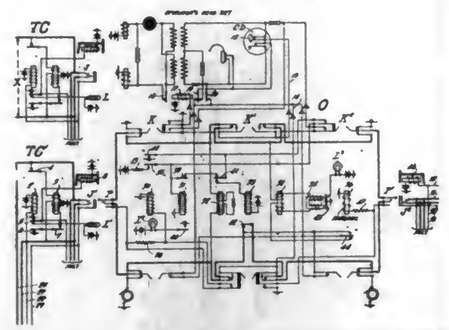
1,665,486. X-RAY COOLING SYSTEM. JULIUS B. WANTZ, Oak Park, Ill., assignor to Victor X-Ray Corporation, Chicago, Ill., a Corporation of Illinois. Filed May 10, 1924. Serial No. 712,496. 2 Claims. (Cl. 250—34.)



1. In combination, an electrical circuit for supplying power, means for shutting off such power, a secondary circuit for energizing an X-ray tube, a water-cooled tube, and a cooling system for said tube comprising a pump, radiator, fan, and thermostat, said thermostat being adapted to terminate the flow of current in said first mentioned circuit by actuating said shutting off means.

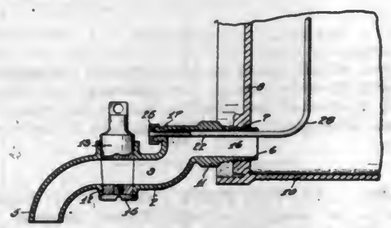
1,665,487. INCINERATOR. MONTROSS WASHBURN, Ossining, N. Y., assignor to Washburn & Granger, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 14, 1927. Serial No. 161,032. 5 Claims. (Cl. 110—18.)

1. An incinerator comprising a grate, a combustion chamber disposed above said grate, a chimney communicating directly with said combustion chamber, means for closing the direct communication between the chimney and chamber, a flue communicating with the combustion chamber from below and with the chimney above said chamber, thereby providing a down draft in the combustion chamber, and a refuse chute opening communicating with said chimney.



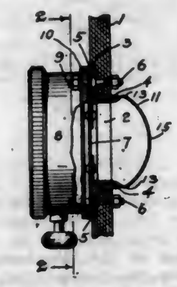
1,665,488. WELL-DRILLING DERRICK. DALLAS D. WERTZBERGER, Tulsa, Okla. Filed July 19, 1924. Serial No. 727,033. 1 Claim. (Cl. 20—0.5.)

Diagonal bracing for derrick legs comprising anchoring brackets secured to said legs and having apertures, nuts having integral bushings formed thereon and extending through said apertures, diagonal rods having right and left handed threads engaging said nuts, and lugs on the brackets engaging said nuts to prevent rotation thereof.



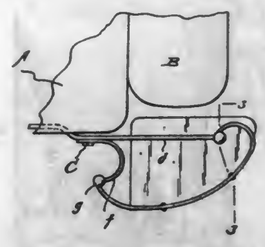
1,665,489. TELEPHONE SYSTEM. JOHN WICKE, Oak Park, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Aug. 25, 1922, Serial No. 584,214. Renewed Dec. 8, 1927. 38 Claims. (Cl. 1.79—27.)

1. In a telephone system, a trunk terminating in a jack, a line relay for said trunk, a cord circuit, a plug associated therewith and adapted to be inserted into said jack, a circuit for said relay including a conductor of said trunk, contacts of said jack, contacts of said plug, and a conductor of said cord circuit, series in a pair of normally open contacts in said trunk conductor, a manually operable key associated with said cord circuit for changing the current flow over the sleeve conductor of



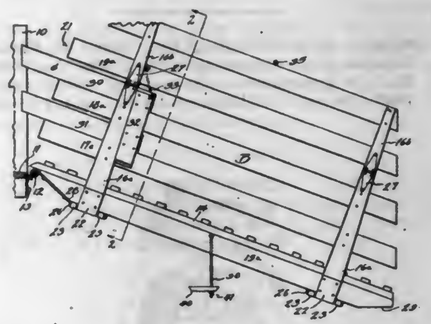
said plug, and means responsive to the actuation of said key and the resulting current change for closing said contacts.

1,665,490. COMBINATION FAUCET AND VENT. HENRY AEBLI, Enright, Oreg. Filed May 17, 1926, Serial No. 109,527. Renewed Feb. 6, 1928. 1 Claim. (Cl. 221,—28.)



In combination with a faucet of the class described having a body provided with an exteriorly screw-threaded nipple formed with a bore therethrough and a chamfered outer end leading to said bore, a vent-tube extending through said bore and formed with a flanged end engaging said chamfered end of said nipple, said tube extending inwardly and upwardly, and an apertured gland-nut screw-threaded on said nipple and securing said vent-tube in operative position.

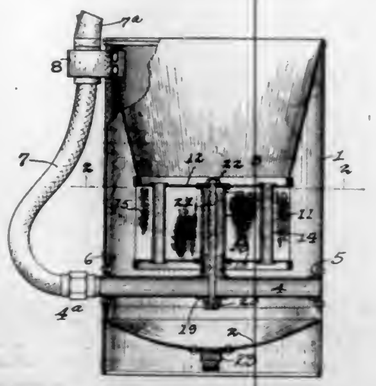
1,665,491. CLOCK MOUNTING. WILLIAM D. CLARK, Washington, D. C. Filed May 6, 1927. Serial No. 189,447. 9 Claims. (Cl. 224—4.)



4. In a quick detachable clock mounting, the combination of a clock casing, a rectangular spring clip rigidly attached thereto, said spring clip having a plurality of divergent portions and a cylindrical portion, said cylindrical portion having a maximum arc greater than the maximum distance between the divergent portions in a plane parallel with the face of the clock, a rectangular keeper plate engageable with said spring clip and means for mounting the keeper plate upon a support.

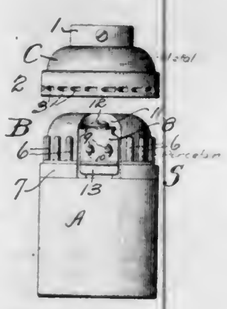
1,665,492. FENDER-GUARD PLATE. RALPH HAMILTON DANE, Portland, Me. Filed July 13, 1927. Serial No. 205,416. 1 Claim. (Cl. 293—55.)

In an automobile and in combination, a rear fender, a horizontally disposed bumper spaced in rear of said fender and having spaced rear and forward portions, and a horizontally disposed plate arranged below and against the rear and forward portions of the bumper and connected to the rear portion and extending forwardly of the forward portion of the bumper and to a point in close proximity to the fender.



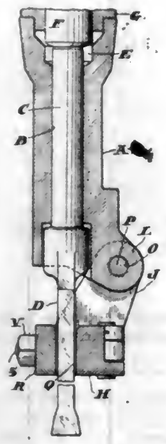
1,665,493. LOADING CHUTE. FRANK DE ROOS, Springfield, S. Dak. Filed Mar. 26, 1926. Serial No. 97,585. 3 Claims. (Cl. 296—61.)

1. In combination with a vehicle having a bottom, a combined loading chute and end gate, of width less than that of the vehicle, said loading chute having a bottom hinged to the rear end of the vehicle so as to swing from a position extending rearwardly and downwardly relative to said vehicle bottom to a substantially vertical position, serving as an end gate for said vehicle, the chute having a fixed side member, the end of which is squared to rest against the bottom of the vehicle when the chute is in its vertical position, an auxiliary sidepiece mounted on said side and slidable relative thereto, from a position extended to fill the gap between the squared end and the vehicle side when the chute is in lowered position, to a position receded rearwardly of the squared end of the chute side when the chute is in vertical posi-



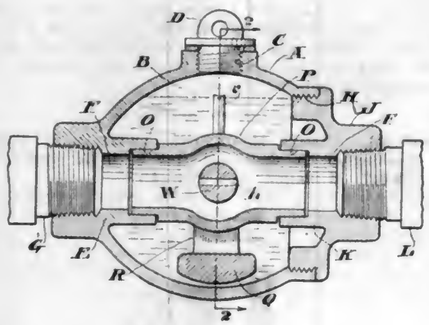
tion, the chute having another side hinged to its bottom and adapted to swing from a position at right angles to the chute bottom to a position extending under and substantially parallel thereto.

1,665,494. STRAINER. WALLACE M. DILLON, Washington, D. C. Filed Oct. 23, 1925. Serial No. 64,319. 3 Claims. (Cl. 210—149.)



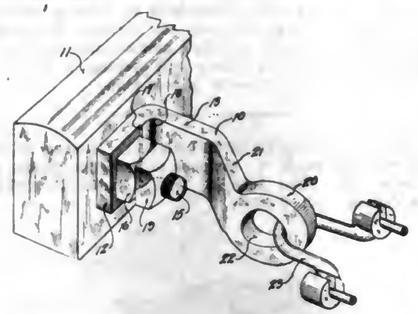
2. In a portable strainer of the character described, in combination a container, a vertically disposed filter screen of drumlike construction having its central outlet communicating with the exterior of the container, and vertical conduits extending through the filter for conducting a fluid therethrough prior to its being filtered by the vertical screen.

1,665,495. ELECTRIC SOCKET. EDGAR H. FREEMAN, Trenton, N. J., assignor to Circle F Mfg. Co., Trenton, N. J., a Corporation of New Jersey. Filed July 10, 1926. Serial No. 121,668. 4 Claims. (Cl. 173—362.)



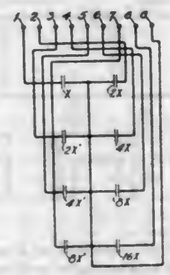
1. An electrical socket including in combination, an interchangeable metal cap and a porcelain body, said body having an integral offset portion, and a resilient metal locking tongue fastened thereto, said integral offset portion and metal locking tongue adapted to detachably interlock with the cap.

1,665,496. GUIDE FOR BROACHING TOOLS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 20, 1926. Serial No. 155,982. 3 Claims. (Cl. 121—32.)



1. In a rock drill, the combination of a front head, a flat rectangular broaching tool extending into the front head, and means pivoted on the front head and extending forwardly thereof to guide the broaching tool for preventing rotation of the broaching tool in the front head, said means being held in retaining position by the broaching tool.

1,665,497. AIR-LINE OILER. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 1, 1927. Serial No. 171,854. 3 Claims. (Cl. 184—55.)

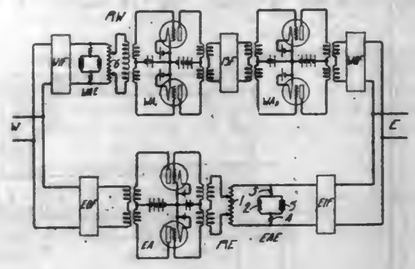


1. An air line oiler comprising a casing forming a reservoir for oil, projections in the casing having passageways for pressure fluid, a tube connecting the passageways, said tube being rotatable in the passageways, and means pivoted on the tube having a passage for conveying oil from the reservoir into the passageway, said means having a weighted portion to constantly maintain the inlet opening of the passage in the lowermost portion of the reservoir.

1,665,498. DEAD-END BRACKET. LEM E. HENDEE, Milwaukee, Wis., assignor to Line Material Company, South Milwaukee, Wis., a Corporation of Wisconsin. Filed July 14, 1924. Serial No. 725,954. 1 Claim. (Cl. 248—20.)

A dead end bracket comprising a base portion having an aperture, to receive a threaded attaching member for clamping said base portion against a support and a clevis-supporting portion projecting laterally from one side of said base portion and having an offset terminal clevis-receiving portion, extending in substantially axial alignment with the aperture in the base portion, and a nut threaded on said attaching member and bearing against said base portion, said base portion having a part spaced from said aperture to prevent turning of said nut with respect to the bracket.

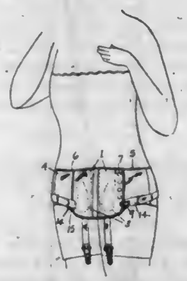
1,665,499. SYSTEM OF GROUPING UNITS. ELLERY T. HOCH, Bloomfield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 12, 1926. Serial No. 94,127. 5 Claims. (Cl. 175—41.)



5. Electrical apparatus comprising groups of two electrical units each, each unit having a nominal value from which it may vary an amount not to exceed plus or minus 33⅓%, the nominal value of each successive group, being twice the nominal value of the preceding group, said groups giving progressive steps, the maximum interval between successive steps not exceeding the maximum limit of the values of the units of the smallest valued group.

1,665,500. AIRCRAFT COVERING. ISADORE M. JACOBSOHN, Chicago, Ill., and STARR TRUSCOTT, Birmingham, Ohio. Filed Apr. 11, 1925. Serial No. 22,347. 4 Claims. (Cl. 91—68.)

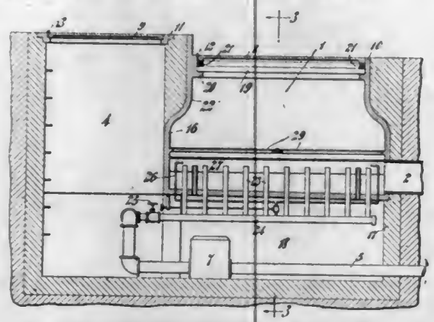
1. A method of rendering a fabric impermeable to gases and flexible consisting in applying an adhesive agent to said fabric, superimposing thereon a plurality of layers of viscose-rubber latex solution, and passing said coated fabric first through a bath of magnesium sulphate then through a bath of sodium bisulphite, then of clear water, and finally of glycerine, to convert the film of viscose-latex into one of cellulose-rubber and to render the coating insoluble in water and to render it flexible.



4. A fabric coated with gelatine having a viscose-rubber latex superimposed thereupon and treated with a plasticising agent, whereby the fabric is rendered flexible and impermeable to gases.

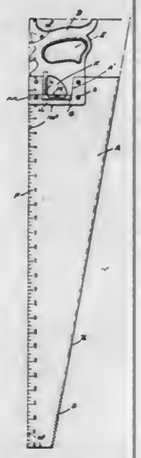
1,665,501. AMPLIFYING REPEATER. JACOB S. JAMMER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed May 22, 1928. Serial No. 640,643. 2 Claims. (Cl. 179—170.)

1. The combination of a transmission line for transmitting in opposite directions a plurality of carrier currents comprised in respective frequency ranges, said line having greater attenuation for waves of higher frequency transmitted in one direction than for waves of lower frequency transmitted in the opposite direction, and a two-way repeater comprising oppositely directed transmission paths, each path including means to select a group of carrier currents, an amplifying means and an equalizer for compensating for the unequal attenuation produced by the line in the waves of the different frequencies comprised in the respective frequency ranges, the amplifying means in the path transmitting the waves of the higher frequencies having a greater amplifying factor than that in the path transmitting the waves of the lower frequencies, each amplifying means having an amplifying factor such that the net gain over the loss introduced by the entire circuit including the line and respective equalizer is substantially the same for each frequency transmitted over the system.



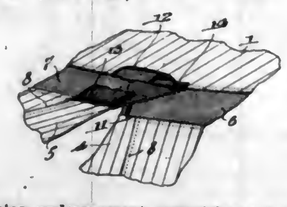
1,665,502. ABDOMINAL SUPPORT. DOUGLAS C. KELLOGG, Jackson, Mich., assignor to Kellogg Corset Company, Jackson, Mich. Filed June 8, 1925. Serial No. 35,826. 1 Claim. (Cl. 2—41.)

An abdominal belt comprising a front section having upwardly tapered bendable metal plates set therein in an outwardly inclined relation to lie over the Poupart's ligaments, said plates being adapted to retain the form into which they are bent under such stresses as they are com-



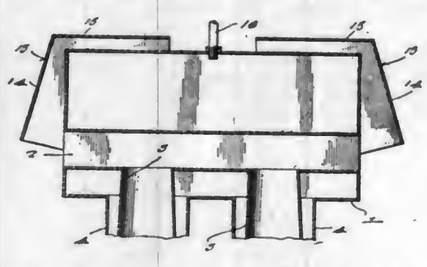
monly subjected to on the wearer, the front section being otherwise without stiffening material, hip sections connected to the side edges of said front section, the connection for one hip section to the front section being detachable, an adjustable lacing connection for the rear edges of said hip sections comprising a plurality of crossed laces, the ends of the laces being connected to tabs provided with buckles, and adjusting straps coacting with said buckles and secured to the front section in opposed relation adjacent the lower edge thereof.

1,665,503. APPARATUS FOR THE REMOVAL OF SNOW. ROSCOE PARKE MCCLAVE and STEPHEN WOOD MCCLAVE, Jr., Cliffside, N. J. Filed May 5, 1925. Serial No. 28,176. 3 Claims. (Cl. 126—343.5.)



1. In a snow disposal system, a chamber, a melting pot in said chamber, an opening to the surface of the ground from said melting pot, a removable cover for said opening, a grating adjacent said cover in said opening to prevent the insertion of large blocks of ice or packed snow, a screen below said grating to support the snow, means for heating the bottom portion of said melting pot below said screen and means for draining the melting pot.

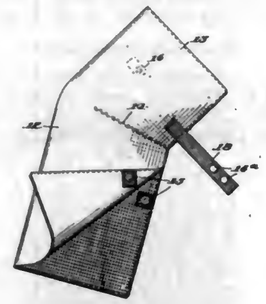
1,665,504. LEVELING SQUARE. WILLIAM MIDGLEY, Berkeley, Calif. Filed Dec. 21, 1925. Serial No. 76,837. 2 Claims. (Cl. 33—207.)



1. A mechanic's tool comprising an elongated thin flat blade tapering in width and provided with a series of graduations of length extending along the side of the blade adjacent a long edge thereof, a gripping handle embracing and secured to the wide end of the blade extending beyond the blade in flush relation with said edge and notched at points continuing said series of graduations beyond the blade and terminating at the end of the series, said blade being notched at its end within the handle and the handle formed with an opening extending transversely through the same and through the notch in the blade, and a pair of bubble glasses mounted at right angles to one another within said opening in the handle and lying within said notch in said blade.

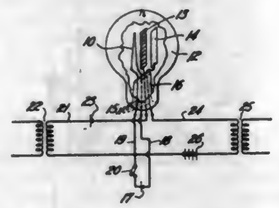
1,665,505. UNION UNDERGARMENT. JOSEPH A. MORTON, Brooklyn, N. Y., assignor to Benjamin Gibbs, Ardmore, Pa. Filed July 23, 1927. Serial No. 207,856. 4 Claims. (Cl. 2—78.)

4. A union undergarment comprising a body, legs, seat flaps, and an elastic belt connected to the body, the legs, and the upper parts of the seat flaps, said belt having elastic overlapping disconnected ends at the back of the garment which extend the seat opening up to the body, and an elastic "snubber" connecting the body and legs of the undergarment where the ends of the elastic belt overlap.



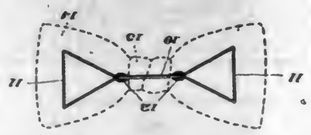
1,665,506. WATER HEATER. WALTER PFEIL and WALTER KOLMEIER, Fredericksburg, Tex. Filed July 29, 1926. Serial No. 125,722. 1 Claim. (Cl. 126—53.)

As a new product of manufacture, a water heater comprising an elongated substantially rectangular tank adapted to rest upon the top of a stove, said tank being provided with a horizontal passage opening through the opposite end walls, shields associated with the discharge ends of the passage, tubes depending from the passage, sleeves depending from the bottom of the tank surrounding the tubes in spaced relation, connecting webs between the bottoms of the tubes and sleeves, a hot water pipe connected with the top of the tank, and cold water supply pipes connected with the sleeves.



1,665,507. GARMENT. JULIUS POLLAK, Houston, Tex. Filed Feb. 17, 1927. Serial No. 169,087. 1 Claim. (Cl. 2—62.)

A garment shaped to provide a leg portion and also a thigh portion, the latter being adapted to extend some distance above the knee of the wearer so as to protect the leg and practically the entire thigh of the wearer, said thigh portion being bent or inclined relative to said leg portion so that the garment may be comfortably worn when the user is in a sitting position, said garment being closed at its front and normally open at its back throughout its length and being provided with detachable fasteners which are located near the bend

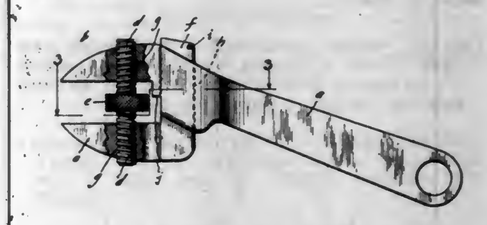


of the garment, leaving the upper and lower ends of the garment open when in use, thus affording free flexure of the knee of the wearer.

1,665,508. ELECTRON-DISCHARGE DEVICE AND CIRCUIT THEREFOR. EARLE E. SCHUMACHER, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 22, 1924. Serial No. 745,085. 2 Claims. (Cl. 250—27.)

1. In combination an electron discharge device having a cathode and an anode, an output circuit comprising said cathode, anode and a source of current and a source of heating current for said cathode, said cathode comprising a metal core having a thick shaggy thermionically active coating, means for closing said heating circuit to establish the space current flow between said cathode and anode, and for thereafter opening said heating circuit, the dissipation of energy in the coating by the flow of space current therethrough maintaining the same sufficiently hot to cause it to emit electrons.

1,665,509. BOW-NECKTIE FRAME. WILL F. SMITH, Brooklyn, N. Y. Filed Aug. 10, 1927. Serial No. 211,931. 2 Claims. (Cl. 2—154.)

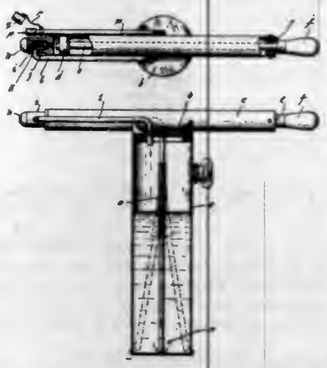


1. A bow tie frame comprising a transverse bar, and wing portions pivoted to the ends of said bar and normally held against movement relative thereto by the friction of the pivots.

1,665,510. CORD GUIDE. ARTHUR S. SPIDEL, Brewster, Ohio, assignor of one-half to E. A. Hamilton, Navarre, Ohio. Filed Oct. 18, 1926. Serial No. 142,314. 5 Claims. (Cl. 173—322.)

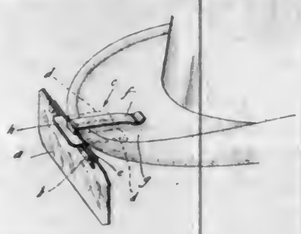
1. A cap for a separable attachment plug and the like, and a cord guide member in the cap, the cap having contact blades and base plates therefor, and the cord guide member having faces forming, together with faces of the cap, guideways for snubbing cord wires about the contact blades and directing them over the base plates and for preventing connection of the cords to the base plates without snubbing the cords about the contact blades.

1,665,511. WRENCH. EDWIN E. THOMAS, Portland, Oreg., assignor to John Kiernan, Portland, Oreg. Filed Apr. 28, 1926. Serial No. 105,316. 1 Claim. (Cl. 81—163.)



A wrench comprising a stock formed to provide a handle portion and a fixed jaw projecting beyond the handle portion, the handle portion immediately adjacent the jaw being widened and formed in such widened portion with a channel open at the ends and arranged in a plane at right angles to the face of the jaw, a portion of the wall of the channel next to and extending laterally of a jaw being cut away to provide an opening into the channel and to leave a square abutment between said opening and the face of the jaw, a movable jaw having an arm arranged at right angles to the operating face of such jaw and of a size to slidably fit in said channel, said movable jaw at the juncture of the jaw proper and arm being of a size to pass through the channel opening formed in the wall of the channel next the fixed jaw, a rod threaded in the respective jaws, and a nut secured on the rod between the jaws for operating the rod to relatively move the jaws, said nut having a thickness approximating the projection of said abutment beyond the face of the fixed jaw, whereby the jaws may be caused to approach each other to limit permitted by the abutment.

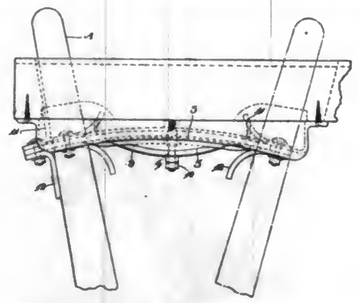
1,665,512. HAND FIRE EXTINGUISHER. EDWIN E. THOMAS, Portland, Oreg., assignor to John Kiernan, Portland, Oreg. Filed Apr. 28, 1926. Serial No. 105,317. 2 Claims. (Cl. 299—96.)



2. A hand fire extinguisher comprising a liquid container, a removable head for closing said container, a pump cylinder carried by the head and arranged at right angles to the axis of said container, said cylinder projecting at its discharge end beyond said head, a plug member closing said discharge of the pump cylinder and having a passage therethrough, an outwardly opening valve in said passage, a head removably engaging the

plug to close the outer end of the passage, a delivery pipe communicating with the passage on the outlet side of the valve and extending longitudinally of and in close proximity to the cyclinder and opening through the head of the container, and a liquid delivery tube having an open

end arranged within the container and extending through the container head, said tube beyond the container head being extended longitudinally of and in close proximity to the cylinder with the discharge end adjacent the valved end of the cylinder.

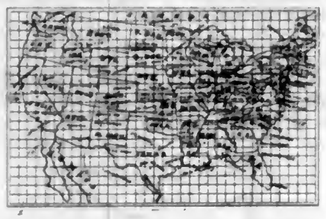


1,665,513. VISOR ATTACHMENT FOR HATS AND CAPS. EDWIN E. THOMAS, Portland, Oreg., assignor to John Kiernan, Portland, Oreg. Filed Apr. 28, 1926. Serial No. 105,318. 1 Claim. (Cl. 2—10.)

A visor attachment for hats and caps, comprising a sheet of transparent material and a frame for removably connecting said sheet to the hat or cap, said frame comprising separate bars of less length and materially less width than that of the sheet, with means for securing the bars on opposite sides of and to the sheet in alignment with the upper edge thereof, the relatively inner bar having rearwardly extending spaced parallel spring arms and the relatively outer bar having a central spring arm extending vertically from the bar and then rearwardly into spaced parallel relation with the first mentioned arms, said relatively outer bar having a forwardly extending section to serve as a finger-hold in applying and removing the attachment, the spring bars cooperating to engage the visor of a hat or cap and the connection between the relatively outer bar and its spring arm providing a space to receive the fordward edge of the visor viding a space to receive the forward edge of the visor to the sheet of transparent material.

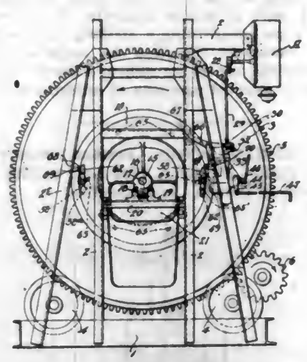
1,665,514. BUFFER FOR THE PICKING ARMS IN WEAVING LOOMS. KICHIRO TOYODA, Nagoya, Japan. Filed Aug. 23, 1926. Serial No. 130,908. 2 Claims. (Cl. 139—165.)

1. In combination with the slay of a loom and the picking arm, a buffer comprising seatings secured to the underside of said slay, pressing plates, means connecting said pressing plates to said seatings, a strap having a slot for said picking arm and frictionally held between said seatings and said pressing plates, a spring acting on



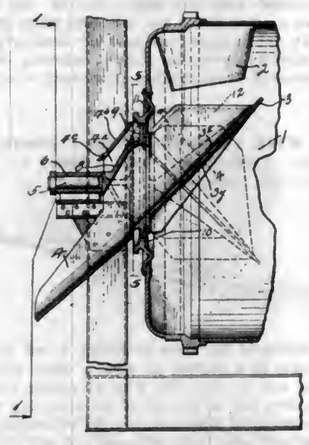
said pressing plates for maintaining said strap in frictional engagement with said seatings and said pressing plates, and oppositely diverging check-tongues provided on said strap at each end of the slot therein.

1,665,515. SINK-HEAD TOP. MAX R. TREMBOUR, Canton, Ohio, assignor to Central Alloy Steel Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 19, 1926. Serial No. 82,209. 3 Claims. (Cl. 22—147.)



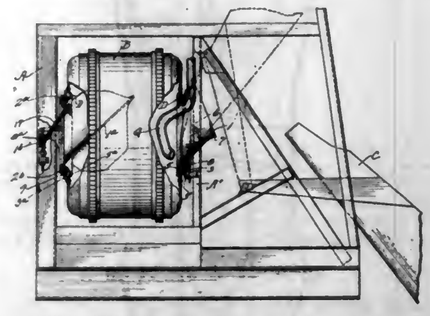
1. A sinkhead top for ingot molds, including a metal frame for resting on the upper edge of the ingot mold, permanent refractory lining for the frame, and a renewable inner lining for the permanent refractory lining.

1,665,516. DRUMMER'S GAME. JULIUS O. TUTTLE and ROY C. TUTTLE, Sioux City, Iowa. Filed Apr. 18, 1927. Serial No. 184,534. 8 Claims. (Cl. 273—134.)



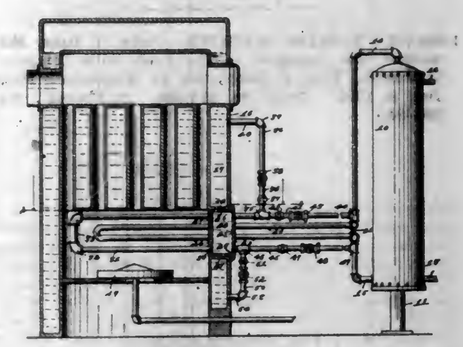
1. In a game, a board comprising a representation of a map, cities indicated upon said map, a few of said cities being distinguished from the other by distinguishing marks, and travel chips for directing a player from one city to another, a few of said travel chips having corresponding distinguished characters and when drawn while the player is at one of the cities having such distinguishing connections serving to double the score which would otherwise be had by the player on that play.

1,665,517. DISCHARGE MECHANISM FOR CONCRETE MIXERS. GEORGE E. WEBB, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Mar. 27, 1926. Serial No. 97,962. 44 Claims. (Cl. 83—73.)



1. In a mixing machine, the combination of a mixing drum, a rotatable discharge chute therefor mounted to move angularly coaxially with the axis of rotation of the drum, and means for operatively connecting the drum with the discharge chute for rotating the chute with the drum.

1,665,518. ROTARY DISCHARGE CHUTE. GEORGE E. WEBB, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Mar. 27, 1926 Serial No. 97,963. 36 Claims. (Cl. 83—73.)

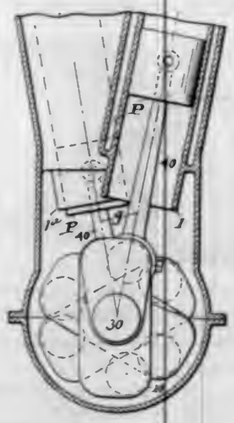


1. In a mixing machine, in combination, a mixing drum provided with a discharge, means within the drum for elevating and dropping materials mixed by the drum, a discharge chute associated with the discharge of the drum and comprising a rotative body provided with means to receive, in the direction of rotation of the body, the impact of the materials elevated by the drum and dropped therein, whereby the turning of the chute is facilitated by said impact action.

1,665,519. CONCRETE-MIXING MACHINE. GEORGE E. WEBB, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Sept. 25, 1926. Serial No. 137,665. 25 Claims. (Cl. 83—73.)

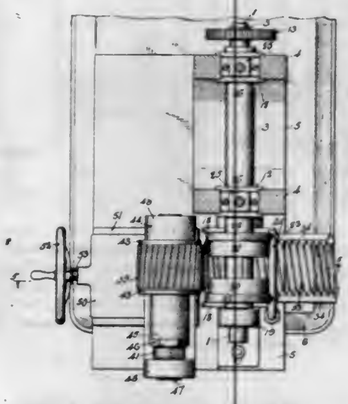
1. In concrete mixing apparatus, the combination of a mixing drum having an axial opening, a chute cooperating with and pivotally mounted at the said opening, and sealing means surrounding the chute and extending in contact with the edges of the opening.

1,665,520. WATER-HEATER ATTACHMENT FOR FURNACES. FRANZ J. WOOD, Des Moines, Iowa. Filed Mar. 10, 1924. Serial No. 698,844. 7 Claims. (Cl. 122—20.)



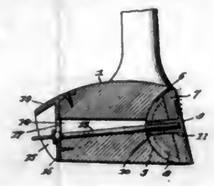
7. In combination, a hot water furnace having a fuel door opening, a hot water supply tank, an auxiliary heating unit designed to fit and be detachably mounted in said door opening, and means for communicating said heating unit with either the water compartment of said furnace or with said supply tank.

1,665,521. INTERNAL-COMBUSTION ENGINE. ERNEST L. WRENTMORE, Warren, Ohio; (Mrs.) Maude V. Wrentmore administratrix of said Ernest L. Wrentmore, deceased. Filed Aug. 25, 1920. Serial No. 405,919. 7 Claims. (Cl. 121—120.)



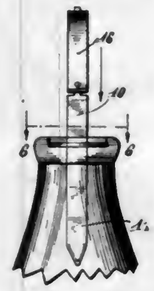
1. In an internal combustion engine having a plurality of cylinders arranged in two relatively inclined rows,—which cylinders are arranged in groups of four of which

the first and fourth cylinder of each group is in one row and the second and third cylinders of said group is in the other row, with a crank shaft having its crank pins disposed in pairs for co-operation with associated pairs of cylinders,—of which one of each pair is in one row and the other is adjacent thereto but in the other row, the crank pins of each pair being disposed one in advance of and one behind the normal plane for said crank pins,



the offsetting of said crank pins from said planes being equal to one-half of the angle between the planes in which the two rows of cylinders lie, the crank pins which are in advance of said normal diametrical planes being connected with the pistons which are in advance of a vertical plane which bisects the angle between the two rows of cylinders, and the other crank pins being connected with the pistons of the cylinders of the other row.

1,665,522. ROLLING MACHINE. JOHN M. BARR, Milwaukee, Wis., assignor to The Louis Allis Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 8, 1923. Serial No. 679,505. 22 Claims. (Cl. 29—84.)

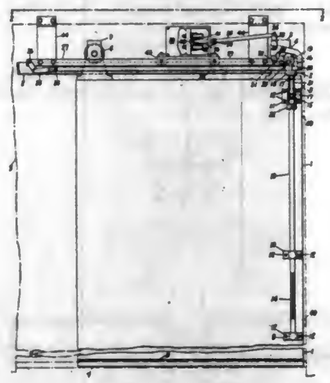


7. A machine for applying to a peripherally slotted rotor core a winding having spaced conductors joined to end rings, comprising a rotatable shaft for the rotor core, a second rotatable shaft, and means carried by the second shaft to engage the conductors and the end rings so as to force the conductors into the slots and bend the end rings.

1,665,523. GOLF CLUB. EDWARD C. BOYCE, New York, N. Y. Filed Jan. 7, 1928. Serial No. 245,123. 12 Claims. (Cl. 273—79.)

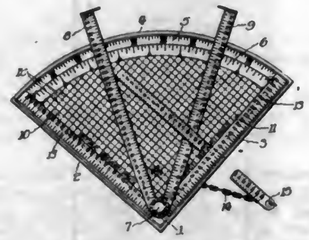
1. A golf club of the wood club type, having a head secured to a shaft, a member supported by the head and having a surface constituting a striking face, said member being mounted in the head for angular movement therein to vary the loft of the club, and means for holding said member in selected positions of adjustment.

1,665,524. CAP EXTRACTOR. EDMOND VINCENT BENOIT, Montreal, Quebec, Canada. Filed Apr. 9, 1927. Serial No. 182,435. 2 Claims. (Cl. 65—47.)



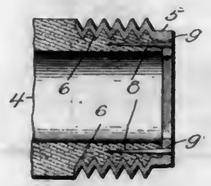
1. A device of the character described comprising a flat body bar tapered at one end having a pair of transverse slots adjacent its opposite end and extending inwardly from the side edges to a point intermediate to the said side edges, a handle formed of a continuous flat strip folded over the upper end of the bar and extending to a point above the bar slots where it is bent outwardly at right angles from said bar thereby providing a pair of laterally projecting flanges, whereby the device will be prevented from further downward movement.

1,665,525. WIRE SPLICER. ALBERT J. BOEHM, Princeton, Minn. Filed June 6, 1927. Serial No. 196,899. 2 Claims. (Cl. 254—81.)



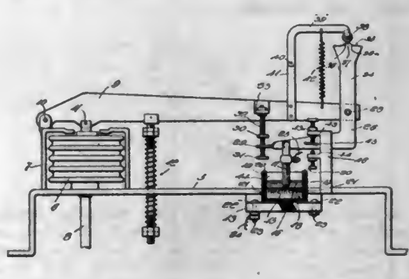
1. In a device of the class described, a rod having one end attachable to a section of wire, a chain attached to the opposite end of said rod, wire attaching means carried by the free end of the chain for attaching the same to another strand of wire, and a rigid extendible member pivotally secured at one end adjacent one end of said rod, said rod having means formed thereon for engaging said member and securing the same in extended position and permitting relative pivotal movement in one direction, and wire attaching means carried at the outer end of the member releasably securing the same against pivotal movement.

1,665,526. ELECTROMECHANICAL INTERLOCK. THOMAS BRADY, East Orange, N. J., assignor to Otis Elevator Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 2, 1927. Serial No. 172,086. 9 Claims. (Cl. 187—81.)



5. An electromechanical interlock for hatchway doors provided with an operating bar comprising, a switch, a stationary rail, a lever pivoted on one end of said rail and operatively connected to said switch, a link pivoted on the other end of said rail, a second link extending parallel to said rail, one end of said second link being connected to said first link and the other end of said second link being connected to said lever, and means connected to the operating bar and arranged, with the door closed, to cooperate with said rail to lock the door and to cooperate with said second link to cause the switch to be held in its closed position.

1,665,527. PELORUS. LEWIS A. BRINKMAN, Chicago, Ill. Filed May 31, 1923. Serial No. 642,700. 5 Claims. (Cl. 33—67.)

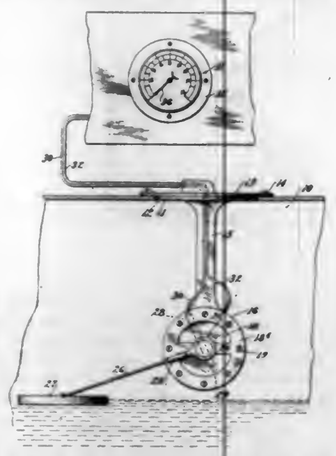


1. In an instrument of the class described, a pair of bearing arms a notched sight plate at the outer end of each arm, common sight post upon which they are pivoted, and an angularly graduated plate, the graduations embracing a quadrant at the center of which is the bearing post and the plate also having rectangular graduations respectively parallel to and in the space between the limiting radii of the quadrant.

1,665,528. ELECTRIC FUSE. HENRY T. BUSSMANN, St. Louis, Mo. Filed Mar. 20, 1922. Serial No. 545,221. 6 Claims. (Cl. 200—132.)

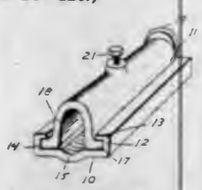
1. In a fuse, a fibre casing, a ring shaped member threaded to the casing, and a holding member to prevent rotational movement of the ring shaped member relative to the casing, said holding member extending longitudinally a relatively short distance into the casing, and being held against displacement by frictional engagement.

1,665,529. QUICK-MAKE AND QUICK-BREAK SWITCH. FORREST LE GRAND BRYANT, Johnson City, N. Y., assignor to Bryant Electric Refrigerator Corporation, Wilmington, Del., a Corporation of Delaware. Filed Mar. 10, 1927. Serial No. 174,258. 12 Claims. (Cl. 200—81.)



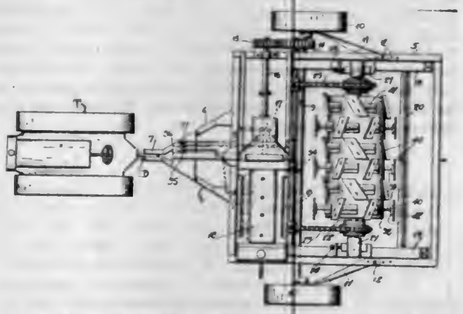
1. A quick make and quick break switch comprising stationary contact means, a member mounted for movement toward or from said contact means, a movable contact for co-action with said stationary contact means, a carrier for said movable contact, means mounting said carrier on said member for movement with respect thereto toward or from said stationary contact means, means for rapidly completing the movement of said carrier in either direction upon movement thereof to a predetermined position with respect to said member, and means for automatically moving said carrier to said predetermined position as the aforesaid member is moved toward or from said stationary contact means.

1,665,530. LIQUID-LEVEL INDICATOR. FREDERICK A. CARMONA and ALFRED M. SANDS, Berkeley, Calif., assignors to Carmona-Sands Corporation, San Francisco, Calif., a Corporation of California. Filed Nov. 15, 1921. Serial No. 515,208. 5 Claims. (Cl. 73—82.)



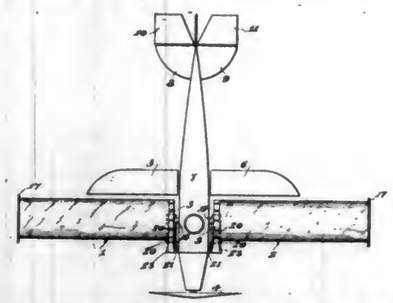
1. In a liquid level indicator for reservoirs, a pressure indicator, an expansion member having a fluid pressure passage extending to the reservoir, and said expansion member and passage containing a fluid, a float mounted to move upwardly and downwardly with the level of the

liquid within the reservoir to vary the pressure in the expansion member, having a fluid pressure passage extending to the reservoir and containing a fluid affected by tem-



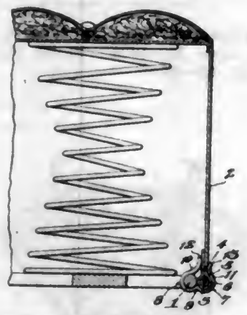
perature changes only, and connected with the said pressure indicator to compensate for temperature variations in the first named expansion member.

1,665,531. CABLE CLAMP. ELMER K. COLE, Winterset, Iowa. Filed June 21, 1926. Serial No. 117,559. 9 Claims. (Cl. 24—126.)



1. A cable clamp comprising two clamping members, one slidably mounted longitudinally with the other, each of said clamping members having its inner face provided with a longitudinal cable receiving groove, each of said grooves being deeper at one end than the other, the deeper end of one groove lying adjacent to the shallow end of the opposite groove.

1,665,532. ROTARY TYPE OF PLOW. ANCEL R. COOK, Sacramento, Calif. Filed Nov. 12, 1926. Serial No. 148,014. 4 Claims. (Cl. 97—46.)

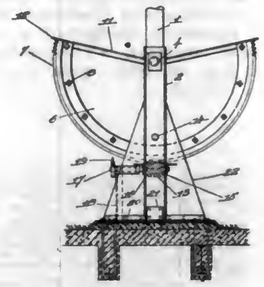


1. A plow including a main wheeled frame having means to hitch the forward end thereof to a tractor or the like, a sub-frame pivoted within the main frame for vertical swinging movement, a rotary plowing implement carried by the sub-frame, means to swing and thereby vertically adjust said sub-frame relative to the main frame, a motor mounted on the main frame, and driving connections between the plowing implement and said motor, said sub-frame embodying rigidly connected side rails of substantially U-shape to provide horizontal intermediate portions and upwardly diverging front and rear legs, the rear legs engaging the inner sides of the main frame to guide the sub-frame in its vertical swinging movements.

1,665,533. AERIAL VESSEL. OVID L. DALLY, Cleveland, Ohio. Filed Oct. 22, 1925. Serial No. 64,175. 7 Claims. (Cl. 244—14.)

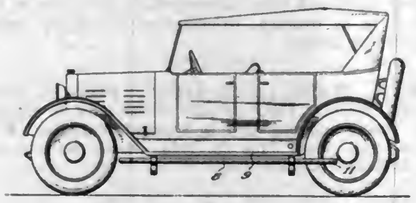
1. An aerial vessel comprising a pair of lengthwise aligned revoluble cylindrical sustaining elements to obtain a Magnus effect with the resulting force extending at right angles to the direction of travel of the vessel, and an air driven turbine fixed to the inner end of each of said elements, bodily revolving therewith and having the operating air therefro directed from the propeller of the vessel on the operation thereof.

1,665,534. BORDER-WIRE CONSTRUCTION AND ATTACHING CLIP FOR SAME. FRANK P. D'ARCY, Kalamazoo, Mich. Filed May 18, 1925. Serial No. 31,015. 5 Claims. (Cl. 155—180.)



1. In combination, a border wire, fabric having a welt paralleling said border wire, and separate clips securing said border wire and welt together at spaced intervals, said welt having a wire therein with a thick soft cover and which is greatly thinner than the border wire and readily bendable by the fingers.

1,665,535. STAFF AND MOUNTING THEREFOR. WILLIAM A. DAVIS, Malden, Mass., assignor to Babcock-Davis Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 18, 1927. Serial No. 234,284. 5 Claims. (Cl. 116—173.)

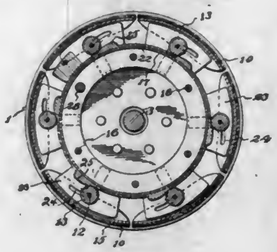


8. A staff and mounting therefor comprising a supporting base plate adapted to be secured to a roof structure, spaced uprights mounted centrally on the base,

radially extending braces to stiffen and preserve the alignment of the uprights, a pole of graduating sizes of steel tubing each size being shrunk onto the next smaller size, trunnions supporting the pole pivotally between the spaced uprights by means of a trunnion bolt journaled at either end in the uprights, a worm sector secured firmly to the base of the pole below the trun-

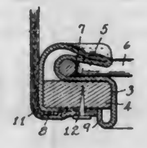
nions by means of a web sector and angle irons and having its radial center coinciding with the trunnion axis, a worm gear of small pitch meshing with the worm sector and providing unilateral transmission of motion from worm to worm sector for the purpose of moving the worm sector and thereby the pole through an oscillatory path, and means whereby the worm may be operated by a removable operating wrench.

1,665,536. MOTOR-VEHICLE BUMPER. WILLIAM A. DIEAKER, Brooklyn, N. Y. Filed Aug. 17, 1927. Serial No. 213,677. 1 Claim. (Cl. 293—57.)



The combination with the side sills of an automobile frame, of a pair of bars secured transversely thereof, resilient loops carried by the outer ends of the bars, and having collars carried thereby, bumper rods engaged in the collars, and rubber buffers carried by the ends of the bars, as and for the purpose set forth.

1,665,537. SKI ATTACHMENT. CLEOPHAS DUMAIS, Limoilou, Quebec, Canada. Filed Mar. 3, 1927. Serial No. 172,447. 2 Claims. (Cl. 208—184.)

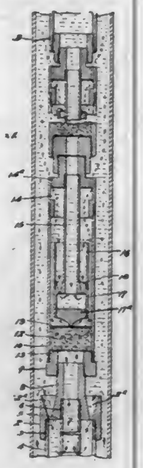


1. A ski attachment comprising an upright wire bracket secured on the intermediate portion of the ski body, a rearwardly extending tongue formed on the bracket and arranged at a downward inclination, a U-shaped spur having its forward portion pivotally connected with the bracket and its rear side portions offset laterally and pointed at the ends to normally engage the ground, the forward portion of the spur being adapted to engage the tongue of the bracket in an elevated position of the spur to limit the upward swinging movement thereof.

1,665,538. VEHICLE BRAKE. RAYMOND G. ELLIS, Snoqualmie, Wash. Filed Mar. 30, 1927. Serial No. 179,555. 6 Claims. (Cl. 188—78.)

1. In a vehicle brake, a plurality of radially movable brake shoes grouped about an axis, and a brake operating ring provided with cam lifts adapted to move the brake shoes outwardly, and other means for moving the brake shoes inwardly consisting of pins and cam slots.

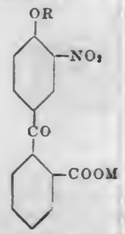
1,665,539. SPRING STRUCTURE. WILLIAM A. FALLS, Detroit, Mich., assignor to L. A. Young Industries, Inc., Detroit, Mich. Filed Mar. 14, 1925. Serial No. 15,603. 2 Claims. (Cl. 155—180.)



1. The combination in a structure of the class described with a plurality of body springs, of a supporting base therefor comprising a border frame of sheet metal conformed to provide a downwardly facing channel having an inturned flat flange at its front edge and a curved flange at its inner edge providing a bead-like support, the web portion of said strip folded upon itself providing an inwardly facing channel within which the bottom coils of said springs are clamped by the said reversely folded portion thereof, a tacking strip secured within said channel by its said flanges, and an upholstery covering comprising a skirt portion wrapped upon said border frame and tacked to said tacking strip with its edges at the outside of said flange which constitutes a guard therefor and a support for the frame.

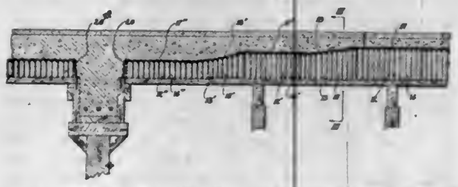
1,665,540. GAS EXTRACTOR FOR PUMPS. HENRY M. GREEN, Los Angeles, Calif.; Pacific Southwest Trust & Savings Bank, administrator of said Henry M. Green, deceased, assignor to C. M. O'Leary. Filed July 20, 1925. Serial No. 44,852. 1 Claim. (Cl. 103—220.)

Bubble breaking and gas separating means for a well, including a tubular body having an intake screen in its



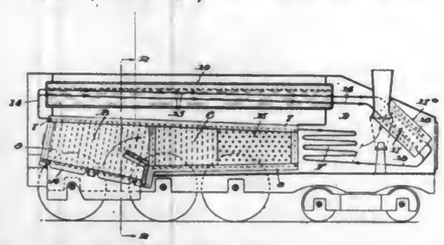
lower end to reduce gas bubbles, a closure on the head of the body having a suction nipple extending down therefrom and having gas escape holes outside of the

nipple, and a liquid trap at the bottom of the nipple having conical inlet ports to express gas from the incoming oil to the nipple.



1,665,541. PROCESS OF PREPARING ALKYL ETHERS OF 3'-NITRO 4'-HYDROXY ORTHO-BENZOYL BENZOIC ACID. IVAN GUBELMANN, HENRY J. WEILAND, and OTTO STALLMANN, South Milwaukee, Wis., assignors to The Newport Company, Carrollville, Wis., a Corporation of Delaware. Filed June 28, 1926. Serial No. 119,246. 9 Claims. (Cl. 260—64.)

7. As a new article of manufacture, alkyl ethers of 3'-nitro 4'-hydroxy-ortho-benzoyl-benzoic acid, having most probably the following formula:

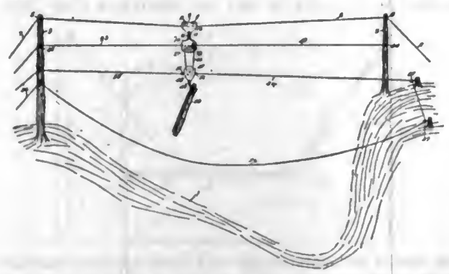


wherein R represents any alkyl group such as methyl, ethyl and the like and M represents a hydrogen or metal atom.

1,665,542. CONCRETE-FLOOR CORE. WALTER S. HALDEMAN, Chicago, Ill., assignor, by mesne assignments, to The Berger Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed Feb. 10, 1922. Serial No. 535,587. 7 Claims. (Cl. 25—131.5.)

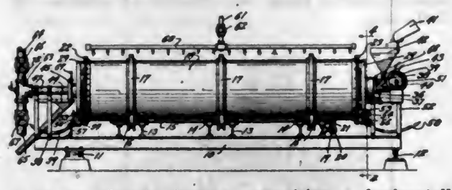
1. A core for concrete floor construction or the like, including a straight section having certain cross-sectional dimensions, another straight section having different cross-sectional dimensions, and an intervening tapered section joining the straight sections, the respective ends of the intervening section corresponding in cross-sectional dimensions to the ends of the adjoining straight sections.

1,665,543. TRAVELING PLANT FOR THE GENERATION OF HIGH-PRESSURE STEAM. OTTO H. HARTMANN, Cassel-Wilhelmshohe, Germany, assignor to Schmidt'sche Heissdampf Gesellschaft m. b. H., Cassel-Wilhelmshohe, Germany, a Corporation of Germany. Filed Sept. 23, 1924. Serial No. 739,255. 7 Claims. (Cl. 122—32.)



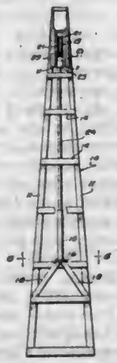
1. A traveling boiler plant for generating high-pressure steam, comprising a fire box, a channel for conveying the combustion gases from said fire box, boiler drums above said fire box and channel, hollow upper collectors forming a protecting wall below said drums to shield them from direct contact with the combustion gases flowing through said fire box and said channel, lower collectors, hollow members connecting the upper collectors with the lower ones, tubes traversing said drums and adapted to transfer heat to the contents thereof, said collectors and connecting members being arranged in groups, each group being connected to one of said tubes, and being disconnectable therefrom to enable it to be removed without interrupting the operation of the plant.

1,665,544. WHEEL-PITCH GAUGE. FRANK R. HARTSOCK, Warsaw, Ind., assignor of one-third to Charles O. Dickey and one-third to Leonard E. Dickey, Warsaw, Ind. Filed June 28, 1926. Serial No. 119,104. 3 Claims. (Cl. 33—203.)



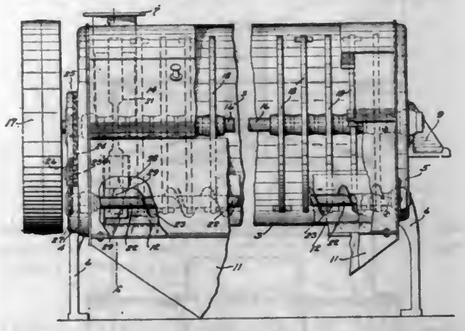
1. In a wheel-pitch gauge, a supporting member embodying a pair of bars and means for slidably connecting said bars for parallel movement, means normally tending to extend them, each bar being provided with an arm near its outer end extending forwardly with respect to said supporting member, a scale-plate at the junction of each arm and its bar, a gauge-lever pivotally mounted on the forward end of each bar and having its forward end turned outwardly for engagement with the wheel felly and having its rear end pointed and adapted to move over the adjacent scale, and a spring at the joint of each gauge-bar with its arm normally tending to swing the forward end of the gauge-bar outwardly, stops being employed to restrict this outward movement of said gauge-bars.

1,665,545. PULLEY BLOCK AND METHOD OF OPERATING PULLEY BLOCKS IN SKY-LINE SYSTEMS. CHARLES T. HASEMAN, Mill City, Oreg. Filed Oct. 21, 1924. Serial No. 744,935. 2 Claims. (Cl. 212—95.)



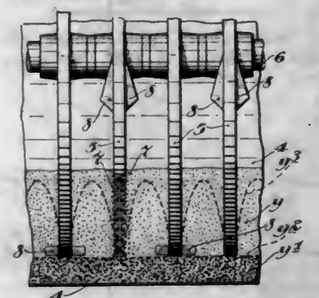
1. In an apparatus of the class described, a block traversable along a cable, said cable being reeved through said block to exert a torsional influence thereupon, and anti-friction means on the block for engaging the cable to resist said torsional influence.

1,665,546. ELECTRIC FURNACE FOR TREATING ORES, SHALES, ETC. FRANCIS E. HATCH, Denver, Colo. Filed Sept. 4, 1926. Serial No. 133,715. 8 Claims. (Cl. 263—16.)



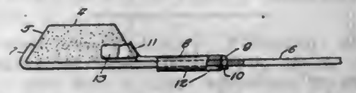
1. In an electric furnace comprising a horizontally disposed drum; a lining of refractory material in said drum; heads adapted to close the extremities of said drum; pipes communicating through said heads and extending throughout said drum through said lining; a collector carried at one extremity of said drum and connected with said pipes; and means for causing a current of air to flow through said pipes and said collector.

1,665,547. ATTACHMENT FOR WELL-DRILLING APPARATUS. CLAYTON E. HAZEL and HARRIS C. MONTGOMERY, Joplin, Mo.; said Montgomery assignor to said Hazel. Filed July 29, 1926. Serial No. 125,803. 2 Claims. (Cl. 189—16.)



1. The combination with a drilling mast including a pair of uprights, of guide plates carried by said uprights adjacent the upper ends thereof, a frame vertically movable in said guide plates, a sheave carried by said frame, a plunger secured at its upper end to said frame, a cylinder supported by said mast, a plurality of rubber cushion blocks arranged in said cylinder, the lower end of said plunger being arranged to reciprocate in said cylinder and being supported by said blocks.

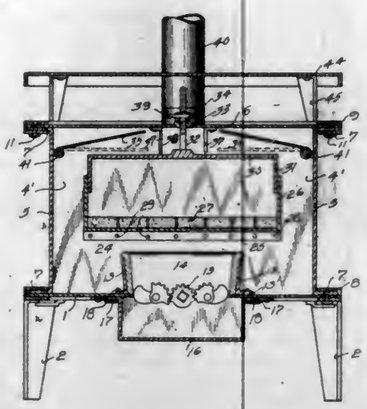
1,665,548. DISK SEPARATOR. CHARLES C. INGRAHAM, Minneapolis, Minn., assignor to Carter-Mayhew Manufacturing Co., Minneapolis, Minn., a Corporation of Minnesota. Filed June 7, 1926. Serial No. 114,094. 10 Claims. (Cl. 209—96.)



1. In a separator of the kind described, the combination with a container and a plurality of pocketed separating disks working therein, of a repeat trough at one side of said container arranged to receive commingled stock from certain of said disks, a conveyor working in said repeat trough, and means at the delivery end of said repeat trough for delivering the returned stock therefrom directly back into the receiving end of said container.

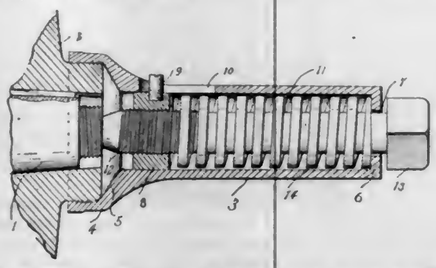
1,665,549. POCKETED SEPARATING DISK. CHARLES C. INGRAHAM, Minneapolis, Minn., assignor to Carter-Mayhew Manufacturing Co., Minneapolis, Minn., a Corporation of Minnesota. Filed June 7, 1926. Serial No. 114,117. 4 Claims. (Cl. 209—96.)

1. As a new article of manufacture, a disk-like separator having a pocketed surface and provided with a laterally projecting agitating lug located close to its periphery and projecting from its pocketed surface.



1,665,550. CONTACT HOLDER. JOHN T. JANETTE, Chicago, Ill. Filed Mar. 30, 1925. Serial No. 19,404. 4 Claims. (Cl. 200—166.)

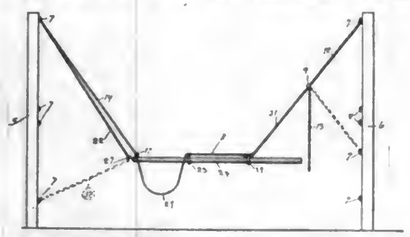
1. In a brush holder, the combination of a metal strip having one end bent at an acute angle, a contact engaging with said strip and having one end beveled to



engage with the bent portion of the strip, a clip having a tang at one end passing through a hole in the strip and having its opposite end engaging with the adjacent beveled end of the contact, said clip having integrally formed projections bent under the strip for holding it in adjusted position.

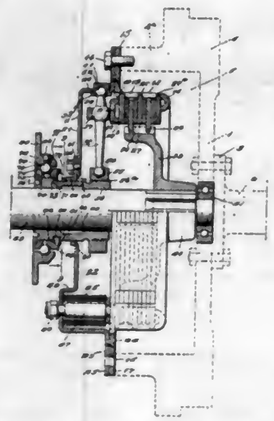
1,665,551. BAKING OVEN. MATTS JOHNSON, Spokane, Wash., assignor of one-fourth to Nels P. Nelson and one-fourth to Oscar Carlson, Spokane, Wash. Filed Mar. 22, 1924. Serial No. 700,991. 1 Claim. (Cl. 107—62.)

The combination in a furnace comprising end, side and top and bottom walls to form a heating chamber, an oven in said chamber and a grate below the oven, spaced plates attached at the under side of the top wall to form a flue located at the longitudinal center of said oven and thereabove and a smoke outlet to said flue, and oppositely disposed, hinged deflector plates at the sides of said spaced plates and adapted to swing to adjusted position between the top of the oven and the top wall of the heating chamber.



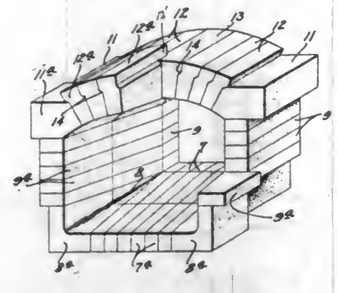
1,665,552. WHEEL PULLER. GEORGE KELL, Louisville, Ohio. Filed Oct. 24, 1927. Serial No. 228,446. 2 Claims. (Cl. 29—85.)

1. A wheel puller comprising a sleeve having a head for engagement with the hub of the wheel, a follower nut slidable in the sleeve, a feed screw engaged in the sleeve and with the nut, and a coil spring encircling the feed screw and engaged with the nut, as and for the purpose set forth.



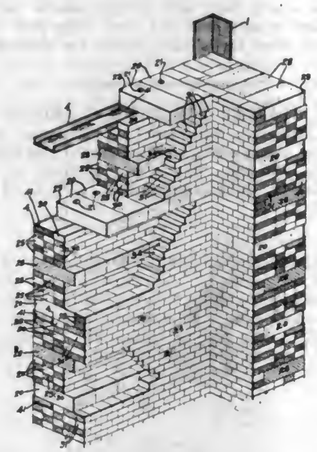
1,665,553. HAMMOCK. PAUL A. KNAPPE, Santa Rosa, Calif. Filed July 17, 1926. Serial No. 123,130. 2 Claims. (Cl. 155—67.)

1. In a hammock of the character described, comprising a fabric strip, cross pieces secured at the ends of said strip, supporting ropes attached to said cross pieces and adapted to be secured to a suitable support, a second fabric strip secured to said first fabric strip in such a manner as to form a pocket, a cross brace removably secured within said pocket, a cross brace secured at the free end of said last mentioned fabric strip, a supporting rope secured to said last mentioned cross brace



and means for maintaining said cross brace in substantially parallel alignment, said means comprising a pair of spaced members having sliding engagement with said cross braces and hooks secured in the ends of said parallel members, said hooks being adapted to engage said rope secured to said cross brace carried on the free end of said fabric strip.

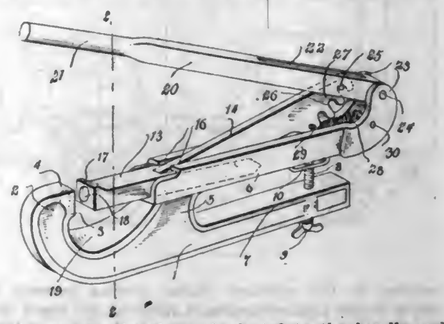
1,665,554. CLUTCH. GEORGE F. KOLB, Fairfield, Conn., assignor to The Bullard Machine Tool Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Apr. 3, 1923. Serial No. 629,578. 9 Claims. (Cl 192—69.)



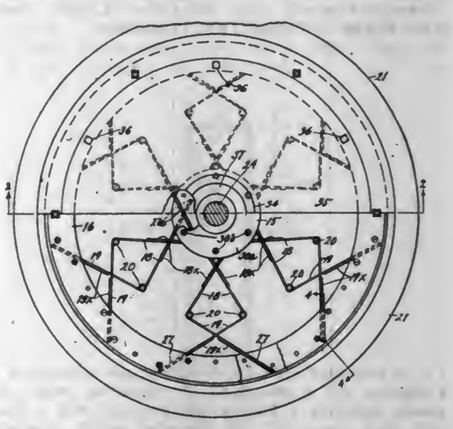
1. A substantially unitary friction clutch adapted for application to various existing motor vehicle flywheels and clutch shafts and comprising a forward housing, one or more annular driving disks therein and having splined engagement therewith, a disk abutment, an annular pressure plate centered by the housing, a rear housing connected to the forward housing, a shifter sleeve centered in relation to the rear housing, a plurality of releasing levers fulcrumed in sockets in the rear housing and having pivotal engagement with the pressure plate, the inward ends of the levers pivotally engaging in sockets carried by an inward portion of the shifter sleeve, means connecting the shifter sleeve to revolve with the rear housing and permitting longitudinal movement, one or more annular driven clutch disks located between said driving disks, a spider having a slidable and irrevoluble connection with the driven disks and also arranged for irrevoluble connection to a clutch shaft or driven shaft, a plurality of direct acting compression springs between the rear housing and the pressure plate, and a spring rod passing through each spring and connected to the pressure plate and passing movably through a hole in the rear housing.

1,665,555. FIRE-TILE DOORFRAME. MICHAEL LIPTAK, Minneapolis, Minn. Filed Apr. 10, 1924. Serial No. 705,533. 8 Claims. (Cl. 110—181.)

1. A door frame, comprising supplemental inner and outer jamb-forming blocks, and supplemental inner and outer arch-forming blocks, said inner arch-forming blocks having terminal extensions resting and slidable upon the outer arch-forming blocks.



1,665,556. FIRE WALL. MICHAEL LIPTAK, St. Paul, Minn. Filed Oct. 11, 1926. Serial No. 140,888. 16 Claims. (Cl. 72—102.)

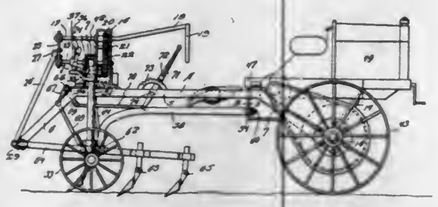


1. A wall having a permanent portion comprising a plurality of superposed channel irons extending lengthwise of the wall, rows of fire bricks laid upon the tops of the irons as headers and projecting at the inner side of the wall to form shelves, bricks filling the space between the headers and irons beneath and above the same, including only stretcher courses at the outer portion, and a replaceable portion comprising bricks laid as headers and supported between the shelf-forming headers and abutting the stretcher courses.

1,665,557. NUTCRACKER. JAMES F. MILLER, Minden, La. Filed Mar. 22, 1927. Serial No. 177,379. 4 Claims. (Cl. 146—16.)

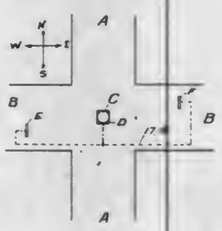
1. A nut cracker comprising an elongated body, a jaw extending upwardly from said body, a post extending upwardly from said body in spaced relation to said jaw, an arm carried by and extending rearwardly from the upper end of said post, said arm being formed with a longitudinally extending pocket opening through the forward end of the arm, the upper surface of the arm being formed with a longitudinally extending slot communicating with said pocket, a plunger slidable into and out of said pocket through the open forward end thereof towards and away from said jaw, a handle pivoted to said arm, and a link pivoted to said plunger and extending upwardly through the slot and pivoted to the handle and adapted to impart reciprocating movement to said plunger when the handle is moved.

1,665,558. SPRING WHEEL. FRED W. MONTGOMERY, North St. Paul, Minn. Filed Jan. 22, 1925. Serial No. 3,968. 4 Claims. (Cl. 152—51.)



1. In a spring wheel, a hub and a felly, said hub and felly having in their opposite sides a plurality of obliquely disposed grooves, a series of spokes arranged in pairs, each spoke comprising two members disposed at substantially right angles and connected at their inner ends, the outer ends of said members being engaged respectively with the grooves of the hub and felly, flat metal rings secured to the opposite sides of the hub and felly whereby the ends of the spokes are held against lateral movement from the grooves, and centrally apertured discs secured at their outer edges to the opposite sides of the felly, the centrally apertured portions of said discs having a sliding engagement with the plates on the opposite sides of the hub.

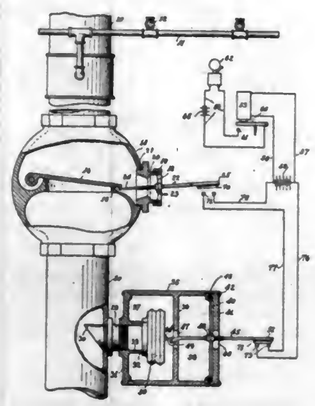
1,665,559. CULTIVATOR. THOMAS A. MOORE, Eldon, Iowa. Filed Mar. 5, 1927. Serial No. 173,065. 2 Claims. (Cl. 97—47.)



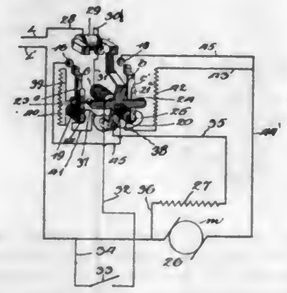
1. A machine of the class described comprising a frame, rear wheels, means mounting the rear wheels on the rear of the frame, front wheels, steering knuckles for

said front wheels, sleeves fixed to said steering knuckles and projecting therefrom vertically, a cross bar having downwardly extending ends at the tops of the sleeves, anti-friction means on the frame engaging said cross bar, an auxiliary frame rising from the first frame, a pair of horizontal shafts journaled in vertical spaced

relation in the auxiliary frame, gearing between the shafts in the auxiliary frame, a roller on the lower shaft ridable on the cross bar, a crank on the lower shaft, a connecting rod engaged with the crank and engaged with the bar, a second crank on the lower shaft, a second connecting rod engaged with the second crank, and with a crank on one of the sleeves, a crank on the other sleeve, and a connecting rod between the two last mentioned cranks.



1,665,560. VARIABLE TRAFFIC SIGNAL. ROBERT O. NELSON, Portland, Oreg. Filed May 16, 1925. Serial No. 30,865. 5 Claims. (Cl. 177—337.)

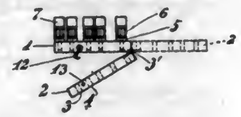


1. A signalling system arranged at the intersection of a highway and a cross road for regulating traffic, said system including a highway lamp circuit and a cross-road lamp circuit, a time controlled switch associated with said circuits for alternately opening and closing the same, said switch being normally idle in an initial position so as to normally retain the highway circuit closed and permit highway traffic to cross the intersection, means actuated by a vehicle approaching the intersection on the cross road for actuating the switch so as to alternately de-energize the highway circuit and energize the cross road circuit to successively signal the right-of-way to the cross road and highway, said means including the time controlled switch and being operative for automatically restoring the switch and the lamp circuits to their initial conditions.

1,665,561. SIGNAL-ALARM DEVICE FOR SPRINKLER SYSTEMS. JAMES G. NOLEN, New York, N. Y., assignor to Robert L. McElroy, Charlottesville, Va. Filed Nov. 11, 1925. Serial No. 68,434. 15 Claims. (Cl. 169—23.)

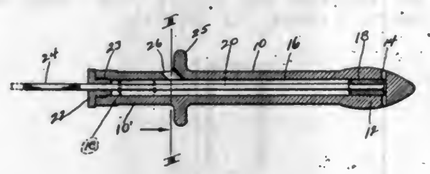
1. In combination, a conduit; a check valve therein having a valve member and a projecting stem held raised by said member when closed; a pipe passed into said conduit between the valve and the inlet end of the conduit; a casing having a vent communicating with said pipe; a bellows in the casing communicating with the pipe; a projecting lever raised by said bellows when distended; an alarm bell; and electric means including a circuit closed by said stem and lever when both are down at the same time, for bringing about the ringing of said bell.

1,665,562. STARTER FOR ELECTRIC MOTORS. WILLIAM C. O'BRIEN, Baltimore, Md., assignor, by direct and mesne assignments, to Cline Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 4, 1924. Serial No. 747,751. 5 Claims. (Cl. 172—288.)



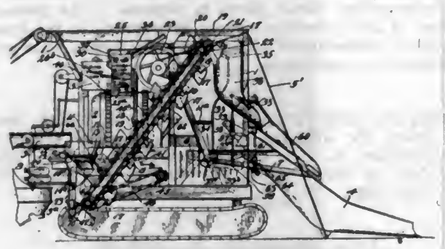
1. In a starter for electric motors, the combination of normally open, main and auxiliary contactors, a normally inoperative spring for closing said auxiliary contactor, a magnet for opposing said spring, and parts mounted on said main contactor for successively closing the circuit of said magnet and placing said spring in operative condition, substantially as described.

1,665,563. FOLDABLE POCKET PIANO KEYBOARD. ALEXANDER RAAB, Evanston, Ill. Filed Mar. 31, 1926. Serial No. 98,772. 5 Claims. (Cl. 84—467.)



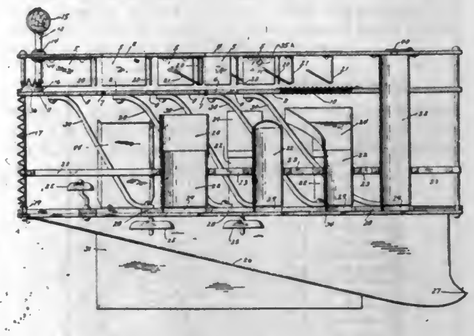
3. In a device of the character described the combination of a pair of hinged sections, the combination of a key

base having a pair of upstanding ears at one end thereof, a key pivotally mounted in said ears, resilient means interposed between said base and the underside of said key



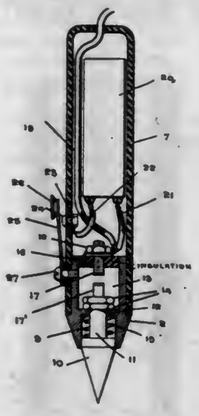
for holding said key in its normal raised position, and means for detachably connecting said base to said sections.

1,665,564. COMBINATION DILATOR AND APPLICATOR APPLIANCE. ALBERT F. REITZ, Kansas City, Mo. Filed Oct. 4, 1926. Serial No. 139,376. 2 Claims. (Cl. 128—234.)



1. A dilator comprising a hollow casing enlarged at one end and provided with openings through said enlarged end, and a plunger within said casing and having an operating rod projecting from the other end of the casing, said casing being formed intermediate its ends with an external annular flange and also having a feed opening rearward of said flange and forward of the retracted position of the plunger.

1,665,565. CEMENT LOADING, CONTROLLING, MEASURING, AND COUNTING APPARATUS FOR CONCRETE MIXERS. JOHN F. ROBB, Cleveland Heights, Ohio, assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed May 6, 1926. Serial No. 107,237. 52 Claims. (Cl. 83—73.)

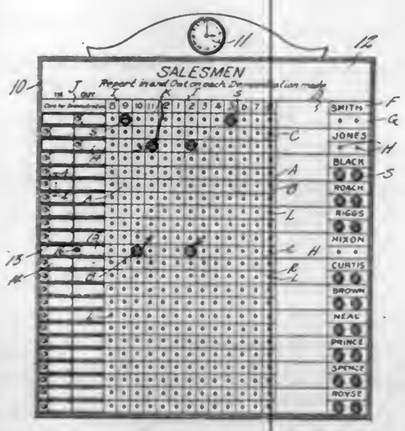


1. In combination, a concrete mixing machine, including aggregate charging means, a cement conveying device therefor, and means to cause operation of the conveying device from the charging means of the mixing machine, and stopping said device when it has conveyed a predetermined amount of material.

1,665,566. COIN-CHANGING MACHINE. WILLIAM HUNTINGTON RUSSELL, New Haven, Conn. Filed Jan. 11, 1928. Serial No. 612,081. 8 Claims. (Cl. 194—80.)

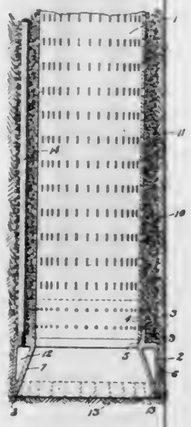
1. A coin changing machine comprising a frame, a plurality of coin carrying plates arranged to receive coins of different values, means to actuate said plates through a coin and means to eject said coin from said plate, said plates being horizontally disposed end to end and movable in said frame against a spring, coin magazines attached to said frame and means selectively connected to the coin carrying plates for ejecting coins of selected denominations from said coin magazines.

1,665,567. IGNITION TESTER. WILMER JENNINGS SLIFER, Easton, Pa. Filed Apr. 8, 1925. Serial No. 21,519. 7 Claims. (Cl. 175—183.)



5. An ignition tester comprising a bridging unit for the breaker of an ignition system and having a terminal prod, said prod including a handle, a testing condenser in said handle, and two independently operable circuit closers assembled with said handle, one circuit closer being connected in series with the condenser and bridging unit and the other circuit closer being connected in series with the bridging unit and bridging said condenser.

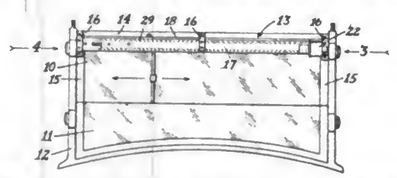
1,665,568. REPORT BOARD. EDWARD R. SPIEGEL, Dallas, Tex., assignor of one-half to John W. Miller, Dallas, Tex. Filed Sept. 30, 1927. Serial No. 223,176. 6 Claims. (Cl. 116—136.)



6. A report board comprising a plurality of vertical columns having indications and including transverse

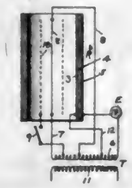
alined spaces formed with receiving recesses, an indicator comprising a plug and head, a key upon the plug entering a seat in the recess to prevent rotation therein, and

a rotatable sleeve surrounding the head and provided with characters adapted to register with the column indications and qualify the same.



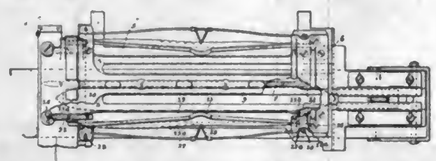
1,665,569. WELL-CASING SHOE. JACOB VON GUNTEN, Massillon, Ohio, assignor to The Ohio Drilling Company, Massillon, Ohio, a Corporation of Ohio. Filed May 31, 1923. Serial No. 642,499. 2 Claims. (Cl. 166—9.)

1. A shoe for well casings provided with a water chamber, ports communicating with the water chamber and extended through the lower edge of the shoe and a pipe connected to the water chamber and extended upward alongside of the casing.



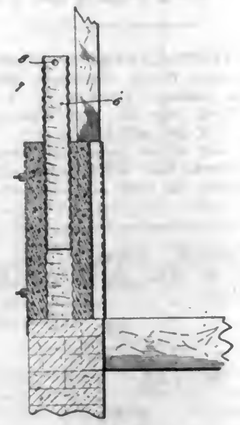
1,665,570. ELECTRIC WINDSHIELD WIPER. LAWRENCE W. WATERS, Los Angeles, Calif. Filed Feb. 19, 1927. Serial No. 169,525. 1 Claim. (Cl. 15—253.)

In windshield wiper mechanism, an elongated stationary horizontal hood of angle iron formation in cross section, said hood having in cross-section an upwardly arched portion and a downwardly arched portion, forming runways, a carriage having a plurality of wheels



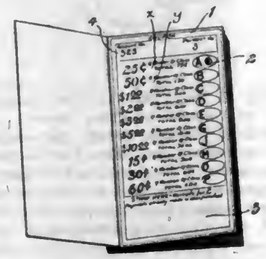
engaging said runways to travel therealong, a windshield wiper element mounted on said carriage, and means for reciprocating said carriage.

1,665,571. ELECTRICAL TRANSLATING APPARATUS. FRANK N. WATERMAN, Summit, N. J., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Continuation of application Serial No. 648,447, filed June 29, 1923. This application filed Oct. 19, 1923. Serial No. 669,578. 2 Claims. (Cl. 250—27.)



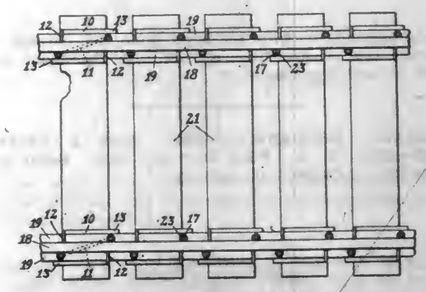
2. In combination, a filament, a primary circuit including a source of current for heating said filament, a plate, a plate circuit including said filament and said plate and a source of current for imparting high velocity to electrons emitted by said filament when the latter is heated by the primary circuit, a grid interposed between said filament and said plate, a grid circuit including said filament and said grid and a source of current for controlling the electron stream flowing from said filament to said plate, a thermo-sensitive substance in contact with said plate and arranged to be heated by bombardment due to electrons flowing from said filament to the plate said substance having the characteristic of varying in electrical resistance in response to variations in its temperature, and a secondary circuit including said thermo-sensitive substance and a source of current whereby the amount of current flowing in the secondary circuit varies in response to the temperature of said substance and so in response to the intensity of bombardment due to electrons flowing from said filament to said plate.

1,665,572. SHUTTLE BOX. WILLIAM S. WELLS, Bethlehem, Pa., assignor to Benjamin Eastwood Company, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 10, 1924. Serial No. 742,768. 2 Claims. (Cl. 139—185.)



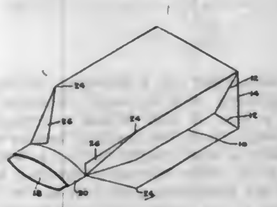
1. A shuttle box having opposite walls between and in wiping contact with which the shuttle moves when in the box, each of said walls having an elongated and substantially straight shuttle-wiped surface extending lengthwise of the shuttle path and which is in permanent substantial parallelism with such surface of the other wall from the entrance end to approximately the other end of the box and one of said walls being elastically yielding from the other and coactive with the latter to grip the shuttle, and the box having at said other end thereof and at both sides of said path stops arranged to be simultaneously engaged by, and thus adapted to check such entering movement of, the shuttle.

1,665,573. CORE FOR HOLLOW-WALL CONSTRUCTION. BRADLEY P. WHEELER, Jr., Buffalo, N. Y. Filed Nov. 20, 1925. Serial No. 70,266. 2 Claims. (Cl. 25—128.)



1. A core for concrete construction work, comprising a cylindrical member having broad rounded high pitch threads on its outer face and adapted to be imbedded in concrete and moved upwardly by the rotation therein the concrete.

1,665,574. COUPON BANK DEPOSIT BOOK. WILLIAM H. WILKES, New York, N. Y., assignor to National Advertising Corporation, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 31, 1925. Serial No. 6,029. 3 Claims. (Cl. 283—59.)

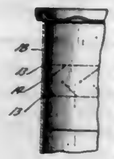


1. A bank deposit book comprising a plurality of detachable coupons, each of said coupons in the book being in superimposed relation with respect to all the other coupons in the book, indicia representing a number of different classes of depositors on said coupons, an indicated space on each coupon corresponding to each indicium thereon, the spaces of the different coupons being in substantially exact superimposed relation whereby all the coupons of the book may be punctured in a single operation in advance of issuance of the book, and said indicia being of such nature as to indicate that all the coupons of the book have been appropriated to a particular class of depositors when superimposed spaces throughout the book have been punctured.

1,665,575. RAIL AND TIE CLAMP. FRANK WILSON, Sr., Los Angeles, Calif., assignor to Annie Wilson Reboul, Los Angeles, Calif. Filed May 3, 1927. Serial No. 188,580. 1 Claim. (Cl. 238—305.)

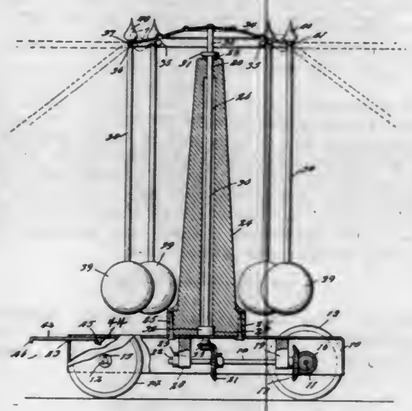
In combination with rails and ties, a clamp comprising a plate placed between the rail and tie, bracing flanges struck up vertically and in spaced relations to the side edges of said plate and engaging in an edgewise manner with the rail above its base, there being aligning holes through the base flange of the rail and through the side portions of said plate where they project beyond their upstanding flanges, and fastening bolts extending through said aligned holes.

1,665,576. BAG OF PAPER OR OTHER FLEXIBLE MATERIAL. CARL A. WITHAM, Minneapolis, Minn. Filed Nov. 12, 1926. Serial No. 147,915. 2 Claims. (Cl. 229—53.)



1. A bag of paper or other flexible material having vertical sides manipulated at the upper end of the bag to reduce the cross section thereof, oppositely disposed tongues extending up from said reduced portion, and a straplike piece of material secured around said tongues to produce a single restricted opening.

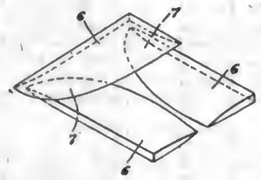
1,665,577. CONTAINER. JOHN M. YOUNG, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed May 22, 1922. Serial No. 562,898. 1 Claim. (Cl. 220—53.)



A can comprising a body having a top closure, and provided with internal scoring therebeneath adapted to permit severance of a tearing strip from the can to open it, and a band having its ends connected in a lock

seam and presenting a smooth substantially continuous outer face in contact with the body, said band being arranged circumferentially within the can and in tight

metal-to-metal fit with its inner wall and adapted to protect said scoring from contact with the liquid content of said container.

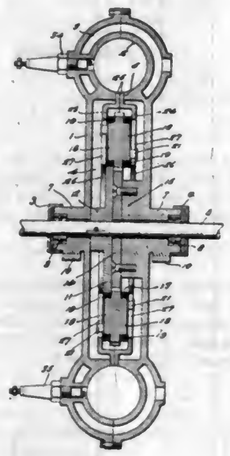


1,665,578. MECHANICAL TOY. JOHN J. BECKER, Brooklyn, N. Y. Filed Dec. 22, 1925. Serial No. 76,952. 7 Claims. (Cl. 46—48.)

7. In a mechanical toy, a traveling carriage, rotatable wheels supporting said carriage, rotatable means actuated by a pair of said wheels including a vertical shaft extending above the carriage, means for supporting said shaft, a disk fixedly secured to the upper end of said shaft to rotate therewith, the disk having incut sections at its periphery, and a series of independent arms pivoted at the upper ends in said sections of the disk, the arms each having an enlarged lower end and also an enlarged upper end, the latter being adapted to engage the disk to limit the outward swing of the arms.

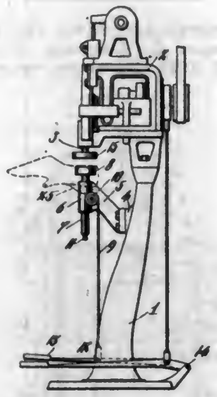
1,665,579. PROCESS OF MAKING HORSESHOE RANDS. OTIS T. CRAFTS, Manchester, N. H., assignor to Crafts Process, Inc., Manchester, N. H., a Corporation of Maine. Filed Jan. 28, 1927. Serial No. 164,208. 1 Claim. (Cl. 36—78.)

That improvement in the art of producing leather rands for use in the manufacture of boot and shoe heels, which consists in assembling a plurality of waste leather sections of varying thickness, each section formed from wedge-like waste material, utilizing such sections with the thicker edge of the wedge-like portion positioned in the outermost edge of the finished rand, overlapping and securing the wedge-like sections together by adhesive independent of separate scarfing or beveling actions on the contacting surfaces of said sections, ap-



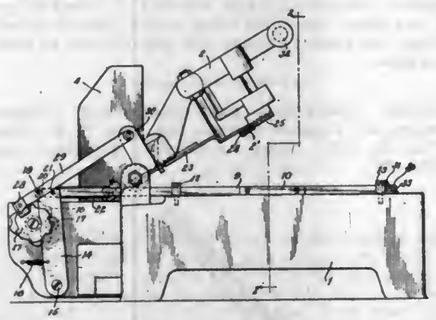
plying pressure thereto, dieing out the united sections into desired horseshoe form, and thereupon subjecting the blank to a cutting action to form a rand-like rim.

1,665,580. MANUFACTURE OF STENCIL SHEETS. ALEX BROOKING DAVIS, Cincinnati, Ohio, assignor to A. B. Dick Company, Chicago, Ill., a Corporation of Illinois. Filed May 20, 1926. Serial No. 110,571. 5 Claims. (Cl. 41—38.6.)



1. A type and stylus impressible stencil sheet consisting of a porous base sheet coated with a homogeneous film including the fatty acid ester of a carbohydrate gum.

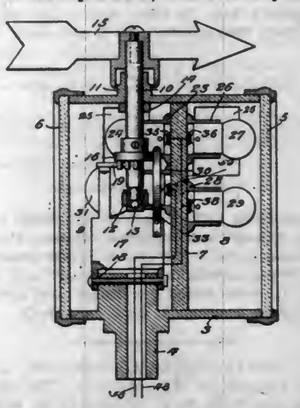
1,665,581. MOTOR. HENRY F. DENY, Marydel, Md. Filed Sept. 30, 1925. Serial No. 59,664. 2 Claims. (Cl. 123—11.)



1. A motor of the class described, comprising a casing having an annular chamber therein and an inner chamber, a shaft passing through the casing, a member fastened to the shaft and having holes therein, pinions rotatably mounted in the holes, a stationary gear in the casing meshing with the pinions and around which said pinions travel, each pinion having a crank pin at each side thereof, the pins being arranged at opposite points on the pinion, a pair of saucer shaped plates enclosing the outer periphery of the pinion carrying member, each plate being slotted to receive the crank pins of the pinions and each plate having portions extending into the annular chamber, a set of pistons connected with each plate, one set being alternately arranged with respect to the other set, the chamber having inlet and exhaust ports in its walls which are controlled by the moving pistons and ignition means associated with the chamber.

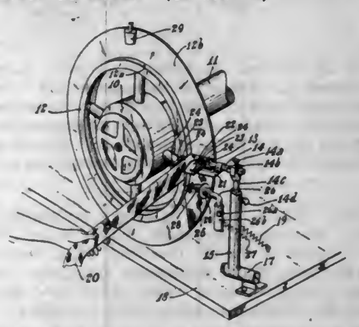
1,665,582. METHOD OF AND MACHINE FOR ATTACHING COUNTERS TO TURN SHOES. MILTON L. DODGE, Newburyport, Mass. Filed Dec. 10, 1923. Serial No. 679,550. 12 Claims. (Cl. 1—19.)

1. The method which comprises inserting a molded counter within the upper of a turned shoe, seating the counter firmly against the heel portion of the upper, pressing the marginal heel seat portion of the counter against the upper and the marginal heel seat portion of the sole, and while the parts are so held pressed fixing the counter in position.



1,665,583. HAND ADDRESSING MACHINE. JOSEPH S. DUNCAN and HENRY E. HUBBARD, Chicago, Ill., assignors, by mesne assignments, to Addressograph Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 26, 1925, Serial No. 52,502. Renewed July 11, 1927. 17 Claims. (Cl. 101—57.)

1. A machine of the class described comprising a platen, a printing device with which said platen is adapted to co-operate, a cut-off plate adapted to cover a portion of said printing device, and means operated by movement of said platen to shift said cut-off plate to uncover different portions of said printing device.



1,665,584. SIGNAL SYSTEM AND DIRECTION INDICATOR FOR AUTOMOBILES. CHARLES F. A. EDDY, New London, Conn. Filed July 20, 1923. Serial No. 652,810. 4 Claims. (Cl. 177—327.)

3. A direction indicator including a casing having a transverse partition therein separating the casing into front and rear compartments, a movable signal mounted on the casing above the top thereof, means for moving said signal, illuminating means within and for illuminating said compartments, each of said compartments having openings in the top thereof, and secondary illuminating

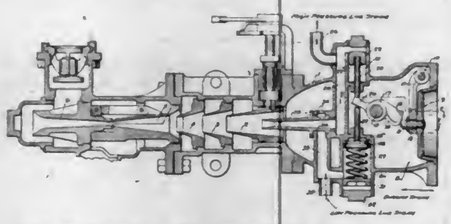
means within the front and rear compartments, connected together and in position to simultaneously shine through the openings.

1,665,585. METHOD AND APPARATUS FOR MAKING LAMINATED ANNULAR ARTICLES. MAX W. ESCH, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Feb. 29, 1924, Serial No. 695,990. Renewed Feb. 28, 1928. 14 Claims. (Cl. 154—1.)

1. The method of making a laminated, annular article which comprises winding a strip of sheet material into an annular, laminated structure of a form other than flat, of which the greatest diameter, during the winding, has its termini at one edge of the strip, flattening said structure to a disc-like, annular form with laminations lying substantially in parallel planes, and fixing said structure in such flattened form.

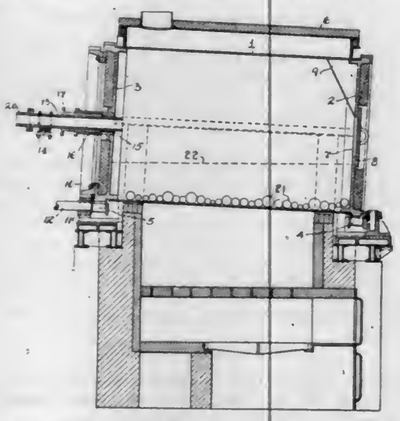
10. Apparatus for making laminated, annular articles, said apparatus comprising a form having a non-cylindrical, annular face, approximately straight in cross-section, and a roller adapted to run longitudinally on said face, following the latter, to press the work thereagainst, means for yieldingly urging said roller towards said face, and means for so guiding a strip of sheet material onto said roller as to cause the strip to pass partly around said roller to the nip of said roller and said form.

1,665,586. AIR-BRAKE VALVE. SAMUEL J. EVANS, Princeton, W. Va. Filed Dec. 20, 1926. Serial No. 155,962. 11 Claims. (Cl. 303—58.)



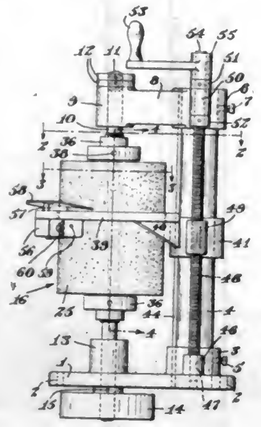
2. A valve comprising a tubular body having inlets at its opposite ends and having a delivery outlet intermediate its ends, said valve having a pair of inwardly

facing valve seats respectively located between said outlet and said inlet, a pair of piston valves slidable in said tubular body between said valve seats and each adapted when in contact with its valve seat to cut off communication between the adjacent inlet and said outlet and



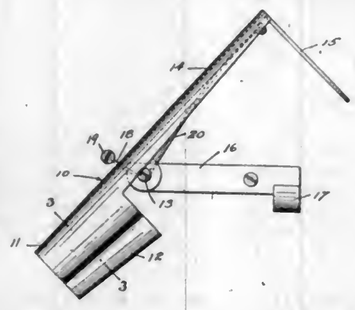
also adapted when at the limit of its stroke away from its seat to permit communication between the adjacent inlet and said outlet, said piston valves being operable in unison by pressure fluid from either of said inlets, and friction latch means tending to retain said piston valves in any adjusted positions in said valve body.

1,665,587. EXHAUST-STEAM INJECTOR. JOSEPH F. GRIFFIN, Teaneck, N. J., assignor to The Superheater Company, New York, N. Y. Filed May 15, 1926. Serial No. 109,304. 12 Claims. (Cl. 103—265.)



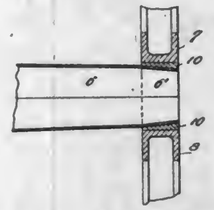
1. In an injector, the combination with an exhaust valve opened by exhaust steam pressure, of a movable element engaging said valve to lock it in closed position, resilient means urging said element to locking position, and means for moving said element out of locking position against the action of said first named means.

1,665,588. METHOD OF MAKING HYDROFLUORIC ACID. WILLIAM J. HARSHAW, Shaker Heights Village, and CHARLES S. PARKE, Cleveland, Ohio, assignors to The Harshaw, Fuller & Goodwin Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 19, 1925. Serial No. 10,261. 4 Claims. (Cl. 23—153.)



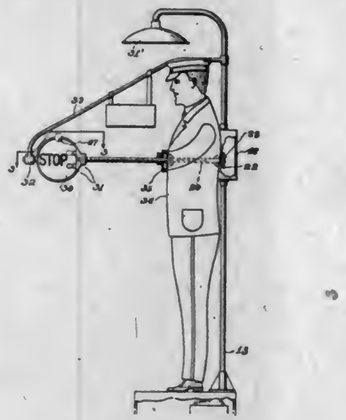
1. A method of making hydrofluoric acid, which includes heating a mixture of a fluoride and an acid capable of reacting therewith to free such hydrofluoric acid, such fluoride being in broken, fragmentary, in contradistinction to ground, form; and removing sulphate coating from the surface of the fluoride fragments to allow further action.

1,665,589. SANDING, SCOURING, AND BUFFING MACHINE. LESLIE L. HARTWELL, Winchester, Mass. Filed June 7, 1927. Serial No. 197,217. 7 Claims. (Cl. 51—98.)



1. A machine of the kind described, comprising a base, a standard mounted on said base and secured thereto, an arm secured to the upper end of said standard, a rotatable shaft mounted in said base and said arm, an abrasive member secured to said shaft for rotation therewith, means to rotate said shaft, a plate located adjacent to said abrasive member, a clamp on said plate slideably fitted around said standard, a threaded boss on said clamp, and a feed screw located adjacent to said column and passing through said boss to raise or lower said plate.

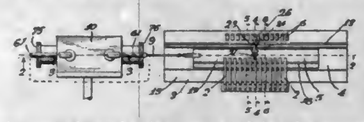
1,665,590. UMBRELLA AND CANE RACK. ISIDORE HIRTZ and VINCENZO OLIVERI, New York, N. Y. Filed July 16, 1926. Serial No. 122,773. 2 Claims. (Cl. 211—63.)



1. A rack comprising a base plate, a barrel pivoted thereto, an extension on the barrel, a guide loop on the extension, and a hook on the plate for engagement with an article when placed in the rack to hold the same against accidental removal.

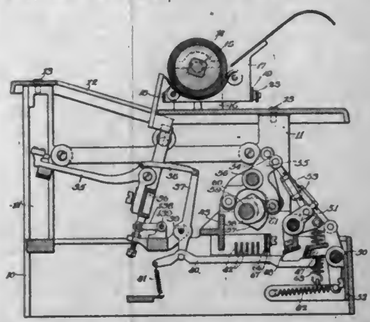
1,665,591. SAND-DREDGING PIPE AND PROCESS OF MANUFACTURE THEREOF. JOSEPH J. KANE, Galveston, Tex., assignor to Kane Boiler Works, Galveston, Tex. Filed Feb. 10, 1927. Serial No. 167,306. 4 Claims. (Cl. 78—14.)

3. A process of manufacturing pipe sections consisting in placing the smaller end of a tapered pipe section between a pair of female die members having semi-frusto-conical recesses, heating a pair of opposed portions of the smaller end adjacent the centers of the dies and moving the dies towards each other to increase the taper of said smaller end and thicken the heated portions thereof.



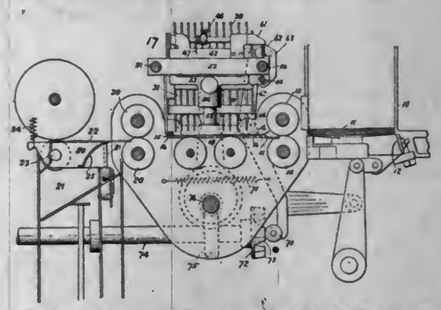
1,665,592. CROSSING SIGNAL. JAMES W. KENNEDY, Canton, Ohio. Filed Aug. 13, 1923. Serial No. 657,049. 1 Claim. (Cl. 177—329.)

In a signaling device for street intersections, a signal, a lamp, means for moving said signal from non-signaling position to signaling position, including a magnet, vehicle operated means for energizing said magnet on the approach of a vehicle, to the intersection, latch means for retaining said signal in signaling position and for energizing said lamp, a magnet for maintaining said latch in operative position, a circuit for said magnet, means including a dash pot actuated by said signal operating means to close the circuit to said last mentioned magnet for delaying the release of said latch for a predetermined time after the operation of said signal.



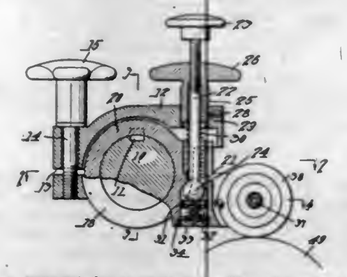
1,665,593. CHROMATIC SCALE AND SOLO-NOTE-SELECTING DEVICE FOR ORGANS AND PIANOS. JOSEPH W. KLEIN, Los Angeles, Calif. Filed Mar. 22, 1926. Serial No. 96,554. 20 Claims. (Cl. 84—337.)

4. A scale running instrument comprising in combination a keyboard, a slide bar, a plurality of connectors electrically connected to the keys, said connectors being electrically connected to the slide, a pneumatic device to operate the slide, electric control means operatively connected to the slide to control the pneumatic device and



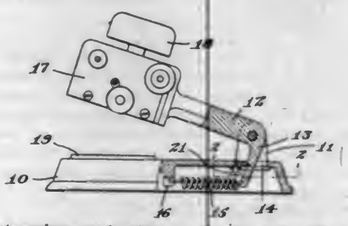
electric control mechanism operated by the movement of the slide to sound a series of notes consecutively by the movement of the slide.

1,665,594. TELEGRAPH PRINTER. HOWARD L. KRUM, Chicago, Ill., assignor, by mesne assignments, to Morkum-Kleinschmidt Corporation, Chicago, Ill., a Corporation of Delaware. Filed June 13, 1924. Serial No. 719,766. 15 Claims. (Cl. 178—27.)



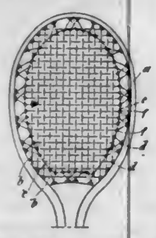
1. In combination in a telegraph printer, a set of type bars, actuating bar connected thereto, a common operating member, a set of permutation bars spring held in normal position for selecting said actuating bars, a set of selectors responsive to receive code combinations and provided with yielding spring means for effecting the selecting movements of said permutation bars, means for controlling said selector, an intermittent operating cam shaft and means operated thereby for successively restoring said selectors and actuating said common operating member, substantially as described.

1,665,595. SORTING MACHINE. WILLIAM W. LASKER, Brooklyn, N. Y., and JOHN MUELLER, North Bergen, N. J., assignors, by mesne assignments, to Remington Rand Inc., New York, N. Y., a Corporation of Delaware. Filed June 30, 1925. Serial No. 40,604. 14 Claims. (Cl. 209—110.)



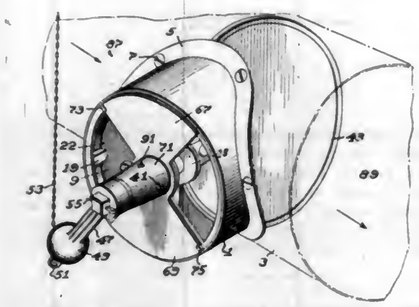
1. In a mechanism of the character stated, the combination of an analyzing unit, means for operating said unit for analyzing purposes, means to feed perforated cards successively to said unit, and automatic locking means to render said unit ineffective for analyzing purposes when certain of said cards are in analyzing position.

1,665,596. FEED-ROLLER SUPPORT. CHARLES S. LENSTON, Worcester, Mass., assignor to Hobbs Manufacturing Company, Worcester, Mass., a Corporation of Massachusetts. Filed June 8, 1927. Serial No. 197,452. 10 Claims. (Cl. 271—2.3.)



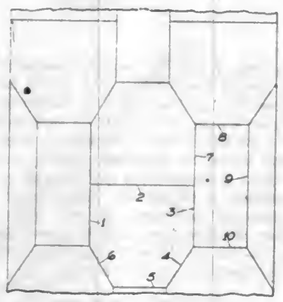
1. In a support for a pressure roller to cooperate with a feed roll to feed sheet material, the combination with a supporting bar and a hollow housing fixed positively to it in stationary position, a holder swiveled on said bar within the housing, means on the holder for supporting a pressure feed roller in a condition free to rotate, and means for adjusting the height of the feed roller and limiting its downward motion toward said feed roll, constituting a stop beyond which the feed roller cannot descend on the rebound down[illegible]ly.

1,665,597. STAMPING DEVICE. ALBERT J. MARKS, Boston, Mass., assignor to Ajax Time Stamp Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 9, 1927. Serial No. 182,278. 4 Claims. (Cl. 101—297.)



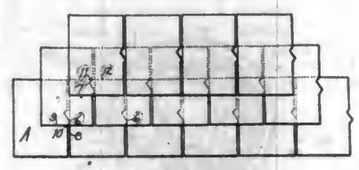
1. A stamping mechanism of the kind described, comprising a base having a recess therein, a stamping member pivotally connected with said base, a portion of said stamping member depending through said recess, a spring in said base to hold said stamping member in inoperative position, and an adjacent supplemental spring engaging said depending portion of said pivotal member and so arranged as to impart increasing resistance to said pivoted member as the main spring returns said pivoted member to normal position.

1,665,598. RESTRETCHABLE TENNIS RACKET. HEINZ MAY, Hanover, Germany. Filed Apr. 26, 1926, Serial No. 104,701, and in Germany Aug. 31, 1925. 9 Claims. (Cl. 273—73.)



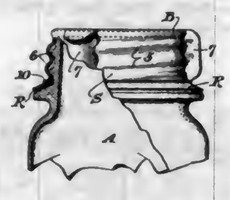
1. A re-stretchable tennis racket, comprising in combination with the frame and with the net, movable bearings in the shape of rings each ring enclosing one pair of strings at the points where the strings pass through the frame said strings serving to transmit the tension from one string to the adjacent string, to other strings of the racket-net and to certain portions of the frame.

1,665,599. FURNACE-REGULATOR UNIT. ALFRED H. MCCULLOCH, Boston, Mass. Filed Mar. 16, 1927. Serial No. 175,723. 9 Claims. (Cl. 126—293.)



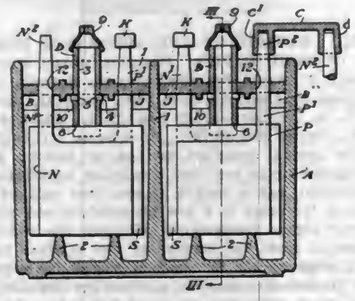
1. A damper and air-inlet regulator unit for application to the pipe for conducting gases of combustion from a furnace, comprising a collar curved to conform to the contour of the pipe and adapted for attachment thereto, a head located in from the outer edge of the collar and formed to provide an air-inlet opening, a register plate on the outer edge of the collar, spaced from the head and having an aperture therein, said head and plate having bearings, a shaft projecting through said bearings, a damper on the shaft for regulating the draft through the pipe, a wing plate on the shaft adapted to be moved by the shaft to cover and uncover the plate aperture, and a member on the shaft for turning the same to adjust the damper and wing plates, said air inlet opening being wholly at one side of the axis of said shaft.

1,665,600. METHOD OF CUTTING SHINGLES. CHARLES W. MORTIMER, Upper Montclair, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Filed Nov. 1, 1924. Serial No. 747,305. 4 Claims. (Cl. 164—17.)



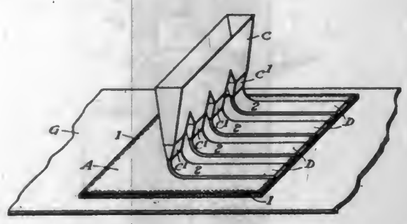
1. The process of cutting shingles from a sheet of roofing material which comprises cutting staggered pairs of parallel lines longitudinally of said sheet, cutting transverse lines at the ends of said first named lines and joining the ends of said first named lines by cutting along diagonal lines.

1,665,601. SELF-SPACING SHINGLE. CHARLES W. MORTIMER, Upper Montclair, N. J., assignor to The Barrett Company, a Corporation of New Jersey. Filed Mar. 2, 1925. Serial No. 12,478. 2 Claims. (Cl. 108—7.)



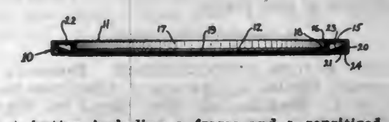
1. A shingle having a projection and a corresponding recess along one edge and substantially in the center thereof, one edge of said recess forming a continuation of one edge of said projection, and the edges of said shingle being straight and unbroken except for said recess and projection.

1,665,602. JAR TOP. NITA G. NETHERLAND, Ballsville, Va. Filed Nov. 13, 1926. Serial No. 148,311. 1 Claim. (Cl. 215—43.)



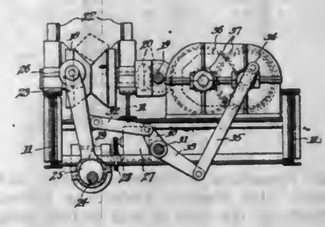
A screw jar cover having a skirt portion comprising a plurality of screw threaded gripping arcs and a lip, and resilient means intermediate said arcs and extending entirely across the skirt and lip, said resilient means being formed by crimping portions of the skirt and lip transversely of the screw threads.

1,665,603. STORAGE BATTERY. PAUL E. NORRIS, Wilkinsburg, Pa., assignor to Westinghouse Union Battery Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed May 26, 1924. Serial No. 715,945. 6 Claims. (Cl. 136—177.)



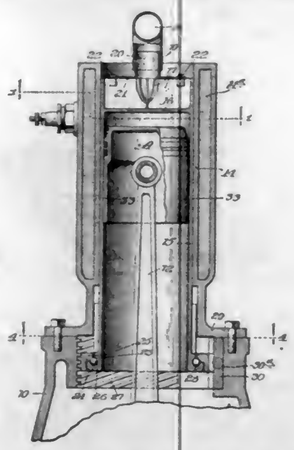
1. A storage battery comprising a jar, a separator in said jar, a cell cover in said jar, and a vent tube passing through said cell cover and engaging said separator.

1,665,604. STORAGE-BATTERY SEPARATOR. PAUL E. NORRIS and HERBERT H. ALDRICH, Wilkinsburg, Pa., assignors to Westinghouse Union Battery Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 1, 1924. Serial No. 740,942. 1 Claim. (Cl. 136—148.)



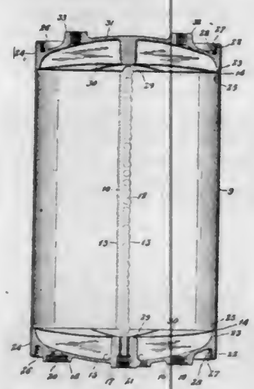
The method of preparing a storage battery separator which consists in impregnating the edges of a sheet of roofing felt with an electrolyte resistant material in plastic condition, immersing individual strips in plastic acid resistant material, attaching said strips to the sheet by the adhesion of said material, and causing said material to solidify.

1,665,605. PHOTOGRAPHIC BUTTON. ROBERT E. OLSEN, Forest Hills, N. Y. Filed Mar. 30, 1927. Serial No. 179,465. 5 Claims. (Cl. 95—8.)



1. A button including a frame and a sensitized plate, said plate including a planar body portion having an upwardly directed peripheral edge, said frame including a top portion and a bottom portion, said top portion engaging said sensitized plate and means to hold said frame on said plate.

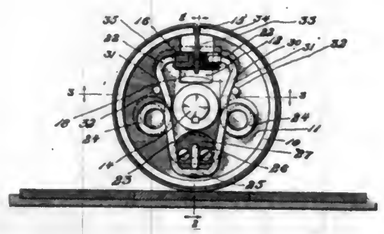
1,665,606. MANIPULATOR TABLE FOR ROLLING MILLS. NORMAN C. RENDLEMAN, Dormont, Pa., assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 18, 1927. Serial No. 176,503. 12 Claims. (Cl. 80—48.)



1. A manipulator for partly turning square and noncircular work pieces around their longitudinal axes without lateral displacement comprising a series of grooved rolls, and work engaging devices movable transversely thereof between the rolls to engage their lower sides and lift them in the roller grooves, said work engaging devices being shaped to permit said work pieces when raised from the bottom of the roller grooves to turn over and fall back into the same grooves under the action of gravity.

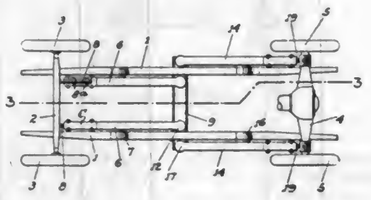
1,665,607. INTERNAL-COMBUSTION ENGINE. CHARLES E. SARGENT, Lakeland, Fla. Filed July 12, 1926. Serial No. 121,837. 10 Claims. (Cl. 123—80.)

1. In an internal combustion engine, a cylinder, a sleeve rotatable therein, a head in said rotatable sleeve, a piston slidable in said sleeve, means for rotating said sleeve in timed rotation to the engine shaft, inlet and outlet ports in said cylinder and in said sleeve, and means for moving said sleeve longitudinally to control the operation of said engine.



1,665,608. BOILER CONSTRUCTION. FREDERICK D. SCHNEIDER, Hillside, and HERBERT J. LONG, New Brunswick, N. J. Filed Jan. 12, 1924. Serial No. 685,909. 12 Claims. (Cl. 220—66.)

1. A boiler comprising a cylindrical section, and heads each provided with annular projections extending in opposite directions, the ends of said section being interlocked with said heads respectively.

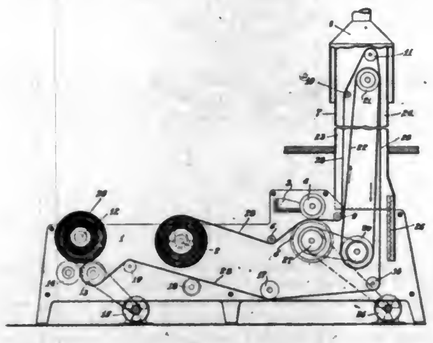


1,665,609. ABRASIVE ROLL. DAVID T. SCOTT, Providence, R. I., assignor, by mesne assignments, to Henry L. Scott Company, Providence, R. I., a Corporation of Rhode Island. Filed Nov. 9, 1925. Serial No. 67,855. 2 Claims. (Cl. 51—194.)

1. An abrasive roll comprising a slotted cylinder about which an abrasive strip may be positioned with an end extending inward through the slot, a pair of jaws for engaging said end, a yoke-shaped member of resilient material having side arms so formed that they are of themselves resilient both laterally and longitudinally

and which are connected to said jaws, a cam for applying a drawing-in tension on said jaws through said resilient yoke arms, and means cooperating with the cam to cause the jaws to engage and hold the end of the sandpaper as the cam draws the jaws inward.

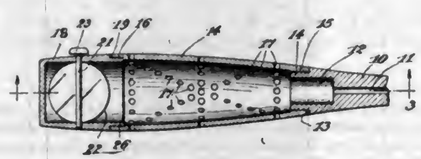
1,665,610. MOTOR-VEHICLE CHASSIS. JAMES SHAW, San Francisco, Calif. Filed Mar. 1, 1926. Serial No. 91,365. 2 Claims. (Cl. 267—20.)



1. A vehicle chassis comprising main longitudinal frame members, a front axle arranged for vertical movement relative to the frames, independent equalizing arms extending rearwardly from the front axle, said arms being pivoted onto the frames, spring means between said arms and frame for resisting upward movement of the axle relative to the frames, the front ends of the arms and the axle being in a common horizontal plane, and longitudinally extending pins secured to the axle and turnably mounted in the adjacent ends of the arms.

1,665,611. METHOD OF AND APPARATUS FOR MAKING GUMMED PAPER. WILLIAM HENRY SMITH and ALBERT STEWART WEBSTER, Ottawa, Ontario, Canada, assignors to American Bank Note Company, New York, N. Y., a Corporation of New York. Filed Jan. 26, 1926. Serial No. 83,781. 19 Claims. (Cl. 91—55.)

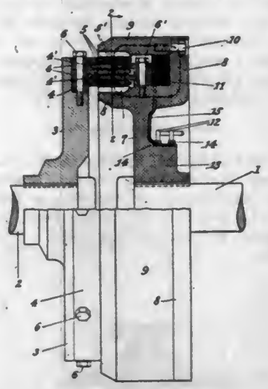
1. The herein described method of making gummed paper consisting in applying a solution containing adhesive material and a vehicle to one face only of paper, subjecting the same to a low temperature and then to a relatively higher temperature, whereby the vehicle will be removed from the surface of the solution inwardly thereof progressively to cause a progressive crystallization of the adhesive material and the readjustment of the adhesive material during its crystallization and avoiding those stresses resulting in curling of the paper.



19. An apparatus for making gummed paper embodying therein means supporting a roll of paper to be coated, a fountain for a solution of adhesive material, a fountain

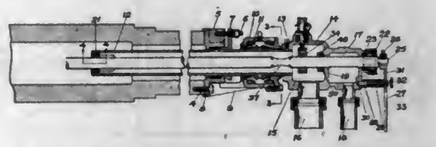
roll, a feeding roll co-operating therewith, a stack open at the bottom and at the top thereof, rollers adjacent the top and the bottom of said stack, an endless belt passing about said rollers whereby said stack is divided into two substantially vertical passages, means for guiding the coated paper strip or web in an upward run through one of said passages, a breaker roller adjacent the upper of said rollers about which said belt passes, about which the paper strip or web passes into a downward run through the other of said passages, means whereby the temperature of the air passing through the

last named of said passages is heated, a rewind reel, guiding means intermediate said last named means and said rewind reel, squeeze rollers engaging the web adjacent said rewind reel and acting upon the web wound upon said reel, whereby said paper is drawn through said stack and subjected to continuous longitudinal stresses, and means whereby said feeding roll, and said fountain roll, and said squeeze rollers are respectively rotated at the same peripheral speed and said belt is driven at substantially the same speed as that of the paper strip or web.



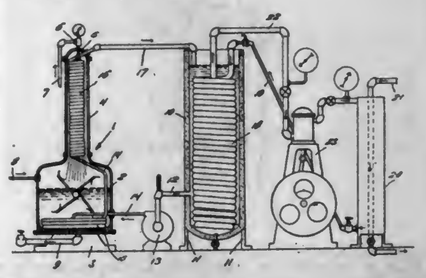
1,665,612. CIGAR HOLDER AND ASH RECEIVER. JOSEPH STERN, New York, N. Y. Filed Apr. 27, 1927. Serial No. 187,059. 3 Claims. (Cl. 131—51.)

3. In a cigar holder, in combination, a mouth-piece capable of receiving a cigar, a foraminous body attachable to the mouth-piece and encompassing a cigar within the mouth-piece, a non-foraminous ash-receiver attachable to the body, a revoluble axle passing through the ash-receiver a closure member fixedly attached to the axle and means exterior of the device for operating the closure member.



1,665,613. COUPLING DEVICE FOR ROTATABLE ELEMENTS. HARRY L. TANNER, Brooklyn, N. Y. Filed June 11, 1920, Serial No. 388,173. Renewed May 29, 1926. 12 Claims. (Cl. 172—284.)

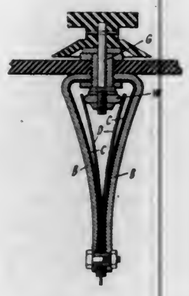
4. In combination, a rotatable driving element, an independently rotatable element adapted to be driven by said driving element and substantially coaxial therewith, and means for establishing a one-to-one magnetic drive connection between said driving and driven elements, said means including a plurality of isolated mag-



netic members secured to one of said elements, a plurality of isolated magnetic elements secured to the other of said elements, and means including pole pieces for passing magnetic flux through said members.

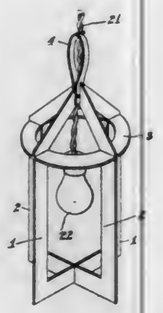
1,665,614. PAPER-MAKING MACHINE. CHARLES W. VALENTINE, Watertown, N. Y., assignor to The Bagley and Sewall Company, Watertown, N. Y., a Corporation of New York. Filed Jan. 12, 1927. Serial No. 160,722. 19 Claims. (Cl. 34—4.)

1. In a dryer mechanism for paper making machines, the combination of a dryer roll, means for admitting steam thereto, a siphon pipe extending into the roll closely adjacent the inner surface thereof, and means exterior to the roll for flexing the siphon pipe to adjust its suction end with respect to the roll surface.



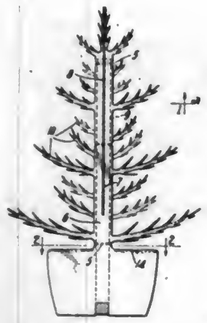
1,665,615. APPARATUS AND METHOD FOR COOLING CARBONATED WATER. LEE J. TAYLOR, New Bern, N. C. Filed Oct. 15, 1924. Serial No. 743,763. 2 Claims. (Cl. 62—101.)

1. An apparatus for cooling carbonated water including a carbonator having a water inlet at its top and a water outlet at its bottom, a relatively large cold brine cir-



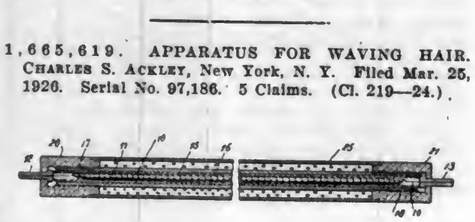
culating coil located wholly within the top of the carbonator, a relatively small cold brine circulating coil located wholly within the bottom of the carbonator, means in the carbonator connecting the coils, the large coil having its terminal passing through the upper portion of the carbonator to the exterior and the terminal of the relatively small coil extending through the bottom portion of the carbonator to the exterior and a gas line entering the carbonator between the coils.

1,665,616. ELECTRICAL CONDENSER. EDWARD HERBERT TRUMP, Merton Park, London, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Oct. 17, 1924, Serial No. 744,099, and in Great Britain Oct. 26, 1923. 5 Claims. (Cl. 175—41.5.)



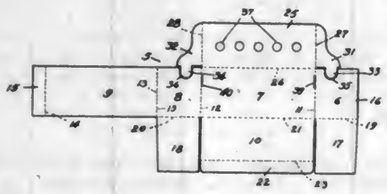
1. A variable electrical condenser comprising a pair of rigid conducting plates spaced apart, a pair of oppositely bent plates intermediate the rigid plates, a sheet of dielectric adjacent each rigid plate and means for changing the curvature of the bent plates.

1,665,617. LAMP SHADE. EDWIN BIRD WILSON, Forest Hills, N. Y., assignor to Design Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 27, 1925. Serial No. 25,992. 9 Claims. (Cl. 240—108.)



1. In a lamp fixture, two frame pieces, notches in one frame piece at which the two frames are interlocked against relative horizontal and vertical displacements, and a ring for locking said frame against relative rotary displacement.

1,665,618. ORNAMENTAL OBJECT. EDWIN BIRD WILSON, Forest Hills, N. Y. Filed Mar. 11, 1927. Serial No. 174,516. 8 Claims. (Cl. 41—11.)

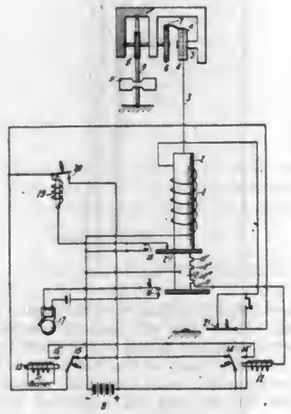


1. A collapsible ornamental device comprising a plurality of sheets of relatively thin material cut to conform to the profile of object to be represented, a slit in each of the sheets by means of which all of said sheets are mutually interlocked and a member having a plurality of slits therein, said member engaging said sheets by means of the slits in the member, thereby securing said sheets against relative angular displacement.

1,665,619. APPARATUS FOR WAVING HAIR. CHARLES S. ACKLEY, New York, N. Y. Filed Mar. 25, 1926. Serial No. 97,186. 5 Claims. (Cl. 219—24.)

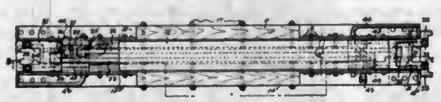
1. A hair waving device comprising a heating element, insulating means surrounding said element, a tube surrounding said insulating means, a covering of absorbent material on said tube, and a perforated sheath surrounding and spaced from said tube and covering.

1,665,620. SHIPPING AND DISPLAY CARTON. HAROLD AMATEL, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Dec. 30, 1922. Serial No. 609,824. 4 Claims. (Cl. 206—44.)



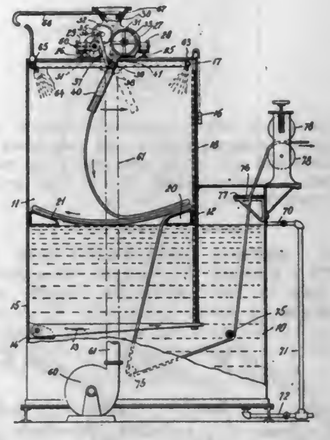
1. A shipping and display carton for incandescent electric lamps, comprising a container having a top, bottom and three side walls, a display rack associated with said top wall, means associated with said rack for holding lamps and means for holding said rack at right angles to said top, said rack being movable to serve as a cover for said carton during shipment, said holding means being adjustable for disposal within the carton when the rack is positioned to serve as a cover.

1,665,621. BALANCED MOTOR FUEL. EDWARD F. CHANDLER, Brooklyn, N. Y. Filed Dec. 23, 1924. Serial No. 757,732. 11 Claims. (Cl. 44—9.)



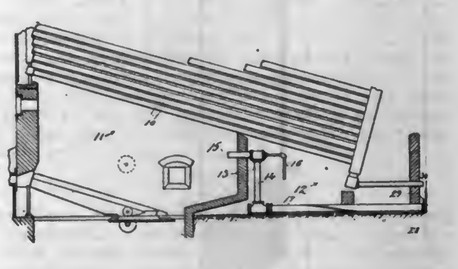
1. A liquid fuel adapted for use in an internal combustion engine, comprising a mixture of a liquid hydrocarbon, an oxide of nitrogen, and a solvent for said oxide.

1,665,622. CALLING DEVICE. LOUIS LUCIEN EUGÈNE CHAUVEAU, Paris, France. Filed Feb. 23, 1922, Serial No. 538,497, and in France Mar. 22, 1921. 5 Claims. (Cl. 177—340.)



1. In selective call receiving systems, the combination of a plunger mounted to descend by gravity a certain distance during a period corresponding to the call, means for governing speed of descent of said plunger, holding and resetting means for normally preventing travel of said plunger and for resetting the same, a controller cooperating with said plunger and having portions corresponding to a succession of signals of given duration and spacing, means responsive to signals, means whereby said controller and said signal responsive means cooperate to render said holding and resetting means inoperative when the controller and signal responsive means supplement each other.

1,665,623. HIGH-STAKE CAR BUNK. FREDERICK W. CHRISWELL, Seattle, Wash. Filed Feb. 26, 1927. Serial No. 171,135. 16 Claims. (Cl. 105—160.)

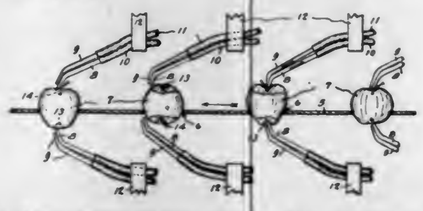


1. In a high stake bunk of the class described, a bunk, two stake supports slidable longitudinally within the respective ends of said bunk frame, an operating bar connected with each of the respective stake supports and extending to the opposite end of the bunk, and means at said opposite end of said bunk for locking each of said operating bars.

1,665,624. PROCESSING APPARATUS. WILLIAM L. CONRAD, Boston, Mass. Filed Apr. 5, 1926. Serial No. 99,765. 11 Claims. (Cl. 8—19.)

10. Apparatus of the character described comprising a receptacle, feed rolls located above the receptacle, means for moving said rolls axially longitudinally of said receptacle, means for receiving the fabric from said rolls and distributing the fabric back and forth across the receptacle as the rolls move longitudinally of the receptacle, and means for impregnating the fabric with treating liquor before it reaches said feed rolls.

1,665,625. SOOT AND SIFTING EJECTOR FOR BOILERS. CHARLES L. DAVIDSON, New York, N. Y. Filed Dec. 30, 1922. Serial No. 609,799. 3 Claims. (Cl. 110—165.)

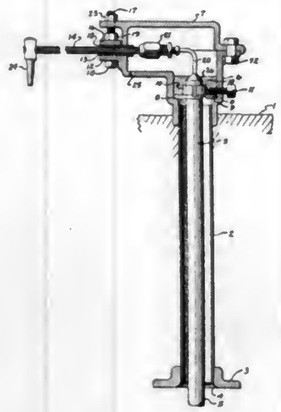


1. A soot collecting device for boiler furnaces comprising a hollow member, a delivery connection therefrom, means to create gas currents in said connection, said hollow member having intake openings along the length thereof, and means to progressively open and successively close said intake openings.

1,665,626. THERMIONIC VALVE. HORACE ST. JOHN DE AULI DONISTHORPE, London, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Oct. 7, 1922, Serial No. 593,140, and in Great Britain Oct. 24, 1921. 4 Claims. (Cl. 250—27.5.)

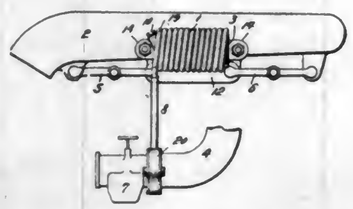
1. A thermionic valve comprising a cathode, an anode, and a double terminal helical grid interposed between said cathode and said anode, said grid being constructed to produce a magnetic field of the same polarity at opposite ends thereof.

1,665,627. METHOD AND MEANS FOR DRYING FRUITS. HEINRICH HEIDENHAIN, Wenatchee, Wash. Filed July 12, 1927. Serial No. 205,089. 4 Claims. (Cl. 34—26.)



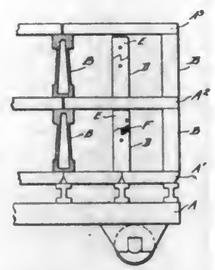
1. Fruit drying devices of the class described embodying a yieldingly supported suction nozzle capable of entering cavities in the surfaces of fruits and means for progressively moving the fruits into engagement with the vacuum nozzle.

1,665,628. TOWEL DISPENSER. JOHN O. HUNT, Brooklyn, N. Y., assignor to Independent Paper Mills, Inc., Brooklyn, N. Y. Filed Mar. 17, 1926. Serial No. 95,449. 2 Claims. (Cl. 312—61.)



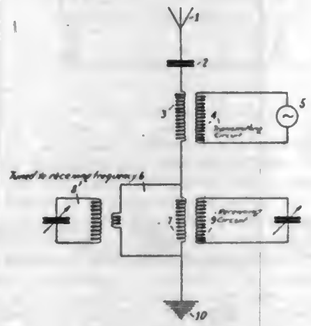
1. In a towel dispenser, a receptacle provided at one end with an opening for the manual withdrawal of its contents, a follower adapted to move and hold the said contents in position in the said opening, the said follower comprising a metal plate having widened end portions, studs set in the plate, a pair of curved plates pivotally mounted on the plate and resting on the plate at points outwardly beyond said studs, frictional elements mounted on the outer elements of said curved plates, said frictional elements being arranged to engage the side walls of the receptacle.

1,665,629. BOOTLEG. FREDERICK C. LAVARACK, Montclair, and WILLIAM H. B. LAVARACK, Norwood Borough, N. J. Filed June 3, 1925. Serial No. 34,721. 2 Claims. (Cl. 247—1.)



2. In a bootleg; in combination; a circular conduit; a two part box at the one end thereof, one part of said box being screw fastened to the conduit and formed with a shoulder, the other part of the box being bolted to the first mentioned part; a cable extending through the conduit and into the box and the conductor therein bared within the box; a two part annulus surrounding the cable within the box and resting on the said shoulder; a set screw borne by the box and bearing against the annulus whereby the cable may be firmly held; a bond wire extending in the box; and means firmly insulatingly holding the bond wire to the box, and means for connecting the bond wire and the bared cables.

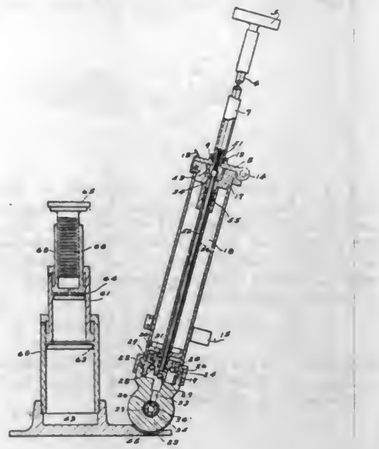
1,665,630. FUEL ECONOMIZER. FREDERICK LAMOTKE, Teaneck, N. J., assignor of one-half to William H. Wettlaufer, Englewood, N. J. Filed Jan. 21, 1927. Serial No. 162,587. 5 Claims. (Cl. 123—119.)



1. In a device of the class described, the combination with an internal combustion engine and intake means for supplying fuel mixture thereto, of a pipe coil in cylindrical form, means for supporting it in position to be heated by the engine, and a tank supported inside of the pipe coil, said tank containing a liquid to be vaporized by heat and a chamber for commingling the vapor and air for introduction into the pipe coil, and means for delivering said heated mixture to the fuel intake means.

1,665,631. KILN-CAR-DECK SUPPORT. CHARLES W. LASCHENSKI, Trenton, N. J., assignor to New Castle Refractories Company, New Castle, Pa., a Corporation of Delaware. Filed Jan. 7, 1927. Serial No. 159,655. 7 Claims. (Cl. 25—142.)

1. A self contained adjustable deck supporting post for a kiln car formed of relatively axially movable refractory parts to vary the effective length of said supporting post.



1,665,632. RADIO SIGNALING SYSTEM. MICHAEL LOCK, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches, Berlin, Germany. Filed Nov. 3, 1925, Serial No. 66,504, and in Germany Nov. 5, 1924. 6 Claims. (Cl. 250—9.)

1. In a duplex radio signaling system, an aerial, a source of high frequency oscillations and a receiving circuit, means to connect the source of high frequency oscillations and the receiving circuit in series with the aerial, a coil in parallel to the aerial comprising a few turns, and a circuit tuned to the incoming wave coupled to said coil.

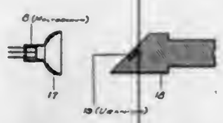
1,665,633. HYDRAULIC JACK. ALLAN J. MCDONELL, Vancouver, British Columbia, Canada. Filed May 3, 1927. Serial No. 188,421. 2 Claims. (Cl. 138—9.)

1. In a hydraulic jack of the class described, a lifting piston, a base casing, an operating handle hinged thereto, a fluid storage reservoir contained in said handle, means for transferring fluid from said reservoir to the lifting piston, a hinge in the operating handle, a pump in

lower portion of the operating handle, a pump handle in said hinged portion of the operating handle and flexible means connecting said pump handle and the pump piston.

1,665,634. PREPARATION OF METAL HALIDES. JOHN WESLEY MARDEN, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Sept. 3, 1921. Serial No. 498,397. 8 Claims. (Cl. 23—87.)

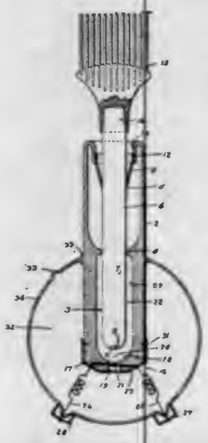
1. The process of producing anhydrous halides of refractory metals which consists in dissolving a hydrated salt of a refractory metal in water, converting the same into the chloride, adding to the solution a substance which will displace the water element from the positive complex of the salt, separating the water from the solution and igniting the residue in an anhydrous atmosphere to remove the said substance.



1,665,635. PURIFICATION OF METAL POWDERS. JOHN WESLEY MARDEN, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Aug. 21, 1922. Serial No. 583,376. 10 Claims. (Cl. 75—17.)

1. The method of purifying a readily oxidizable metallic powder such as thorium, uranium, etc., which comprises treating said powder with a non-aqueous liquid which does not react with the oxides of said powder and which is capable of preventing further oxidation of said powders, and combining with said liquid an acid which will interact with the impurities with which said powder is contaminated to form compounds which are readily soluble in said liquid.

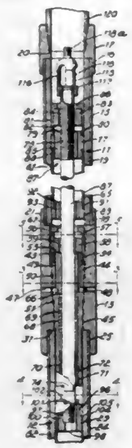
1,665,636. ACTIVATION OF ELECTRON-EMISSION MATERIAL. JOHN WESLEY MARDEN, East Orange, and JOHN EDWARD CONLEY, Bloomfield, N. J., assignors to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed Feb. 21, 1923. Serial No. 620,485. 2 Claims. (Cl. 250—27.5.)



1. The method of manufacturing tungsten in filamentary form for electron-emission purposes comprising mixing with tungsten powder, a small proportion of thorium carbide, pressing said mixture to form a slug, heat-treating said slug and working to the desired filamentary form.

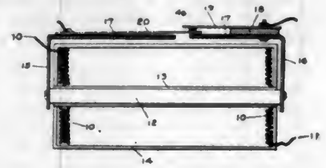
1,665,637. X-RAY TUBE. JOHN WESLEY MARDEN, East Orange, N. J., assignor to Westinghouse Lamp Company, a Corporation of Pennsylvania. Filed June 18, 1927. Seral No. 199,698. 4 Claims. (Cl. 250—35.)

1. A thermionic device comprising an anode and a cathode adapted to be heated to electron-emitting temperature, said anode being formed of a material having the property of emitting electrons of corresponding value at the same temperature as that to which said cathode may be heated and also possessing better ray emitting properties than tungsten.



1,665,638. X-RAY TUBE. MONTFORD MORRISON, Chicago, Ill. Filed Sept. 22, 1925. Serial No. 57,835. 10 Claims. (Cl. 250—35.)

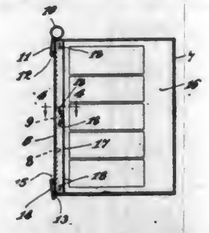
1. An X-ray tube comprising a bulbous vessel, an insulating bushing sealed therethrough, an anode disposed within said bushing and spaced closely from the inner wall thereof and a cathode supported by said bushing and spaced closely from said anode.



1,665,639. TANDEM SINGLE-ACTING PUMP. EDGAR W. PATTERSON, Long Beach, Calif. Filed Mar. 30, 1926. Serial No. 98,442. 13 Claims. (Cl. 103—189.)

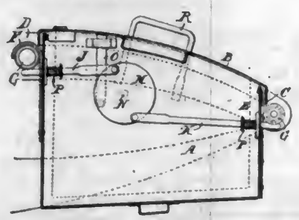
1. A pump for use in an oil well comprising: an upper barrel having an upper bore; an upper plunger working in said bore; an upper working valve so arranged as to permit liquid to pass from the space below said plunger into the space above said plunger but preventing a reverse movement of said liquid; an upper standing valve arranged to admit liquid from the well into the space below said upper plunger but preventing a reverse movement of said liquid; a lower barrel having a lower bore; a wall separating said upper bore from said lower bore; a lower plunger working in said lower bore; a lower standing valve arranged to admit liquid from the well into the space below said lower plunger but preventing a reverse movement of said liquid; a lower working valve arranged to admit liquid from the space below said lower plunger to the space above said lower plunger but preventing a reverse movement of said liquid; and a hollow tube passing in fluid-tight relationship through said wall and connecting said upper and lower plungers, said

tube providing a free connection at all times between the space above said lower plunger and the space above said upper plunger.



1,665,640. AUTOMATIC AUTOMOBILE LIGHT INDICATOR. CLYDE I. RANDLE and FRANK S. ANDERSON, Eureka, Calif.; said Anderson assignor to Gilbert Sutherland, Eureka, Calif. Filed Sept. 22, 1925. Serial No. 57,978. 1 Claim. (Cl. 200—87.)

A coil for use in an automatic automobile light indicator circuit comprising a core, an insulating casing surrounding the core and extending thereabout, straps carried on the ends of the core and extending across the opposite ends of the casing and along one side thereof exterior of the casing and terminating in spaced relation to each other to provide a magnet, a coil mounted in the casing about the core and adapted to be connected in the light circuit to energize the coil when the light is on, a rigid conductor bar mounted in insulated relation on one of said straps and spaced outwardly from the end thereof, a resilient magnetic conductor bar insulated on the other strap and extending across the ends of the straps and beneath the rigid bar and normally bearing thereagainst to close a branch circuit therethrough.

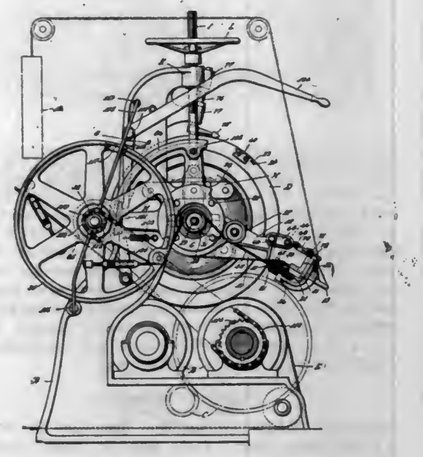


1,665,641. SUPPLEMENTAL LEAF-ATTACHING DEVICE FOR BOOKS. BERTHOLD J. REESE, New York, N. Y. Filed July 17, 1925, Serial No. 44,165. Renewed Mar. 2, 1928. 2 Claims. (Cl. 281—3.)

1. An attachable and detachable supplement for bound books, comprising in combination an attaching member adapted to be inserted between the book leaves adjacent the bound edges thereof and having means at its opposite ends for detachable clamping engagement against the outer side of the book binding, a sheet centrally folded and engaged around said attaching member to provide supplemental leaves, each supplemental leaf having a hinge crease therein in spaced parallel relation to said member, fastening means extending through the opposed edge portions of the leaves between said member

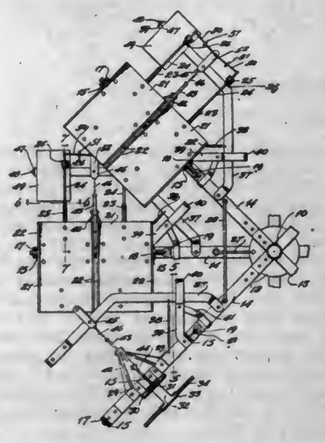
and the hinge creases, and said member being provided with a laterally projecting part coacting with said folded sheet to prevent swiveling or turning movement of the same upon said attaching member.

1,665,642. TOOL HOLDER AND OTHER RECEPTACLE FOR USE ON MOTOR VEHICLES. HAROLD BANTOCK SANKEY, Albrighton, England. Filed Apr. 25, 1927, Serial No. 186,496, and in Great Britain Feb. 15, 1927. 3 Claims. (Cl. 224—29.)



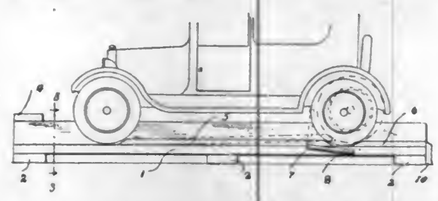
1. A receptacle adapted to be placed between the forward extensions of the side members of a motor vehicle frame, forwardly and rearwardly extending hooks on the receptacle, inwardly extending projections from the said forward extensions of the vehicle frame said hooks adapted to engage over said projections, and bolts sliding in relation to the receptacle and adapted to pass at their outer ends beneath the said projections from the chassis frame so as to secure the receptacle in position thereon.

1,665,643. NIPPLE CHUCK AND PIPE BENDER. ROBERT A. SCHMITT, San Diego, Calif. Filed Nov. 4, 1926. Serial No. 146,226. 1 Claim. (Cl. 279—7.)



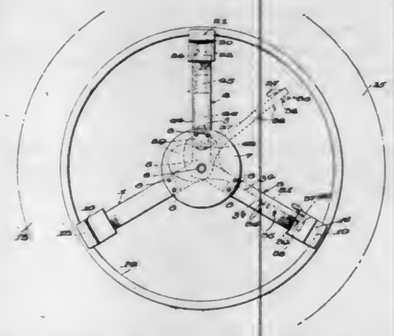
A device for the purpose specified comprising a pipe coupling and a mandrel comprising a body one end of which is reduced to form a shoulder and having said reduced end threaded for engagement with said pipe coupling and of less length than the coupling to thereby permit engagement of one end of the coupling with the shoulder, said reduced end having an axial prolongation adapted to enter and interiorly fit throughout its length a pipe engaged with the coupling, said axial prolongation being reduced in size and thereby providing at its junction with the reduced extension a shoulder against which the end of the pipe may abut, said prolongation being of a length such that its end projects beyond the end of the coupling engaged with said reduced threaded portion to thereby support and prevent collapse of the pipe outwardly of said coupling, the extremity of said prolongation being rounded to thereby provide a guiding heel for use in producing short bends in pipe.

1,665,644. CUTTING MECHANISM FOR PULP AND LIKE MACHINES. CHARLES W. SPONSEL, Wethersfield, Conn., assignor to Case & Marshall, Incorporated, Hartford, Conn., a Corporation. Filed June 14, 1927. Serial No. 198,768. 25 Claims. (Cl. 92—67.)



1. In combination, a roll on which a web is adapted to be wound, a knife mounted for movement longitudinally of the roll and held against movement radially with respect thereto during the cutting operation, and means for moving the knife longitudinally of the roll to effect a ripping cut in the web parallel to the axis of the roll.

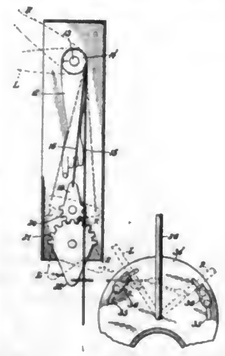
1,665,645. WINDMILL. LUKE S. STRIPLING, Amarillo, Tex. Filed Aug. 31, 1927. Serial No. 216,644. 10 Claims. (Cl. 170—30.)



1. In a windmill, a vertical shaft, arms projecting radially therefrom, each arm having a main vane mounted thereon to swing on an axis carried by said arm, a secondary arm having one end pivoted to each first arm to swing in a horizontal plane, a vane carried by each secondary arm, a stop device pivoted to each first arm to limit the movement of the vane carried by said first arm, and operative connections between the secondary arms and the said stop devices.

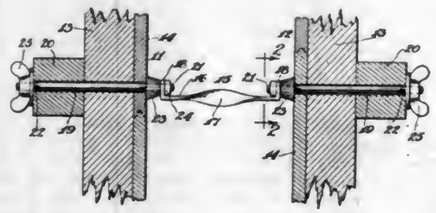
1,665,646. VEHICLE SUPPORT. JAMES H. VALLEAU, Reno, Nev. Filed Aug. 30, 1926. Serial No. 132,566. 8 Claims. (Cl. 254—88.)

1. A vehicle support comprising supporting means adapted to engage the chassis of a vehicle and support the vehicle with its wheels elevated, front and rear track members spaced from each other and along which the wheels of a vehicle travel when the vehicle is moving onto and off of the support, the front track members being of a length to be disposed between the front and rear wheels of a vehicle resting upon said supporting means, and means to move the front track members into position to engage the tread portions of tire of the rear wheels of a supported vehicle and permit movement of the vehicle rearwardly off of the support.



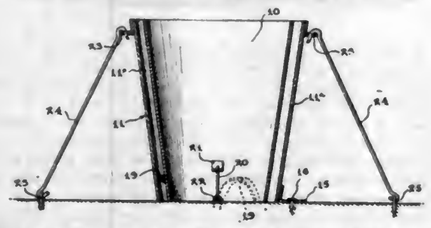
1,665,647. TIRE CARRIER. EDWARD A. WALTERS, Youngstown, Ohio. Filed May 12, 1926. Serial No. 108,651. 1 Claim. (Cl. 224—29.)

In combination, a plurality of radially disposed arms one of which being tubular and rectangular in cross section, a slidable member in the tubular arm, a threaded shank carried thereby, a substantially rectangular tire rim engaging head adjustable longitudinally with respect to its arm, a rectangular sleeve projecting from the head and slidably received in the tubular arm and having an interiorly threaded bore threadedly receiving the stem, whereby the head may be adjusted longitudinally of the tubular arm upon moving said member in an outward direction until the rectangular sleeve has been moved beyond the tubular arm and rotating the sleeve on the stem, fixed tire engaging heads carried by the other arms, and means for moving said member in an outward direction within the tubular arm to engage the adjustable head with a tire arm.



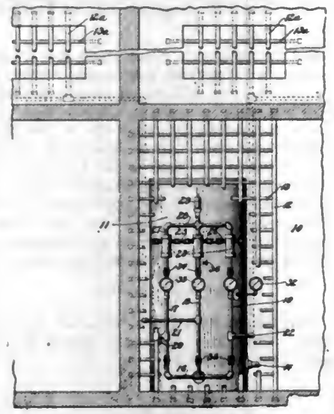
1,665,648. AUTOMOBILE SIGNAL. GEORGE S. WELLINGTON, Los Angeles, Calif., assignor of one-half to Louis P. Barenchi, Los Angeles, Calif. Filed June 23, 1927. Serial No. 200,887. 8 Claims. (Cl. 116—52.)

1. A signal for use with automobiles comprising a casing, having a slot in one side; a normally pendant signal arm pivoted within the casing; pivoted crank arms having intermeshing gear segments also mounted within the casing; a flexible cable connecting the signal arm to one of the crank arms; a second flexible cable connecting the signal arm to the brake pedal to move the signal arm



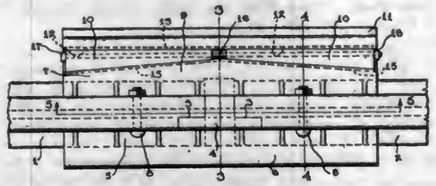
through the slot in the casing when the brake is depressed; and means for manually swinging the other crank arm to move the signal arm.

1,665,649. SPREADER TIE FOR CONCRETE-WALL FORMS. CHARLES T. WHITESCARVER and GEORGE BENDIXEN, New York, N. Y. Filed Feb. 19, 1927. Serial No. 169,576. 3 Claims. (Cl. 25—131.)



1. A concrete form spreader tie comprising a flat twisted brace member, removable rods extending from opposite ends of said brace member, corrugated cone members mounted on said rods and abutting the ends of said brace member, and clamping means on said rods substantially as and for the purpose specified.

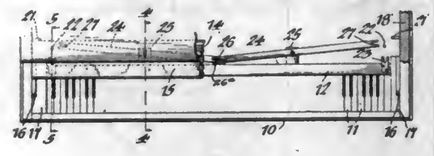
1,665,650. FIRE-POT MOLD. JOHN PAUL NICHOLAS WOOD, East Winterhaven, Fla. Filed May 21, 1927. Serial No. 193,143. 3 Claims. (Cl. 25—130.)



1. A mold for the purpose indicated comprising a core provided with anchoring hooks for securement to a flat surface, and a shell disposed in surrounding relation to the core and comprising separable sections, the shell at its lower end being provided with arch plates serving as spacers between the core and the shell and defining bottom openings in the molded product, the arch plates being of transversely tapering form.

1,665,651. PNEUMATIC CAGE FOR PRISONS, VAULTS, AND THE LIKE. DAVID FRANKLIN YOUNGBLOOD, San Antonio, Tex. Filed Nov. 14, 1925. Serial No. 69,101. 5 Claims. (Cl. 116—70.)

2. In a structure of the character described, the combination of a system of connected pipes, a source of compressed air having an outlet, with a connecting pipe leading therefrom to said system, a valve between the system of pipes and said outlet and adapted to be closed when the desired pressure has been obtained in the system, a cylinder connected with the system and having diametrically opposed ports, a piston normally acting under the influence of air pressure in the system to close said ports but adapted to drop by gravity and uncover said ports when the air pressure is released by a break in the system, a pressure operated alarm having a connection to the upper end of the cylinder, and a by-pass connecting the source of compressed air with said ports independently of said valve, so as to sound the alarm whenever the ports are uncovered by the piston.

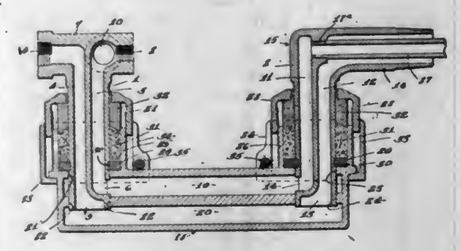


1,665,652. RAIL JOINT. CHARLES A. ALLEN, Tucson, Ariz. Filed Jan. 26, 1927. Serial No. 163,720. 3 Claims. (Cl. 238—307.)

1. In combination with connected rails, a rail chair having an integral side plate lying against the web and flange portions of the rails, a complemental removable plate seated in the chair and lying against the opposite sides of the rails and means for effecting clamping action of the removable plate against the rails and comprising elements mounted at the remote ends of the chair and engaging the removable plate and operated by a single actuating means.

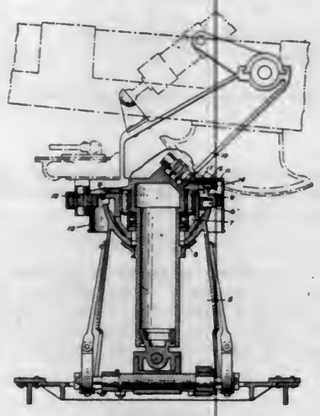
1,665,653. PIANO FALL BOARD. STEPHEN BATTNER, North Tonawanda, N. Y., assignor to The Rudolph Wurlitzer Manufacturing Company, North Tonawanda, N. Y., a Corporation of New York. Filed Oct. 26, 1925. Serial No. 64,771. 2 Claims. (Cl. 84—179.)

1. In a piano, the combination of a keyboard, guides at opposite ends of the keyboard and a longitudinal strip fixed above it, of a fall-board slidable on said guides, a pair of horizontally-swinging equalizing levers extending lengthwise of the fallboard and fulcrumed on said strip,



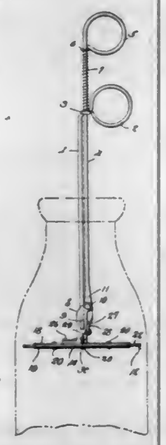
said levers being pivoted together at their inner ends and having their outer ends pivotally connected to opposite ends of the fall-board.

1,665,654. PAD FOR PRESSING MACHINES. PHILIP N. BRAUN and SIMEON T. HART, Syracuse, N. Y., assignors, by mesne assignments, to The Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Aug. 5, 1924. Serial No. 730,311. 1 Claim. (Cl. 68—9.)



A pad for pressing machines, comprising a base plate, and a flexible metal top plate spaced apart from the base plate, and secured at its margin to the base plate, the plates confining a sealed chamber, the top plate normally bulging upwardly and the margins bulging outwardly to expand laterally as the pad is compressed.

1,665,655. FLEXIBLE JOINT. ALBERT B. CLISSON, Geddes, N. Y., assignor, by mesne assignments, to The Prosperity Company, Inc., a Corporation of New York. Filed Sept. 20, 1923. Serial No. 663,918. 2 Claims. (Cl. 285—9.)

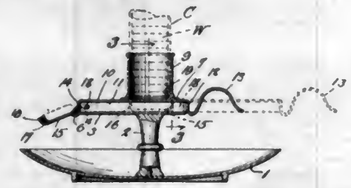


1. A flexible coupling of the class described, comprising parallel pivotal conduits, each having an inlet and return passages therethrough, a body member U-shaped in general form, the arms of the U-shaped member forming bearings in which said pivotal conduits are journalled, the intermediate part of the U-shaped body being formed with inlet and return passages communicating respectively with the inlet and return passages of the pivotal conduits, and said conduits extending through the bearings and into the intermediate part of the U-shaped body, the bearings being formed with internal shoulders, and the pivotal conduit having thrust bearing against said shoulders, a packing in each bearing, thrusting toward the shoulders, and a nut enclosing each pivotal conduit and threading on the adjacent bearing.

1,665,656. AZIMUTH SCALE WITH MICROMETER MECHANISM. THOMAS A. CONDON, Silver Spring, Md. Filed Oct. 5, 1925. Serial No. 60,616. 6 Claims. (Cl. 89—41.) (Granted under the provisions of the act of Mar. 3, 1882, 22 Stat. L., 625.)

6. The combination with a gun mount, of a top carriage rotatably supported thereby, a graduated azimuth scale carried by the mount, a dial carried by the top carriage and graduated in divisions of unit of the scale, a multiplying gear train connecting the dial and the scale, and a reference against which scale and dial may be read.

1,665,657. MILK AND CREAM SEPARATOR. WINTON A. DEAN and ARTHUR L. DEAN, Long Beach, Calif. Filed Oct. 29, 1927. Serial No. 229,642. 2 Claims. (Cl. 210—51.5.)



1. In a device of the class described, a support, an operating member, means for connecting the support and the operating member for relative longitudinal movement, a foldable separator, means for connecting the support and the operating member pivotally to the intermediate portion of the separator in off-set relation to the separator, links forming a pivotal connection between the support and the side portions of the separator, and spring means for imparting relative longitudinal movement to the support and to the operating member to dispose the separator flat and in a position approximately at right angles to the support, and to the operating member.

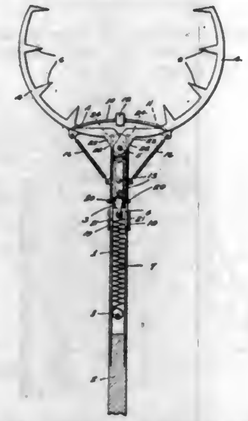
1,665,658. RAZOR-STROP-DRESSING TOOL. JOHN G. DICK, Chinook, Mont. Filed July 31, 1924. Serial No. 729,396. 2 Claims. (Cl. 51—203.)

1. A device for holding a razor strop for dressing the same comprising an elongated base member having a suspending loop at one end, stationary means located at the same end for engaging one end of a strop, longitudinally-movable means located at the other end of the base member for engaging the other end of said strop, upstanding, spaced pins carried by the base member adjacent to said loop, a metal bracket having an angular seat to receive the end of the base member, the upper flange of the seat having holes to receive said pins, and the lower flange having a down-turned lip to act as an abutment to position the device on the arm of a barber's chair.

1,665,659. INCENSE BURNER. WILLIAM EVANS, Piedmont, Calif. Filed May 19, 1927. Serial No. 192,660. 2 Claims. (Cl. 167—3.)

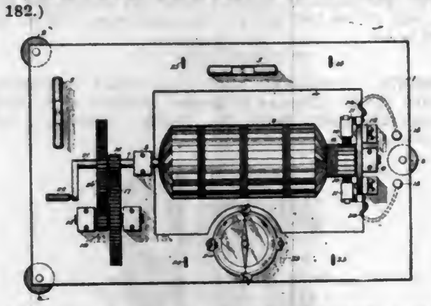
1. An incense burner including a tray, a guide supported thereabove, a holder opening downwardly into the guide, a slide mounted for reciprocation in the guide, a leaf hingedly connected to the slide and movable into and out of position below the holder, and means for supporting the leaf in an inclined position beyond one end of the guide and above the tray when the slide is in one position.

1,665,660. PROJECTION APPARATUS. LEON V. FOSTER, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 28, 1925. Serial No. 19,165. 3 Claims. (Cl. 88—24.)



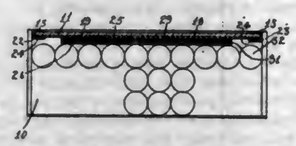
1. In a projection apparatus the combination with a projection lens and a light source, of a mirror adapted to form near the projection lens an image of the source of light, said mirror being formed with front and rear spherical surfaces separated by a medium of high refractive index, the front and rear surfaces having spherical undercorrection which is compensated for by overcorrection afforded by the medium of high refractive index lying between said surfaces.

1,665,661. FISH GRAPPLE. ALBERT E. GLESSALE, Syracuse, N. Y. Filed Aug. 11, 1926. Serial No. 128,585. 14 Claims. (Cl. 43—5.)



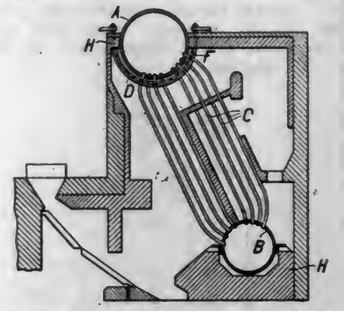
1. A fish grapple comprising a shank having a lengthwise passage therein, a carrier slidable lengthwise of the shank within the passage, a pair of jaws pivoted to the carrier, the jaws being formed with arms at the pivoted ends of the jaws and arranged at an angle to

the contiguous portions of the jaws for coacting with end surfaces on the shank to close the jaws when the carrier moves inwardly lengthwise of the shank, a spring connected to the carrier for moving it inwardly



lengthwise of the shank and latching means for normally holding the jaws from closing movement by the spring, said latching means having a trip associated therewith.

1,665,662. ELECTROMAGNETIC DETECTING DEVICE. CECIL E. GODKIN, Hayward, Calif. Filed Dec. 15, 1925. Serial No. 75,599. 2 Claims. (Cl. 175—182.)

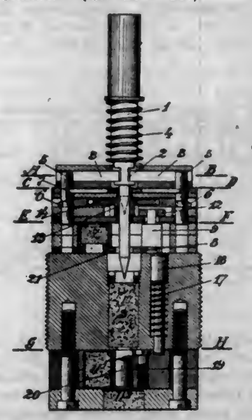


2. A device of the type described comprising a frame, means carried by said frame for supporting it in horizontal position with respect to the ground and an armature carried by said frame, means for actuating said armature, a magnetic shield covering the upper portion of said armature and being carried by said frame and a current measuring device in electric connection with said armature.

1,665,663. MOISTENER FOR CIGAR BOXES. ELMER C. HAKE, Cincinnati, Ohio, assignor to The Ludlow Manufacturing Company, Ludlow, Ky., a Corporation of Kentucky. Filed Sept. 30, 1926. Serial No. 138,764. 8 Claims. (Cl. 131—30.)

1. The combination of an auxiliary cover for cigar boxes comprising a frame, the frame being of a U shaped cross section, a transparent window carried by the frame, a longitudinal strip intermediate the frame and the window, a moisture carrying pad secured to the longitudinal strip, and means carried by the strip spaced from the pad whereby an air space is provided intermediate the moisture pad and spaced means.

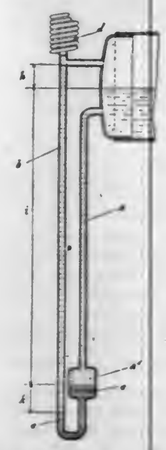
1,665,664. WATER-TUBE BOILER. WILHELM HOPF, Kiel, Germany, assignor to Fried. Krupp Germaniawerft Aktiengesellschaft, Kiel-Gaarden, Germany. Filed Feb. 13, 1925, Serial No. 8,992, and in Germany Mar. 6, 1924. 2 Claims. (Cl. 122—235.)



1. In a water tube boiler comprising upper and lower drums, water tubes connecting said drums, and a protecting shell arranged concentrically below said upper drum consisting of longitudinally running strips provided with recesses for the water tubes, supporting means for said shell comprising straps running transversely of said shell and suspended at both sides of the drum, said strips lying free upon said straps.

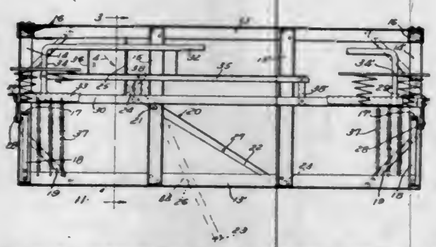
1,665,665. PROCESS FOR PRODUCING A HARD LOW-TEMPERATURE COKE. KURT JAHNKE, Ludwigsburg, Germany. Filed Oct. 19, 1926, Serial No. 142,774, and in Germany May 2, 1924. 4 Claims. (Cl. 202—8.)

1. A process for producing hard low temperature coke which comprises the steps of mixing a pulverized coal with a mixture of pulverized ferrocarbonate and a bituminous material; and subjecting this mixture to low temperature carbonization.



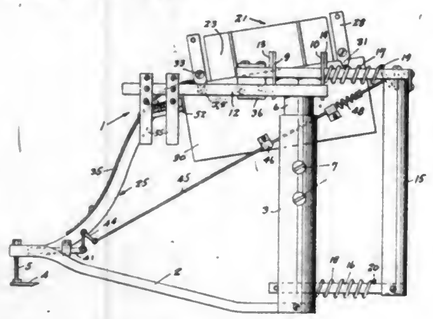
1,665,666. PERCUSSION FUSE. OSKAR JUNGHANS, Schramberg, Germany; Siegfried Junghans administrator of said Oskar Junghans, deceased. Filed Oct. 7, 1926, Serial No. 140,106, and in Germany May 21, 1926. 3 Claims. (Cl. 102—39.)

1. A percussion fuse in which the percussion pin normally lies concealed within the casing of the fuse comprising a percussion cap, a divided igniting charge



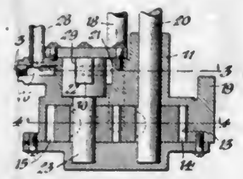
composed of a plurality of single explosive bodies which normally occupy safe positions so as not to communicate with each other, but which upon firing are permitted to communicate with each other for the purpose of igniting the explosive charge of the projectile, means for ensuring the safe and active positions of the said explosive bodies, forming the igniting charge, and means including a clockwork for retarding the interconnection of the said bodies to active position for a predetermined length of time after firing.

1,665,667. LIQUID-LEVEL INDICATOR. WILHELM KÜSTERS, Aachen, Germany. Filed Feb. 17, 1925, Serial No. 9,860, and in Germany Feb. 29, 1924. 1 Claim. (Cl. 73—54.)



A liquid level indicator for the water in steam boilers, comprising a pipe having a U-bend at a point below the boiler and one leg of the bend being in open communication with the water-containing space of said boiler and the other leg with the space above said water, said legs containing independent columns of water between which is interposed at the bend an indicating liquid having a specific weight which is approximately double that of the water.

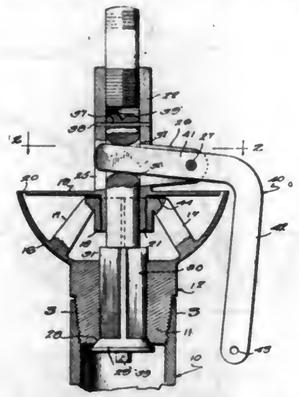
1,665,668. PORTABLE FOLDING BED. CHARLES LOFMAN, Los Angeles, Calif., assignor to Roberti Bros., Los Angeles, Calif., a Corporation of California. Filed Sept. 30, 1925. Serial No. 59,070. 5 Claims. (Cl. 5—168.)



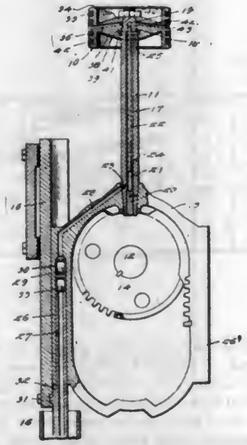
5. In an organization of the general character described, a truck frame, a bed frame pivotally mounted thereon, a floor engaging brace member pivotally mounted on said truck frame, means on said bed frame arranged to engage said brace member for automatically moving one end of said brace member outwardly from said truck frame during the movement of said bed frame from vertical to horizontal position, means on said bed frame for engaging said brace member, to give an initial inward movement of the brace member on raising the bed frame and resilient means tending constantly to throw said brace member outwardly.

1,665,669. NAIL SETTER. EDWARD F. MALOUF, Marysville, Calif. Filed Feb. 12, 1927. Serial No. 167,744. 9 Claims. (Cl. 1—47.)

2. In a nail setter adapted for setting nails at predetermined spots, a frame; a receptacle slidably mounted on the frame and adapted to receive nails therein; a nail conveyer connected with the receptacle for leading the nails therefrom; means for allowing the passage of only one nail at a time through the nail conveyer to the free end thereof; means at the free end of the nail conveyer for yieldingly retaining the nail passed through the conveyer; and manually operated means for holding the nail in, and at the free end of, the nail conveyer while the nail is set.



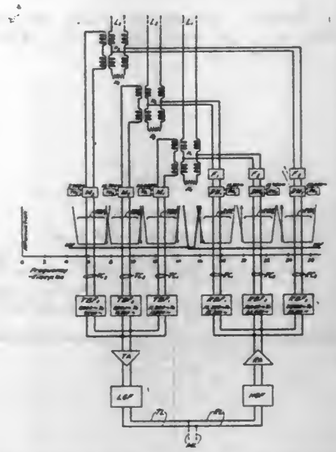
1,665,670. COMBINED LOW AND HIGH PRESSURE OIL PUMP. CHARLES W. MANZEL, Buffalo, N. Y. Filed Apr. 22, 1925. Serial No. 24,998. 6 Claims. (Cl. 103—4.)



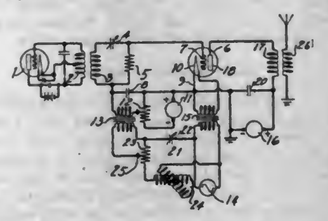
1. An oil pump of the character described, comprising a casing having low and high pressure oil chambers each provided with an inlet and an outlet, the outlets of said chambers delivering the oil to two separate distributing points and the outlet of the low pressure chamber having a branch communicating with the inlet of the high pressure chamber, and rotary means in said chambers for pumping the oil from the inlets to the outlets thereof, respectively.

1,665,671. LOCOMOTIVE WHISTLE. RALPH C. MOREHOUSE, Mason City, Iowa. Filed May 1, 1926. Serial No. 106,115. 4 Claims. (Cl. 116—137.)

3. In a locomotive whistle, a base including an upper bowl shaped portion having an open upper end and a depending cylindrical portion having an axial opening therethrough, a valve stem vertically slidable in said axial opening and having portions spaced therefrom to permit passage of operating fluid therethrough, the lower end of said axial opening being provided with a valve seat, a valve carried by said stem and normally engaging said seat, a stationary sleeve carried by said base near its upper end, a plate arranged in the open end of said bowl shaped portion and supported by said sleeve, a guide extending upwardly from said plate, said guide being provided with a vertically elongated radial slot, said valve stem projecting upwardly into said guide and provided with a slot arranged in alinement with the slot in said guide, a lever pivotally supported intermediate its ends by said guide, one end of said lever being vertically movable and arranged in the slot in said valve stem, and means for supporting a whistle bell over said plate.



1,665,672. PISTON AND CONNECTING-ROD CONSTRUCTION. LEROY H. NOAH, Ogallah, Kans. Filed Mar. 22, 1927. Serial No. 177,381. 1 Claim. (Cl. 184—18.)

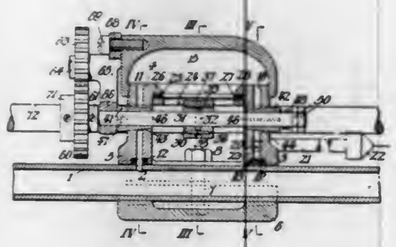


In combination, a piston comprising an annular wall having a groove formed intermediate its ends, a hub having a rod receiving bore, a web perpendicular to the annular wall connecting the annular wall and hub, ribs connecting said hub and annular wall, the rod receiving bore of the hub having annular grooves formed therein, lugs connecting the groove of the annular wall with the grooves of the hub and extending through said ribs, a rod engaged with said hub and having ports communicating with the grooves thereof, said rod having a bore the upper end of which is reduced and communicates with one of said ports, a plug seated in the lower end of the bore, said plug having a bore of the same size as the reduced extension of the first named bore, a tube having its ends engaged in said reduced extension and the bore of the plug and means for conducting lubricant to the bore of the plug, the other of said ports connecting the bore of the rod with the second groove of the piston hub, the lower end of the bore having an outlet formed through the wall thereof.

1,665,673. ARRANGEMENT OF CARRIER CHANNELS IN MULTIPLEX SIGNALING SYSTEMS. WAYNE B. NOTTINGHAM, Philadelphia, Pa., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 24, 1925. Serial No. 77,473. 7 Claims. (Cl. 179—15.)

1. In a multiplex carrier wave signaling system comprising a plurality of two-way carrier channels employing different carrier frequencies, all of the carrier frequencies in said channels used for transmission in one direction being comprised in a range below a certain limiting frequency, and all of the carrier frequencies in said channels used for transmission in the opposite direction being comprised in a range above said limiting frequency, the method of reducing near-end cross-talk which consists in selecting the particular carrier frequencies associated in each two-way channel for transmitting in opposite directions so that objectionable frequency components produced by intermodulation between the frequency bands transmitted in the same direction in any two of said channels will lie outside the range of the frequency bands transmitted in the opposite direction in any of the other channels.

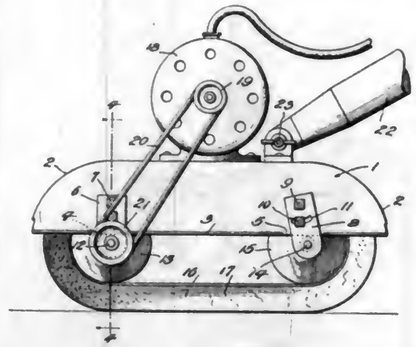
1,665,674. SYSTEM INCLUDING SPACE DISCHARGE DEVICE. ARTHUR A. OSWALD, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 7, 1924. Serial No. 691,173. 18 Claims. (Cl. 250—6.)



6. An electrical system comprising a space discharge device having a cathode, an anode and a control electrode means for supplying energy to control the operation of

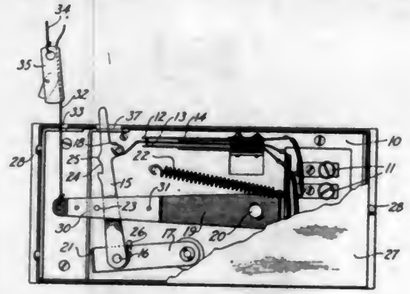
said device means for supplying alternating current to said cathode, and means for impressing a voltage wave upon the other electrodes of said device for compensating the effect of the alternating current supplied to said cathode.

10. A carrier transmitting system, comprising a source of carrier waves, means for coupling said source to a transmission circuit by a circuit including a space discharge device and a tuned circuit including a series connected means for preventing impedance variations in said transmission circuit from reacting upon said source of carrier waves.



1,665,675. PUMP. ARTHUR E. PAIGE, Philadelphia, Pa. Filed Mar. 24, 1926. Serial No. 96,935. 10 Claims. (Cl. 103—150.)

1. In a pump; the combination with a casing having an inlet port and means arranged to connect a conduit therewith; said inlet port extending from said conduit into a pump chamber in said casing; an outlet port from said chamber extending through said casing; a flexible metallic diaphragm fitted in said casing as a wall of said pump chamber; rotary valves fitted in corresponding seats in said casing, which are in coaxial relation and respectively local to said inlet port and outlet port; each of said valves having a port; a shaft extending through said valves and operatively connected therewith to turn them; means connecting said valves in predetermined relative rotary position upon said shaft; means arranged to press said valves toward their seats in compensation for wear; and a cam on said shaft in co-operative relation with said diaphragm, arranged to flex said diaphragm inwardly to reduce the volumetric capacity of said pump chamber when said inlet valve is closed and said outlet valve opened and vice versa; means arranged to rotate said shaft; a by-pass arranged to establish communication between said conduit and said pump chamber, independently of said inlet valve; and means arranged to vary the effective area of said bypass; whereby, rotation of said cam and inlet and outlet valves causes oscillatory displacement of the liquid in said pump chamber, but the effective displacement of said liquid through said outlet is variable by adjustment of said bypass valve.

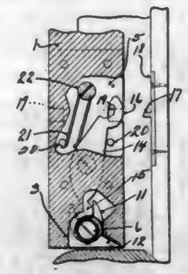


1,665,676. SANDPAPERING AND BUFFING MACHINE. ELY PRIMEAUX, New Orleans, La. Filed May 3, 1926. Serial No. 106,441. 1 Claim. (Cl. 51—174.)

In a buffing machine, the combination of a casing open at its lower ends and having indentions in the lip of its side walls; one of which indentions is slightly larger than the other, bearing straps secured to the side walls of the machine; one of said straps being retained snugly in one of the indentions and the other of which is adapted to be adjusted with respect to the side wall and within the complementary indentions, a slot formed in one of the straps to engage adjusting means, shafts journalled in the lower ends of the straps, drums mounted on the shafts, a

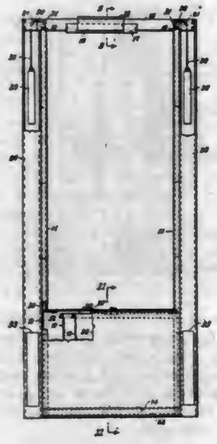
buffing element arranged on an endless belt; said endless belt being actuated by the drums and means for actuating one of the shafts.

1,665,677. ALARM DEVICE. WILLIAM C. ROE, New York, N. Y., assignor to Holmes Electric Protective Company, New York, N. Y., a Corporation of New York. Filed Jan. 10, 1923. Serial No. 611,770. 2 Claims. (Cl. 200—161.)



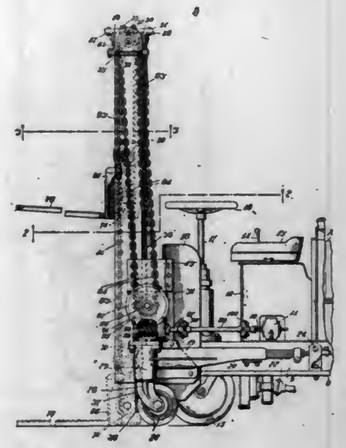
2. In combination, a movable member to be supervised, a pivoted lever, a spring tending to lower said lever, a set of contact springs for controlling an alarm circuit, a pivoted arm for operating the same, a link connecting said member and lever and holding said lever against the action of said spring, said lever being raised due to a pull on said link when the supervised member is raised and being lowered by said spring when said link is severed, said lever being arranged to operate said arm when moved in either direction to cause the actuation of said springs, and means associated with said lever and arm for maintaining said springs in their closed position.

1,665,678. AUTOMATIC WEATHER STRIP. FRANK SHERSMITH, Oconomowoc, Wis. Filed Mar. 28, 1927. Serial No. 179,069. 3 Claims. (Cl. 20—67.)



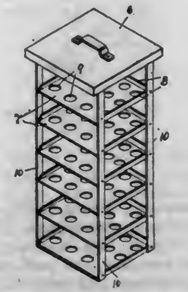
1. In a device of the class described, the combination of a casing, a member hinged thereto, a lever pivoted intermediate its ends within said member, a rocking sleeve extending transversely along the underside of said member and having an arm interfitting with the lower

end of said lever, a spring urging said lever in one direction, means carried by said casing against which said lever strikes for rocking said lever in the other



direction to thereby rock said sleeve, and a resilient weather strip carried by said sleeve and contacting with said casing when said sleeve is rocked.

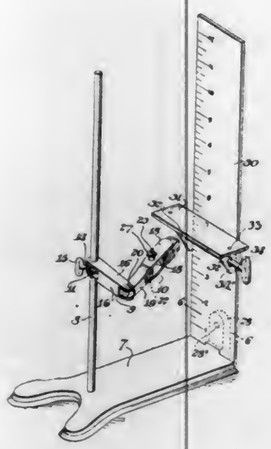
1,665,679. LIGHT SCREEN AND VENTILATOR. LEOPOLD SIMON, New York, N. Y. Filed Jan. 22, 1926. Serial No. 82,948. 12 Claims. (Cl. 189—61.)



1. A screen or covering device for application to windows, or like openings, including, in combination, spaced tubular posts, cross frame members extending between said posts, and including an upper lintel member and a lower base member, said posts and frame members forming a unitary screen framework adapted for installation as a unit within a window opening, guide members upon the inner faces of the said tubular posts and having channel guide-ways, a plurality of louvers mounted face to face in said channel guide-ways for sliding movement relatively to each other, the mutually adjacent louvers having flanges disposed at the leading edge of one and at the following edge of the other and turned backwardly from the edges along the adjacent faces thereof and facing toward each other so as to engage in interlocking relation when the louvers are moved relatively to each other into extended position, counterweight mechanism for operating said louvers and including a weight housed wholly within one of said tubular posts and running therein, and a flexible connection between said weight and one of the louvers.

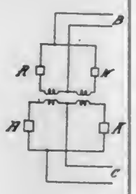
1,665,680. TIERING MACHINE. BERGER STOCKFLETH, Berrien Springs, and FREDERICK W. BURGER, Niles, Mich., assignors to Clark Tructractor Company, Buchanan, Mich., a Corporation of Michigan. Filed Feb. 9, 1925. Serial No. 7,947. 8 Claims. (Cl. 187—11.)

5. A tiering machine comprising an elevator frame, a carriage movable vertically on said elevator frame, driving sheaves mounted on the lower portion of said elevator frame at opposite sides thereof, means for driving said sheaves, sheaves mounted at the upper portion of the elevator frame over said driving sheaves, hoisting chains at opposite sides of the elevator frame, each of said chains extending over one of the upper sheaves and having a bight extending around and operatively engaging one of the driving sheaves, means actuated by said hoisting chains for moving the carriage vertically, and means for vertically adjusting said upper sheaves.



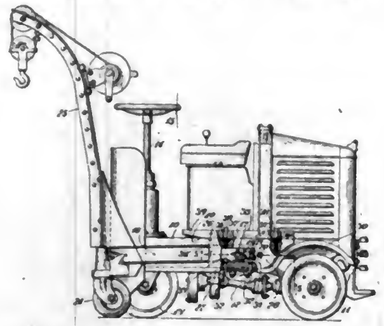
1,665,681. ICE-CREAM-BRICK CONTAINER. CHARLES B. TELLING, Cleveland, Ohio. Filed Feb. 3, 1923. Serial No. 616,710. 1 Claim. (Cl. 220—9.)

A bodily transportable unit for brick ice cream and the like comprising a container, a lid having a handle on its



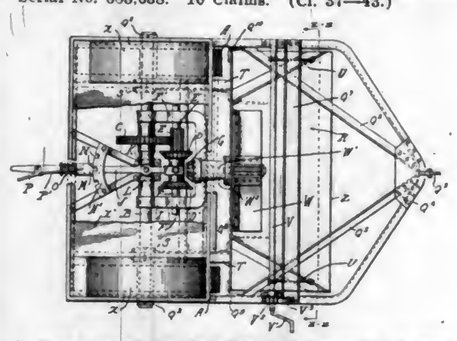
upper side and a rack of trays underneath, and means for maintaining the lowermost of the said trays clear of any liquid cream on the bottom of said container, said means comprising brackets on the container a short distance from the bottom thereof upon which the rack is supported.

1,665,682. GARMENT GAUGE. JOEL B. WELLS, Philadelphia, Pa. Filed June 21, 1921. Serial No. 479,191. 4 Claims. (Cl. 33—9.)



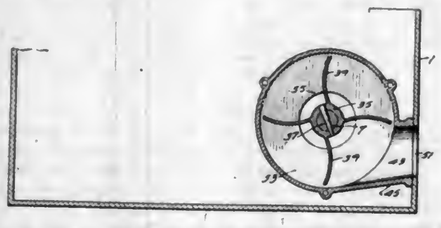
1. In a garment gauge, the combination of an upright gauge member, a horizontally extending plate supported thereby, and channelled elements pivoted to the plate, one at each end thereof, having channels oppositely disposed for receiving the opposite side margins of the gauge member.

1,665,683. TELEPHONE SYSTEM. THEODOR ZUSCHLAG, New York, N. Y., assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Oct. 6, 1924, Serial No. 742,038, and in Germany Oct. 6, 1923. 5 Claims. (Cl. 178—44.)



1. In a communication system, a two-way transmission line, a pair of one-way transmission lines, means interconnecting said lines so that transmission is permitted between said two-way line and each one-way line, but transmission is prevented between said one-way lines at certain frequencies, in combination with a balanced bridge circuit connected in one of said one-way lines and at all times operative to prevent transmission between said one-way lines at other frequencies.

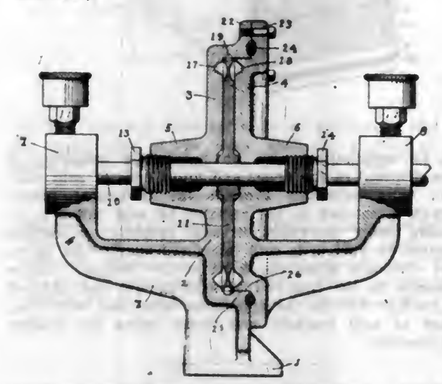
1,665,684. SHOP TRACTOR. FREDERICK W. BURGER, Niles, and BERGER STOCKFLETH, Berrien Springs, Mich., assignors to Clark Tructractor Company, Buchanan, Mich., a Corporation of Michigan. Filed Feb. 27, 1924. Serial No. 695,537. 6 Claims. (Cl. 180—14.)



1. The combination with a shop tractor frame having at each side a running board or step and a curved fender over one of the rear wheels of the tractor, of a weighting member located on each of said running boards or steps and projecting at one end over the adjacent wheel of the tractor.

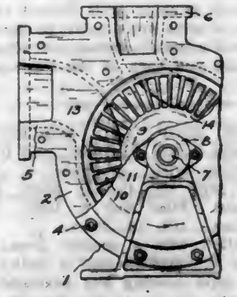
1,665,685. SNOW-REMOVAL APPARATUS. EDWIN B. CADWELL, Saugerties, N. Y. Filed Dec. 31, 1923. Serial No. 683,638. 10 Claims. (Cl. 37—43.)

1. A machine of the class described comprising a frame having means for connection to the rear draw bar of a tractor, traction wheels and a driving axle for supporting the frame, a snow scoop and a rotor mounted for operation therein whereby the snow may be discharged at either side of the scoop and gearing for operating the rotor from the said axle.



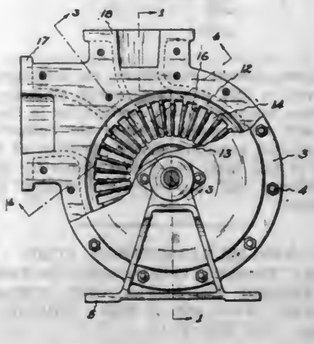
1,665,686. PUMP. PATRICK HENRY DAVIS, Leonia, N. J. Filed Dec. 29, 1925. Serial No. 78,154. 2 Claims. (Cl. 103—104.)

1. In combination, a tank, a shaft journaled in opposite walls of said tank, a rotor on said shaft having a



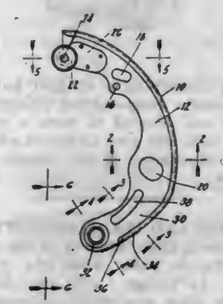
plurality of vanes, a pump casing surrounding said rotor to form therewith a centrifugal pump and spaced therefrom at all points to permit the passage therebetween of solid particles of substantial size, said casing being provided with lateral intake openings, and a tangential outlet member on said casing forming an outlet from the casing and from the tank, said outlet member being secured to a lower portion of a side wall of the tank to thereby support the casing above the floor of the tank.

1,665,687. PUMP. WILLIAM I. DERRICK, Davenport, Iowa, assignor to Westco-Chippewa Pump Company, Davenport, Iowa, a Corporation of Delaware. Filed Apr. 25, 1928. Serial No. 634,499. 37 Claims. (Cl. 103—96.)



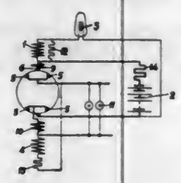
1. A pump comprising a casing, a shaft mounted therein, a rotor secured to the shaft, a plurality of annular passages in the casing adjacent the periphery of the rotor, said passages having common peripheral supply and discharge ducts, and blades on the rotor for engaging liquid in said passages, said rotor and casing having a substantially liquid-tight running fit between said passages and liquid deflecting means having a close running fit with said blades and extending over a plurality of successive blades for deflecting liquid from said annular passages to said discharge duct and for maintaining relatively great pressure differential between the outlet and the inlet ends of the passages.

1,665,688. PUMP. WILLIAM I. DERRICK, Davenport, Iowa, assignor to Westco-Chippewa Pump Company, Davenport, Iowa, a Corporation of Delaware. Filed Aug. 18, 1927. Serial No. 213,812. 7 Claims. (Cl. 103—96.)



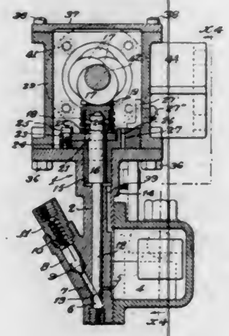
1. A rotary pump comprising a rotor in the form of a disc having an annular row of transverse apertures therein, and a casing provided with an inlet and an outlet and having walls closely overlying the face of the disc inwardly and outwardly of said row of apertures and between the inlet and outlet, said casing and disc forming an unobstructed passage alongside the row of apertures from the inlet to the outlet.

1,665,689. PUMP. WILLIAM I. DERRICK, Davenport, Iowa, assignor to Westco-Chippewa Pump Company, Davenport, Iowa, a Corporation of Delaware. Filed Aug. 18, 1927. Serial No. 213,818. 6 Claims. (Cl. 103—96.)



1. A rotary pump comprising a rotor having a continuous annular channel therein and impeller vanes alongside the channel, and a casing having portions closely overlying the rotor on opposite sides of the channel, and having an inlet and an outlet communicating with said channel, said casing having an inwardly projecting portion obstructing said channel between the inlet and the outlet to prevent return flow from the outlet to the inlet.

1,665,690. BRAKE SHOE. ADIEL Y. DODGE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 23, 1927. Serial No. 177,547. 15 Claims. (Cl. 188—250.)



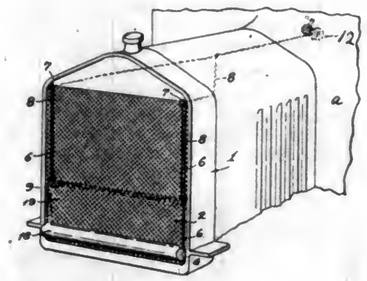
9. A brake shoe having an arcuate friction face and a stiffening web, separate plates or stampings secured to opposite sides of the web immediately adjacent its end, a pin having a central part with a relatively great diameter and with a length equal to the combined thickness of the web and plates and mounted in the web and said plates and projecting on opposite sides of the shoe, and a pair of thrust rollers respectively mounted on the ends of said pin and engaging the sides of said central part to hold the pin against axial movement, the ends of the pin being headed over to hold the rollers against axial movement.

1,665,691. TWO-VOLTAGE DIRECT-CURRENT GENERATOR. LUDWIG DREYFUS, Vasteras, Sweden, assignor to Allmänna Svenska Elektriska Aktiebolaget, Vasteras, Sweden, a Corporation of Sweden. Filed Feb. 23, 1927, Serial No. 170,313, and in Sweden Dec. 4, 1924. 6 Claims. (Cl. 171—223.)

1. In direct current generators, an armature having a commutator, a field having a system of main poles, a set of brushes bearing on said commutator in the neutral zones of said main poles, brushes short-circuited over a portion of said armature in the direction of the magnetic path of said main poles, and means for tapping a current between said short-circuited brushes and said other brushes.

1,665,692. VARIABLE-DISCHARGE PUMP. ORVILLE H. ENSIGN, Pasadena, Calif., assignor to Ensign Carburetor Company, Los Angeles, Calif., a Corporation of California. Filed Apr. 8, 1925. Serial No. 21,552. 10 Claims. (Cl. 103—37.)

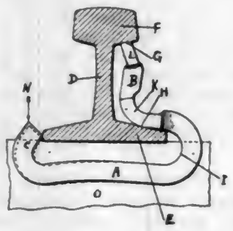
1. In a pump comprising a cylinder having inlet and discharge ports and a reciprocating plunger formed with an oblique face and adapted to form a cut-off for said inlet port; and rack and gear means to effect and maintain a rotative adjustment of the plunger with relation to the inlet port.



1,665,693. GLASS AND ITS MANUFACTURE. ELBERT E. FISHER, Toledo, Ohio, assignor of one-half to George W. Batchell, Toledo, Ohio. Filed Apr. 5, 1927. Serial No. 181,274. 14 Claims. (Cl. 106—36.1.)

1. A batch for glass production comprising a substantial proportion of barium sulfate as a primary ingredient and producing, when melted, a glass which is capable of being effectively decolorized by selenium and which solidifies to a clear transparent product.

1,665,694. GLASS AND ITS MANUFACTURE. ELBERT E. FISHER, Toledo, Ohio, assignor of one-half to George W. Batchell, Toledo, Ohio. Filed Apr. 6, 1927. Serial No. 181,613. 25 Claims. (Cl. 106—36.1.)

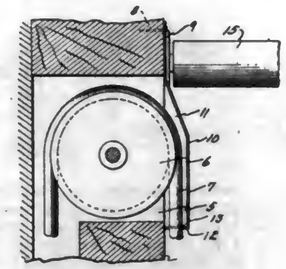


1. A glass-forming batch containing barium sulfide as a primary ingredient.

1,665,695. RADIATOR SHUTTER. LEIGH G. GARNSEY, Redlands, Calif. Filed Apr. 21, 1926. Serial No. 103,421. 2 Claims. (Cl. 257—132.)

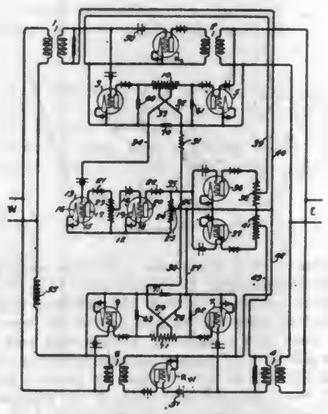
2. In combination with an automobile radiator; of tubes disposed in the upper and lower ends of said radiator; bolts extending through the lowermost tubes; brackets connected to the radiator by said bolts; a rewinding roller journalled in said brackets; a curtain arranged to wind upon said roller and adapted for movement vertically along the front of the radiator; cables connected to the free end of said curtain and adapted for passage through the uppermost tubes and wires connected to said brackets and upper tubes for guiding said curtain.

1,665,696. ANTICREEPER. HORATIO G. GILLMOR, Washington, D. C. Filed Aug. 28, 1925. Serial No. 53,062. 11 Claims. (Cl. 238—330.)



1. A one piece anticreeper consisting of a bar having a body portion adapted to engage a tie but not the rail bottom and rail gripping arms formed on the ends of said bar, one of said arms being so formed as to provide a rail head gripping surface extending forward of the forward face and back of the rear face of said body portion.

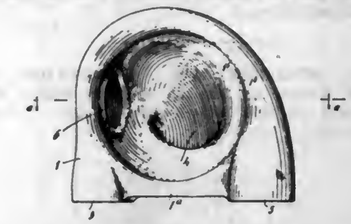
1,665,697. SASH STOP AND PULLEY GUARD. JOSEPH P. GLASER, LOUIS F. JULIEN, and HERBERT W. WHITTEN, Detroit, Mich., assignors to Chamberlin Metal Weather Strip Co., Detroit, Mich., a Corporation of Michigan. Filed May 6, 1925. Serial No. 28,356. 2 Claims. (Cl. 16—210.)



1. The combination with a window frame having a pulley opening in the side thereof, a pulley rotatably supported in the said opening and partially extending therethrough, a sash slidable in the window frame and a sash cord extending over the pulley and connected with the sash, of a cover member for the said opening consisting of a sheet metal member recessed in its mid

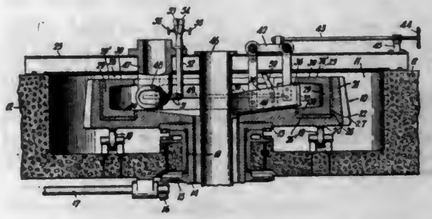
section and providing lateral extending flanges on opposite sides and at one end, the opposite end having a return bent part providing a closure for the recess at

the said end and forming when in position a stop for the upper edge of the sash, said end portion of the recess having an aperture for the pulley cord.



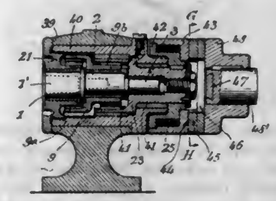
1,665,698. ELECTRIC-CURRENT TRANSMISSION. WILLIAM S. GORTON, London, England, assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Jan. 26, 1923. Serial No. 615,164. 24 Claims. (Cl. 179—170.)

1. A transmission system and two oppositely pointed asymmetrically transmitting channels connected thereto, and means responsive to the transmission in said system for decreasing the transmitting efficiency of one of said channels and for maintaining one of said channels at low transmitting efficiency at the instant when transmission is initially incident upon said channels, said means comprising circuits for balancing the energy of the transmission at one part of the system against the energy of the transmission at another part of the system.



1,665,699. AMPLIFIER. ERNEST W. GRAEF, Caldwell, N. J. Filed Feb. 12, 1924. Serial No. 692,287. 2 Claims. (Cl. 181—27.)

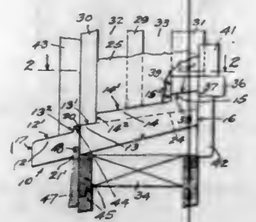
1. An amplifier of the character specified comprising a body having an interior passage provided with an inlet and an outlet, said passage gradually increasing in diameter from the inlet to the outlet and being arranged in convolute form with the main outlet opening through one



side of the body in a position transverse to the plane of the passage and a secondary outlet opening through the same side as the main outlet.

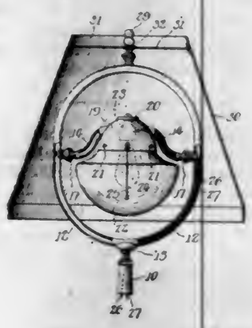
1,665,700. CENTRIFUGAL CASTING MACHINE. JOHN K. HENCKEN, Brooklyn, N. Y. Filed Nov. 14, 1925. Serial No. 68,970. 5 Claims. (Cl. 22—65.)

1. A centrifugal casting machine comprising a centrifugal mold, means for introducing molten metal into the mold, means for subjecting the introduced metal to centrifugal action within the mold whereby the relatively heavy metal is forced towards the periphery of the mold and the lighter material is moved toward the axis of rotation, skimming means projecting into the mold for removing said lighter material from the mold, and means for receiving the lighter material so removed and for directing it out of the vicinity of the mold.



1,665,701. TRANSMISSION GEAR. SIMON HOLDENER, Wolfhausen, Switzerland, assignor to Benjamin Kienast, Schlossberg, Switzerland. Filed Mar. 13, 1924, Serial No. 698,984, and in Switzerland Mar. 29, 1923. 9 Claims. (Cl. 74—35.)

1. In a transmission gear adapted for use in driving looms, a shaft, an eccentric on said shaft, a transmitting member loosely mounted on said eccentric, an internally toothed rim and an externally toothed rim provided on said transmitting member, a split casing, a bush rotatable in said casing, an externally toothed rim operatively connected to said bush and in mesh with the internally toothed rim of the transmitting member, an organ adapted for power-transmission to outside of the gear and operatively connected to the loom shaft, an internally toothed



rim on said organ and in mesh with the externally toothed rim on the transmitting member, means to clamp said split casing to prevent said bush from rotating and cause thereby the gear to transmit power, and means to operate said clamping means.

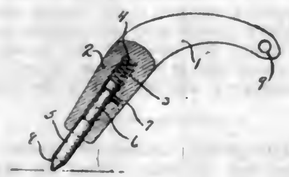
1,665,702. WINDOW-FRAME CONSTRUCTION. BERTRAM F. KEHRER and EDWARD H. BRETT, Seattle, Wash. Filed Mar. 22, 1926. Serial No. 96,438. 3 Claims. (Cl. 20—11.)

1. In a window-frame, a sill having its upper surface formed to provide a series of steps, each end of said sill being formed to provide at the front thereof a horn element to protrude lengthwise of the sill beyond the ends of the rear portion of the sill, said horns being of a width to include all of the lowermost step and a portion of the second step, said last named portion of the second step extending as a rib along the upper rear edge of the respective horns to the outer extremities thereof.

1,665,703. PORTABLE ELECTRIC LAMP. JAMES KERNES, Chicago, Ill., assignor to Kernes Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 8, 1926. Serial No. 146,927. 5 Claims. (Cl. 240—81.)

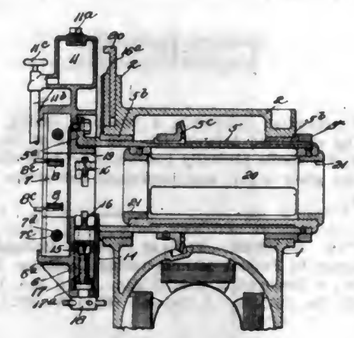
4. In a portable electric lamp the combination of a standard terminating in a loop, a cross-arm extending across said loop, said cross-arm being curved and having a dished or cupped member, a lamp socket contained in said dished member, said dished member being adapted to carry an interior shade, said cross-arm carrying the dished member and socket in the curved portion of said cross-arm whereby balance of the portable electric lamp is secured when said cross-arm, dished member and interior shade are out of vertical alignment with said standard and said loop, said cross-arm, dished member and lamp socket being rotatable within said loop, a post secured to the top of said looped member, said post comprising a ball and socket joint, and a holder for an exterior lamp shade, said ball and socket joint in said post permitting the tilting of the exterior shade held by said shade holder.

1,665,704. ROD FOR CURTAINS, DRAPERIES, AND THE LIKE. JAMES KERNES, Chicago, Ill., assignor to Kernes Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed May 23, 1927. Serial No. 193,895. 3 Claims. (Cl. 156—19.)



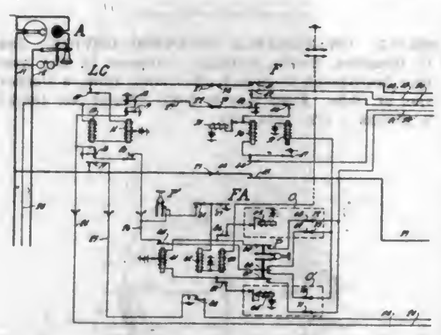
1. In a rod for curtains, draperies and the like, a lamp socket in the end of said rod, a fitting surrounding said lamp socket, said fitting having an inturned flange offset at opposite sides of the flange and forming two relatively short grooves on the interior of said flange, an opening in the edge of said flange in one of said relatively short grooves, a second fitting, said second fitting being provided with two projections, one of said projections being adapted to be placed in one of said grooves and the other of said projections being adapted to be placed in said edge opening and in the other of said grooves, said second fitting being provided with an aperture in one end, which is centrally arranged in the end, through which aperture a lamp normally connected in said lamp socket may pass.

1,665,705. PAPER-FILING DEVICE. FRED J. KLINE, New York, N. Y. Filed July 9, 1925. Serial No. 42,565. 4 Claims. (Cl. 129—25.)



1. The combination of a file base, a fastener supporting member lying substantially flat upon said base, one of said parts being relatively flexible, the fastener supporting-member having one side secured to the file base and another side free, and a fastener attached to said free side, the free side of said supporting-member being adapted to be separated from the file base by relative flexure between said base and the free side of the supporting-member to permit the fastener to be attached to said free side.

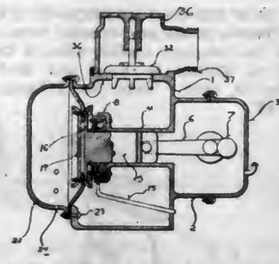
1,665,706. STOCKING MARKER. CHARLES T. LA MONT, Milwaukee, Wis. Filed Mar. 14, 1927. Serial No. 175,397. 4 Claims. (Cl. 66—1.)



1. A marker for stockings comprising a body portion and a yielding point adapted to move inwardly towards the body portion.

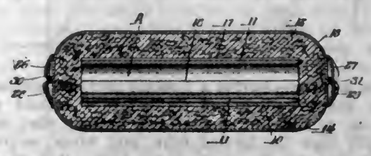
1,665,707. DEVICE FOR CUTTING PIPE. JACOB LEVY, Boston, Mass. Filed July 16, 1924. Serial No. 726,274. 4 Claims. (Cl. 10—90.)

1. A device for cutting pipe, embracing in its construction a supporting frame, a revoluble hollow shaft mounted therein and provided with interiorly disposed removable pipe-supporting and centering means, a tool-carrying head secured to said shaft, a pair of opposed slide blocks mounted on said head, thread-cutting dies adjustably secured in said blocks, and means comprising outwardly thrusting springs and opposed automatically controlled screws engaging said blocks, for automatically moving said blocks apart to decrease the depth of the thread cut toward the end of the cutting operation in order to avoid formation of a projecting burr at the end of the thread, substantially as described.



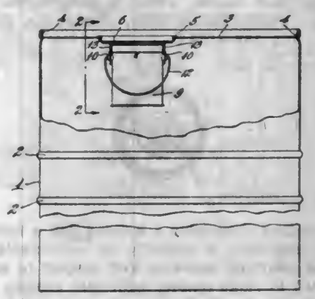
1,665,708. TELEPHONE SYSTEM. CLARENCE E. LOMAX, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Dec. 6, 1922, Serial No. 605,149. Renewed Sept. 26, 1927. 19 Claims. (Cl. 179—18.)

2. In a finder system, a plurality of finders an allotter for alloting an idle one for use when the allotted one is taken for use, said allotter comprising two operating mechanisms and a group of relays common to both said operating mechanisms, and a manually operable device for disconnecting either operating mechanism from the associated relays and substituting the other operating mechanism.



14. In a telephone system, link circuits for extending calling lines, a signalling device initially rendered effective responsive to all said link circuits becoming busy, and means for maintaining said device effective while any calling line is waiting to be extended.

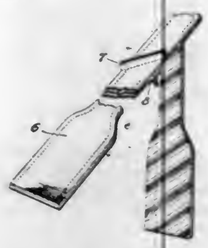
1,665,709. DIAPHRAGM PUMP. CHARLES L. LONGENECKER, Wauwatosa, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 16, 1926. Serial No. 135,819. 3 Claims. (Cl. 103—150.)



1. A diaphragm pump comprising a casing having a fluid receiving chamber provided with opposed walls and having inlet and outlet openings, one of said walls having an enlarged opening, the other of said walls having a tubular guide projecting into said fluid receiving chamber and directed towards said enlarged opening, said casing having a crank compartment one of whose walls is formed by said last mentioned wall, a plunger slidably mounted within said tubular guide and having an enlarged head provided with a rounded marginal portion, a diaphragm closing said enlarged opening and secured to said enlarged head adjacent said rounded marginal portion, a diaphragm-clamping cap secured to the outer side of said first mentioned wall and clamping the marginal portion of said diaphragm adjacent said enlarged opening, a crank located within said crank compartment, and means connecting said crank and plunger.

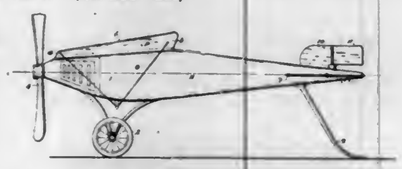
1,665,710. MANICURING BUFFER. ZANA R. LUCAS and GUY E. CARPENDER, West Chicago, Ill.; said Carpender assignor to said Lucas. Filed May 20, 1926. Serial No. 110,402. 12 Claims. (Cl. 132—73.)

1. In a manicuring buffer, the combination of a slit tube, said tube being surrounded by padding, and an outer covering therefor.



1,665,711. CONTAINER. LEO A. LUX, Rocky River, Ohio. Filed Jan. 18, 1924. Serial No. 687,027. 3 Claims. (Cl. 220—28.)

1. A structure of the character described, comprising a main container provided with an opening, a closure for said opening, a secondary container provided with bail



receiving bosses, and strip portions on said closure provided with openings therein to receive said bosses for securing the secondary container thereto.

1,665,712. BOW TIE AND METHOD OF MAKING THE SAME. GEORGE R. MILLER, Omaha, Nebr., assignor to Grip Bow Tie Company, Omaha, Nebr., a Copartnership composed of William M. Reese and Merl W. Reese. Filed June 23, 1926. Serial No. 117,992. 3 Claims. (Cl. 2—146.)

1. An improved method of making bow ties which consists of cutting the material in a strip on a bias so as to obtain bias ends, folding the strip over on itself and sewing along two longitudinal edges to form a closed tubular section and joining the bias ends of two sections.

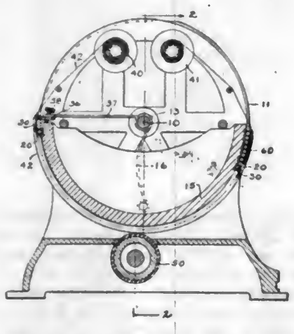
1,665,713. AEROPLANE. ARTHUR A. NESO, Abrams, Wis. Filed Dec. 1, 1926. Serial No. 152,042. 4 Claims. (Cl. 244—12.)

1. An aeroplane having a fuselage provided with scoop-shaped wings, leading and trailing edge of said wings tilted up at dihedral angles, the trailing edge having more tilt than the leading edge, said wings secured to the fuselage with the trailing edge higher than the leading edge measuring from the horizontal center line of the fuselage, means for stabilizing said aeroplane.

1,665,714. GOVERNOR FOR MOTORS. KENNETH B. NOBLE, Hartford, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Connecticut. Filed June 5, 1925. Serial No. 35,196. 2 Claims. (Cl. 188—184.)

1. A governor comprising a housing and a motor shaft relatively removable, a plurality of counterweights supported and relatively movable with respect to said shaft and adapted to make contact with said housing substantially entirely around its inner surface, and a single resilient split ring secured at diffeernt points thereon to said weights to control the action of the latter under centrifugal force.

1,665,715. COMPASS INDICATOR FOR AUTOMOBILES, ETC. OLE P. NOISOM, South Bend, Ind. Filed May 8, 1926. Serial No. 107,566. 4 Claims. (Cl. 33—222.)

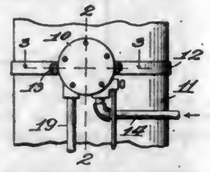


1. In direction indicators, a two part casing, a glass covering supported between the two parts of the casing, a magnetic needle pivotally positioned between the casing and the glass cover, and impressed indications on the casing.

1,665,716. DAMPER. THOMAS OLINGER, Holland, Mich., assignor to Federal Manufacturing Company, Holland, Mich., a Corporation of Michigan. Filed Jan. 17, 1927. Serial No. 161,499. 9 Claims. (Cl. 126—292.)

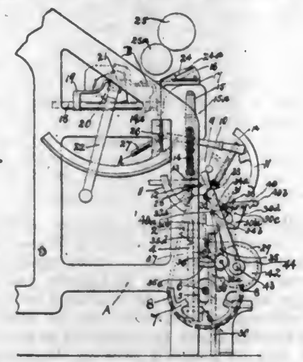
1. A damper comprising, a circular disk of sheet metal, two members of like construction located at one edge of the disk, each including a semi-cylindrical section with oppositely extending wings at its inner end, said wings lying against opposite sides of the damper disk and being permanently secured thereto, and said sections fitting together and forming a tubular outwardly extending stem, substantially as described.

1,665,717. CHANGEABLE PRINTING DEVICE. JOHN C. OSBORNE, Berlin, Germany, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 5, 1927. Serial No. 188,972. 9 Claims. (Cl. 101—52.)



4. In a changeable printing form, the combination of a holder comprising a plate with intermediate raised bed and inwardly turned edge flanges some distance beyond the extreme edge of the bed, and a pair of rails with laterally extending bottom portions secured to the under side of said plate.

1,665,718. EXPANSION-JOINT MATERIAL. CARL J. PATER, Wyoming, Ohio, assignor to The Philip Carey Manufacturing Company, a Corporation of Ohio. Filed June 14, 1920. Serial No. 388,987. 7 Claims. (Cl. 94—18.)

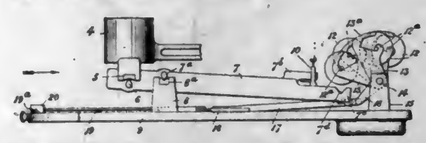


1. An expansion joint formed of a body of bituminous material and a body of harder bituminous material than said first mentioned body, forming a surface for said joint.

1,665,719. THERMOSTAT. LOUIS W. SCHNEPP, San Bernardino, Calif. Filed Apr. 11, 1927. Serial No. 182,775. 5 Claims. (Cl. 297—11.)

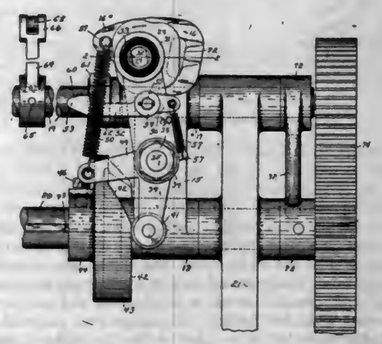
1. A thermostat comprising a dished rigid disk, a disk of resilient metal having its edge firmly secured to the edge of the rigid disk, which resilient disk is normally dished against said rigid disk and a hollow member projecting outwardly from the central portion of the rigid disk on the convex surface thereof.

1,665,720. DOFFING MECHANISM FOR CAP SPINNING, DOUBLING, AND LIKE MACHINES. ALFRED STELL, Ingrow, Keighley, JOHN STELL, Browfield, Keighley, and HENRY WELCH, Keighley, England. Filed June 17, 1927. Serial No. 199,604, and in Great Britain May 17, 1926. 5 Claims. (Cl. 118—18.)



1. In doffing mechanism for cap spinning machines, a vertically movable spindle rail, means for actuating said spindle rail, spindles fixed upon said spindle rail, a lifter plate taking over said spindles, wharles mounted upon said spindles, bobbins supported and operated by said wharles, caps mounted upon the upper ends of said spindles, each of said caps having a lateral flange formed upon it, means for engaging said flange to support the cap, devices for actuating said means, members for engaging the lower ends of the bobbins within the caps and means for operating said members, two series of pegs for receiving the full and empty bobbins, a rail mounted upon lever arms supporting one series of pegs, an oscillating shaft supporting the second series of pegs, a lever fixed to said shaft, a slotted connecting link coupling the lever supporting the first rail to the lever fixed upon said shaft, means for actuating said levers, bearings upon which said levers and the shaft are pivoted, and means for raising and lowering said bearings for the purpose described.

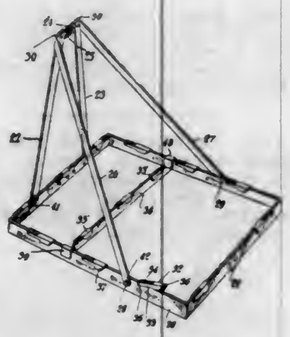
1,665,721. PROFILE GAUGE. RICHARD A. STOCKTON, Beverly, Mass. Filed Aug. 8, 1925. Serial No. 49,008. 4 Claims. (Cl. 33—175.)



1. A profile gauge comprising a pair of alined and relatively slidable rules, a holder attached to each rule, a plurality of superposed slidable strips surrounding each holder, and a clamp mounted on each holder and bearing against the uppermost strip.

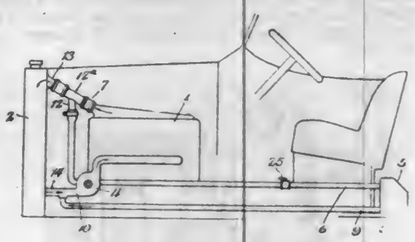
1,665,722. AUTOMATIC OR SEMIAUTOMATIC WEIGHING APPARATUS. WILLIAM TIMSON, Soho Foundry, Birmingham, England, assignor to W. & T. Avery, Limited, Birmingham, England. Filed June 8, 1926, Serial No. 114,429, and in Great Britain May 4, 1926. 4 Claims. (Cl. 265—48.)

1. A weighing apparatus comprising a rotatable spindle, a plurality of jaws secured on said spindle at varying angles, a plurality of weights adapted to be carried in their non-acting position by said jaws, a scale lever, a plurality of jaws on said scale lever for receiving said weights and means for rotating the said spindle whereby the weights may be deposited or removed from the scale lever.



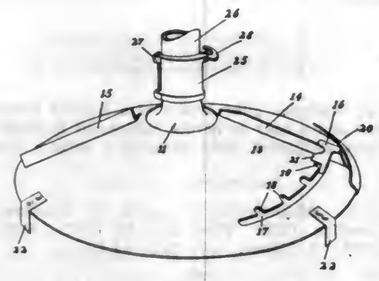
1,665,723. AIR-CONTROL DEVICE FOR AIR-OPERATED SHEET-FEEDING MECHANISMS. CHARLES W. TREMPER, New Haven, Conn., assignor to The Tremper-Shields Co., New Haven, Conn., a Corporation. Filed July 7, 1927. Serial No. 203,971. 7 Claims. (Cl. 271—26.)

1. An air-control device for air-operated sheet-feeding mechanisms, comprising a main air-pipe, an extension air-pipe, a valve-member connected with the said main



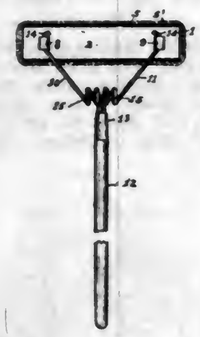
air-pipe, a valve-member connected with the said extension air-pipe, each of the said valve-members having an air-port, and one being movable with respect to the other, means for operating the movable valve-member for registering and de-registering the said air-ports, whereby the main air-pipe is sealed to the atmosphere and the extension air-pipe is opened thereto, and a detent for holding the said movable valve-member with its air-port out of registration with the air-port of the other member, the said detent operating only at one point and that at the completion of any one cycle of the operation of the device.

1,665,724. BAG HOLDER AND SPREADER. WILLIAM P. WAY, Richmond Hill, N. Y. Filed Feb. 12, 1927. Serial No. 167,733. 10 Claims. (Cl. 83—26.)



1. A device of the class described, comprising a substantially rectangular bag holding frame having two ends and two opposing sides, and a movable member adapted to bridge the space between said sides at various distances from said ends in order to adjust the size of the frame portion delimited thereby.

1,665,725. AUTOMOBILE HEATER. ELIZABETH AEBY, Indiana Harbor, Ind., assignor to Louis Aeby, East Chicago, Ind. Filed Mar. 11, 1922. Serial No. 542,882. 2 Claims. (Cl. 123—174.)

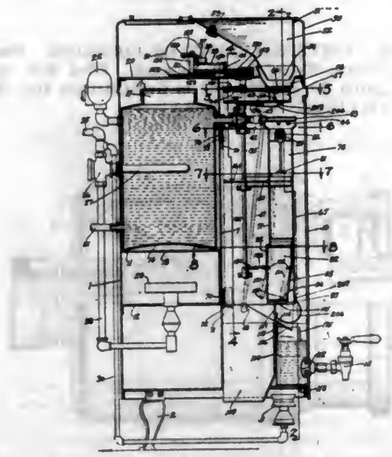


1. In combination with a motor vehicle, a radiator, a pump and a heater in the body, two liquid circuits in both of which the motor and the pump are contained, one containing the radiator and the other containing the heater, said circuits being connected on the outlet side of the motor jacket between the same and the radiator, and a spring-seated valve device in the radiator circuit between said connection and the radiator, adapted to yield to predetermined pressure, and in case of less pressure to exclude the circulating liquid from the radiator circuit and to limit it to the heater circuit.

1,665,726. POST-BASE TRIMMER. HARRIET O. ALLISON, Charlotte, N. C. Filed June 8, 1926. Serial No. 113,482. 6 Claims. (Cl. 72—128.)

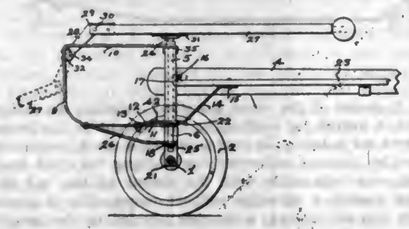
1. In a device for forming the upper surface on a concrete base for posts and the like, a funnel-shaped member having a hole in its center adapted to receive a post, handle members secured to the funnel-shaped member for reciprocating the same around the post as a center.

1,665,727. CLEANING APPARATUS. JOHN S. CAMPBELL, Pittsburgh, Pa. Filed Feb. 21, 1927. Serial No. 169,779. 1 Claim. (Cl. 15—209.)



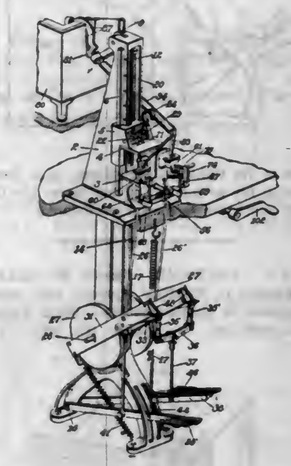
In combination a cleaning apparatus of the character described comprising a rectangularly shaped sheet metal holder including a back wall, a cleaning element removably mounted in said holder, said holder provided with a pair of lugs stamped from the said back wall thereof and disposed adjacent to respective ends of said holder, an operating handle, a pair of supporting arms having their rearward ends permanently fixed in the forward end of said handle, the forward ends of said pair of arms detachably respectively engaging said pair of lugs, the rearward end portion of each of said pair of arms being formed to provide a spring for maintaining said pair of arms in engagement with said lugs, said spiral springs further permitting varied tensional adjustment of said carrier relatively to said operating handle.

1,665,728. COFFEE-MAKING APPARATUS. BRUCE W. CANRIGHT, St. Paul, Minn., assignor of one-half to Ira E. Meagher, Minneapolis, Minn. Filed Dec. 19, 1927. Serial No. 241,124. 13 Claims. (Cl. 58—3.)



1. An apparatus for making coffee comprising a ground-coffee supply hopper having a valve for controlling discharge therefrom, a charge measuring chamber arranged

to receive dry coffee from the hopper and having a discharge control valve, an extraction chamber arranged to receive a charge released from the measuring chamber and having a valve to control discharge therefrom, means

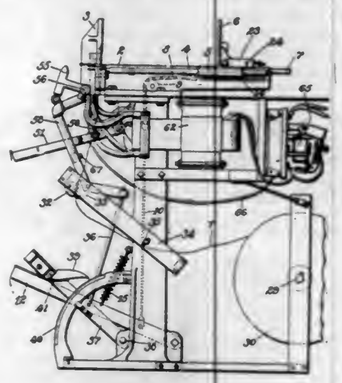


for delivering hot water within the extraction chamber including a valve, a drain receptacle arranged to receive a charge delivered from the extraction chamber and having a pivoted perforated bottom as a drain, said drain receptacle being supported to move to a dumping position, means for holding the bottom in closed position when the drain receptacle is in charge-receiving position, and arranged to release the bottom as the receptacle moves to dumping position, and means connected to operate the valves and drain receptacle in timed relation to close the measuring chamber valve, bring the drain chamber to charge-receiving position, open the hopper and extraction chamber valves and then cause a dwell of these elements in respective positions for a predetermined time, and afterwards close the extraction chamber and hopper valves, open the measuring chamber valve, open the hot water valve, move the drain receptacle to dumping position, and then cause a dwell of these elements for a timed period, the arrangement being such that the timing mechanism opens the water valve for a fraction of the period in which the charge is held in the extraction chamber and at the beginning of that period and after delivery of the charge.

1,665,729. COASTER-WAGON STEERING GEAR. ARTIE C. CARLSON, Valparaiso, Ind., assignor, by mesne assignments, to The Northern Trust Company and Harold H. Rockwell as trustees. Filed Aug. 21, 1924. Serial No. 733,352. 16 Claims. (Cl. 280—87.5.)

2. In coaster wagons, a body having a front piece, a king pin mounted on the front piece, front wheel suspension means carried by the lower end of the king pin, a perforated plate secured to the body bent downward to pass beneath the front piece through which the king pin passes, a steering frame attached to the king pin below the perforated plate and also to said pin above the front piece, and a steering handle pivoted to the steering frame in such position that when the handle is in an approximate horizontal position it will be supported by the upper end of the king pin.

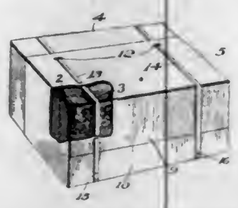
1,665,730. MACHINE FOR BUNDLING PAPER CURRENCY. FRANK W. CHASE, Melrose, Mass., assignor to Weldfast System, Inc., Salem, Mass., a Corporation of Massachusetts. Filed Feb. 1, 1922. Serial No. 533,474. 24 Claims. (Cl. 100—31.)



2. In a machine for bundling paper currency, the combination of mechanism for compressing a stack of said currency, mechanism for tightening a binder about said stack while the stack is held compressed, and means for delivering a quantity of melted sealing material to overlapping portions of the binder to secure the binder in its tightened condition.

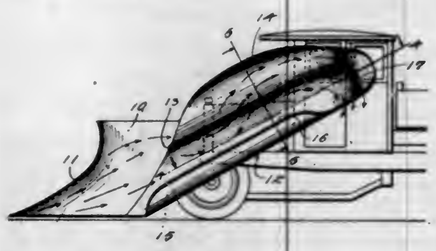
24. In a machine for bundling currency, the combination of mechanism for compressing a stack of currency, means for anchoring one end of a metal tape at a point closely adjacent to said stack with said tape looped about the stack, mechanism for tightening said tape about said compressed stack with portions of said tape overlapping each other, means for sealing the overlapping portions of said tape together in their tightened condition, and means for laterally withdrawing the anchoring means from under said binder after the sealing operation has been completed.

1,665,731. MACHINE FOR BUNDLING CURRENCY. FRANK W. CHASE, Melrose, Mass., assignor to Weldfast System, Inc., Salem, Mass., a Corporation of Massachusetts. Filed Feb. 21, 1923. Serial No. 620,371. 22 Claims. (Cl. 100—31.)



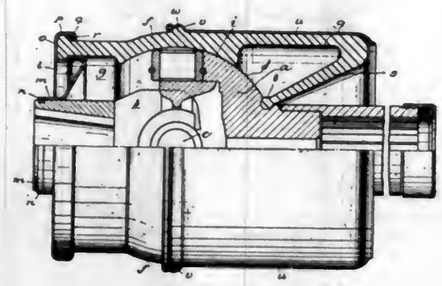
21. In a bundling machine, the combination of mechanism for compressing a stack of material to be bundled, means for anchoring one end of a metal tape at a point closely beside said stack with said tape movable about said stack, mechanism for tightening said tape closely around said compressed stack, with portions of said tape overlapping each other, and means for electrically welding overlapping portions of the tape together while the tape is so tightened, comprising an electrode located adjacent to said anchoring means where the binder is drawn

over it as the binder is tightened and a second electrode movable into and out of position to cooperate with the first electrode in welding portions of said binder together



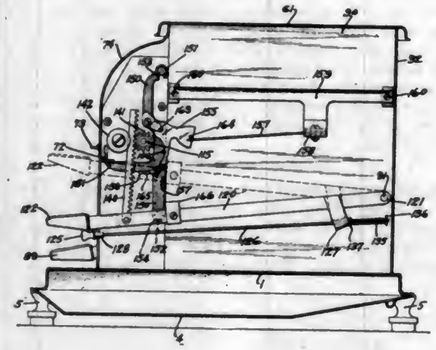
to secure it in its tightened condition, said first electrode being mounted for withdrawal from under the binder after the welding operation has been performed.

1,665,732. PACKAGE. FRANK W. CHASE, Melrose, Mass., assignor to Weldfast System, Inc., Salem, Mass., a Corporation of Massachusetts. Filed June 16, 1923. Serial No. 645,746. 5 Claims. (Cl. 100—14.)



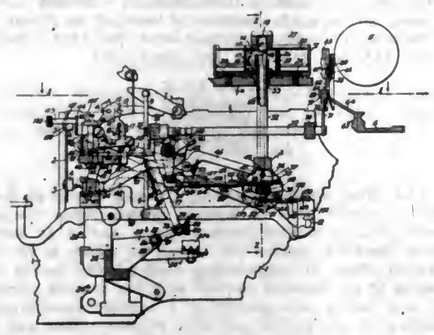
1. An article of the character described comprising a stack of material, an outer cover for said stack, and a metallic binder tightly encircling said stack and cover and holding said stack under compression, said binder extending through a perforation in said cover and having one end lying substantially against the cover and the other overlapped upon it and sealed to it by a fused metallic union.

1,665,733. SNOWPLOW. CLARENCE W. CLARK, Ashland, Wis. Filed Feb. 12, 1927. Serial No. 167,804. 4 Claims. (Cl. 37—44.)



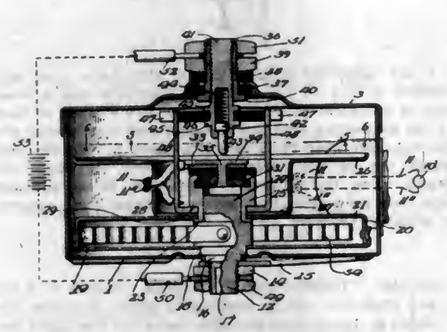
1. A snow plow having rearwardly divergent, upwardly and rearwardly inclined mold boards and chutes extending upward and rearward from the rear edges of the mold boards, the bottom and inner wall of each chute for substantially the entire length of the chute being curved transversely so as to provide a hood extending over and forming a continuation of the chute and the rear end wall of each chute being laterally curved.

1,665,734. UNIVERSAL JOINT OR COUPLING. HERBERT CLARK, Wylde Green, England. Filed Mar. 28, 1927, Serial No. 178,958, and in Great Britain Dec. 28, 1926. 6 Claims. (Cl. 64—89.)



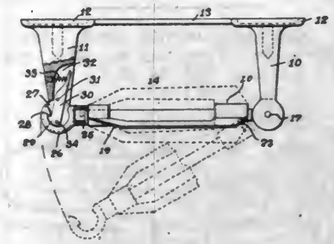
1. A cover for a universal coupling between two shafts comprising a flexible seamless and jointless casing moulded from flexible material having a central portion fitting closely around the coupling, annular pockets on each side of the central portion to receive lubricant, and means adapted to engage the coupling members and thereby close said pockets.

1,665,735. BREAD TOASTER. THOMAS C. FORBES, Hopkins, Minn., assignor to Waters-Genter Co., Minneapolis, Minn., a Corporation of Minnesota. Filed Jan. 5, 1927. Serial No. 159,129. 16 Claims. (Cl. 219—19.)



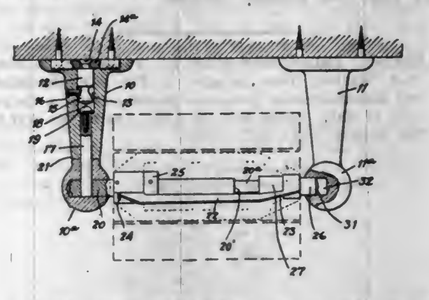
1. A device of the class described including an electric heater, a switch for controlling the current to the heater, a detent for holding the switch closed, a clock mechanism, a movable element connected for winding the clock mechanism, and engageable with the detent at the end of a timing period, a movable support engageable to prematurely trip the detent, a member pivoted to the movable support, and a thermostatic element controlled by the heater temperature and arranged to move the pivoted member to interpose the same in the path of the movable winding element.

1,665,736. TYPEWRITING MACHINE. GEORGE G. GOING, Middletown, Conn., assignor, by mesne assignments, to Remington Typewriter Company, a Corporation of New York. Filed Sept. 30, 1925. Serial No. 59,623. 35 Claims. (Cl. 197—151.)



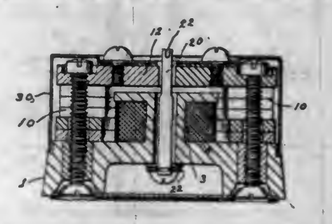
1. In a typewriting machine, the combination of ribbon spools, a ribbon driving shaft therefor, a ratchet wheel operatively connected with said shaft, a pair of pawls constantly engaged with said ratchet wheel, printing key levers, type bar actuating devices connected with said levers, a universal bar operative by certain of said devices, a rock shaft connected with said universal bar, a crank arm on said rock shaft, and a pawl carrying member pivotally connected directly to said crank arm and carrying said pair of pawls.

1,665,737. AUTOMATIC SWITCHING-CORD REEL. JAMES J. GOUGH, Chicago, Ill., assignor to Chicago Electric Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 4, 1925. Serial No. 66,726. 12 Claims. (Cl. 200—153.)



1. The combination with a rotatable reel, of a conductor wound thereon, a terminal connected to one end of the conductor, a stationary circuit terminal spaced from the conductor terminal transversely of the reel, a switching member threaded on one of the terminals on an axis identical with that of the reel and extending transversely of the reel toward the other terminal, the other terminal having a contact face adapted to be engaged by the switching member; and means fast with respect to the said other terminal and engaging the switching member whereby a rotation of the reel rotates the switching member so as to cause the switching member to move towards or away from the said contact face; the switching member including a metal body portion threaded on the said one of the terminals and a spring-pressed plunger carried by and projecting beyond the said body portion toward the said contact face.

1,665,738. HOLDER FOR PAPER ROLLS. JOSEPH A. HOEGGER, Jersey City, N. J. Filed May 8, 1925. Serial No. 28,944. 3 Claims. (Cl. 242—55.2.)



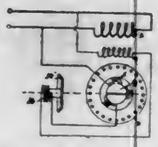
1. A roll holder of the kind described comprising a pair of permanently spaced immovable arms, a rigid shaft hinged to the outer end of one of said arms, said shaft having at its free end a hook which engages in a slot of the second arm, a latch pivoted in the slot of the second arm and engaging the aforesaid hook, and key actuated means for releasing the latch.

1,665,739. PAPER HOLDER. JOSEPH A. HOEGGER, Jersey City, N. J. Filed July 28, 1925. Serial No. 46,625. 3 Claims. (Cl. 242—55.2.)

1. A paper holder comprising a pair of posts having rounded outer head portions one of which has a socket and the other of which is held to turn on the body of the post, a pintle held in the second mentioned post and extending into the aforesaid turning head, and a paper holding member entering the turning head and connecting with the pintle, said member having slidably mounted in its free end a slide bolt to enter the aforesaid socket.

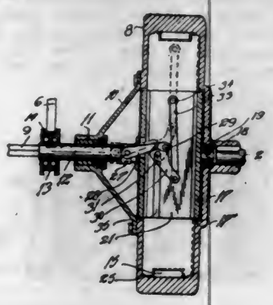
1,665,740. MAGNETIC SOUND-REPRODUCING DEVICE. ZAY JEFFRIES, Shaker Heights, Ohio, assignor to The Cleveland Trust Company, trustee, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 6, 1924. Serial No. 742,078. 1 Claim. (Cl. 175—345.)

In an electrically operating sound producing device, the combination of means for creating a magnetic field comprising opposed magnetic poles and an adjacent



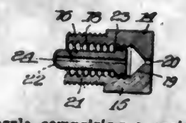
coil, a vibrating reed projecting through said coil and disposed between said poles, said reed consisting of an alloy of nickel and iron of preferably of only somewhat less nickel than iron.

1,665,741. ARCH-SUPPORTING SHOE. JOHN JONES, Wilkes-Barre, Pa. Filed May 31, 1927. Serial No. 195,349. 2 Claims. (Cl. 36—71.)



1. An arch supporting shoe, comprising an upper provided with a welt, an insole, a spring shank stiffener secured directly to the insole and arranged on the longitudinal center line of the shoe, a packing piece arranged under the shank stiffener and extending under the shank and heel portions of the insole for their full width and having a projecting tongue at one side arranged in line with the big toe portion of the shoe, said packing piece being beveled at each side and at its ends, granular packing under the remaining front portion of the insole, and an out sole secured to the welt under the said packing piece and granular packing.

1,665,742. INDUCTION MOTOR. FREDERICK S. KINGSTON, Warren, Ohio, assignor to The Sunlight Electrical Manufacturing Company, Warren, Ohio, a Corporation of Ohio. Filed Apr. 28, 1927. Serial No. 187,151. 14 Claims. (Cl. 172—278.)

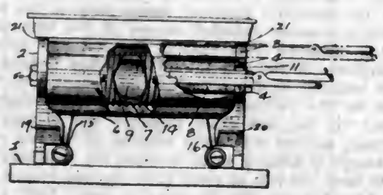


1. An induction motor, having a starting winding, an electro-magnetic clutch having an energizing winding, and means responsive to the motor speed for de-energizing both of said windings after the motor has been started.

1,665,743. HYDRAULIC TRANSMISSION MECHANISM. MERRITT A. KNAPP, Rosalia, Wash. Filed Nov. 17, 1926. Serial No. 148,915. 3 Claims. (Cl. 192—58.)

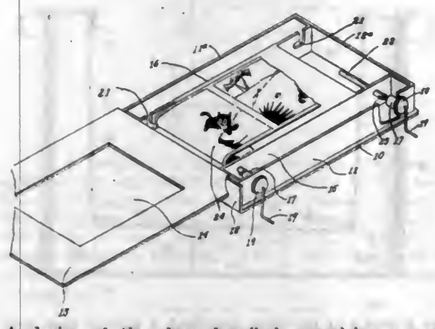
1. The combination with a hollow fly wheel having a series of fins terminating short of the side walls of said wheel, of a rotary driven head journaled in said wheel, and a plurality of radially extensible blades having notched ends carried by said head for frictional engagement with said fly wheel.

1,665,744. FACE-SPRAYING DEVICE. MARGOT LANDBERG, Chicago, Ill., assignor of one-half to Justus P. Seeburg, Chicago, Ill. Filed Nov. 15, 1926. Serial No. 148,570. 2 Claims. (Cl. 299—115.)



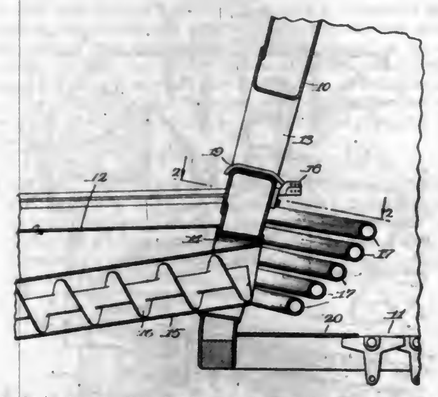
1. A spray nozzle comprising a casing having an inlet and an outlet and an internal spiral groove therebetween, and a member in said casing having an externally threaded portion the thread of which is of triangular shape in cross-section, said member loosely engaging at its threaded portion with the grooved portion of said casing and containing a passage therethrough opening at one end to the inlet of said casing and at its other end in communication with the outlet of said casing.

1,665,745. SAXOPHONE CORD. ALBION SLAYTON LANG, Jamaica Plain, Mass. Filed Dec. 17, 1926. Serial No. 155,432. 5 Claims. (Cl. 224—5.)



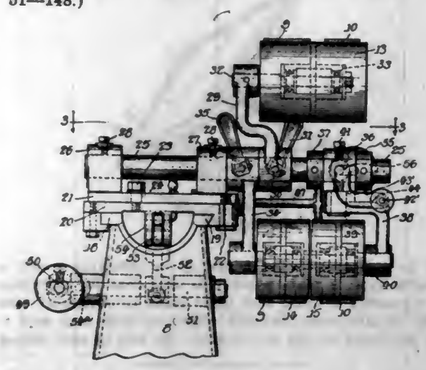
1. An adjusting member for a saxophone cord, said member having an upper pair of apertures and a lower pair of apertures through which the two strands or leads of the supporting cord are threaded and also having projections extending from opposite faces to provide rests which the operator may hold between his finger and thumb when the adjusting member is to be adjusted, said rests preventing the finger and thumb from applying a gripping pressure on the strands.

1,665,746. CURLING-IRON HEATER. HENRI G. LEVY, San Francisco, Calif., assignor to Mono Abramson and Henri G. Levy, doing business under the firm name and style of Electric Manufacturing Company, San Francisco, Calif. Filed Mar. 7, 1924. Serial No. 697,451. 2 Claims. (Cl. 219—22.)



1. In a heating device of the class described, the combination of a main heating compartment for receiving and heating a device to be heated, an auxiliary heating compartment associated in heat absorbing relationship with said main heating compartment for receiving the device and maintaining the heated condition thereof, and a single heater for both of said compartments, said heater being disposed in the main heating compartment and heating said main compartment to a higher temperature than said auxiliary compartment so that the temperature of the device may be maintained in the auxiliary compartment without overheating the device.

1,665,747. MOVING-PICTURE BOOK. RICHARD A. LOEDERER, New York, N. Y. Filed Apr. 11, 1927. Serial No. 182,596. 1 Claim. (Cl. 40—86.)

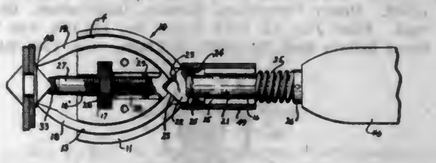


A device of the class described comprising a case, shafts rotatably mounted in said case, a strip bearing pictured representations having its ends attached to said shafts and adapted to be wound or unwound on said shafts, a stud in the wall of the case adjacent the end of each shaft, said studs having bores passing therethrough, a spindle passing through and rotatable in each stud bore, a handle on one end of said spindle, the other end of said spindle being enlarged into a loop, the end of said shaft being slotted, said loop engaging said slotted end of the shaft.

1,665,748. LOCOMOTIVE STOKER. NATHAN M. LOWER and EDWIN ARCHER TURNER, Pittsburgh, Pa., assignors to Locomotive Stoker Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 25, 1926. Serial No. 111,551. 9 Claims. (Cl. 122—4.)

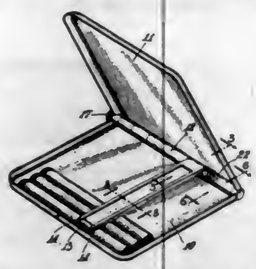
1. In a locomotive fire-box, a hollow backhead having an aperture adjacent the grate, a fuel delivering conduit discharging through such aperture, a U-shaped wall formed of tubes having their ends in communication with the chamber of the backhead and inclosing the aperture, and means above the wall for projecting fuel thereover upon the grate.

1,665,749. DOUBLE-BELT SANDER. CARL LAWRENCE MATTISON, Rockford, Ill., assignor to Mattison Machine Works, Rockford, Ill., a Corporation of Illinois. Filed Mar. 24, 1924. Serial No. 701,275. 15 Claims. (Cl. 51—148.)



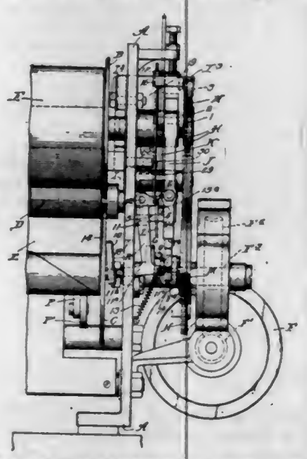
14. In a belt sanding machine, the combination with an idler pulley, means for supporting said pulley comprising a shaft, a head mounted to turn on said shaft, said head carrying a stud perpendicular to said shaft, an L-shaped bracket having one leg thereof pivoted on said stud, and a shaft mounted in the other leg of said bracket with its axis intersecting that of the said stud, said second shaft being adapted to support the pulley, and means for adjusting said bracket with respect to said head head.

1,665,750. CAP ATTACHMENT FOR VISORS. MARIE MCKEE, Garden Home, and CHARLES A. ROACH, Portland, Oreg., assignors of one-third to Frank E. Walling, Portland, Oreg. Filed Aug. 15, 1927. Serial No. 212,980. 1 Claim. (Cl. 2—176.)



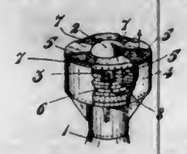
The combination of a head band; strap means for holding same in position around the head of the wearer; a visor at the forward end of said band; a head piece above said visor; a foldable head covering mounted on said visor at the lower edge of said head piece; a yieldable wire band around the rear edge of said head covering hinged to the sides of said head band; and means for securing said wire to the rear portion of said head band.

1,665,751. RIVET-FINISHING TOOL. BERTRAM NEILL, Borger, Tex. Filed Mar. 24, 1925, Serial No. 17,898 Renewed Aug. 25, 1927. 6 Claims. (Cl. 78—47.)



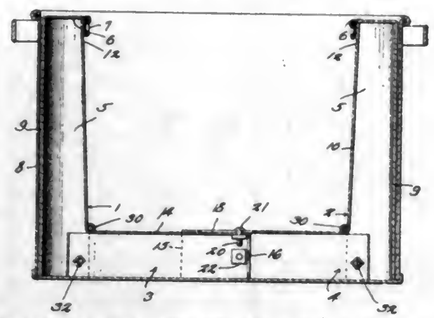
1. A rivet finishing tool comprising a frame provided with grooved guideways, a pair of reciprocable impact members mounted in said guideways adapted to contact with the surface of a rivet head, and means to actuate said members.

1,665,752. CIGARETTE CASE. JOHN PARSONS, Newton Center, Mass. Filed May 29, 1926. Serial No. 112,480. 9 Claims. (Cl. 206—41.)



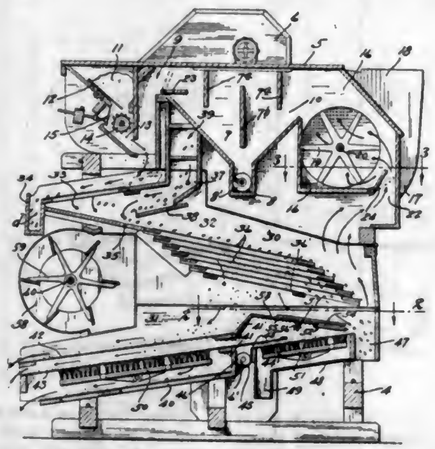
3. In a cigarette case, a casing for receiving a roll of abrasive tape, a plate pivoted to said case for maintaining cigarettes therein, said plate being in alinement with a slot in said casing through which the tape may pass to said plate and means for rotating the roll in said casing.

1,665,753. BRAKE DEVICE. OSCAR PETERSON, Chicago, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed July 20, 1925. Serial No. 44,767. 3 Claims. (Cl. 84—134.)



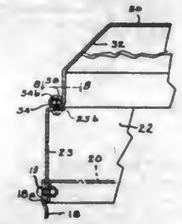
1. In means of the character set forth, a reversible motor, a contact-carrying bar, a rock-frame on which said bar is mounted equipped with an actuating arm, means driven by said motor for lifting said actuating arm, a braking device co-acting with the take-up roll of the mechanism, a spring normally tending to apply said braking device and retracting means for said braking device actuated by the actuating arm of said rock-frame.

1,665,754. SPARK ARRESTER FOR CUPOLAS OR THE LIKE. PERCY PRITCHARD, Moseley, Birmingham, England. Filed July 13, 1926, Serial No. 122,198, and in Great Britain Sept. 28, 1925. 1 Claim. (Cl. 183—94.)



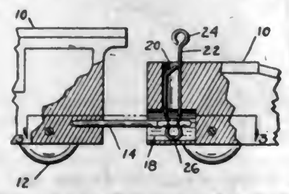
A spark arrester comprising a cover sealing the top of a chimney, an annular member located around the chimney comprising a wall spaced from the chimney, and having a bottom passing from the wall to the chimney, radial walls dividing the annular member into compartments, such walls passing to a short distance from the said bottom, roofs for the top of each alternate compartment, said chimney having ports leading into the upper end of each said alternate compartment provided with a roof, whereby gases will pass into the roofed compartments and then under the radial walls into the other compartments.

1,665,755. WASHBOILER. TERRENCE W. STAFFORD, San Francisco, Calif. Filed Nov. 23, 1926. Serial No. 150,277. 1 Claim. (Cl. 68—30.)



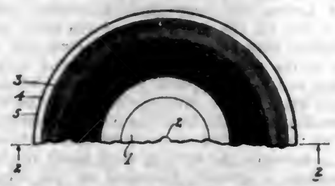
In a device of the class described, a pair of base members, upstanding tubular arms at the outer ends of the base members, hinges connecting the arms with the base members, securing devices connecting the lower ends of the arms with the base members, releasably, to prevent the base members and the arms from having relative movement on the hinges, and a bolt and slot connection between the inner ends of the base members, whereby the base members may be adjusted minutely, with respect to each other, thereby to permit the arms to be disposed closely adjacent to the ends of a boiler.

1,665,756. GRAIN SEPARATOR. CLARENCE T. THORBUS, Minneapolis, Minn., assignor to Richardson Grain Separator Co., Minneapolis, Minn. Filed June 12, 1924. Serial No. 719,522. 11 Claims. (Cl. 209—361.)



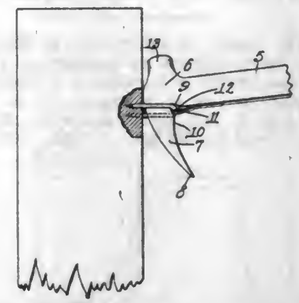
1. In a separator of the kind described, the combination with a gang of vibratory sieves, of upper and lower grading screens below said gang, a repeat screen underlying said gang of sieves, and an adjustable repeat board between said gang of sieves and said repeat screen, operative to vary the extent of the delivery to said upper and lower grading screens of material passed through said gang, said lower grading screen having an imperforate receiving section extended under said adjustable repeat board.

1,665,757. STOVE CONSTRUCTION. ALBERT H. TINNERMAN, Cleveland, Ohio. Filed Apr. 3, 1925. Serial No. 20,359. 8 Claims. (Cl. 126—301.)



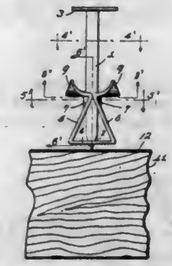
1. In a canopy structure for a stove of the character described the combination of a top member having flaring sides terminating in a continuous vertical flange, a bead structure formed around the marginal edges of said flange on three sides thereof and a horizontally extending projection along the back of said flange and end panel members formed to provide a suitable support for the bead.

1,665,758. TOY TRAIN COUPLING. FRANKLIN S. UPHAM, Des Moines, Iowa. Filed Apr. 16, 1927. Serial No. 184,856. 5 Claims. (Cl. 280—33.15.)



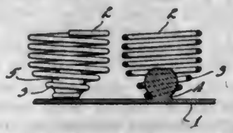
1. A toy train coupling comprising a plurality of cars, a hook member connected to one end of each of said cars, each hook member having an eye therein arranged substantially horizontal, the other end of each of said cars having a vertical bore and a horizontal bore therein communicating with each other, said hook member having the eye portion thereof arranged to be received in said horizontal bore and means frictionally mounted in said vertical bore adapted to project through the eye of said hook member, said means having an enlarged portion adapted to project below the eye of the hook member.

1,665,759. PHONOGRAPH RECORD AND METHOD OF MAKING THE SAME. ANTHONY J. VARSELLI, Newark, N. J., assignor, by mesne assignments, to Columbia Phonograph Company, Bridgeport, Conn., a Corporation of New York. Filed Apr. 22, 1926. Serial No. 103,758. 11 Claims. (Cl. 18—48.3.)



1. A phonograph record of the character described having an enlarged rim with a knurled transverse edge.

1,665,760. FENCE TOOL. KEITH J. VAUGHT, San Diego, Calif. Filed Mar. 30, 1927. Serial No. 179,606. 3 Claims. (Cl. 254—28.)



1. A tool of the class described including a handle, a head at one end of the handle, said head including a finger tapered to a fine point, said head having a recess adjacent to the handle to receive a staple, and means overlying the recess for holding a staple in the recess.

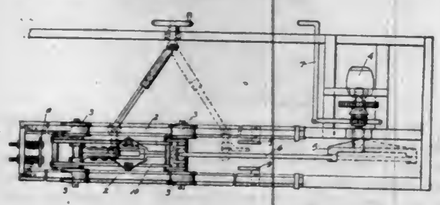
1,665,761. WIRE FASTENER. GEORGE F. VOIGHT, Oakland, Calif., assignor to Economy Products Corporation, a Corporation of California. Filed Jan. 25, 1926. Serial No. 83,755. 8 Claims. (Cl. 72—118.)

3. In means of the character described, a spacing element formed of a strip of flat metal and comprising a base plate adapted to seat against a support, said base plate having an opening in its midpart, and a cooperable nail projecting into said opening, the opposed ends of said base plate terminating in upwardly extending inwardly inclined side supports with their upper ends adjacent said nail, the upper end of one of said side supports being provided with an outwardly extending wire support.

1,665,762. WELDED SPRING PAD AND METHOD OF MAKING THE SAME. CHARLES E. WARRAM, Norwood, Ohio, assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed Jan. 23, 1926. Serial No. 83,277. 7 Claims. (Cl. 29—173.)

1. The method of securing a spring with tapering end coils to a base plate, consisting in applying within the tapering end coils a member having a convex curved lower surface, adapted to engage said coils and permanently securing said member to the plate.

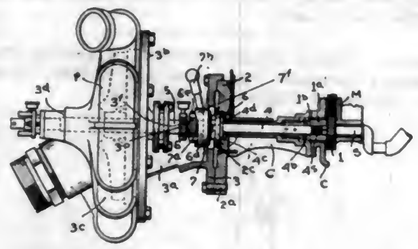
4. A spring pad, comprising a metal base plate, and a series of springs secured thereto, each spring having



tapering terminal convolutions, and a member within said convolutions and permanently secured to the plate and having a curved lower surface beneath which said tapering spring convolutions are engaged.

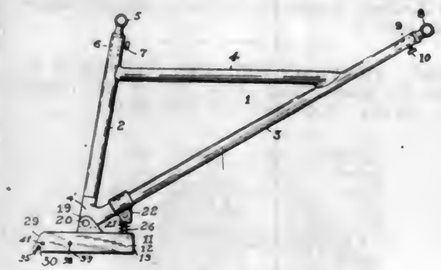
1,665,763. SHOE OR BOOT. ELI H. WIEL, San Francisco, Calif., assignor to Buckingham & Hecht, San Francisco, Calif., a Corporation of California. Continuation in part of application Serial No. 534,092, filed Feb. 4, 1922. This application filed June 30, 1923. Serial No. 648,660. 1 Claim. (Cl. 36—45.)

A boot or shoe having a two piece vamp secured together by a flat seam, a separate exterior reinforcing strip stitched along its edges to the two pieces along opposite sides of said seam, said strip being U-shaped in cross section whereby a thickened vamp portion is formed along the line of junction of the two vamp pieces to reinforce the vamp, and a cord threaded within said U-shaped strip.



1,665,764. PUNCTURING MACHINE. ALLEN B. YORK, Sandpoint, Idaho, assignor to Malvern L. Bruce, Sandpoint, Idaho. Filed June 4, 1927. Serial No. 196,622. 5 Claims. (Cl. 144—2.)

1. In a pole perforating machine the combination with a reciprocable carriage and tool holder, and a reciprocable tool in the holder, of an extensible, sectional, and flexible shaft normally disposed perpendicular to the line of travel of the carriage and means actuated thereby for adjusting the tool holder relatively to the carriage, said shaft having a non-traveling portion, and means for operating the shaft.

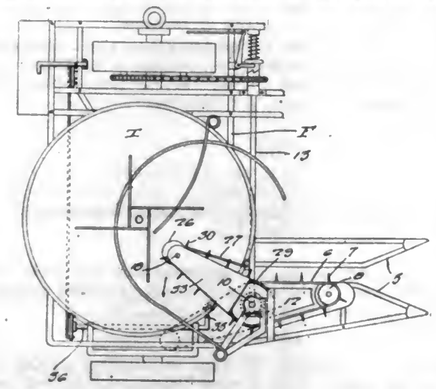


1,665,765. PUMP ATTACHMENT FOR MOTOR VEHICLES. BEN D. BARTON, Battle Creek, Mich., assignor to American Steam Pump Company, Battle Creek, Mich., a Corporation of Michigan. Filed Feb. 15, 1926. Serial No. 88,421. 13 Claims. (Cl. 180—53.)

1. The combination in a structure of the class described, of a chassis, a driving shaft carried by the chassis, a supporting bracket mounted on the chassis, a centrifugal pump detachably secured to said bracket, a coupling shaft interposed between the driving shaft and pump shaft to transmit motion from the former to the latter, clutch means for connecting the coupling shaft to the driving shaft, spring means for disengaging said clutch means when the supporting bracket is removed or when the clutch means permits; a sleeve on said pump shaft, means for interlocking the sleeve and coupling shaft when the pump is attached to the bracket, cam-means for moving the sleeve to cause the engagement or disengagement of the said clutch at will, and means

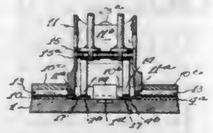
for engaging the sleeve and pump shaft to prevent further longitudinal inward movement of the sleeve on the shaft when the clutch is engaged, whereby end thrust of the pump is transmitted through the sleeve to the pump bracket.

1,665,766. FLOOR SCRAPER. NICKOLAUS BINGER, Pittsburgh, Pa. Filed Mar. 11, 1925. Serial No. 14,676. 1 Claim. (Cl. 145—48.)



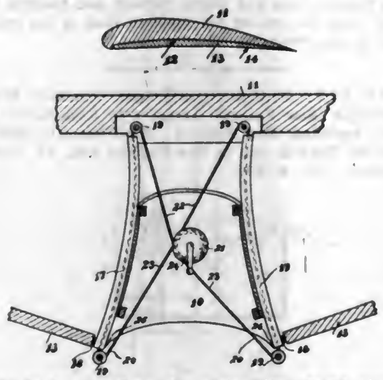
In a floor scraper a manually slidable shoe including a body portion having side walls and a top and bottom, an upstanding partition formed integral with said side walls at the rear ends of said top and bottom, a pair of oppositely extending inclined plates merging into each other at the tops thereof, formed integral with said side walls rearwardly of said partition and one arranged in advance of the other, the forward plate spaced from said partition and the lower part of the rear plate extended and spaced from the rear ends of said sides, and a surface working tool clamped to the forward face of each of said plates.

1,665,767. SWINGING CARRIER FOR CORN SHOCKERS. FRANK T. BOOKMYER, Marion, Ohio. Filed Mar. 20, 1925. Serial No. 17,000. 1 Claim. (Cl. 56—71.)



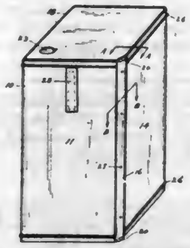
A swinging carrier for corn shockers comprising a vertical shaft adapted to be journaled in the frame of the shocker, a pair of shafts mounted in spaced relation on the vertical shaft, a rectangular plate between the intermediate portions of the carrier in spaced relation to the shaft, and having its longitudinal dimension vertically disposed, a rail on the upper end of the plate and extending beyond both sides thereof, a second rail on the lower end of the plate and extending beyond both sides thereof, said rail being disposed horizontally, bearings on the forward ends of the rails for receiving the vertical shaft, a bracket extending from the plate and terminating in a bearing for receiving the vertical shaft between the sprockets, a collar on the vertical shaft below the bearing of the bracket, a sprocket journaled on the other end of each rail, chains trained over the sprockets on the brackets and the sprockets on the vertical shaft, spikes

extending from the chains, means for urging the free ends of the rails toward the center of the table of the



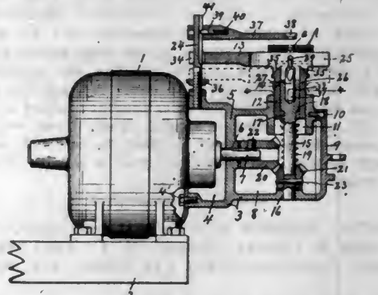
shocker, and a spring adapted to be mounted on the shocker for urging the stalks in engagement with the spikes and the chain.

1,665,768. ELECTRIC IRON. GEORGE BROWNING, Wilmette, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 15, 1925. Serial No. 50,368. 8 Claims. (Cl. 219—25.)



1. An electric laundry iron and the like having a base member with the smoothing face comprising integrally an upper and a lower portion, said base member being slotted edgewise parallel to the smoothing face inward from the front end, and from the opposite longitudinal sides forming between said upper and lower portions a horizontally extending pocket for the electric heating element, in combination with said element inserted edgewise into said pocket, and means for securing it therein.

1,665,769. AEROPLANE. NORMAN BUIE, Stayner, Ontario, Canada. Filed Mar. 26, 1927. Serial No. 178,707. 2 Claims. (Cl. 244—12.)



1. In an aeroplane, a pair of auxiliary wings hingedly connected at their outer ends to the underside of the main plane, arcuate guides fastened to the body, followers carried by the inner ends of the wings and disposed in said guides, sheaves positioned at the upper and lower ends of the guides, a drum, a crank therefor, and cables connected to the followers and passed over the sheaves to the said drum.

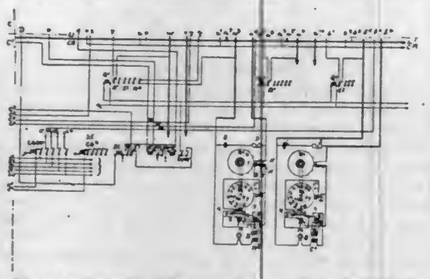
1,665,770. LIQUID CONTAINER. LYMAN ORMISTON BUIST, Toronto, Ontario, Canada. Filed Oct. 29, 1925. Serial No. 65,589. 1 Claim. (Cl. 229—6.)

A liquid container comprising a top and a bottom having three rounded corners and one beveled corner, a cardboard blank folded around said top and bottom and overlapping on the beveled corner and forming the four sides of said container, means for securing said blank to and around said top and bottom, and an inside and an outside wooden stiffener of triangular cross section lying upon said beveled corner and secured thereupon and to one another by a plurality of nails, and a coating of water proof material laid over and completely covering the inside surface of said container.

1,665,771. MACHINE FOR COUNTERBORING BRAKE LININGS AND THE LIKE. GEORGE B. CADY, Canastota, N. Y. Filed Apr. 10, 1925. Serial No. 22,099. 2 Claims. (Cl. 77—5.)

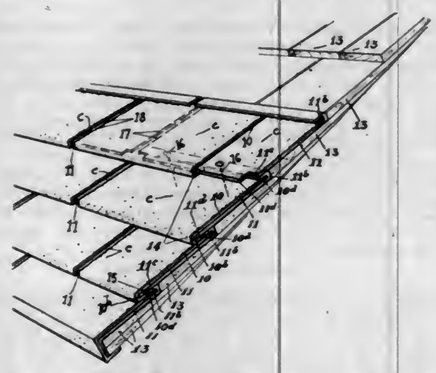
2. In a machine for boring the linings of brake bands and the like, a horizontal motor, a gear case secured to one end of the motor and provided with a vertical guide opening, a work table having a hub movable vertically in said guide opening, an upright shaft journaled in said hub, a boring tool in the upper end of the shaft, and means for transmitting rotary motion from the motor to said shaft, an upright guide post at one side of the shaft for guiding the work table in its vertical movement, and a registering arm adjustable vertically along and upon the guide post above the work table and provided with a sight opening in vertical alinement with the axis of the shaft.

1,665,772. STORAGE-BATTERY CONSTRUCTION. CAMPBELL C. CARPENTER, Niagara Falls, N. Y., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Feb. 9, 1918. Serial No. 216,144. 6 Claims. (Cl. 136—168.)



1. In a battery terminal fastening, a terminal post having lugs and flat sides connecting the lugs, and a

nut having a slot shaped to receive the lugs and pass down the flat sides, one of said elements having diagonally

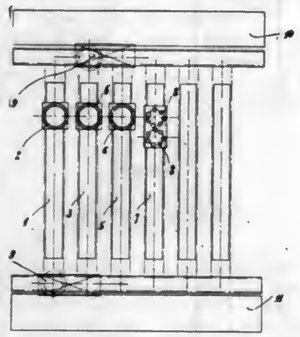


disposed inclined faces at points of contact with the other element, whereby the nut and lugs are wedged together when the nut is turned and swung under the lugs.

1,665,773. AUTOMATIC SWITCHBOARD TELEPHONE SYSTEM. LOUIS LUCIEN EUGENE CHAUVEAU, Paris, France. Filed Feb. 7, 1924, Serial No. 691,310, and in France May 5, 1923. 10 Claims. (Cl. 179—16.)

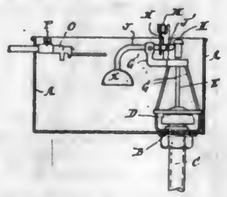
1. In an automatic telephone system for effecting connection between a plurality of stations, the combination of a controlling system comprising a selector, a pair of relays adapted to respond to impulses of different intensity, said selector comprising a plurality of relays so connected that each relay of said selector controls the circuit of the relay following, said relays being divided into two series of relays and connected respectively to two lines, a coupling relay, whereby upon an impulse actuating one of the relays of the first named pair of relays certain relays of the selector are actuated to energize said coupling relay to effect the coupling of the stations with a connecting line, auxiliary means to effect the call, and to effect a special signal if not available, and means in case of fault to effect the return to normal of said system, and the emission of a signal indicating the fault.

1,665,774. SHINGLE AND SHINGLE CONSTRUCTION. GEORGE E. CONWAY, Cresskill, N. J. Filed Sept. 24, 1927. Serial No. 221,673. 14 Claims. (Cl. 108—9.)



1. In a shingle construction, the combination of superimposed outer and under shingles having interengaging parts for anchoring the butt edges of the outer shingles to the under shingles and for securing the edge portions of the outer shingles opposite said butt edges to the under shingles.

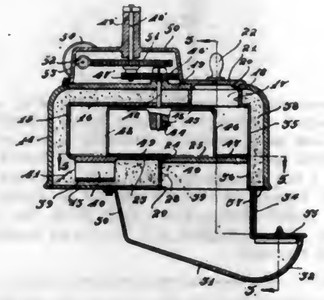
1,665,775. GUIDE CONSTRUCTION FOR SCREENS. HARRY DIXSON, Pella, Iowa, assignor to Rolscreen Company, Pella, Iowa. Filed Dec. 5, 1927. Serial No. 237,804. 6 Claims. (Cl. 156—26.)



3. A guide having a longitudinal slot, the guide having adjacent to the slot, spaced channel shaped members opening toward each other.

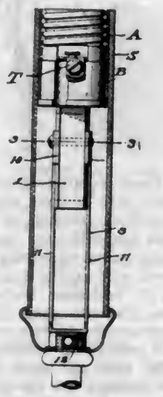
1,665,776. SMOOTHING AND POLISHING GLASS OR THE LIKE. PAUL JOSEPH MAXIMILIEN ESCOLE, Jeumont, France. Filed Mar. 19, 1924, Serial No. 700,361, and in France June 23, 1923. 1 Claim. (Cl. 51—56.)

Smoothing and polishing apparatus, comprising a battery of stationary tables of great length, whereon the material undergoing treatment is adapted to be secured, fixed side by side in spaced, parallel relation; parallel tracks extending along the opposite ends of the tables at right angles to the latter; carriages adapted to travel along said tracks; and abrading devices adapted to travel longitudinally over said tables for polishing the material secured thereon from end to end thereof, and adapted to be moved from the end of one table to that of the next by means of the carriages.



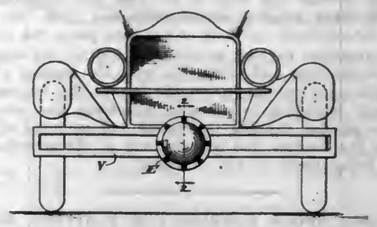
1,665,777. FLUSHING SYSTEM. CHARLES FABIAN, Auckland, New Zealand, assignor to Ross Gould Limited, Auckland, New Zealand. Filed Aug. 10, 1927, Serial No. 212,051, and in New Zealand Aug. 24, 1926. 3 Claims. (Cl. 4—53.)

1. In a flushing system, the combination with a cistern, and a flush outlet in the bottom of such cistern having a valve seat opening, of a flushing valve constructed with



a bottom adapted to engage and seal such opening, a vertically extending rod fixed to said valve and having an enlarged head on its upper end, a lever pivoted in the upper part of the cistern and having at its inner end a hinged pawl adapted to engage beneath such head and to lift the rod when such lever end is raised, a float upon the outer end of such lever, an operating lever mounted on the cistern, and a connection between the operating lever and the inner end of the lifting lever.

1,665,778. COMBINATION ROASTER AND MIXER. AXEL E. FREDRICKSON, Ferndale, Mich. Filed Aug. 6, 1926. Serial No. 127,523. 4 Claims. (Cl. 34—23.)

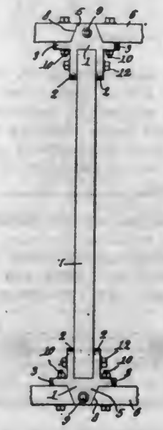


1. A machine of the class described comprising an oven; an agitator comprising a horizontally disposed member having a downwardly projected and horizontally outwardly turned leg at one end; a downwardly projecting and horizontally inwardly turned leg at the other end of said member, said inwardly turned leg extending beyond the center of said horizontally disposed member; a shaft fixedly mounted on said horizontally disposed member and projecting exteriorly of said oven; and means exteriorly of said oven for rotating said shaft for effecting an agitation by said horizontally disposed member and downwardly projecting legs of the contents of said oven.

1,665,779. ADJUSTABLE CANDELABRUM SOCKET. EDGAR H. FREEMAN, Trenton, N. J., assignor, by mesne assignments, to Circle F. Mfg. Co., Trenton, N. J., a Corporation of New Jersey. Filed Mar. 3, 1922. Serial No. 540,815. 1 Claim. (Cl. 240—52.)

An adjustable candelabrum device including a socket having an insulating base member formed with an integral extension post of angular cross-section and having a slot, a support having fixture attaching means at one end and a pair of spaced upstanding arms, and a screw cooperating with the slot in the post for adjustably connecting the latter to the support.

1,665,780. ATTACHMENT FOR BUMPERS. HERMAN HAMBURGER, Santa Paula, Calif. Filed Aug. 31, 1927. Serial No. 216,711. 9 Claims. (Cl. 293—55.)



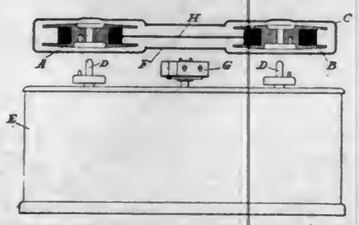
9. An attachment for bumpers comprising a hollow cup shaped body, and means by which the body is adapted to be supported on a bumper at a point in advance of the latter so as to shield the bumper against direct contact with an obstacle, the body being formed of yieldable material so as to be compressed when struck and thereby absorb the force of the impact.

1,665,781. ARSENICAL COMPOUND. CLIFF S. HAMILTON, Lincoln, Nebr., assignor, by mesne assignments, to Parke, Davis & Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 17, 1924. Serial No. 699,891. 5 Claims. (Cl. 260—14.)

1. The method of preparing arsanilic acid derivatives which comprises reacting upon an arsanilic acid compound, with a halohydrin, thereby introducing a hydroxyl containing group in its amino group.

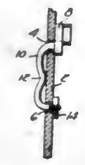
1,665,782. COMBINATION METAL BRACKET. HENRY C. HANNA, Marietta, Ohio. Filed Sept. 17, 1925. Serial No. 56,974. 1 Claim. (Cl. 20—94.)

In a device of the class described, a vertical post and parallel beams disposed at right angles to the post and located in the same plane with the post at the ends of the post, and a pair of brackets each including parallel flanges and a base plate from which the flanges project, the flanges being arranged at right angles to each beam, and the base plate extending longitudinally of each beam, a web connecting the flanges and located at right angles to the base plate and to the flanges, the base plate extend-



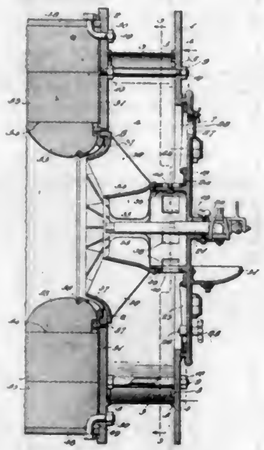
ing outwardly beyond the sides of the flanges to form ears, the web being of less height than the ears, and being joined to the base plate at one edge of the base plate, securing elements mounted in each beam and engaging the ears, the space between the flanges being open in front of the webs, so that the ends of the post may be slid into engagement with the webs, between the flanges of the respective brackets, the post being notched to define shoulders engaging the edges of the webs, securing members passing through the ends of the post and engaging the flanges, there being a tongue projecting from the base plate intermediate the ends of the base plate, the tongue being arranged parallel to the web and at the opposite edge of the base plate from the web, the tongues of the brackets being overlapped on the beams, the tongue and the web extending in opposite directions and securing devices passing through the beams and mounted at one end in the tongues, the opposite end of the securing devices being clear of the brackets.

1,665,783. SPOOL CARRIER FOR PLAITING, KNOTWORK, BOBBIN, AND LACE-MAKING MACHINES. ALBERT HOMBRECHER, Barmen-Langerfeld, Germany. Filed Dec. 30, 1926, Serial No. 158,005, and in Germany July 23, 1926. 5 Claims. (Cl. 96—13.)



1. A spool carrier having means for supporting a conically shaped bobbin, a head cooperating with one end of said carrier having means for conducting thread away from said bobbin, said means receiving the thread in the first instance at a point substantially at the top of the bobbin and within the circumference of the bobbin.

1,665,784. ELECTROMAGNETIC TALKING MACHINE. WILLY HORNAUER, Neukolln, Germany, assignor to Vox Maschinen-Aktiengesellschaft, Berlin, Germany. Filed June 20, 1925, Serial No. 38,559, and in Germany June 28, 1924. 2 Claims. (Cl. 179—100.2.)

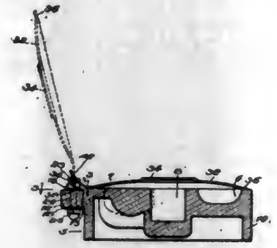


1. In an electro-magnetic talking machine of the character described, a spool casing, record spools enclosed in said casing, driving spindles adapted to receive and to be coupled to said spools, and spring-pressed clutches engaging the spools in the casing so as to prevent normally a displacement of the same, the driving spindles being adapted to disengage said clutches automatically on entering the spools.

1,665,785. MECHANISM FOR ATTACHING WINDOW FIXTURES. AMSON G. ILLCH, New York, N. Y. Filed Feb. 24, 1927. Serial No. 170,523. 4 Claims. (Cl. 156—24.)

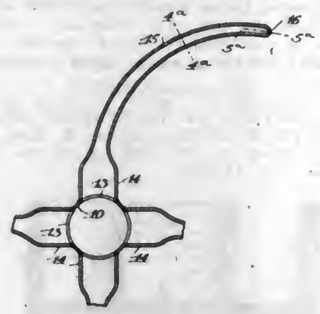
1. A mechanism for use in combination with a sheet metal structure having two spaced holes, comprising a fixture, a back plate connected therewith, a rod connected with the back plate adapted to pass in one hole and out the other, a nut for the free end of the rod, and a fulcrum point formed on the rod adapted to contact with the sheet metal structure so that when the nut is screwed up, the back plate will be drawn against the sheet metal structure.

1,665,786. FURNACE FRONT. DAVID J. IRISH, West New Brighton, N. Y., assignor to Morse Dry Dock & Repair Co., New York, N. Y., a Corporation of New York. Filed June 16, 1924. Serial No. 720,401. 10 Claims. (Cl. 158—1.5.)



1. In a furnace front, an air-receiving casing having a front plate provided with a door opening and a back plate formed with a flame opening, an outwardly-opening burner-carrying door for said door opening, and a substantially cylindrical burner-encircling and air-directing shell extending across said casing from front to back and having controllable air admission means, said shell being of considerably less diameter than said flame opening, being disposed in concentric relation with the latter and being provided with pitched air-whirling webs, said webs projecting outwardly from the shell to the edge of the flame opening for whirling all air passing around the shell through said flame opening, said shell being rigidly mounted on said door and by opening movement of the latter being movable outwardly from the casing through the door opening.

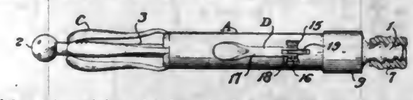
1,665,787. METHOD OF MANUFACTURING A NEW SYPHILIS REMEDY FROM DIHYDROXY-DIAMINO-ARSENO-BENZENE-MONOMETHYLENE SULPHONIC ACID. TORU IWADARE, Tokyo, Japan. Filed Oct. 8, 1926, Serial No. 140,424, and in Japan Dec. 14, 1925. 1 Claim. (Cl. 260—15.)



A method of manufacturing a new syphilis remedy, comprising causing formaldehyde and sodium-bisulphite to act upon dihydroxy-diamino-arseno-benzene-monomethylene sulphonic acid.

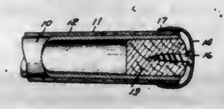
1,665,788. HOLDER FOR MANICURE PREPARATIONS AND THE LIKE. WILLIAM MEYER, Chicago, Ill. Filed Mar. 11, 1927. Serial No. 174,508. 6 Claims. (Cl. 206—1.)

1. In combination a body having well means therein, a supporting pin, a cover for said well means having an integral tab rolled around said pin and swingable thereon and an integral tongue struck from said tab, said tongue being spaced from the edge of the tab and forming a yielding retention for releasably retaining the cover upon the pin.



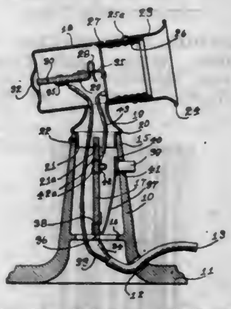
1,665,789. AGITATOR. EDGAR B. NICHOLS, Rochester, N. Y., assignor to The Pfaudler Co., Rochester, N. Y., a Corporation of New York. Filed Oct. 1, 1923. Serial No. 665,772. 5 Claims. (Cl. 259—133.)

3. In a rotary agitator, the combination of a hub portion comprising a length of metal tubing open at one end for the reception of a shaft and closed at the other end, and a plurality of separately formed blades spaced about the periphery of the hub each comprising a length of metal tubing having an end thereof welded to said hub with its outwardly extending portion elongated transversely of and curved in the plane of rotation and closed at the outer end.



1,665,790. SANITARY DOUCHE NOZZLE. WILLIAM NOVACK, Brooklyn, N. Y. Filed Sept. 7, 1925. Serial No. 54,851. 9 Claims. (Cl. 128—242.)

1. In a dilating douche nozzle an inner tubular metal stem; an outer tubular shell; a compression spring; means for reactively connecting said spring to exert a moving force relatively between said tubular stem and said tubular shell tending to effect an axial movement of one within the other; dilator arms projecting out from the distal end of said tubular shell; an operator associated with the proximal end of said tubular shell; means for utilizing said tubular stem as a mechanical element responsive to said operator for effecting a positive movement of said dilators relatively to said tubular shell

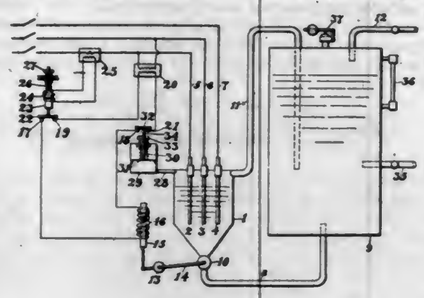


without impairing the functioning of said tubular stem as a fluid-conducting non-corrodible duct, comprising a pair of flanged metal sleeves axially spaced along said tubular stem, one directly engageable by said operator and the other engaging the ends of said dilator arms, which said sleeves have inwardly projecting localized indentations nesting with complementary surface indentations on said tubular stem.

1,665,791. GOLF-CLUB GRIP. JOSEPH A. NOVAK, San Francisco, Calif., assignor to The Novak Club Inc., San Francisco, Calif., a Corporation of Nevada. Filed Jan. 26, 1927. Serial No. 163,601. 6 Claims. (Cl. 273—81.)

6. In a golf club having a hollow tapered shaft, a hand grip comprising flexible material applied to the shaft, a plug in the outer end of the shaft, and a cap detachably secured to said plug and engaging one end of the material.

1,665,792. ELECTRIC CIGAR LIGHTER. GEORGE PARKER, Meriden, Conn. Filed Apr. 8, 1926. Serial No. 100,561. 1 Claim. (Cl. 219—32.)

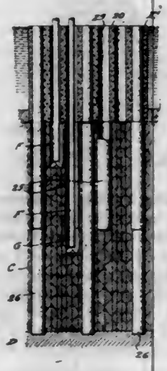


In an electric cigar lighter, a tubular vertical standard open at its top, means in said standard for supporting the base of a vertical insulating strip, a horizontal body member having a depending neck seated within the open top of said vertical standard, an ignition unit in said body member, said neck having slots to fit over and lock said insulating strip, a switch supported by said strip and connecting the ignition unit with a source of current, and means for operating said switch.

1,665,793. AUTOMATIC ELECTRIC STEAM BOILER. OLOF ALFRED SANDBORGH, Stockholm, Sweden. Filed Aug. 29, 1921, Serial No. 496,654, and in Sweden Mar. 1, 1920. 8 Claims. (Cl. 219—40.)

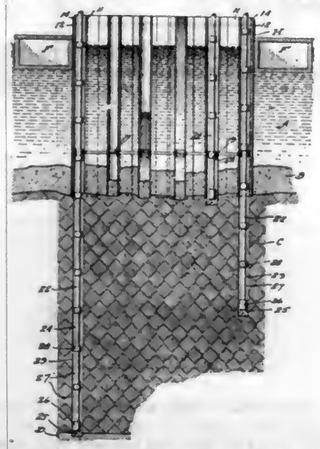
5. In an automatic electric steam boiler the combination of a steam generator, a reservoir, a pipe connection from the lower part of the generator to the reservoir, a valve in the said connection, a pipe connection from the

top of the generator to the reservoir, electric power supplying means, electrodes within the generator, connection between the mains and the electrodes, and electromagnetic



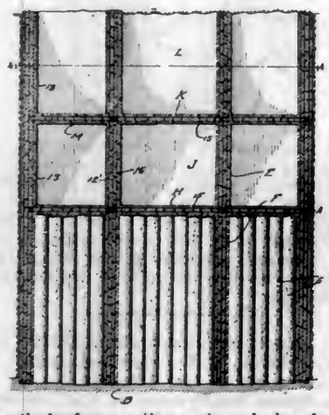
means for opening and closing the valve, said means arranged to operate automatically upon a variation in the level of the water in the boiler.

1,665,794. WINDSHIELD CLEANER. VINCENT SCALZO, Pittston, Pa. Filed Apr. 19, 1927. Serial No. 184,957. 10 Claims. (Cl. 15—255.)



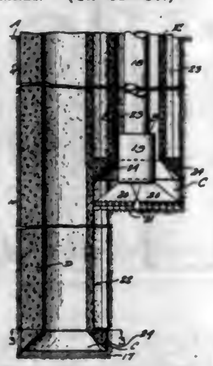
1. A windshield cleaner comprising a channel-like frame having yieldable outwardly curved side walls provided at their free edges with flanges extending in spaced parallel relation, a wiping element carried by each flange, and a heating element having a tubular casing insertable into said frame between the yieldable side walls from one end thereof and having a longitudinally extending opening aligning between said flanges.

1,665,795. METHOD OF PRODUCING SUBAQUEOUS FOUNDATIONS, PIERS, BREAKWATERS, ETC. GEORGE B. SIPE, Shreveport, La. Filed Nov. 3, 1923. Serial No. 672,538. 7 Claims. (Cl. 61—46.)



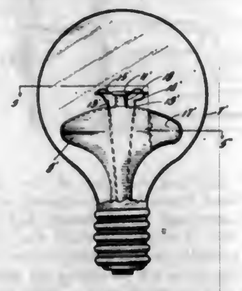
1. A method of producing and placing piers which comprises, placing a plurality of laterally spaced apart piles extending into the formation subjacent to the body of water in which the pier is to be located; disposing a caisson, having a plurality of laterally spaced apart vertical conductor ways therethrough, upon said piles, said ways being open above the water; drilling cavities open to the conductor ways, through the formation and into the bed rock subjacent to said body of water and removing the dislodged material through said conductor ways; and depositing a filler including cementitious material in the said cavities and conductor ways, to link said caisson to the bed rock.

1,665,796. METHOD OF PROVIDING AND PLACING PIERS. GEORGE B. SIPE, Shreveport, La. Filed Nov. 5, 1923. Serial No. 673,036. 4 Claims. (Cl. 61—52.)



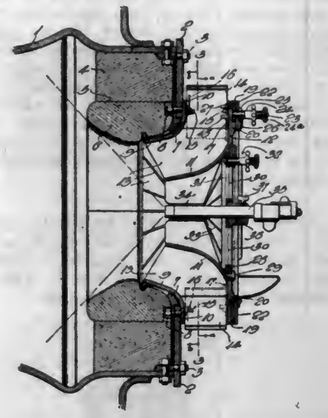
1. A method of producing and placing piers which consists of lowering and steadying a caisson having a plurality of upright ways until the lower end of the caisson rests in the hard yet compressible formations subjacent to the body of water in which the pier is to be located; drilling cavities open to said upright ways through the formation sub-jacent to the body of water and removing the dislodged material through said ways; lowering liners through said ways to follow the drills and lodge in any floating sand encountered in the formation; lowering hollow forms through said ways and liner to follow the drill; and filling said cavities and ways with concrete from the bottom upwardly and removing said hollow forms as the filling progresses.

1,665,797. METHOD OF EXCAVATING AND PRODUCING FOUNDATIONS. GEORGE B. SIPE, Shreveport, La. Filed Nov. 6, 1923. Serial No. 673,220. 6 Claims. (Cl. 61—50.)



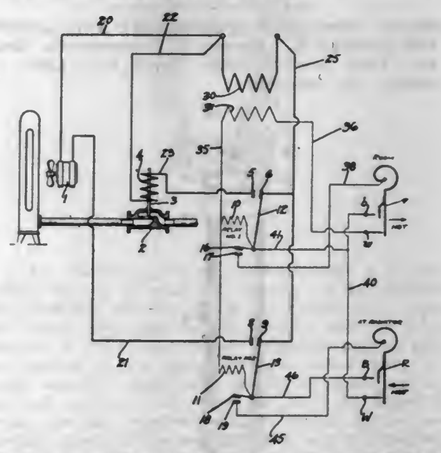
1. A method of excavating and producing foundations which includes, drilling cavities into the soil to bed rock along the lines of the foundations, disposing a filler including cementitious material in the cavities to form piles extending to the surface from the bed rock, subsequently drilling cavities into the major portion of the soil within the bounds of said piles, and disposing a filler including cementitious material into said last mentioned cavities, partly filling same to form piles terminating short of the height of the first mentioned piles.

1,665,798. METHOD OF PRODUCING AND PLACING PILES IN INTERLOCKED RELATION. GEORGE B. SIPE, Shreveport, La. Filed Apr. 22, 1925. Serial No. 25,067. 7 Claims. (Cl. 61—57.)



1. Those steps in the method of producing and placing piles in interlocked relation which comprises, drilling a cavity into the soil, placing a casing having a longitudinally extending keyway open at its side, in the cavity, drilling a second cavity next adjacent to the casing thus placed, so that the path taken by the drill intersects the drill path taken in producing the first mentioned cavity at said keyway, and placing a second casing in said second cavity in contiguous relation to said first mentioned casing.

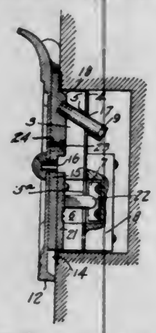
1,665,799. INCANDESCENT LAMP. ARTHUR B. SMITH, South Brownsville, Pa. Filed Oct. 28, 1925. Serial No. 65,487. 1 Claim. (Cl. 176—34.)



An incandescent lamp of the character described, including a plug having a recess therein, comprising a bulb mounted in said recess, a hollow filament supporting member, comprising a circular head having the upper surface thereof convexed and having the under side drawn downwardly to provide a supporting stem of relatively small diameter and secured in said plug, a filament mount comprising a short upstanding member arranged centrally upon the upper surface of said head, means carried by said mount for supporting the filament in close proximity to the head, and reflector means coating the interior surface of the head and stem.

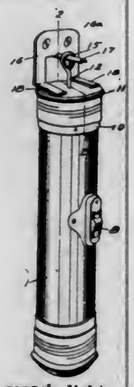
1,665,800. AIR REGISTER. CHRISTOPHER STRACHAN, South Orange, N. J., and DAVID J. IRISH, St. George, N. Y., assignors to Morse Dry Dock & Repair Co., New York, N. Y., a Corporation of New York. Filed Jan. 5, 1923. Serial No. 610,881. 5 Claims. (Cl. 158—1.5.)

1. In an air register, an outer air admission wall of substantially cylindrical form enlarged toward its front end and provided at its front extremity with an annular outstanding flange, an inner substantially cylindrical air admission wall within and spaced from said outer wall, said inner wall being enlarged toward its front end and extending forwardly beyond the plane of said flange, an annular front wall joined to the front end of said inner wall and spaced forwardly from said flange, means between said flange and front wall for controlling the admission of air between said inner and outer walls, additional means for controlling the admission of air into the space within said inner wall, and means for mounting a burner centrally within said inner wall.



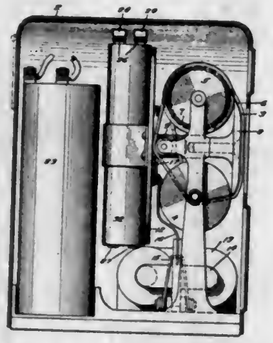
1,665,801. UNIT-HEATER CONTROL. HAROLD W. SWEATT, Minneapolis, Minn., assignor to Minneapolis Heat Regulator Co., Minneapolis, Minn., a Corporation of Minnesota. Filed Apr. 27 1927. Serial No. 187,051. 4 Claims. (Cl. 236—37.)

4. In combination a heater and a fan motor thereadjacent, magnetically operable means for controlling the heater temperature, a device responsive to control



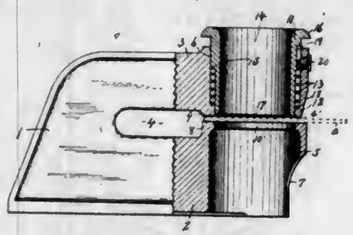
a circuit as a result of temperature fluctuations at the heater, a device responsive to control a circuit as the result of temperature fluctuations in the room, a first relay controlled by the room device for in turn controlling the magnetically operable means and also for controlling a power circuit to the room device, a second relay controlled by the room device and by the heater device, said second relay in turn controlling the motor and power circuit to the heater device, and circuit connections for the magnetically operable means, motor, relay and room and radiator devices, said connections arranged to obtain actuation of said magnetically operable means to supply heat when the room is sufficiently cool and further arranged to cause the motor to start only when the heater is sufficiently warm the arrangement further being such that the room device dominates control by the heater device.

1,665,802. DETACHABLE ELECTRIC FIXTURE. WHITMAN SYMMES, San Francisco, Calif., assignor to Thomas Day Company, San Francisco, Calif., a Corporation of California. Filed Nov. 8, 1921. Serial No. 513,662. 3 Claims. (Cl. 173—330.)



1. The combination in a removable electric lighting fixture, of a wall plate having a recess therein and provided at its upper portion with an aperture, an electrical receptacle seated behind said plate below said aperture with the face of the receptacle forming a portion of the back of the recess, an electric lighting fixture bracket having a back, a prong on said back adapted to be inserted in said aperture, an electrical plug on said back below said prong adapted to engage said receptacle and a projection on the back shaped to fit said recess.

1,665,803. PORTABLE SEARCHLIGHT AND MOUNTING THEREFOR. VINCENT V. VEENSCHOTEN, Erie, Pa. Filed Nov. 25, 1925. Serial No. 71,466. 5 Claims. (Cl. 240—10.5.)

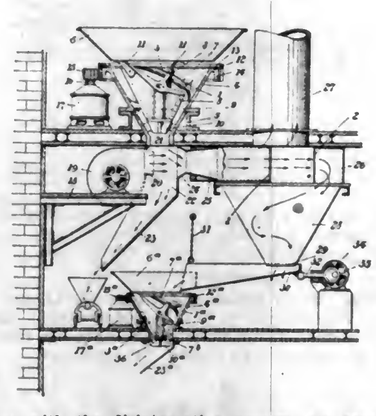


1. In a portable search light and mounting therefor, the combination of a search light comprising a casing, bulb, a manually normally operated switch and a secondary switch; a supporting device on the secondary switch; and a mounting receiving the device and automatically opening the switch as the device is received by the mounting.

1,665,804. TIMING APPARATUS. PHILIP J. WALSH, San Francisco, Calif. Filed May 22, 1922. Serial No. 562,715. 8 Claims. (Cl. 161—1.)

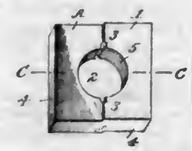
3. In a timing apparatus, an invertible, closed container adapted to hold a fluid, a float in the container, and means for periodically inverting said container, comprising an electroresponsive device, an electric circuit therefor, means whereby said circuit is opened when the container is fully inverted, and is closed during inversions, and means whereby the rise of the float to a definite level independently closes the circuit.

1,665,805. HOLLOW PUNCH. FRANK J. WALTER, Canastota, N. Y., assignor of one-half to George B. Cady, Canastota, N. Y. Filed July 27, 1927. Serial No. 208,801. 5 Claims. (Cl. 164—25.)



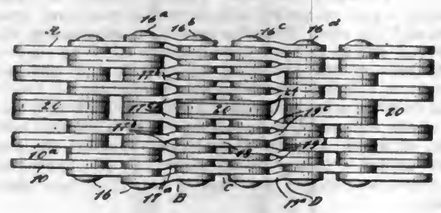
1. In a card punching machine of the character described, a bifurcated frame having opposed arms provided with registering openings therethrough, one of the arms being provided with a relatively fixed die, an additional die reciprocally movable in the other opening to cooperate with the first-named die for punching an interposed portion of the card and provided with a sight opening therethrough from end to end.

1,665,806. METHOD OF AND APPARATUS FOR DISINTEGRATING BULKY SCRAP METAL. JULIUS BING, Eisenach, Germany, assignor to the firm Magnet-Werk G. m. b. H. Eisenach Spezial-Fabrik für Elektromagnet-Apparate, Eisenach, Thuringia, Germany. Filed Aug. 15, 1925, Serial No. 50,438, and in Germany Aug. 23, 1924. 12 Claims. (Cl. 29—4.5.)



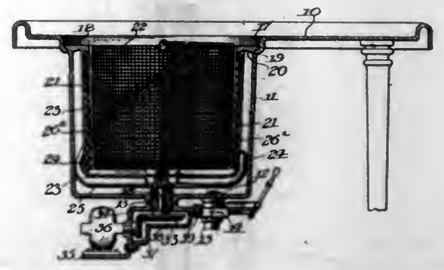
1. A method of disintegrating scrap metal, more particularly turnings, consisting in this, that the materia)

to be disintegrated is first only partially disintegrated, that the foreign bodies contained in the material, which



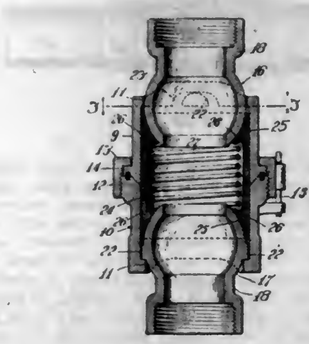
interfere with the disintegrating process, are separated out by means of a current of a fluid medium and that the disintegration is thereupon completed.

1,665,807. LOCK NUT. PAUL W. DIETER, New York, N. Y. Filed Feb. 1, 1927, Serial No. 165,132. Renewed Oct. 27, 1927. 2 Claims. (Cl. 151—21.)



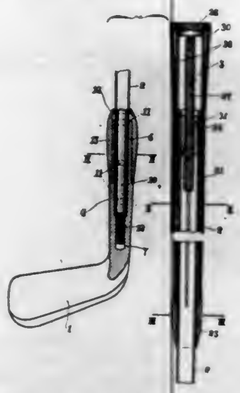
1. A nut having a threaded opening therein and grooves extending axially through said nut on opposite sides of the threaded opening, with definite portions of said nut pressed in opposite directions to offset the threads on one side of said grooves with the threads on the other side of said grooves.

1,665,808. DRIVE CHAIN AND LINKS THEREFOR. RICHARD F. DOW, Hartford, Conn., assignor to The Whitney Mfg. Co., Hartford, Conn., a Corporation of Connecticut. Filed Nov. 17, 1922. Serial No. 601,463. 10 Claims. (Cl. 74—32.)



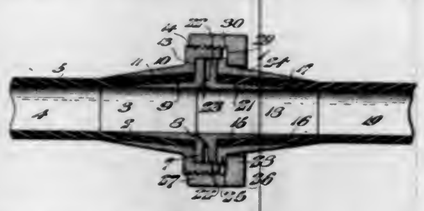
1. As an article of manufacture, a link for a transmission chain of substantially uniform thickness throughout and offset intermediate its ends so that both faces of the link at one end are outside the plane of either face of the link at the other end.

1,665,809. CLEANSING MACHINE. WILLIAM H. DUNN, Chicago, Ill., assignor to Dunn Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 24, 1919. Serial No. 278,906. 17 Claims. (Cl. 141—9.)



1. In a cleansing machine, the combination of a fluid container, a stationary element into which the article to be cleansed may be placed, said element having a rotatable element rotatably attached thereto, and means for driving the rotatable element, both of said elements being removable together from said driving means and from within the container.

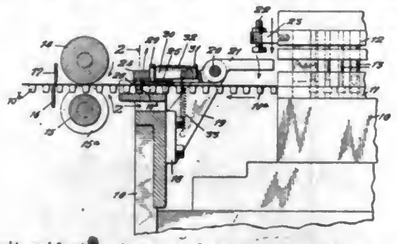
1,665,810. FLEXIBLE JOINT. LAWRENCE H. GILLICK, St. Paul, Minn., assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York. Original application filed July 26, 1920, Serial No. 398,882. Divided and this application filed July 2, 1925. Serial No. 41,053. 10 Claims. (Cl. 285—92.)



1. In a flexible pipe joint, the combination of a socket member having an elongated socket cavity, ball members extending into opposite ends of the socket cavity, means for flexibly connecting the ball members with the socket member, a single longitudinally extensible annular packing member of less length than the socket cavity and bodily movable longitudinally within the socket and having end portions which are forced into the spaces between the ball members and the socket member and having curved surfaces bearing against said ball members, respectively, said packing member being formed with shoulders adjacent to said curved surfaces, and a spring interposed between said shoulders.

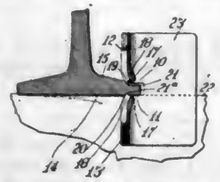
1,665,811. GOLF CLUB. WILLIAM JAMES HADDEN, Glasgow, Scotland, assignor to Donaldson Manufacturing Company Limited, Glasgow, Scotland. Filed May 12, 1927, Serial No. 190,740, and in Great Britain Aug. 16, 1926. 2 Claims. (Cl. 273—80.)

1. A golf club comprising, a shaft, a club head having a contractible socket adapted to fit snugly on one end of said shaft, a screwed plug on said shaft adapted to screw into the said head, means for contracting said socket so as to clamp it on the shaft, and a grip detachably fixed on the other end of said shaft.



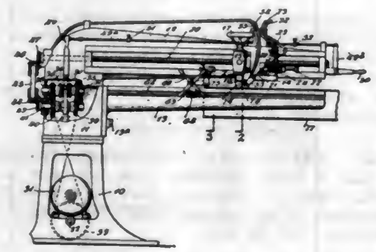
1,665,812. HOSE OR PIPE COUPLING. JOHN J. JONES, Ridley Park, Pa. Filed Oct. 28, 1922. Serial No. 597,463. 1 Claim. (Cl. 285—86.)

In a device of the character stated, an inner bushing having a conical exterior wall, a terminal right angled flange and a female counterbore, an outer concentric sleeve having a conical interior wall concentric with said conical exterior wall, and an exteriorly threaded outer longitudinal wall and a hose section having its flared end held entirely between said bushing and sleeve, in combination with another juxtaposed inner bushing having a conical outer wall, a right angled flange and a male projection contiguous to said female counterbore, an outer sleeve having a conical interior surface concentric with said last mentioned conical bushing, a hose section having its flared end held entirely between said last mentioned bushing and sleeve, and provided with a right angled flange contacting with said last mentioned right angled flange, and an outer internally threaded coupling ring having a shoulder engaging said last mentioned flange, said three right angled flanges being confined between said coupling ring and said outer longitudinal threaded wall.



1,665,813. POSITIVE STOCK-FEED STOP. JOHN KARMAZIN, Detroit, Mich. Filed May 12, 1926. Serial No. 108,463. 11 Claims. (Cl. 113—113.)

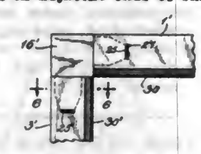
1. In a radiator element forming machine, upper and lower cooperating die members, means to constantly urge a strip of radiator element forming material through said machine between said dies, and means adapted to positively grasp said strip at each operation of the dies and



permit said strip to move forward a predetermined distance whereby said strip is positioned between the dies for the next successive operation of the dies.

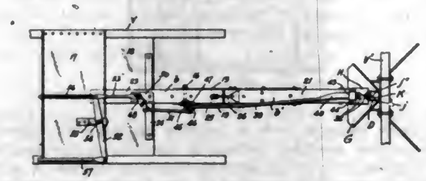
1,665,814. RAIL ANCHOR. MILTON C. LENOIR, Lombard, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 30, 1926. Serial No. 158,060. 16 Claims. (Cl. 238—330.)

1. A rail anchor comprising a member formed with jaws adapted to be driven into engagement with one flange of a rail base, and a spring arm extending outwardly from the jaw portion of said device and adapted to bear with spring pressure against the said base flange.



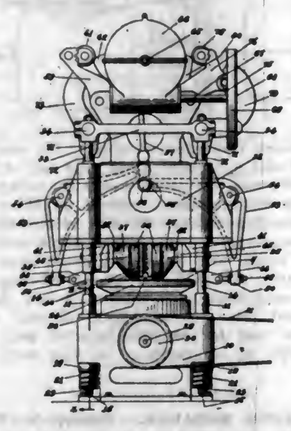
1,665,815. WELDING MACHINE. ALFONS MAUSER, Cologne-Marienburg, Germany. Filed Dec. 12, 1925, Serial No. 74,992, and in Germany Feb. 13, 1925. 15 Claims. (Cl. 113—59.)

1. In a longitudinal seam welding machine, a frame having a pair of horizontally extending cantilever arms arranged one above the other in stepped relationship, the lower of said arms being provided with means to support both ends of the article to be welded, and clamping devices to hold said article in welding position; a travelling carriage mounted on said upper arm, driving means to cause said carriage to be moved at a regular even rate of speed, a welding implement mounted on said carriage and a presser block adjacent to said implement to press the edges of the seam to be welded into alignment.



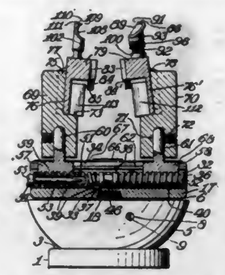
1,665,816. FRAME-JOINT CONSTRUCTION. CHARLES MAUTNER, Brooklyn, N. Y. Filed July 19, 1927. Serial No. 206,849. 4 Claims. (Cl. 189—36.)

1. A frame joint comprising a body portion provided with resilient extensions arranged in pairs and each pair extending from different sides thereof, shoulders formed at the juncture of said extensions and body portion, projections formed at the ends of said extensions adapted to engage in openings in adjacent ends of said frame mem-



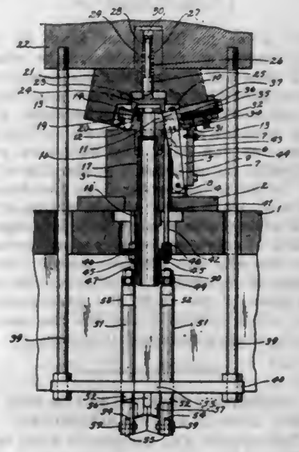
bers, said openings being spaced to cause the ends of said frame members to abut said shoulders and to be held in position with said joint by the engagement of said projections in said openings.

1,665,817. DRAFT APPLIANCE. ROLLA A. MORTON, Long Beach, Calif., assignor to Western Wheeled Scraper Company, Aurora, Ill., a Corporation of Illinois. Filed Mar. 27, 1924. Serial No. 702,382. 22 Claims. (Cl. 280—33.12.)



1. In combination, a drawing vehicle and a trailing vehicle, a coupling pin adapted to be carried by one of said vehicles, a coupling device adapted to be carried by the other of said vehicles and including spaced jaws which are normally urged to a releasing or receiving position with respect to said pin, and yieldable means for urging the jaws to a gripping position with respect to said pin and against the tendency of the jaws to occupy said releasing or receiving position and including a member disposed parallel with the jaws and bearing on the outer sides thereof.

1,665,818. MACHINE FOR ROLLING METALLIC DISKS. EMIL A. NELSON, Abington, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 2, 1923. Serial No. 666,122. 30 Claims. (Cl. 80—16.)

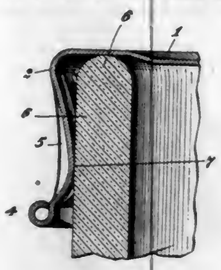


1. A machine of the class described comprising a rotatable support for the blank to be rolled, a roll adapted to act on the blank, means for applying said roll to the upper surface of said blank under spring pressure, and means for traversing said roll radially of the blank.

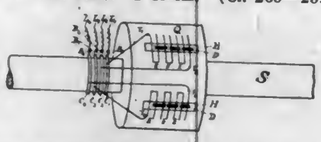
1,665,819. ENGRAVING BLOCK. HORACE PLUMMER, Lawrence Township, Marion County, Ind. Filed Oct. 31, 1924. Serial No. 747,006. 11 Claims. (Cl. 81—4.)

1. An engraving block having jaw bodies and jaw heads removably connected to the upper portions of the jaw bodies respectively, the jaw heads being invertible on the jaw bodies and provided with holding devices adjacent to the tops and bottoms thereof, the bottom devices being different from the top devices.

1,665,820. PUNCH PRESS. OSWALD SCHLAUPITZ, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Mar. 16, 1927. Serial No. 175,833. 12 Claims. (Cl. 164—90.)



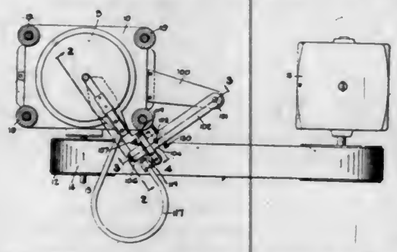
1. A press comprising a bolster, a hollow block thereon, a hollow die on said block, the interior of said die communicating with the interior of said block, said die having transverse openings therethrough, a plurality of elongated punches disposed around the outer periphery of said block and pivotally supported at their lower ends, the upper end of each punch cooperating with a transverse hole of said die, the upper outer edge portions of said punches being beveled, a reciprocatable ram head and punch actuating means in said ram head, said means being angularly disposed to cooperate with the beveled portions of said punches.



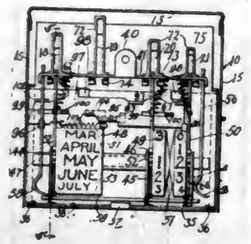
1,665,821. FRICTION CLOSURE CAP. EDGAR SCOFIELD, New York, N. Y., assignor to Anchor Cap and Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed May 7, 1926. Serial No. 107,404. 7 Claims. (Cl. 215—39.)

1. A closure cap having a cover portion and a skirt portion, said skirt portion having frictional engaging

means provided therein, said means comprising curved members having an abrupt curvature in the lower portion and a lesser curvature in the upper portion to provide the point of contact adjacent the lower edge of the skirt of the cap.

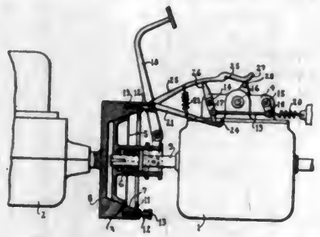


1,665,822. TORSION METER. SEIZO SHIMIZU, Tokyo, Japan. Filed Apr. 4, 1927, Serial No. 180,920, and in Japan Feb. 18, 1926. 1 Claim. (Cl. 265—25.)



A torsion meter for an engine shaft by which the amount of torsion of the shaft can be measured by means of a difference of electrical resistance, comprising an inner case fixed at a predetermined point on the shaft, U-shaped electrical resistance conductors axially arranged and mounted in several series on the outer face of said inner case, an outer case fixed at a second predetermined point on said shaft, a plurality of series of conductive bridge pieces arranged on the inner face of said outer case, each series of said bridge pieces being arranged in sliding contact with and to bridge over one of said series of electrical resistance conductors on the inner case, whereby the effective amount of the electrical resistance conductors is changed in accordance with the torsion of the shaft, the measurement thereof being made with a suitable device and the amount of the torsion of the shaft determined therefrom.

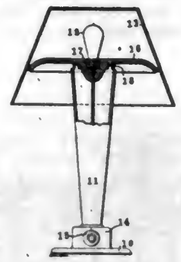
1,665,823. METHOD AND APPARATUS FOR FEEDING ROTATING DISK-FORMING MACHINES. JOHN W. SMITH, Philadelphia, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Original application filed May 24, 1923, Serial No. 641,240. Divided and this application filed Mar. 2, 1925. Serial No. 12,631. 33 Claims. (Cl. 80—43.)



1. The method of feeding to a determinate working position blanks to be worked upon through their rotation, which consists in working upon a blank in working position to space its periphery from working position, the while establishing a blank to be fed upon a feeding position laterally of the working position, relatively moving the feeding and working positions to enter the fed blank in the peripheral space formed through the working of the worked blank, removing the worked blank, thereupon establishing substantial coincidence of the working and feeding positions, and then rotating the fed blank to be worked upon.

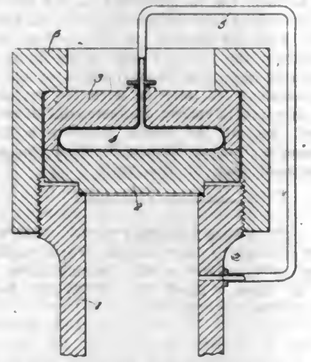
1,665,824. SAVINGS BANK. ZENO M. SPEER, Milwaukee, Wis., assignor to Speer Calendar Bank Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 9, 1925. Serial No. 14,031. 5 Claims. (Cl. 194—94.)

1. In a savings bank, a housing having coin deposit slots, ratchet operated indicating mechanism mounted in the housing and visible through openings therein, a coin cartridge removably mounted in the housing and having slots in position to receive the coins deposited, and means whereby the removal of the cartridge prevents the insertion of coins and operation of the mechanism and the insertion of the cartridge permits the insertion of coins and operation of the mechanism.



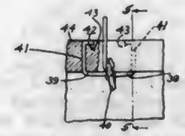
1,665,825. POWER-TRANSMISSION SYSTEM. WILLIAM C. STEVENS, Milwaukee, Wis., assignor, by mesne assignments, to Vulcan Motor Devices Company, a Corporation of Pennsylvania. Filed Mar. 12, 1923. Serial No. 624,355. 7 Claims. (Cl. 74—58.)

1. In a power transmission system, the combination with a motor and a variable speed gear set, of a clutch device therebetween including normally engaged main friction parts and normally released auxiliary friction parts, an operating member movable unidirectionally to effect disengagement of said former parts and engagement of the latter, and a selective speed gear shifting device associated with said gear set for effecting selected neutralizing operations upon release of said main friction parts and prior to engagement of said auxiliary friction parts, and for effecting selected gear shifting operations prior to reengagement of said main friction parts.



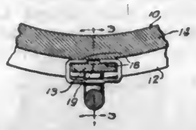
1,665,826. LOUD SPEAKER. ROBERT B. WHEELAN, Brooklyn, N. Y. Filed Mar. 29, 1924. Serial No. 702,708. 1 Claim. (Cl. 181—27.)

A loud speaker, including a base, a standard extending upwardly from said base, a downwardly-extending shade spaced from and positioned adjacent the upper end of said standard and extending toward said base, and a sound-deflecting element associated with said shade and extending from a point centrally above the upper end of said standard to points adjacent the inner faces of said shade, said base being hollow and receiving a loud



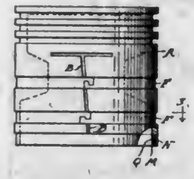
speaker unit, said standard having a bore connected with said base, and said shade acting as a horn directing the sound waves emanating from said unit and passing through the standard bore against the surface supporting said base.

1,665,827. PACKING DEVICE FOR PRESSURE VESSELS. RICHARD TILLMANN, Mannheim, Germany. Filed Sept. 1, 1926, Serial No. 133,073, and in Germany Sept. 4, 1925. 3 Claims. (Cl. 220—24.)



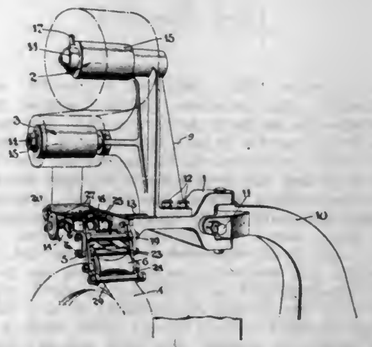
1. A closing device for pressure vessels comprising a closing lid, a supporting plate therefor, and an elastic bladder-like body between the closing lid and the supporting plate, the elastic bladder-like body being supported on all sides by the closing lid and supporting plate.

1,665,828. BAIL EAR. RICHARD P. WHITE, Chicago, Ill. Filed Aug. 9, 1926. Serial No. 128,101. 2 Claims. (Cl. 220—91.)



1. The combination with a vessel having a shoulder and openings, of a spring wire looped to form bail attaching means; arms extending from the loop and underlying the shoulder; and prongs projecting from the arms and placed under tension in said openings, substantially as described.

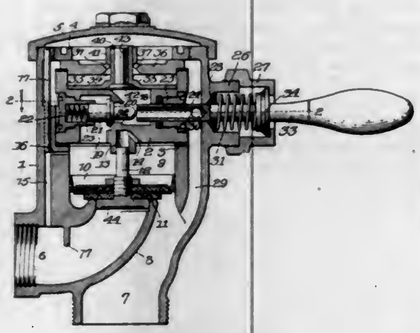
1,665,829. BAIL EAR FOR VESSELS. RICHARD P. WHITE, Chicago, Ill. Filed Apr. 16, 1927. Serial No. 184,217. 3 Claims. (Cl. 215—100.)



2. In combination with a vessel comprising a body provided with a lug; a bore through said lug; a spring wire looped into substantially a circle to form a bail attaching means; arms projecting from said loop in opposite directions, bent about said lug, and projecting into opposite ends of said bore.

1,665,830. BUILT-UP PISTON. WILLIAM R. WILEY, Mount Clemens, Mich. Filed Feb. 7, 1925. Serial No. 7,474. 1 Claim. (Cl. 74—108.)

The combination, with a piston body of relatively high expansive characteristics, of a band of U-shaped cross-section engaging over a terminal edge of the piston body to effect its close engagement against each surface thereof at normal temperatures, said band being formed of a metal having a relatively low coefficient of expansion and thereby serving to resist the relatively rapid response of the component metal of the piston body to changes in its thermal condition, and a second band of similar metallurgical characteristics mechanically locked about a groove in the intermediate portion of the piston body to circumferentially resist the heat-induced expansion of that portion of the piston.

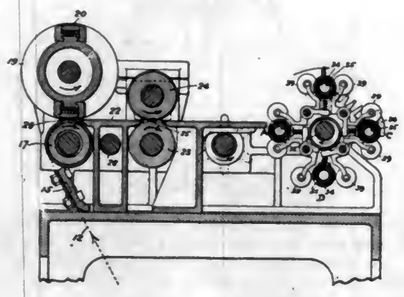


1,665,831. BREAKER-APPLYING DEVICE. DAYTON L. WILLIAMS, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 8, 1925. Serial No. 49,126. 6 Claims. (Cl. 154—10.)

1. A tire building machine comprising a rotatable core, a horizontally movable support positioned adjacent the core, a breaker supply roller secured horizontally upon

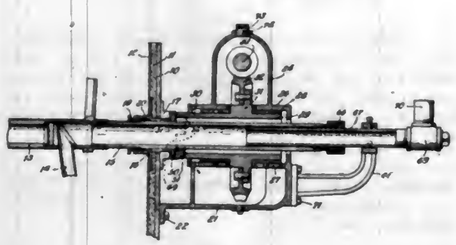
the support, a liner rewind roller mounted upon the support in parallel relation with respect to the breaker supply roller, a guide mechanism pivoted to the support to swing vertically in the plane of the rollers, and a horizontal stitcher roller secured to the front end of the guide and adapted to press the tire fabric into contact with the core as it leaves the guide mechanism.

1,665,832. FLUSH VALVE. WARREN C. WRIGHT, Chicago, Ill. Filed Mar. 18, 1927. Serial No. 176,340. 13 Claims. (Cl. 137—93.)



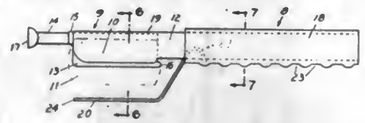
3. A valve device having a pressure chamber with a by-pass connection with the inlet side of the valve, a piston valve operable in said chamber for controlling the flow of liquids through the valve, a second chamber out of the path of the main flow of liquids through the valve device to receive and confine the liquids displaced from the pressure chamber by the piston valve in its opening movements, a relief valve for opening and closing the second chamber to the pressure chamber, said second chamber having a vent opening, and means for closing said vent opening when the second chamber has received all displaced liquids.

1,665,833. EXTENSION TABLE. DAVID ZORK, Chicago, Ill. Filed Sept. 12, 1924. Serial No. 737,251. 1 Claim. (Cl. 45—113.)



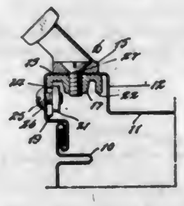
An extension table comprising a plurality of legs, longitudinal side members rigidly mounted thereon, transverse tie members connecting said side members, sides fixedly secured to said side members, beaded members fixed to said sides on the top thereof, top tie members connecting said beaded members, slides mounted on said side members between the top and transverse tie members and being wholly supported thereby, guides for said slides, means for limiting the movement of said slides, ends rigidly connected to said slides and movable therewith and removable leaves mounted on the slides when extended, said leaves having an apron depending from each side thereof corresponding to said sides and spacing members secured to the under surface at the sides thereof to contact with said extended slides to position said leaves in the same plane as the table top, and guides secured to said under surface for contacting with said slides.

1,665,834. MECHANISM FOR CUTTING PAPER SHELL BLANKS FROM CONTINUOUS ROLLS OF PAPER. WILLIAM T. AYER, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Original application filed Sept. 18, 1923, Serial No. 663,387. Divided and this application filed July 24, 1924. Serial No. 727,886. 1 Claim. (Cl. 164—68.)



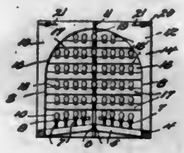
A mechanism for cutting blanks from a continuous sheet of paper comprising a pair of rolls between which the paper travels, one of the rolls being an anvil roll with a smooth cylindrical surface and the other a cutting roll carrying a knife extending spirally about and having a cutting edge projecting slightly beyond its cylindrical surface, the forward face of the knife extending from the cutting edge inwardly of the surface of the cutting roll, and the surface of the cutting roll being recessed adjacent the forward face of the knife to form a wall diverging from the inner portion of the forward face of the knife to its junction with the surface of the roll, which junction is spaced a substantial distance from the forward face of the knife, whereby a groove of tapering cross section is formed between the said wall and the forward face of the knife.

1,665,835. POWER-TRANSMITTING MECHANISM. RALPH B. BAGBY, Cedar Rapids, Iowa, assignor to J. G. Cherry Company, Cedar Rapids, Iowa, a Corporation of Iowa. Filed Oct. 5, 1922. Serial No 592,462. 3 Claims. (Cl. 74—7.)



1. In combination, a coil shaft free to wabble, a frame, a hub supported in the frame, a worm gear fixed to said hub, a nipple extending through said hub and connected to said coil shaft, means for supporting said nipple independently of said hub, a worm communicating with said worm gear and mounted independently thereof, a motor, flexible means connecting the motor and the worm, and means arranged on said hub and said nipple for rotating said coil shaft, whereby any wabbling motion of the coil shaft will not be transmitted to the worm, gear or said other shafts.

1,665,836. RAZOR-BLADE HOLDER. LEA W. BAKER, Pomona, Calif. Filed Apr. 29, 1925. Serial No. 26,631. 3 Claims. (Cl. 51—218.)

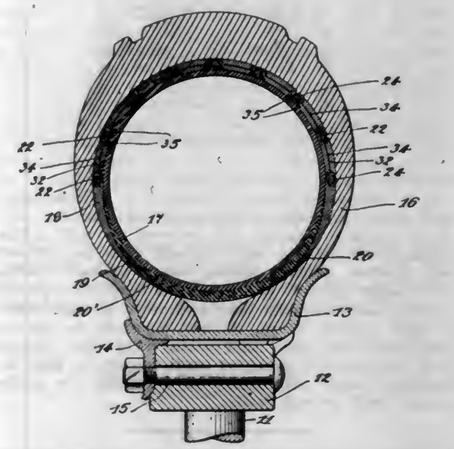


1. A stropping holder for razor blades comprising a blade holder, a handle-forming extension on said holder, and a combined stropping guide and handle-grip comprising a wire having a grip portion formed into a plurality of turns transverse to said extension to longitudinally receive and be held by said extension and a guide portion projecting opposite said blade holder in the plane normally assumed by a blade in said holder and parallel to the edge of said blade.

1,665,837. SAFETY ANCHOR MOUNTING. ANTONIO BARDELLO, New York, N. Y., assignor to Ainsworth Buck, Incorporated, New York, N. Y., a Corporation of New York. Filed July 14, 1927. Serial No. 205,831. 6 Claims. (Cl. 20—72.)

1. A manufactured window frame including a thin sheet metal form, a reinforcing element contained within the frame and permanently secured thereon, a side of the frame opposite the element providing an anchor receiving surface free of projections whereby the frame may be shipped and installed in place without the anchor, the side of the frame forming said surface and the reinforcing element in rear of the same provided with aligned bolt apertures adapted to receive an anchor securing bolt, the part of the aligned apertures contained in the reinforcing element being threaded, a safety anchor engaging said surface and a screw for securing the anchor passed therethrough, through the aperture in the frame and in engagement with the threaded aperture in the reinforcing element.

1,665,838. AERIAL SIGNALING METHOD AND MEANS. EDMUND BECKER, Washington, D. C.; Camille Hindmarsh and Marie L. Wallis executrices of said Edmund Becker, deceased. Filed Jan. 10, 1924. Serial No. 685,400. 11 Claims. (Cl. 240—1.)



1. In an aerial beacon, a substantially horizontal circular apertured frame, a substantially vertical, arcuate apertured, frame supported above said first mentioned frame, and means for illuminating the apertures of said frame.

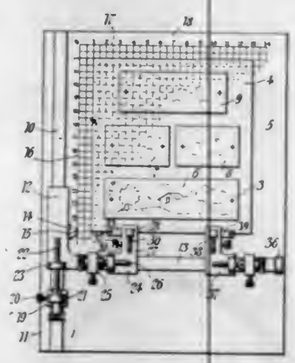
1,665,839. INVERTED-EDGE HAT CARRIER. JACOB BERNSTEIN, Philadelphia, Pa. Filed June 16, 1926. Serial No. 116,352. 2 Claims. (Cl. 206—8.)

2. A hat carrier of the character stated, consisting of a substantially rigid inner core comprising a crown portion and a rim portion of sized textile material, and an outer layer of surfacing fabric snugly secured to the outer surface of the crown portion and the upper surface of the rim portion of the core by the adhesion of the sizing within the latter; the free edge of the surfacing fabric being secured to the edge of the rim of the core by a row of stitches passing therethrough and through the rim, and a plurality of snap fasteners secured to the rim.

1,665,840. VEHICLE TIRE. DAVID N. BOOTH, New York, N. Y. Filed July 12, 1927. Serial No. 205,061. 7 Claims. (Cl. 152—18.)

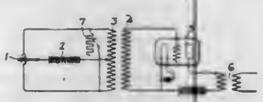
1. In a vehicle tire, an armor comprising a band of flexible material having a plurality of openings therein, a plurality of blocks each placed in an opening in the band so that the blocks are movable in the band and the parts are adapted to conform to the shoe of a tire under working conditions thereof, and reinforcing plates in overlapping relationship in the said band and blocks.

1,665,841. ELECTRIC CUT-OUT. GEORGE R. BROWN, Bridgeport, Conn., assignor to General Electric Company, a Corporation of New York. Filed Sept. 17, 1925. Serial No. 57,037. 1 Claim. (Cl. 173—358.)



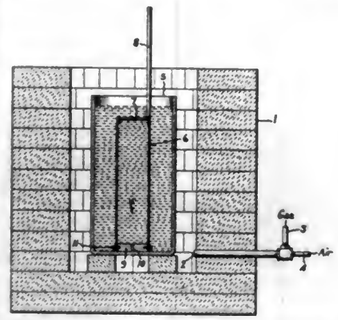
A sealing plug for electric cut-outs comprising a screw-threaded metal thimble adapted to make shunting contact between the center and screw shell contacts of a

cut-out, and a metal disk provided with oppositely inclined spaced teeth secured at the inner end of said



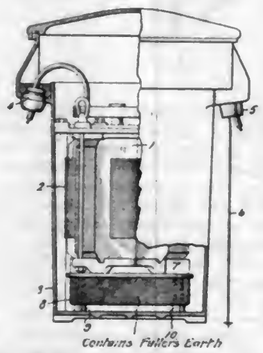
thimble whereby it may be operated by a screw driver into permanently fixed operative position in said screw shell contact.

1,665,842. MEANS FOR MAKING ETCHED PRINTING PLATES. HENRY H. BRUNINGS, Brooklyn, N. Y., assignor to American Lithographic Company, New York, N. Y., a Corporation of New York. Filed Oct. 21, 1925. Serial No. 64,045. 5 Claims. (Cl. 33—184.5.)



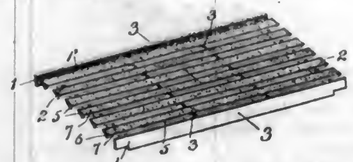
1. A composing device including a combination a table having carriage guiding means near one edge thereof, a carriage mounted for traverse on said guiding means, there being a scale on said table parallel with said carriage guiding means, means on said carriage for reading against said scale, an arm fixed to said carriage and extending over said table at right angles to said guiding means, a slide mounted for traverse lengthwise said arm, said table being also provided with a transverse scale at right angles to said first mentioned scale, and means on said slide for reading against said traverse scale.

1,665,843. AMPLIFIER. IRVING F. BYRNES, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 1, 1924. Serial No. 747,385. 8 Claims. (Cl. 179—171.)



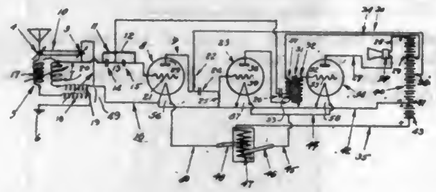
1. The combination in an amplifying system of a push-pull circuit arrangement which includes a source of direct current, and means for producing variable currents from said source of direct current, and an impedance connected between two points in said circuit arrangement which are at the same potential with respect to the direct current component of the source but at different potentials with respect to the variable currents.

1,665,844. METHOD OF PURIFYING METALS. JOHN J. CONLIN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 6, 1927. Serial No. 181,543. 5 Claims. (Cl. 75—17.)



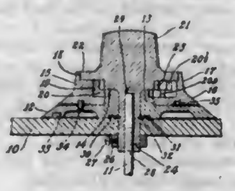
1. The method of purifying a readily oxidizable metal which comprises placing the metal in a container provided with a vent and submerging the container in molten material which does not react with said metal and which has a temperature sufficiently high to cause separation of the metal and impurities contained therein.

1,665,845. ANTISLUDGING MEANS FOR OIL. DAVID C. COX, Soldier Summit, Utah, assignor to General Electric Company, a Corporation of New York. Filed Sept. 28, 1926. Serial No. 138,303. 4 Claims. (Cl. 175—361.)



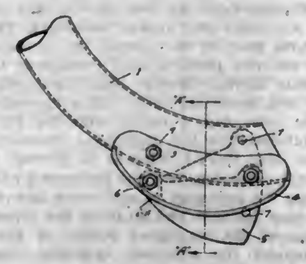
1. In combination with a charge of mineral oil which is subjected to an elevated temperature for a sufficient length of time to permit sludging to occur, a body of fuller's earth in contact with said oil, and sufficient in quantity to reduce sludging of the oil.

1,665,846. GRATING. HARRY DENNI, Kansas City, Mo. Filed July 5, 1927. Serial No. 203,895. 8 Claims. (Cl. 94—30.)



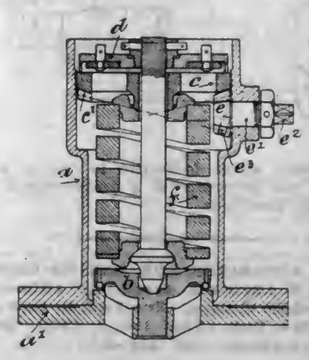
1. A grating having two side bars, transverse bars supported by said side bars, one of said transverse bars having transverse notches in its upper edge, and channel bars mounted concave sides up on said transverse bars and respectively in said notches with their upper edges in the plane of the upper edges of said side bars.

1,665,847. RADIO RECEIVING SYSTEM. PHILIP E. EDELMAN, Chicago, Ill. Filed June 5, 1922. Serial No. 566,132. 6 Claims. (Cl. 250—20.)



1. In a radio receiver including a series of vacuum tubes having input and output circuits, a grid input circuit for one of said vacuum tubes, a plate output circuit for another of said vacuum tubes succeeding said first named vacuum tube in said series, and a resistance connected to feed energy from said last named plate output circuit via said resistance to the grid of said first named vacuum tube, whereby a limited amount of said output circuit energy is applied to said grid of said first named vacuum tube under the control of said resistance.

1,665,848. PRECISION ADJUSTMENT DEVICE. JOHN R. GAMMETER and CHARLES C. CADDEN, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Sept. 13, 1922. Serial No. 587,922. 9 Claims. (Cl. 74—7.)



6. In a precision adjustment device, the combination of an instrument mounting having mounted thereon a rotary part to be angularly adjusted, a dial member journaled concentrically with and adapted to be rotated with said part, means for securing said dial member in different angular positions, and a set of differential gears carried by said member and adapted to rotate said part with relation to said member, the differential ratio or ratios of said gears being such as substantially to interlock said member and said part against relative rotary movement as to any force acting between them except through said gears.

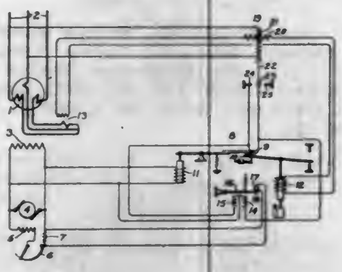
1,665,849. TAIL-SKID SHOE FOR AIRPLANES. JOHN F. HABERLIN, Seattle, Wash., assignor to Boeing Airplane Company, Seattle, Wash. Filed Aug. 3, 1927. Serial No. 210,393. 1 Claim. (Cl. 244—2.)

An article of the class described comprising a friction shoe, a keel member swingably mounted within said shoe and adapted to adjustable movement externally of the shoe and means for locking said keel in any of its adjusted positions.

1,665,850. SAFETY VALVE. WILLIAM HARGREAVES, West Didsbury, Manchester, England, assignor of one-half to R. L. Ross and Company Limited, Stockport, England. Filed Mar. 16, 1927, Serial No. 175,914, and in Great Britain Apr. 6, 1926. 4 Claims. (Cl. 137—53.)

1. A device of the character described, comprising in combination, a series of safety valve units disposed for operation in parallel, means carried by each of said units and adjustable to hold its valve to its seat with variable pressure, each of said units being provided with enclosed non-tamperable means for independently and relatively adjusting said holding means and separately setting the valve units, means carried by each valve and operable from outside the valve for actuating its adjusting means and means connecting the outside operable means of the individual valves thereby to permit alteration in the relative seating pressure of the individual valves.

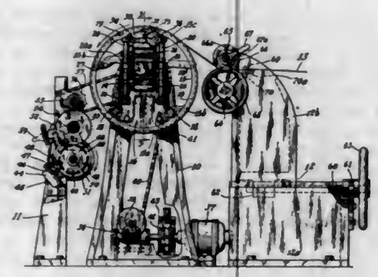
1,665,851. ELECTRIC BUTT-WELDED TUBING AND METHOD OF MAKING THE SAME. JOSEPH W. HARRIS, Washington, D. C. Filed Sept. 26, 1924. Serial No. 740,070. 36 Claims. (Cl. 219—6.)



1. Skelp having serrated edges, said serrations being cut in directions to produce a "cross-hatching" contact when the skelp is formed into a tube and said edges are pressed together.

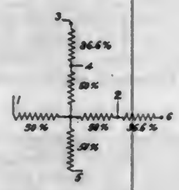
3. The method of electric tube welding, which comprises producing serrations upon one of the welding edges of a skelp, forming the skelp into a tube-shape, pressing said serrated edge against the other edge to form a tube, and passing an electric current across the joint through the sharp edges of said serrations.

1,665,852. REGULATING SYSTEM. MAX HERKLOTZ, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Feb. 27, 1926, Serial No. 91,213, and in Germany Mar. 26, 1925. 9 Claims. (Cl. 171—119.)



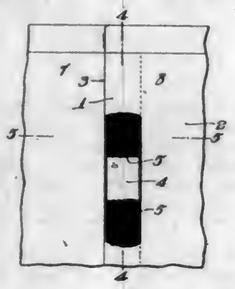
1. In combination, an alternating current dynamo-electric machine, means normally arranged to control an electrical condition of said machine, and means re-

sponsive to said controlled condition and to another electrical condition of said machine for rendering said



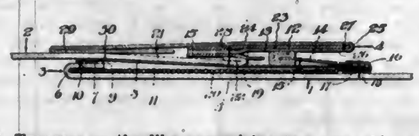
first mentioned means ineffective to control said machine upon the occurrence of a predetermined relation between said conditions.

1,665,853. APPARATUS FOR MAKING GROMMETS. CHARLES W. LEGUILLON, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 5, 1924. Serial No. 724,446. 6 Claims. (Cl. 154—9.)



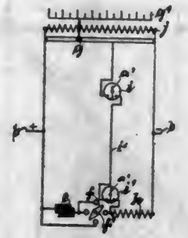
4. In apparatus for making endless rings, the combination of a drum formed with a circumferential groove, means for detachably securing one end of a strip of material within said groove, means for rotating said drum, and means for stopping said rotation after a determinate number of revolutions thereof.

1,665,854. ALTERNATING-CURRENT DEVICE. BERNARD E. LENEHAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 15, 1924. Serial No. 755,862. 11 Claims. (Cl. 171—84.)



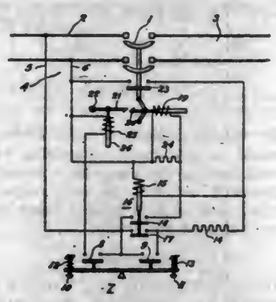
3. The combination with a three-phase circuit, of a pair of auto-transformers comprising windings having a common connection dividing said windings into four parts, primary leads connected between the circuit conductors and three of said parts and secondary leads connected to three of said parts including one part not included in the primary-lead connection.

1,665,855. TROUSERS. ARTHUR S. LICHTEN, ABRAHAM KOUFMAN, and WILLIAM SHULIK, Philadelphia, Pa. Filed July 27, 1927. Serial No. 208,678. 3 Claims. (Cl. 2—234.)



3. Trousers or the like, comprising two separable parts having their adjacent edges in overlapping relation to each other, thereby forming an outer flap, continuous and separable fastening means extending longitudinally of said flap along the inner face thereof, having one part thereof secured to said outer flap, spaced inwardly a suitable distance from the free edge thereof and having the other part thereof secured to the juxtaposed part of the trouser, an operating slide common to the two parts of said continuous fastening means, slidably carried thereby; said continuous fastening means and operating slide being concealed from view by said outer flap, and a haircloth stiffening ply in said outer flap, intermediate of said fastening means and the free edge thereof, said haircloth stiffening ply having strands of a limp character extending longitudinally and being relatively stiffer transversely than longitudinally of saidflap.

1,665,856. TROUSERS. ARTHUR S. LICHTEN, ABRAHAM KOUFMAN, and WILLIAM SHULIK, Philadelphia, Pa. Filed Oct. 17, 1927. Serial No. 226,736. 5 Claims. (Cl. 2—234.)

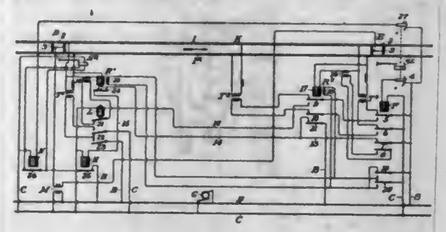


3. Trousers or the like, comprising two separable parts having their adjacent edges in overlapping relation to each other, thereby forming an outer flap, continuous and separable fastening means extending longitudinally of said flap along the inner face thereof, having one part thereof secured to said outer flap, spaced inwardly a suitable distance from the free edge of said outer flap and having the other part thereof secured to the juxtaposed separable part of the trouser, an operating slide common to the two parts of said continuous fastening means, slidably carried thereby; said continuous fastening means and operating slide being concealed from view by said outer flap, a textile stiffening ply in said outer flap intermediate the continuous fastening means and the free edge thereof, adapted to prevent the separation of said outer flap from the juxtaposed part of the trouser, along the free edge of said outer flap when the fastening means is closed, and an inner flap formed along the free edge of the overlapped portion of the trouser extending beyond the separable fastening means and being adapted to shield the latter from contact with the body and the undergarments of the wearer.

1,665,857. ELECTRICAL TRANSMISSION SYSTEM. JOHN CUTHBERT NEEDHAM, London, England, assignor to Evershed & Vignoles Limited and himself, London, England. Filed May 26, 1920, Serial No. 384,462, and in Great Britain July 10, 1919. 1 Claim. (Cl. 175—183.)

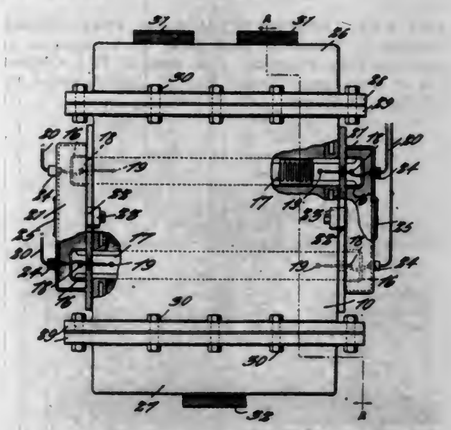
Electrical transmission system by which the speed of a moving body can be readily ascertained from a distance, comprising a potentiometer at one station; a condenser of constant capacity, a switch operated by the moving body for alternately connecting the condenser with a source of electrical energy to charge said condenser and short circuiting the condenser to discharge said condenser, and a noninductive resistance at the other station; a source of electrical energy and a polarized indicating device responsive to nonalternating electrical energy being operatively associated with the potentiometer, condenser, switch and resistance to enable the apparent resistance of the condenser and switch to be measured.

1,665,858. CIRCUIT INTERRUPTER. WILLIAM L. NEWMEYER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 11, 1924. Serial No. 725,847. 5 Claims. (Cl. 175—294.)



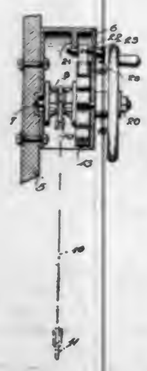
1. The combination with a circuit interrupter, a closing coil therefor, a resistor connected in parallel relation with the closing coil, and a source of electrical energy, of a relay device for connecting the closing coil to the source of energy, a switch for connecting the relay device to the source of energy, an auxiliary switch associated with the relay device for maintaining connection between the relay device and the source of energy, and means associated with the circuit interrupter for rendering the relay device ineffective.

1,665,859. METHOD OF PAINTING URINALS. JOHANN OMSCH, Glockenthal, near Steffisburg, Switzerland. Filed Oct. 23, 1926, Serial No. 143,790, and in Switzerland Oct. 29, 1925. 2 Claims. (Cl. 167—3.)



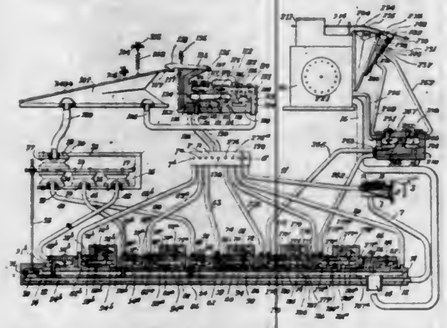
2. A method of disinfecting urinals, comprising the step of applying a coating of disinfecting oil to a coating of a black japan before the latter is dry.

1,665,860. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. BERTRAM R. PADMORE, Montrose Heights, Blawnox, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 6, 1923. Serial No. 666,919. 24 Claims. (Cl. 246—37.)



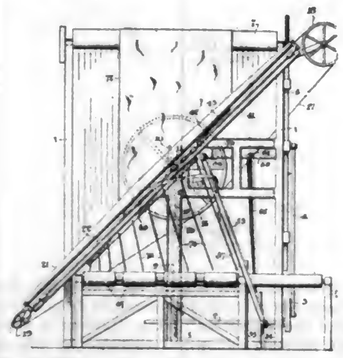
1. In combination, a section of railway track, two sources of current at the two ends of said section respectively and a third source of current at an intermediate point in said section, a track relay at the exit end of said section and a line relay at the entrance end of the section, means controlled by traffic conditions in advance of the section for rendering the source of current at the exit end of the section or the source of current at the intermediate point in the section effective to supply current to the rails of the section, means controlled by traffic conditions in advance of the section and by the track relay at the exit end of the section for energizing said line relay, and means controlled by said line relay when energized for rendering the source of current at the entrance end of the section effective to supply current to the rails of the section.

1,665,861. ELECTRIC HEATER. MARTIN K. PURDY, Stroudsburg, and WILLIAM H. REAGLE, Tobyhanna, Pa. Filed Aug. 31, 1927. Serial No. 216,638. 2 Claims. (Cl. 219—39.)



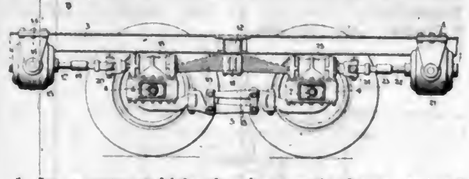
1. An electric heater comprising a housing having heating chambers normally open to the atmosphere upon opposite sides, lugs formed upon the exterior of the housing adjacent the open sides, electrical heating elements inserted through the heating chambers and secured to the lugs, cover members for the open ends of the heating chambers and for the extended ends of the lugs, means leading to conduits through the cover members into the heating chambers and connecting with the heating elements, and circulating chambers contiguous to and receiving heat from the heating chambers.

1,665,862. HAND BRAKE. WILLIAM HENRY SAUVAGE, New York, N. Y., assignor, by mesne assignments, to Boyal Railway Improvements Corporation, New York, N. Y., a Corporation of Delaware. Filed May 8, 1924. Serial No. 711,828. 4 Claims. (Cl. 254—176.)



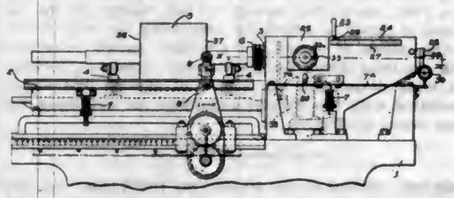
1. In an apparatus of the character described, in combination, a casing having a closed top and provided with an opening on its under side, a block chain sheave within said casing, a gear integrally formed with said sheave, a hand wheel, a shaft on which it is mounted, a pinion gear integrally formed with said shaft and meshing with the first mentioned gear, a double acting pawl co-acting with the first mentioned gear adapted to prevent rotation in either direction according to the position in which it is set, and a chain passing around said sheave in the form of a loop and connected with a second chain whereby as said sheave is rotated in either direction tension will be exerted on said second chain and said double acting pawl will hold the same in tensioned position.

1,665,863. AUTOMATIC MUSICAL INSTRUMENT. CHARLES F. STODDARD, New York, N. Y., assignor to American Piano Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 12, 1924. Serial No. 698,599. 56 Claims. (Cl. 84—41.)



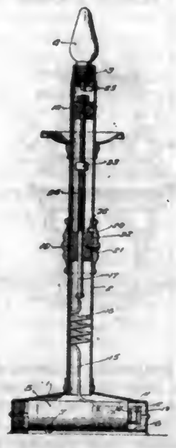
1. In an automatic musical instrument having player pneumatics and a source of pneumatic power, in combination, means to govern the pressure applied to said player pneumatics by said source of power to thereby govern playing intensities including a regulator responsive to changes in pressure applied there to by said source of power, and means to vary by perceptible increments the pressure applied to said governing means by said source of power to thereby additionally govern playing intensities.

1,665,864. DISENGAGING DEVICE. EDWIN G. TEMPLETON, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 17, 1925. Serial No. 56,985. 10 Claims. (Cl. 164—65.)



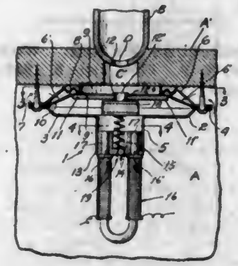
1. A strip removing device for bias cutters comprising disengaging means, an inclined belt conveying mechanism and a plurality of strip supporting members arranged substantially parallel to the belt mechanism and adapted to deposit the strips in substantially horizontal position.

1,665,865. MOTOR-VEHICLE-DRIVING MECHANISM. ELLIS W. TEMPLIN, Philadelphia, Pa., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed Oct. 19, 1921, Serial No. 508,844. Divided and this application filed Nov. 9, 1925. Serial No. 67,928. 5 Claims. (Cl. 180—22.)



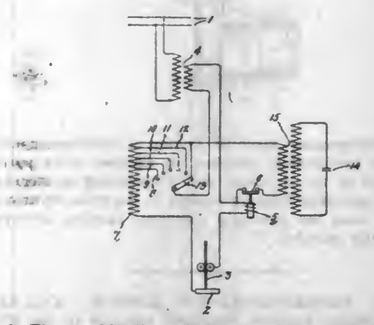
1. In a motor vehicle chassis, a main frame, a truck resiliently mounted on said frame comprising two spaced driving axles each having driving wheels mounted thereon, a motor pivotally mounted on said frame on each side of said truck, each of said motors being operatively connected to the adjacent drive axle.

1,665,866. BALANCING MACHINE. WILLIAM E. TRUMPLER, Wilkinsburg, Pa., assignor to Westingbouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 28, 1924. Serial No. 716,331. 12 Claims. (Cl. 73—51.)



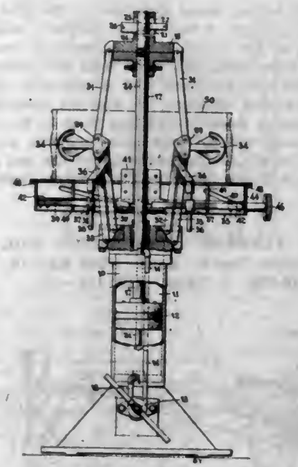
1. In a balancing machine, a drive spindle, a countershaft, frictional coupling means therefor, a plurality of counterbalance weights associated with said countershaft and axially movable thereon and conical rollers for adjusting said weights angularly to balance the unbalanced mass of the body being tested.

1,665,867. ELECTRIC BOUDOIR LAMP. CHARLES WACHTEL, New Hyde Park, N. Y. Filed Nov. 18, 1924. Serial No. 750,602. 4 Claims. (Cl. 240—10.5.)



1. An electric lamp comprising a slender tubular standard, a hollow base supporting the standard, a lamp socket carried by the upper end of the standard, a battery located within the base, means forming a normally open electrical circuit from the battery to the lamp socket, a sleeve encircling the standard and adapted to be grasped to lift the lamp, said sleeve being adapted to slide upwardly toward the lamp socket a limited distance when a lifting force is exerted thereon, reciprocable circuit closing means within the tubular standard, a yieldable operative connection between the sleeve and said means to close the circuit when the sleeve is shifted toward the lamp socket, and means to lock the sleeve in circuit closing position, said circuit closing means and sleeve being adapted to gravitate to circuit opening position when the sleeve is released.

1,665,868. VALVE ACTION FOR PIPE ORGANS. HARRY F. WATERS, St. Louis, Mo. Filed Feb. 19, 1927. Serial No. 169,466. 11 Claims. (Cl. 84—338.)

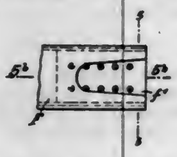


5. A valve mechanism for pipe organs comprising a housing having an air passageway formed through a wall thereof and arranged in communication with an organ pipe, a valve seat at said air passageway, a pneumatic pouch within said housing, a portion of said pneumatic pouch being movable as a valve into and out of contact with said valve seat whereby passage of air to said organ pipe may be controlled, said pouch being provided with an air passageway formed through a wall thereof by means of which the interior of said pouch is placed in communication with said organ pipe, a valve within said pouch movable into and out of contact with a valve seat to control the passage of air through the passageway formed through the wall of said pouch, and means whereby the operation of the second mentioned valve may be effected.

1,665,869. ELECTRIC WELDING. JAMES M. WEED, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 18, 1925. Serial No. 30,933. 6 Claims. (Cl. 171—119.)

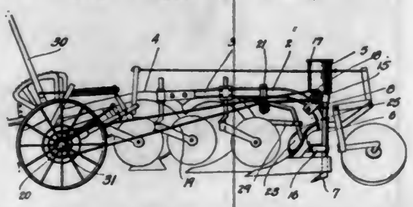
1. The combination of an alternating current welding circuit, an adjustable reactance device connected to said circuit, an adjustable capacitance device connected to said circuit, and means electrically interconnecting said devices for simultaneously producing substantially proportionate adjustments in the volt amperes of said circuit and said capacitance device.

1,665,870. SHAPING DEVICE. LAURENCE WETMORE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 26, 1926. Serial No. 131,625. 7 Claims. (Cl. 154—10.)



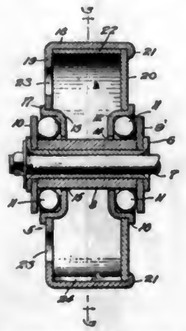
7. The combination with a tire band shaping machine having means adapted to shape the central portion of a tire band, of a band centering device comprising a band engaging member in operative relation with respect to the shaping means, adapted to support the band, a cylindrical member provided with a plurality of helical slots adapted to freely support the engaging member and a plurality of lugs operative by movement of the band centering device and projecting through the slots in the cylindrical member slidably to support the latter.

1,665,871. REFRIGERATING MACHINE. JAMES J. WOOD, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Feb. 10, 1926. Serial No. 87,400. 3 Claims. (Cl. 230—232.)



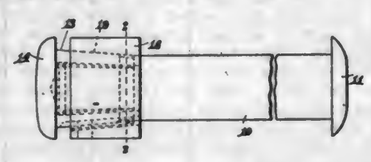
1. A refrigerating machine having a compressor comprising an oscillatable cylinder, an exhaust valve seated on the end of the cylinder, and a combined muffler box and valve enclosing housing secured to the cylinder around the valve, said box having a discharge opening arranged adjacent the cylinder.

1,665,872. ASSEMBLAGE-POINT DEVICE. KARL ARNSTEIN, Friedrichshafen, Germany, assignor to the Firm Luftschiffbau, Zeppelin Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Filed June 28, 1920, Serial No. 392,483, and in Germany Oct. 13, 1917. 3 Claims. (Cl. 189—37.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



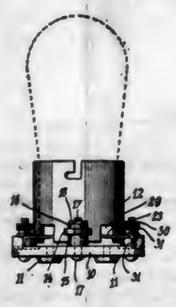
1. A light weight metal structure of the type described comprising a stress transmitting member, said member constituting a thin walled tube, the walls at one end portion of the tube being cut out to form two oppositely disposed spaced end portions, and a plurality of channel shaped connecting members, the channel shaped members having fastening means connecting them to the oppositely disposed spaced end portions, said fastening means being accessible through the cut out walls of the end portion of the tube to facilitate fastening the members together.

1,665,873. PLANTER ATTACHMENT FOR PLOWS. LOUIS BINDER, Norton, Kans. Filed Mar. 16, 1925. Serial No. 15,825. 1 Claim. (Cl. 111—1.)



In combination with a gang plow comprising a plurality of plows arranged in gang formation, a seed distributor located with relation to the inner furrow producing plow to deposit seeds in the furrow produced by said plow and a furrowing disk positioned with relation to the outermost plow of the gang for removing the excess earth applied to the seeded furrow by said outer plow during the next succeeding traversal of the gang plow across the field.

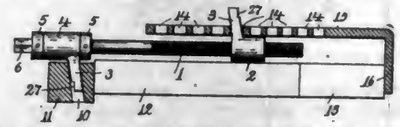
1,665,874. SKATE WHEEL. HERMAN CASLER, Canastota, N. Y., assignor, by mesne assignments, to Rex-Watson Corporation, Canastota, N. Y. Filed Mar. 20, 1925. Serial No. 16,958. 1 Claim. (Cl. 308—190.)



A roller bearing comprising a sleeve, a tubular member of less length than said sleeve and mounted upon said sleeve, flat washers on said sleeves, the ends of said sleeves swaged to clamp the washers against the ends of said tubular member, ball bearings and bearing cups therefor holding said bearings against said washers and said tubular member.

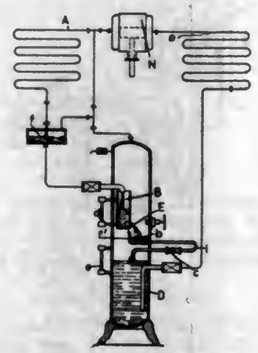
1,665,875. BOLT. MELBURN A. COMEAU, Haverhill, Mass. Filed May 16, 1927. Serial No. 191,654. 10 Claims. (Cl. 85—5.)

1. The combination of a bolt having a reduced tapered end of which the greatest diameter is at its outer extremity; a thimble provided with a socket to receive said tapered end, the wall of said socket consisting of a plurality of separated sections; and means surrounding said thimble adapted to force said sections into contact with said tapered end.



1,665,876. RADIO TUBE SOCKET. WILLIAM H. EGGERS, Brooklyn, N. Y. Filed June 5, 1925. Serial No. 35,211. 2 Claims. (Cl. 173—328.)

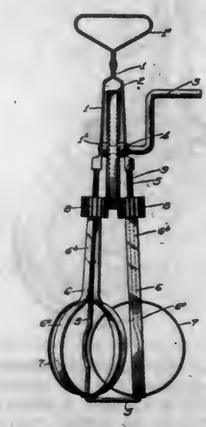
1. A radio tube socket comprising a base having a plurality of substantially equidistantly counter sunk seats, a tubular body provided with a plurality of cut-away portions on its lower edge corresponding to said counter-



sunk seats, a terminal secured at one end in each of said seats and having the other end thereof overlapped and extending into the tubular body through the cut-away portions therein, a plurality of outwardly extending ears on the tubular body near the lower edge thereof and adjacent said cut-away portions, means extending through said ear and base for connecting said tubular body and said base with the cut-away portions in alignment with the countersunk seats, and a cushioning element above and below each ear and retained by said connecting means.

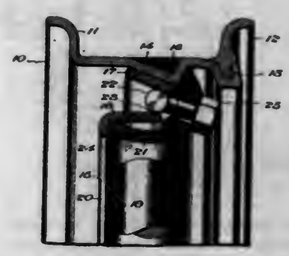
1,665,877. CLAMP. CHARLES H. FERNALD, Malden, Mass. Filed May 27, 1927. Serial No. 194,708. 1 Claim. (Cl. 144—303.)

A clamp comprising a screw rod having at one end means for its rotation, a collar rotatable but not slidable on said rod, and a threaded collar turning on the threaded portion of said rod, each collar having a straight but slightly inclined finger projecting therefrom, each finger being roughened on its acute-angled face, and formed with a notch at the end of its opposite face, said collars being entirely independent of each other except as controlled by said rod.



1,665,878. REGULATING DEVICE FOR REFRIGERATING MACHINES. KARL GLÄSSEL, Cannstatt, Germany. Filed Mar. 20, 1925, Serial No. 17,093, and in Germany May 6, 1924. 3 Claims. (Cl. 62—115.)

1. A device for regulating refrigerating machines, comprising, in combination: a compressor, a condenser, a regulating valve, two vessels serving for conducting the refrigerating liquid from the condenser to the regulating valve, one of said vessels being arranged within the other vessel in such a manner as to be superposed to the latter, so that a drop of flow is produced between said two vessels, an orifice provided in said superposed vessel and establishing a communication between said vessels, means for regulating the cross sectional area of said orifice, and a vessel arranged between said condenser and the upper one of the before mentioned two vessels.

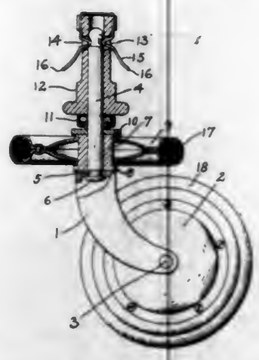


1,665,879. EGG BEATER. SCOTT S. GRAVES, San Diego, Calif. Filed May 9, 1923. Serial No. 637,646. Renewed Sept. 16, 1926. 7 Claims. (Cl. 259—131.)

1. An egg beater, including a frame, a gear revolubly mounted on said frame, a crank member secured to said gear for turning the same, a beater-member support secured to said frame and extending therefrom, a beater-member provided with a loop portion at its lower end and arms extending upwardly therefrom, the lower end of said loop portion being revolubly mounted on said beater-

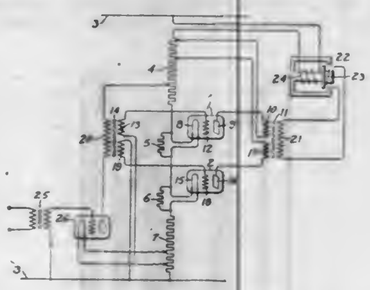
member support, a pinion secured to the extended arms of said beater-member and revolubly mounted on said beater-member support and shiftable relatively to said gear, and a spring interposed between said pinion and said frame.

1,665,880. VEHICLE WHEEL. JAMES E. HALE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 24, 1921. Serial No. 502,938. 2 Claims. (Cl. 301—24.)



2. The combination with a felly having a rim-seating portion in radial alignment with a spoke-receiving portion, of a demountable tire rim, and clamping means for securing the tire rim to the felly comprising a clamp member and a T-headed bolt operating therewith, said bolt being swingably mounted intermediate the rim-seating and spoke-receiving portions of the felly.

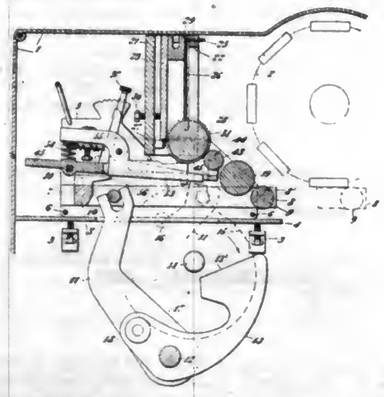
1,665,881. BITUMINOUS PRODUCT AND METHOD OF MAKING SAME. EUGEN HUTZENLAUB, Stuttgart-Gaisburg, Germany, assignor to firm Paul Lechler, Stuttgart, Germany. Filed June 26, 1926, Serial No. 118,859, and in Germany July 8, 1925. 8 Claims. (Cl. 134—1.)



2. As a new product, a stable mixture of a tarry substance and water, such mixture having the form of a cream-like paste which is substantially non-miscible with water at ordinary temperature, such product containing a small amount of an emulsifying agent, but insufficient to form an aqueous emulsion.

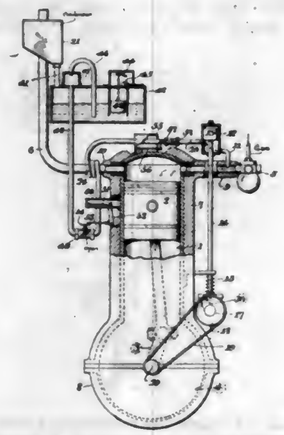
1,665,882. CASTER. NELSON L. JARVIS and FRANK J. JARVIS, Palmer, Mass., assignors to Jarvis & Jarvis, Inc., Palmer, Mass., a Corporation of Massachusetts. Filed Feb. 8, 1926. Serial No. 86,840. 2 Claims. (Cl. 16—18.)

1. In a device of the character described, a roller bracket, a caster stem secured to the bracket, a bearing portion having a collar on the stem, a guard roller on the bearing portion resting on the collar, a ball bearing over the bearing portion, and a sleeve over the ball bearing rotatably mounted on the stem.



1,665,883. POWER-AMPLIFYING SYSTEM. EDWARD W. KELLOGG, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 13, 1926. Serial No. 108,941. 9 Claims. (Cl. 179—171.)

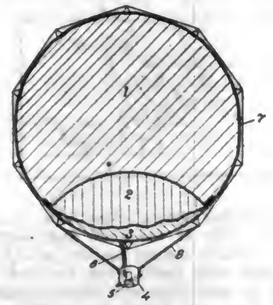
4. The combination of current supply means, impedance means connected to said supply means, and a push-pull amplifier provided with cathode heating circuits connected across different portions of said impedance means and with output circuits connected across portions of said impedance means that have equal potential drops.



1,665,884. INKING MECHANISM OF MACHINES FOR FRANKING POSTAL MATTER AND THE LIKE. ULRICH KOHLER, Bern, Switzerland, assignor to Hasler A.-G. vormals Telegraphenwerkstätte von G. Hasler, Bern, Switzerland, a Swiss Corporation. Filed Sept. 8, 1926, Serial No. 134,213, and in Switzerland Sept. 16, 1925. 8 Claims. (Cl. 101—360.)

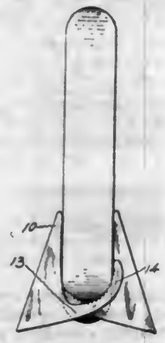
1. Inking mechanism comprising in combination a framework adapted to be detachably inserted in a machine, an ink box removably mounted on said framework, an ink container open at the top and bottom removably inserted in said ink box, a doctor roll journalled in said ink box closing the open bottom of said ink container, a sliding member fitting the open top of said ink container, a frame mounted to reciprocate below said box, an inking roll carried by said frame in operative relation to said doctor roll, a lever arranged

to reciprocate said frame, and a feed mechanism actuated by said frame and arranged to feed said doctor roll step-by-step.



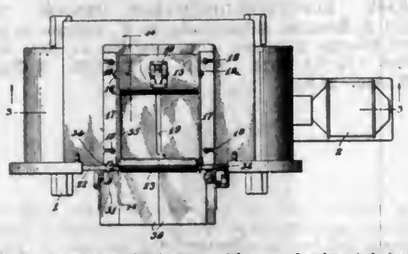
1,665,885. INTERNAL-COMBUSTION ENGINE. HENRY ERNEST LE MESURIER, London, England. Filed Apr. 7, 1925, Serial No. 21,371, and in Great Britain Apr. 17, 1924. 12 Claims. (Cl. 123—25.)

1. In an internal combustion engine the combination of a cylinder, means for preventing loss of heat therefrom, means for admitting water to the cylinder during the admission stroke in sufficient quantity to prevent overheating of the said cylinder, and means for automatically stopping the engine whenever the supply of water is insufficient to prevent overheating of the cylinder.



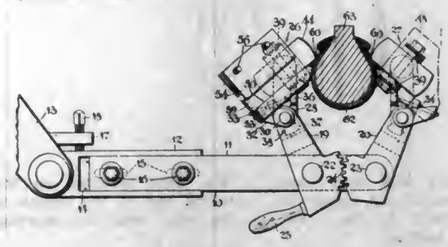
1,665,886. GAS-INFLATED AIRSHIP. EBERHARD LEMPERTZ, Friedrichshafen, Germany, assignor to Luftschiffbau Zeppelin Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Filed July 19, 1926, Serial No. 123,316, and in Germany Feb. 18, 1926. 10 Claims. (Cl. 244—6.)

1. An airship comprising a structure adapted to be inflated with gas; a motor adapted to propel said structure; a gas contained in said structure and being of lower specific gravity than air; a second gas contained in said structure and having a specific gravity substan-



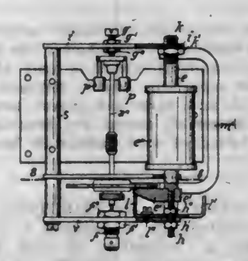
tially alike that of air; said first gas being adapted to serve as lifting gas; said second gas being adapted to serve as fuel for said motor.

1,665,887. HOLDER FOR TIRES. FREDERICK A. LIND, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 10, 1923. Serial No. 656,664. 4 Claims. (Cl. 211—24.)



1. A tire holder comprising two separate members each provided with a portion adapted to engage one side wall of a tire casing and an arm-like portion adapted to extend beneath the tire in clamping engagement therewith.

1,665,888. CAKE-SPLITTING MACHINE. JOHN B. LITTY, Philadelphia, Pa. Filed Sept. 21, 1925. Serial No. 57,520. 13 Claims. (Cl. 146—72.)

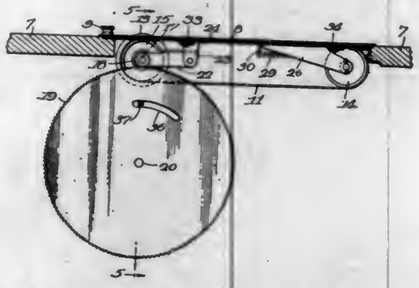


13. In a cake splitting machine, a horizontal bed, a band knife disposed parallel thereto and adapted to move transversely thereof, mechanism for moving said knife, means movable longitudinally of said bed for moving a cake through the path of the knife, means for moving said cake-moving means, a guide for holding the cake against lateral movement during the splitting operation, and means mounted above the knife for holding the cake against upward movement during the splitting operation.

1,665,889. CHAFING-STRIP APPLIER. ELOY F. MAAS, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 16, 1926. Serial No. 95,043. 7 Claims. (Cl. 154—10.)

1. An attachment for a tire building machine having a carcass supporting core mounted thereon, a swinging bracket mounted adjacent the core, a pair of interconnected arms pivoted to the bracket and adapted to operate on opposite sides of the core, spring pressed roller members secured to the arms for engaging the tire carcass supported by the core, and individual guides mounted on the arms for directing strips of fabric under the rollers.

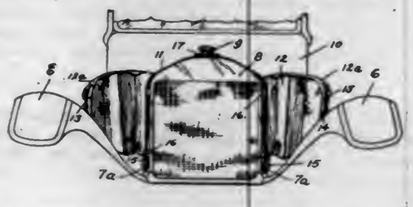
1,665,890. SYNCHRONOUS MOTOR SPECIALLY FOR DRIVING CLOCKS. ROBERT MICHL, Kosice, Czechoslovakia. Filed June 10, 1925, Serial No. 36,275, and in Germany June 13, 1924. 4 Claims. (Cl. 172—120.)



1. A synchronous motor, comprising in combination, a disk-like rotor formed of spaced segments, two exciter magnets the pole shoes of which are situated in a a plane adjacent and parallel to the plane of rotation of said rotor segments, and an alternating current electromagnet the pole nose of which is situated in another plane adjacent and parallel to but on the other side of the plane of rotation of said rotor segments.

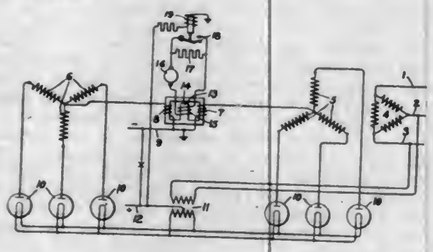
4. A synchronous motor, comprising in combination, a disk-like rotor formed of spaced iron segments, two exciter magnets the pole shoes of which are situated in a plane adjacent and parallel to the plane of rotation of said rotor segments, said exciter magnets being bowed out in outward direction in order to make the motor as flat as possible.

1,665,891. STATION-SELECTOR DIAL FOR RADIO RECEIVING SETS. MARTIN NYSTROM, Chicago, Ill., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed July 25, 1925. Serial No. 46,043. 15 Claims. (Cl. 40—96.)



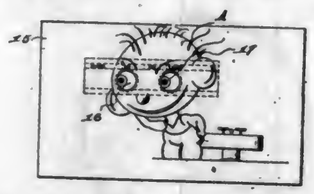
1. Station selector means for radio receiving sets comprising a support, a tuning element, a rotor shaft for the tuning element, a frame pivotally connected

to said support, another frame slidably mounted on said support, a drum revolubly mounted in each of said frames, means operatively connecting one of the drums



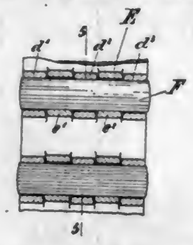
with said rotor shaft, a dial band mounted on the drums, and means for operating one of the drums to adjust the dial band and the rotor shaft for selecting a station.

1,665,892. AUTOMOBILE LUGGAGE CARRIER. MARK O'DEA, St. Paul, Minn. Filed June 23, 1924. Serial No. 721,769. 3 Claims. (Cl. 224—29.)



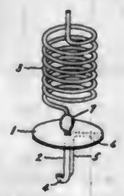
1. A luggage carrier for automobile comprising a supporting means adapted to extend over the top and side portions of an automobile hood, a pair of receptacles secured to said supporting means, disposed respectively at each side of said hood and means secured to the rear of said supporting means for securing the same to the rear portion of said automobile hood.

1,665,893. SYSTEM OF DISTRIBUTION. DAVID C. PRINCE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 23, 1924. Serial No. 739,443. 10 Claims. (Cl. 175—363.)



9. The combination of polyphase windings, a direct current circuit, an interphase transformer comprising a magnetic core and windings wound on said core and connected between said direct current circuit and said polyphase windings, and means operable in accordance with the voltage of said direct current circuit for varying the saturation of said core to regulate the relation between the voltages of said polyphase windings and said direct current circuit.

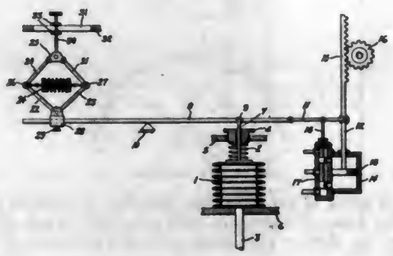
1,665,894. ADVERTISING DEVICE. RUSSELL L. REICHARD, Allentown, Pa. Filed Aug. 19, 1926. Serial No. 130,287. 4 Claims. (Cl. 40—138.)



1. An advertising device comprising a plate, disks pivoted at one side of the plate and adapted for the reception of suitable display matter, means for rocking said disks upon their pivots when the plate is tilted, a card secured to said plate and having openings therein opposite the disks, said disks being adapted to rock from one side to the other of said openings, and thereby display through said openings the display matter thereon.

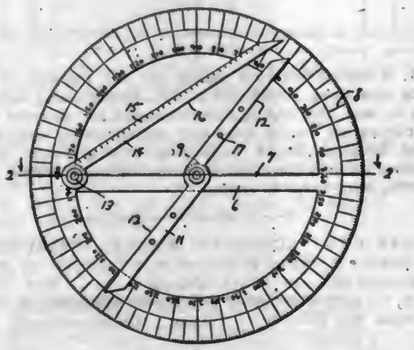
1,665,895. SHAFT COUPLING. LEONZ RIEGER, Friedrichshafen, Germany, assignor to the Firm Luftschiffbau Zeppelin Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Filed June 28, 1920, Serial No. 392,436, and in Germany May 22, 1919. 2 Claims. (Cl. 64—96.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

1. An elastic coupling comprising two concentric rims, one within the other; inwardly extending projections on the outer rim; outwardly extending projections on the inner rim; said projections being arranged in axially extending rows, the projections of a row on one rim fitting in the gaps between the projections of the corresponding row on the other rim, and in circumferential direction the projections on the outer rim alternating with those on the inner rim; and a non-metallic compressible band axially extending between the projections of the outer and of the inner rim.



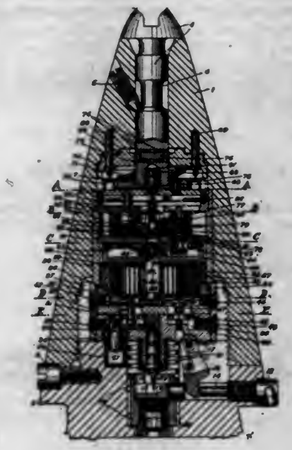
1,665,896. ELECTRON-DISCHARGE DEVICE. WILLIAM A. RUGGLES, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 17, 1924. Serial No. 726,623. 3 Claims. (Cl. 250—27.5.)

1. A resilient filament support comprising a coil spring body member, a rod-like member extending therefrom in the direction of the axis of said spring, filament retaining



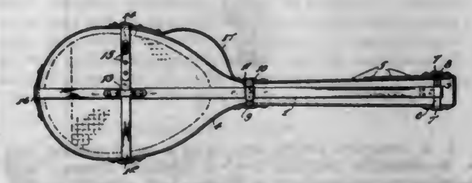
means upon said rod-like member and a heat dissipating metal plate disposed loosely upon said member and intermediate the spring body and the filament retaining means and perpendcular to the axis of said spring and bracing means attached to the metal plate and rod-like member.

1,665,897. ELASTIC CONNECTION. REGINALD G. STANDERWICK, Marblehead, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 23, 1926. Serial No. 104,235. 5 Claims. (Cl. 267—20.)



1. The combination with an elastic connection having a straight line characteristic, of means for modifying such characteristic comprising a spring which extends at a right angle to the line of movement of said elastic connection and has an initial tension equal to the product of its scale and free length, and means for moving the spring always in a straight line, said means comprising an angularly disposed arm pivoted to said elastic connection and to said spring.

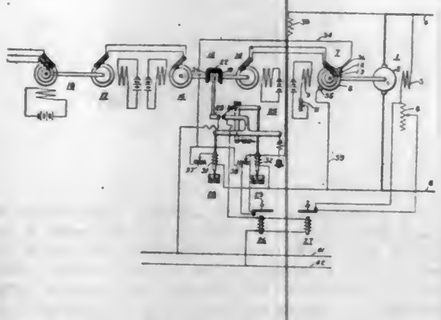
1,665,898. DRAFTING INSTRUMENT. LOUIS G. STRICKLAND, Huntington, N. Y. Filed June 7, 1927. Serial No. 197,100. 2 Claims. (Cl. 33—75.)



1. In a device of the class described, a ring, a bar formed integrally therewith and extending across the center of the ring with one edge of the bar forming a center line therethrough, an arm pivotally mounted at the center of the bar and having one edge thereof forming a center line across the ring and an arm having one end pivotally mounted at the junction of one end of the bar with the ring, one edge of said arm forming a center line through said pivotal connection.

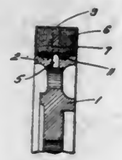
1,665,899. MECHANICAL FUSE FOR ARTILLERY PROJECTILES. ANDRÉ VARAUD, Geneva, Switzerland. Filed Jan. 7, 1927, Serial No. 159,530, and in Switzerland Jan. 16, 1926. 16 Claims. (Cl. 102—86.)

1. In a mechanical fuse for artillery projectiles of the type in which the power member of the clockwork is constituted by a barrel shaft arranged in the axis of the fuse in such a manner as to describe several revolutions, in one direction for effecting, prior to firing, simultaneously the winding and the setting or adjusting of the fuse, and in the inverse direction and during the trajectory under the action of the power spring and for driving the rotary member controlling the release of the striker member, and also for transmitting the driving power to a regulating device of the clockwork with a dead-beat escapement and a spiral balance, in combination a frame, for housing the different movable members of the clockwork, said frame being composed of at least two parts, one of them being a fixed one and containing the power spring, said fixed part being integral with the fuse body, and a movable one adapted to become, prior to firing, displaced angularly with regard to the fixed part, for effecting simultaneously the winding of the power spring and the adjusting of the time of ignition of the projectile charge, means being provided, which, in function of the inertia, are adapted to render, during the complete trajectory, this movable part of the frame integral with the said fixed part.



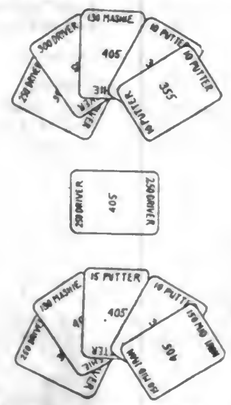
1,665,900. TENNIS-RACKET CARRIER. OLIVIA E. VAUGHAN, Newark, N. J. Filed May 12, 1926. Serial No. 108,483. 1 Claim. (Cl. 224—45.)

A carrier for a tennis racket comprising a strap to extend longitudinally completely around the edges of the racket to be carried, another strap to extend longitudi-



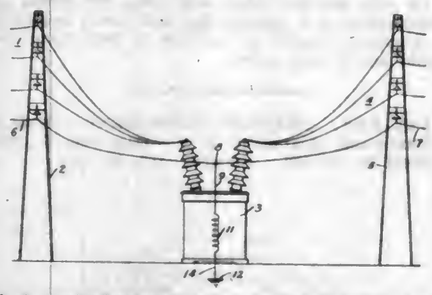
nally partly around the racket along the longitudinal median line at opposite sides and having loops at its ends, a plurality of tie straps to extend transversely around said racket, one of said tie straps passing around the head of the racket and another passing around the handle at the base of the head and a third around the end of the handle, means adjustably connecting the ends of each of said tie straps, means for separably connecting the ends of the first-mentioned strap, and means connecting all of said tie straps to the two first-mentioned straps so that said tie straps may move longitudinally of themselves but are held against movement longitudinally of the two first-mentioned straps.

1,665,901. SPEED-REGULATOR SYSTEM. JOHN H. ASHBAUGH, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 26, 1925. Serial No. 58,823. 5 Claims. (Cl. 172—293.)



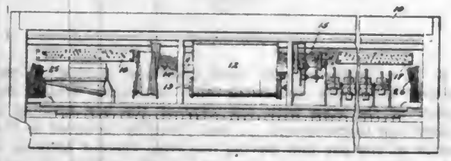
1. In combination, a speed-reference means, a dynamo-electric machine having a field winding, means for regulating the excitation of said field winding comprising a pair of contact members, means for actuating one of said contact members in accordance with the speed of said dynamo-electric machine, and means for actuating the other of said contact members in accordance with the differential speeds of said speed-reference means and said dynamo-electric machine.

1,665,902. MOLDED ARTICLE. ARTHUR J. BASTIAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 26, 1921. Serial No. 440,041. 7 Claims. (Cl. 74—28.)



1. A composite article comprising a metal support and a non-metallic working portion molded thereon, said working portion comprising fibrous sheet material spirally wound on the periphery of said support, fibrous sheet material helically wound on the periphery of said spirally wound material, and a single insert of resilient material disposed between some of the sheets.

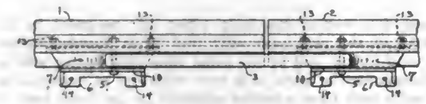
1,665,903. CARD GAME. ALAN L. BECKET, East Orange, N. J. Filed Sept. 10, 1926. Serial No. 134,610. 5 Claims. (Cl. 273—152.)



1. A game of the character described, a deck of cards on the faces of which are designated the names of golf clubs, the distances of shots and the distances of golf holes.

1,665,904. CARRIER-WAVE TELEPHONE SYSTEM. CLARENCE A. BODDIE, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 18, 1923. Serial No. 658,040. (Cl. 179—2.)

1. A carrier-frequency system for the transfer of signals over lines, comprising a line, sectionalizing apparatus in said line, and a transfer means for carrying carrier-frequency energy past said sectionalizing apparatus, said transfer means comprising one or more wires coupled to said line, and a tuned drain-coil system connecting said wires to earth.

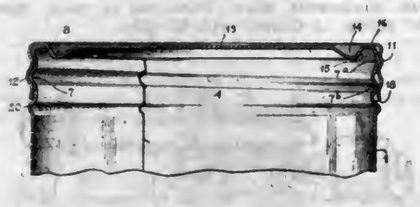


1,665,905. AUTOMATIC MUSICAL INSTRUMENT. TOLBERT F. CHEEK, New York, N. Y., assignor, by mesne assignments, to Welte Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Oct. 6, 1922. Serial No. 592,833. 3 Claims. (Cl. 84—57.)

1. In an automatic pneumatic musical instrument, a junction block comprising a plurality of thin complementary coacting parts, each part having a series of open-

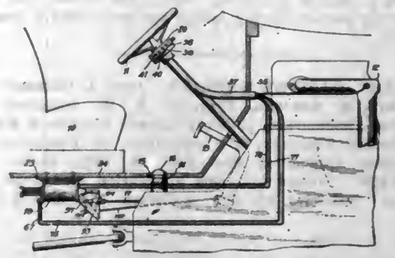
ings cooperating with a corresponding series of openings in another part, tubes leading from the openings from one part and tubes leading from the openings of the complementary part a recess in the coacting part toward which the air travels from the complementary part, means in the recess for removing dust from the air passing through the tube passages and located within the block.

1,665,906. EASER JOINT. ROBERT S. BOHANNAN, Birmingham, Ala., assignor to H. M. Barrett, Birmingham, Ala. Filed Sept. 26, 1925. Serial No. 58,927. 6 Claims. (Cl. 238—174.)



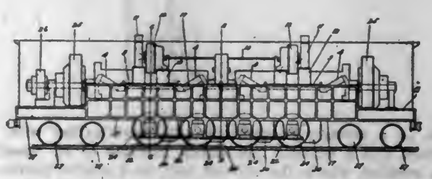
2. An easer rail appliance for a joint between a stationary and a movable track rail, comprising riser blocks adapted to be rigidly attached to the sides of the adjacent rail ends, beveled seated in said riser blocks adapted to support an easer bar alongside the unchanged tread of the adjacent rails, said easer bar having beveled tread ends and having at one end a hole and a bolt adapted to pass through said hole and anchor said bar and a riser block to the adjacent rail end.

1,665,907. UPHOLSTERY-FILLING DEVICE. CHRISTOPHER F. CODA, Detroit, Mich. Filed Mar. 10, 1927. Serial No. 174,139. 4 Claims. (Cl. 226—44.)



1. An upholstery filling device comprising a sheet of spring material bent to form a substantially tubular member having its edges spaced from one another throughout their length to form a longitudinal slot.

1,665,908. CAN AND CLOSURE. FRANK J. COSTELLO, Baltimore, Md., assignor to Federal Tin Company, Incorporated, Baltimore, Md., a Corporation of New York. Filed Mar. 30, 1923. Serial No. 628,819. 1 Claim. (Cl. 220—39.)

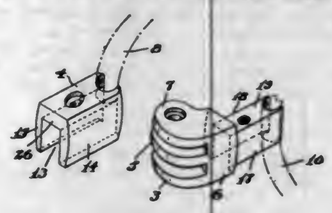


A can construction including a body and a flanged cover, the body and the cover flange having threads interengaging to lock the cover to the body when the cover is centered on the body, the flange and cover of enough greater diameter than the body to permit the engagement of the threads by a combined tilting and lateral or radial movement of the cover on the body, the cover having an internal annular rib near the periphery thereof, and the body an inturned flange for engagement by the rib to center the cover on the body when it is drawn into close engagement therewith, and to prevent release of the threads by radial movement of the cover with respect to the body.

1,665,909. GEAR SHIFT. ALVIN M. CRAIG, New Haven, Conn., assignor to Universal Gear Shift Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 24, 1923. Serial No. 634,397. 7 Claims. (Cl. 74—58.)

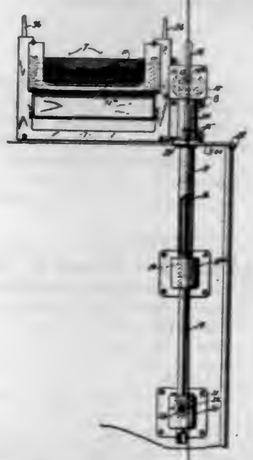
1. In a gear shifting apparatus, a plurality of cylinders, pistons for the cylinders, said pistons having projecting piston rods, a connection between the piston rods and gear shifting rods, a stud connected with the aforesaid rods, a rock shaft, a pawl or latch carried by the shaft and engaging the aforesaid stud, and means for rocking the shaft to release the pawls and the pistons connected therewith.

1,665,910. LOCOMOTIVE. GEORGE K. DAVOL, San Francisco, Calif.; Phil C. Katz administrator of George K. Davol, deceased. Filed Oct. 10, 1925. Serial No. 61,659. 26 Claims. (Cl. 105—35.)



1. In a locomotive, the combination of a structure mounted on wheels and axles, the said structure comprising side frames disposed longitudinally, and cross members joining the said side frames, an internal combustion engine comprising a revolving main shaft, the said shaft being mounted longitudinally or substantially parallel to the said side frames, engine cylinders disposed parallel to the said shaft and side frames, pistons reciprocating in the said cylinders, means transmitting the movement of the said pistons to the said shaft, and means for transmitting power from the said shaft to the said axles.

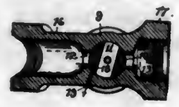
1,665,911. OPHTHALMIC MOUNTING. GEORGE H. DAY, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 18, 1927. Serial No. 176,492. 6 Claims. (Cl. 88—47.)



1. An ophthalmic mounting having, in combination, a split lens-holding rim having end pieces at the ends of

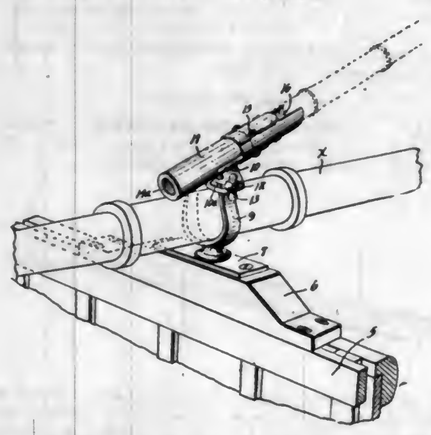
the rim, one of the end pieces having a recess within which the other end piece is received, the said other end piece

having a portion extending beyond the recess, and the extending portion having means for connecting a temple thereto.



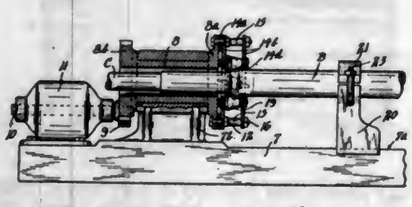
1,665,912. CABINET WRINGER. JOHN J. DOSSERT and EDWIN E. GREAVES, Syracuse, N. Y., assignors, by mesne assignments, to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Original application filed Feb. 28, 1921, Serial No. 448,459. Divided and this application filed June 30, 1921. Serial No. 481,485. 4 Claims. (Cl. 68—32.)

1. In a wringer construction, the combination with a cabinet and a wringer mechanism movable to an operating position above the cabinet and to a stored position within the cabinet, of a source of power, power-transmitting means operatively connecting the source of power to the wringer comprising a vertical shaft within the cabinet consisting of two telescoping members, a tubular member surrounding the upper telescoping member, a fixed bracket secured to the cabinet, means securing the wringer mechanism to the upper end of the tubular member and serving to support the wringer mechanism on the fixed bracket when the wringer mechanism is in its stored position in the cabinet, and means secured to the upper end of the tubular member for operatively engaging the upper edge of the cabinet when the wringer mechanism is in its operative position to prevent side sway thereof.



1,665,913. AIR-BRAKE-RELEASE VALVE. RAY O. DURST, Richmond, Ind. Filed June 17, 1926. Serial No. 116,617. 2 Claims. (Cl. 303—86.)

1. A valve including an angular body, an air line connected to one end of the body, a hose connected to the other end of the body, a tapered core rotatably mounted in the body, there being a slot formed through the core and adapted to register with ports located inside the body and on each side of the core with which said slot in the core is adapted to register with one of said ports directed toward the air line and the other port directed toward said hose, there being an elongated cavity formed in one side of the contact face of the core which cavity is located near but spaced from one of the open sides of said slot, there also being a vent aperture formed

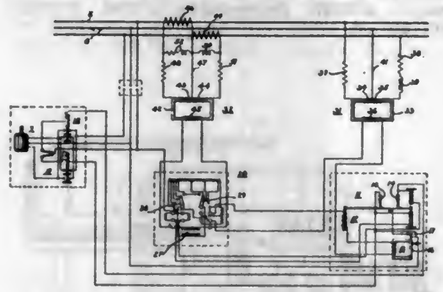


through the wall of the body where at one point in the rotation of the core said vent will be in communication with said cavity and at the same time said cavity will be in communication with said port which is in communication with said hose whereby pressure in the hose may be released through said vent without releasing the pressure in the air line.

1,665,914. FISH-POLE HOLDER AND OARLOCK. EARL ECK, Minneapolis, Minn. Filed Feb. 19, 1927. Serial No. 169,561. 6 Claims. (Cl. 9—26.)

1. A combined oar lock and fish pole holder comprising a pintle adapted to be seated in an oar lock socket, a crotch carried by said pintle adapted to receive an oar and a socket carried by an arm of said crotch adapted to detachably hold the handle of a fish pole or casting rod therein.

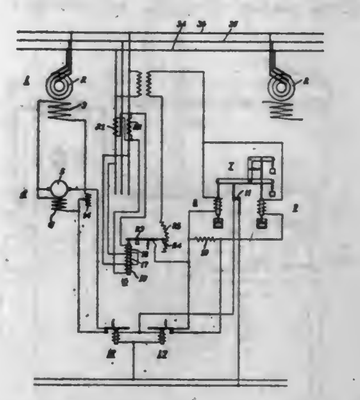
1,665,915. PIPE-SWAGING DEVICE. ALBERT C. EKMAN, Minneapolis, Minn. Filed Dec. 21, 1925. Serial No. 76,641. 2 Claims. (Cl. 80—13.)



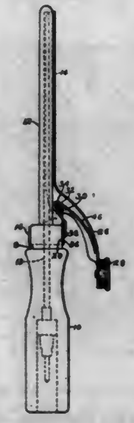
1. A machine for swaging one pipe on a smaller pipe having in combination, a frame, a member slidable on said frame having means receiving and clamping one of said pipes to hold the same against rotation, a rotating head on said frame having an opening therein, coaxial with said means, adapted to receive said pipes in telescoping relation, said head carrying a plurality of circumferentially spaced rollers tapered toward their ends, said rollers being freely revoluble in said head and having their axes inclined to the axis of said head with their front ends offset in a direction opposite to the direction of rotation of said head, and means for rotating said head whereby said pipe and said first mentioned member are automatically drawn into said head and said larger pipe swaged down onto said smaller pipe and connected thereto.

1,665,916. OVERHEAD WELDING. OTTO H. ESCHHOLZ, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 14, 1921. Serial No. 444,710. 4 Claims. (Cl. 113—112.)

1. A welded joint comprising a pair of plates overlapping one another to provide a downwardly facing lower edge and a plurality of reinforcing offset members in proximity to the said lower edge of the overlapping portions, said offset members being secured to said plates by metal deposited along the side edges thereof.



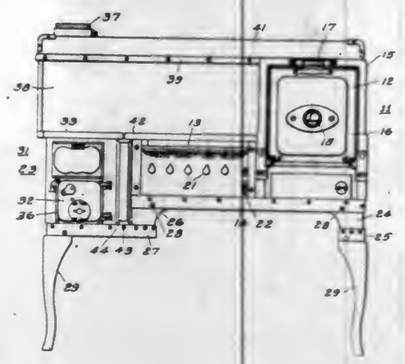
1,665,917. REGULATOR SYSTEM. ROBERT D. EVANS, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 12, 1921. Serial No. 460,781. 2 Claims. (Cl. 171—119.)



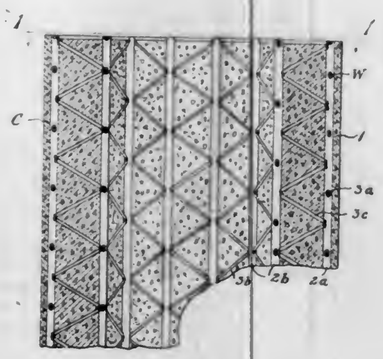
1. In a control system for an induction regulator, the combination with a control motor for said regulator, contact-making means for governing the operation of said motor, and means cooperating therewith for compensating for line-circuit conditions, of actuating means for said contact-making means and means for energizing said actuating means in accordance with one of a set of symmetrical components into which the unbalanced electrical quantities of said circuit may be resolved.

1,665,918. COMPENSATED VOLTAGE-REGULATOR SYSTEM. ROBERT D. EVANS and HOLLIS K. SELS, Pittsburgh, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 15, 1923. Serial No. 625,281. 4 Claims. (Cl. 171—229.)

1. In a regulator system, the combination with a power circuit, and a dynamo-electric machine, of a regulator therefor comprising a pair of electromagnets actuated in accordance with the voltage of said power circuit, a variable resistor means in circuit with said electromagnets, and means actuated in accordance with the load upon said power circuit to control said variable resistor means.



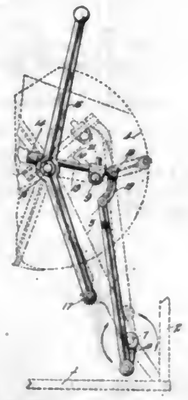
1,665,919. CURLING IRON. FRANK F. FORSHEE, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 8, 1926. Serial No. 120,458. 2 Claims. (Cl. 132—137.)



1. A curling iron comprising a handle, a heater tube secured thereto, a bracket having a pair of enveloping arms for snugly engaging a portion of said handle, said bracket being indented for securing it to said handle, said bracket having a pair of lugs provided with openings therein, a tong for engaging said heater tube, said tong having an integral channelled operating arm and a pair of integral lugs provided with openings therein, said tong lugs receiving the bracket lugs and engaging their outer portions, a rivet passing through the openings in said bracket lugs and the openings in the tong lugs for pivotally mounting said tong on said bracket, and a spring for normally forcing said tong into engagement with said heater tubes.

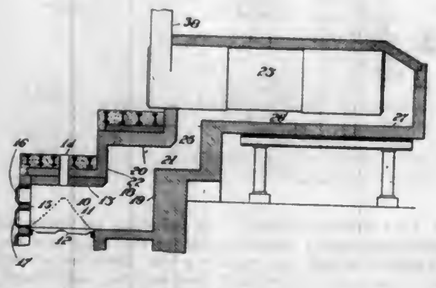
1,665,920. COMBINATION COAL AND ELECTRIC RANGE. FRANK F. FORSHEE, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 11, 1927. Serial No. 198,042. 3 Claims. (Cl. 126—36.)

1. In a combined coal-electric range, the combination with a base band, an electric oven and an electric stove located on and supported by said base band, of a bracket secured to the base band and extending therefrom, a fire-box base band secured to the bracket, and a fire-box located on and supported by the fire-box base band.



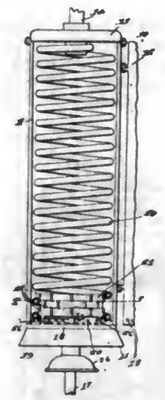
1,665,921. TUBULAR FRAME STRUCTURE. HERXTHAL F. FREASE, Canton, Ohio. Filed Mar. 29, 1926. Serial No. 98,193. 8 Claims. (Cl. 72—6.)

1. A tubular structure including circumferentially and longitudinally continuously arranged frame members determining an outer tubular surface, circumferentially and longitudinally continuously arranged frame members determining an inner tubular surface, and frame members connecting the sets of surface members.



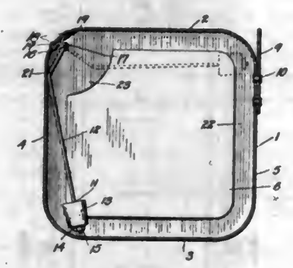
1,665,922. WASHING MACHINE. BENJAMIN E. GETZ, Morton, Ill., assignor, by mesne assignments, of one-half to Getz Power Washer Co., Morton, Ill., a Corporation of Illinois, and one-half to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 14, 1923. Serial No. 631,965. 5 Claims. (Cl. 74—14.)

1. In a machine of the character described, in combination, a tub mounted for oscillation, a sleeve like member connected to said tub, a rod having a slidable relation in said member, a lever having connection with one end of said rod for moving the latter alternately to



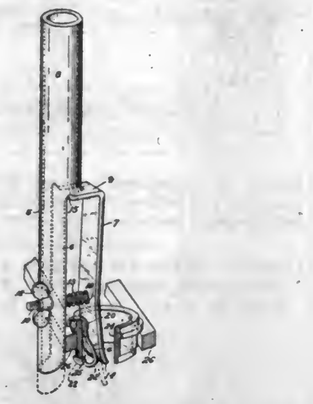
operative and inoperative positions, and during such movement to the latter position bringing the tub to its normal position, an operating mechanism, and operating connections between said rod and said mechanism.

1,665,923. STEAM-BOILER FURNACE. WILLIAM A. GILCHRIST, New York, N. Y. Filed Feb. 8, 1919. Serial No. 275,837. Renewed July 4, 1924. 7 Claims. (Cl. 110—7.)



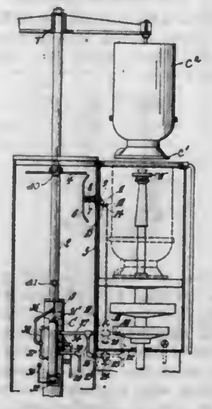
7. The method of burning solid fuel containing volatile constituents, which consists in delivering the fuel to be burned into a chamber, admitting air to said delivered fuel, driving off the volatile portions of said fuel by radiating and reflecting heat both downwardly and laterally against said fuel, retarding the flow of said driven off volatile portions in a space directly rearwardly of and in unobstructed communication with the whole height of said chamber, radiating and reflecting heat both vertically and laterally into said retarded volatile portions to effect the complete combustion thereof, and delivering the resultant products of combustion against the surface to be heated

1,665,924. HEATER. JOHN HICKS, Somerville, N. J. Filed Nov. 26, 1926. Serial No. 150,954. 3 Claims. (Cl. 158—99.)



1. A combustion chamber for gas water heaters comprising a plurality of separate identical ceramic sections mounted one upon the other, each section including a ring member, a plurality of inwardly extending baffle elements terminating short of the axial center of said ring member, the baffle elements of one section being staggered with respect to the baffle elements of the next adjacent sections with the free ends of the baffle elements of one section bridging the space between the baffle elements of the next adjacent sections.

1,665,925. LIQUID-DISPENSING DEVICE. NEWTON S. HILLYARD, St. Joseph, Mo. Filed Jan. 21, 1927. Serial No. 162,499. 1 Claim. (Cl. 73—82.)

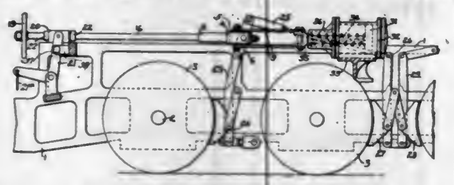


In a device of the class described, a box, a float gage comprising a bar provided with a float on one end and having its other end bent to constitute a journal, a bracket interiorly mounted on a wall of the box, said journal being pivotally mounted on the bracket, the bent end of said journal protruding through an aperture in a wall of the box, an index arrow secured to said protruding end of the journal, said bar having a bend adjacent the said journal end for engagement with a wall of the box.

1,665,926. WRENCH FOR VERTICAL TWISTER TRAVELERS. JOHN E. HULL, Providence, R. I. Filed Aug. 3, 1925. Serial No. 47,710. 12 Claims. (Cl. 29—84.)

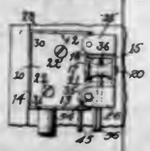
1. A traveler wrench for applying vertical twister travelers to vertical twister rings comprising an elongated tool having spaced yoke arms at one end, one of which is rigid and the other flexible.

1,665,927. CAN-WASHING MACHINE. IRA H. KENDALL, Potsdam, N. Y., assignor to The Kendall Patents, Inc., Potsdam, N. Y., a Corporation of New York. Filed Dec. 29, 1923. Serial No. 683,309. 5 Claims. (Cl. 141—7.)



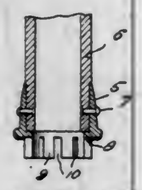
1. A washing machine comprising washing means, a movable supporting member adapted to support the article to be washed, power operated mechanism adapted to cause a relative movement between the said article and the said washing means along a definite path, and control means automatically operated by said operated mechanism adapted to cause the velocity of the said relative movement to vary along the said path.

1,665,928. AIR-BRAKE MECHANISM. CHARLES N. F. KNAPP, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 24, 1923. Serial No. 670,527. 5 Claims. (Cl. 188—107.)



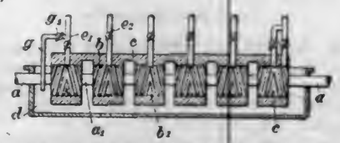
1. A brake mechanism comprising a plurality of shoes, a brake beam, links connecting said shoes and beam, a trunnion mounted centrally of said beam, a sleeve pro-

vided with an internal screw thread being slidably mounted in said trunnion and beam, a screw shaft disposed in said sleeve and engaging the internal thread



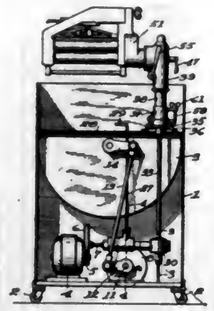
thereof, a fluid-pressure-actuated device linked to said trunnion, and means for independently actuating said fluid pressure device and said screw shaft.

1,665,929. SHADE-SUPPORTING BRACKET. JOHN L. MONTGOMERY, Stoneham, Mass. Filed Mar. 17, 1926. Serial No. 95,438. 3 Claims. (Cl. 156—27.)



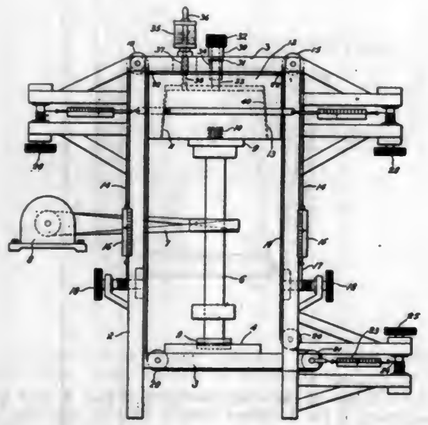
3. A shade-supporting bracket comprising a back plate provided with a side flange having a lug extended therefrom substantially parallel with said back plate, a cord-engaging member supported by said lug and back plate, and a flange extended from said back plate and provided with an extension cooperating with the said lug to close the space between the cord-engaging member and the last mentioned flange.

1,665,930. METALLIC BOBBIN BASE. CECIL CARTER NIXON and JOHN MARIN MCLAMORE, Talladega, Ala. Filed Aug. 25, 1926. Serial No. 131,533. 1 Claim. (Cl. 242—121.)



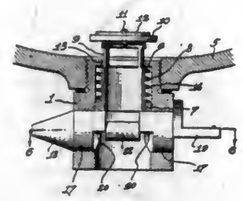
In combination, a bobbin, a fitting associated with the bobbin for forming a base, said fitting including a sleeve extending over one end of the bobbin and merging into an internal annular flange forming a shoulder abutted by said end of the bobbin, an annular collar merging outwardly from the flange concentrically with the sleeve and formed with a plurality of slots for engaging the bobbin gear, and an annular bead formed externally on the sleeve adjacent said collar.

1,665,931. DISTRIBUTION OF LIQUIDS. JACOB EMIL NOEGGERATH, The Hague, Netherlands. Filed Aug. 12, 1921, Serial No. 491,853, and in Germany Nov. 14, 1916. 6 Claims. (Cl. 103—84.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



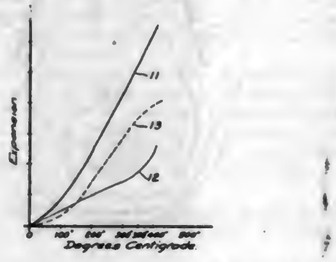
1. A system of the kind described comprising in combination, a stationary body, a body in contact with and capable of revolving relatively to said stationary body, a plurality of juxtaposed groups of viscosity threads in one of the contacting surfaces and several conduits adapted for cooperation with said groups of threads.

1,665,932. INCLOSABLE OR FOLDING WRINGER. WILLIAM G. PETERS, Peoria, Ill., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 30, 1921. Serial No. 481,634. 8 Claims. (Cl. 68—32.)



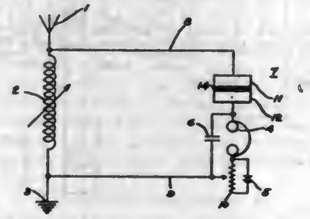
1. In a washing machine the combination of a driving gear, a hinged tubular support for a wringer, a wringer carried by said support and adjustable around the same, a wringer driving mechanism within said support, and a clutch between the wringer driving mechanism and the driving gear whereby when the hinged tubular support is in operating position the clutch will be engaged.

1,665,933. GLISSOMETER. CLARENCE J. RODMAN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 21, 1923. Serial No. 682,073. 6 Claims. (Cl. 265—11.)



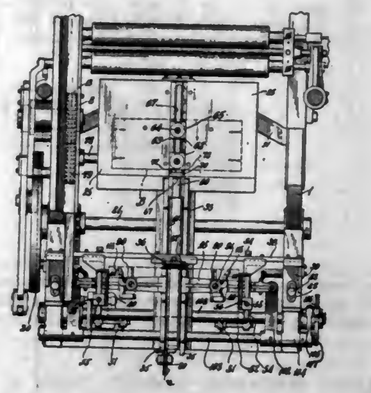
1. A glissometer comprising a plurality of relatively movable interfitting members, means for applying lubricant between the adjacent surfaces of said members, means coacting with one of said members for subjecting said lubricant to pressure, and means for indicating the unctuousness and thickness of the lubricant film.

1,665,934. VALVE. ROBERT E. SCHIEBER, Detroit, Mich. Filed June 9, 1927. Serial No. 197,559. 3 Claims. (Cl. 251—132.)



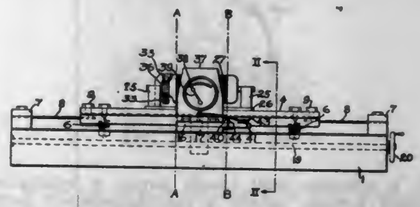
1. A valve comprising a casing, a ported member slidable in the casing and adapted for projection beyond one end thereof, a head carried by said member and adapted to close said end, said casing having a plurality of openings, and a cam adapted for reception in any of said openings and to engage said member.

1,665,935. BIMETALLIC ELEMENT. HOWARD SCOTT, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 27, 1926. Serial No. 157,320. 5 Claims. (Cl. 297—15.)



1. A thermostatic element comprising two cooperating elements having different temperature coefficients of expansion, one of said elements being a ferrous alloy containing substantially 42% nickel, and the other element being a ferrous alloy containing not less than 1% manganese, and nickel.

1,665,936. RADIODETECTOR. JOSEPH SLEPIAN, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 15, 1923. Serial No. 668,554. 2 Claims. (Cl. 250—31.)

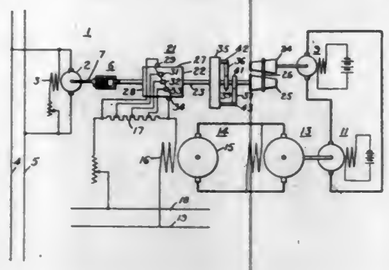


1. A radio detector comprising a body having a non-rectilinear conductivity, said body comprising a mixture of carborundum, amorphous carbon and a binder.

1,665,937. CARD-FEED MECHANISM AND METHOD. HARRY BRIDGMAN SMITH, Brooklyn, N. Y., assignor, by mesne assignments, to Hoague-Sprague Corporation, Lynn, Mass., a Corporation of Massachusetts. Filed July 24, 1923. Serial No. 653,505. 14 Claims. (Cl. 271—44.)

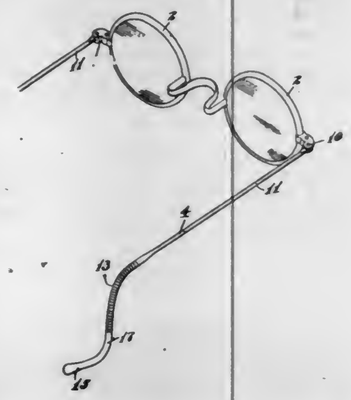
1. A method of separating and feeding individual curved sheet blanks having wing formations from a stack of such blanks, comprising bending opposite winged portions of a single blank at the end of the stack away from the next adjacent blank sufficiently to rectify the curvature and to clear the wing formations of the end blank from said next blank while retaining a central portion of said end blank substantially in contact with said next blank, and then moving said end blank away from the stack substantially edgewise while maintaining said winged portions in said bent and separated positions.

1,665,938. BALANCING MACHINE. CARL RICHARD SÖDERBERG, Edgewood, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 11, 1922. Serial No. 593,732. 15 Claims. (Cl. 73—56.)



1. In a balancing machine, the combination with a supporting frame, of a vertically oscillatable bed yieldingly mounted thereon, a movable fulcrum interposed between said bed and said supporting frame, said bed and springs being arranged to possess a constant period of vibration for all positions of the fulcrum, means for rotatably mounting a body to be tested on said bed and means on said bed for actuating said body.

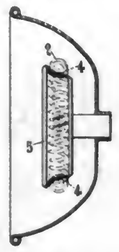
1,665,939. REGULATOR SYSTEM. STEPHEN A. STAEGE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 15, 1926. Serial No. 102,168. 7 Claims. (Cl. 171—229.)



1. In a regulator system, a resistor, means for varying the effective value of said resistor comprising a rotary contactor drum, means for rotatively actuating said

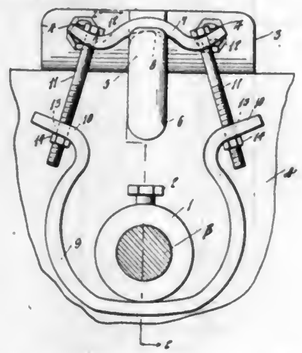
drum in accordance with the regulated quantity, means for actuating said drum longitudinally in accordance

with variations of the regulated quantity from the desired value, and inertia means for actuating said drum temporarily to prevent hunting action in the system.



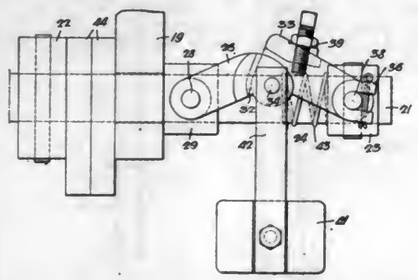
1,665,940. SPECTACLE TEMPLE. JAMES A. SWEENEY, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 18, 1927. Serial No. 176,507. 6 Claims. (Cl. 88—52.)

1. A spectacle skull temple having a substantially straight forward portion, a bent intermediate portion and a rear tip portion bent laterally to engage the wearer's skull, the forward part of the forward portion, the rear part of the intermediate portion and the rear tip portion being comparatively inflexible, and the rear end of the forward portion and the forward part of the intermediate portion being comparatively resilient, whereby the rear tip portion will engage the skull resiliently but inflexibly with a resilient binding action.



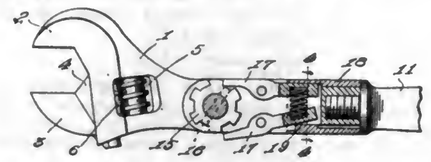
1,665,941. ELECTRIC HEATER. ANDRÉ EMMANUEL MARIE VAN DER MEERSCH, Chelsea, London, England, assignor to Thermo Path Company Limited, London, England. Filed Dec. 8, 1926, Serial No. 153,377, and in Great Britain Dec. 11, 1925. 2 Claims. (Cl. 219—34.)

1. An electric heating element comprising a wire initially coiled into spiral form with such spiral length of wire further coiled into spiral form of greater diameter, and a cement base in which the coiled wire is partly



embedded to freely expose the greater portion of the wire including the cores of the second spiral formation to the air.

1,665,942. ROCKER-SHAFT BEARING. FRANK H. WALLACE and WILLIAM H. COMPTON, Newry, S. C. Filed Apr. 28, 1927. Serial No. 187,275. 2 Claims. (Cl. 308—21.)

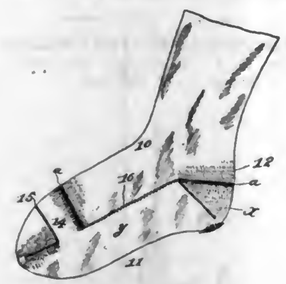


1. A shaft bearing, comprising a yoke, means to support the yoke, a sling adapted to engage under a shaft, and means adjustable in length connecting the yoke and sling.

1,665,943. STOKER MECHANISM. ANTHONY E. WEINGARTNER, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 18, 1924. Serial No. 700,036. 14 Claims. (Cl. 110—44.)

1. A pair of reciprocatory members having different strokes, a toggle-joint having the ends thereof operatively associated with said members, respectively, and a weight carried by the toggle-joint tending to maintain the same in its extended position.

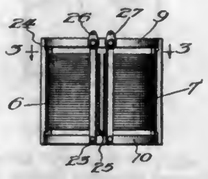
1,665,944. WRENCH. ALBERT ALBERTINI and ANDREW ALBERTINI, Staunton, Ill. Filed July 14, 1926. Serial No. 122,422. 1 Claim. (Cl. 81—62.)



A wrench of the character described comprising a body portion having a stationary jaw, a slidable jaw movable on the said body portion, said body having a socket extension, a shouldered post including a threaded portion engaged in said socket, a locking pin for holding the post in the socket, a handle having a bifurcated end through which said post is passed, a ratchet wheel arranged on the post between the arms of said bifurcated portion, of the handle, spring influenced pawls pivoted in said bifurcated portion and normally engaging the said ratchet wheel, a sleeve rotatably mounted on the handle and receiving the adjacent ends of said pivoted pawls, and cam-like surfaces formed on the sleeve, and arranged to cooperate with said pawls for operating the latter against the influence of the spring.

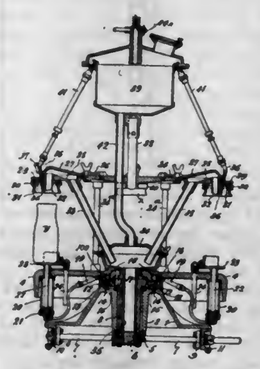
1,665,945. DISPERSING POWDER AND PROCESS OF MAKING. EDWARD R. ALLEN and WILFORD E. KAUFMANN, East Orange, N. J., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed July 3, 1925. Serial No. 41,432. 16 Claims. (Cl. 134—58.)

15. A dry colloid like powder obtained by agitating an aqueous mixture of an inorganic pigment not readily miscible with water and a foam producing dispersing agent until a mass of foam is produced, drying said mass and grinding, said powder being characterized by the property of dispersing readily in water to form a smooth pulp.



1,665,946. STOCKING. OTTO F. BOEHME, Dover, N. J. Filed Jan. 12, 1924. Serial No. 685,873. 2 Claims. (Cl. 66—183.)

2. A stocking comprising a leg part of flat piece goods cut to form and sewn up the back, a knitted foot part, the foot part being joined to the leg part by means of stitching intermediate the heel and toe portions and by means of slackened courses of knitted thread at the heel and toe portions thus yieldingly interknitting the leg part to the heel and toe portions, the remainder of the heel, sole, and toe being formed with unslackened courses of knitted thread.

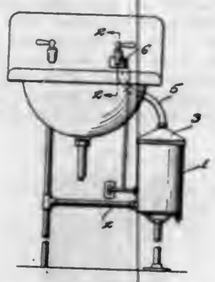


1,665,947. INDUCTANCE COIL. THOMAS H. BRENNAN, Chicago, Ill. Filed Apr. 25, 1925. Serial No. 25,835. 3 Claims. (Cl. 175—359.)

1. As a new article of manufacture, an inductance unit for the purpose specified comprising in combination a pair of D shaped helical coils, each comprising a single layer of turns progressing axially in a given direction, the two coils being placed with their flat sides in relatively close proximity to each other, the turns of each coil being completely self-contained within said coil and progressing from end to end thereof, the turns of the two coils progressing in opposite directions around the coils when measured from one end of the device to the other end thereof, a cross connection joining together the turns at one end of the device into a single continuous circuit,

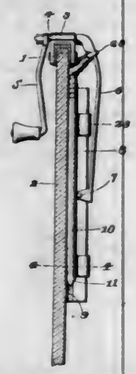
and means for supporting the two coils comprising a plurality of pairs of relatively thin and narrow bars extending axially through the coils and embracing the convolutions of the coils on which they are placed, end rings in alignment with the ends of the pairs of D coils and located between the end portions of the pairs of bars aforesaid, together with means for clamping the bars together in pairs and securing them to the end rings, substantially as described.

1,665,948. APPARATUS FOR FILLING BOTTLES, TINS, OR OTHER CONTAINERS. HERBERT FREDERICK BROADHURST, London, England. Filed Aug. 23, 1927, Serial No. 214,894, and in Great Britain Mar. 12, 1926. 6 Claims. (Cl. 226—98.)



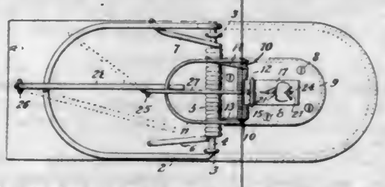
1. Means for filling receptacles with liquid comprising means for closing the receptacle, a liquid supply means connected to said closing means, means for continuously admitting a small quantity of air to said closing means, a closed overflow receptacle arranged at a level above that of the liquid supply, means whereby said overflow receptacle may be evacuated, a connection between said overflow receptacle and the closing means, an unobstructed connection between said overflow and said supply whereby an unobstructed and continuous flow of liquid from said overflow receptacle to said supply is secured.

1,665,949. WATER HEATER. JAMES G. CHAMBERS and BASIL C. SALAMIS, Montreal, Quebec, Canada. Filed Aug. 27, 1926. Serial No. 132,024. 1 Claim. (Cl. 219—39.)



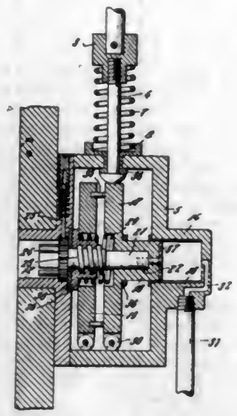
A device of the class described comprising a tank, a conical cap threaded to the tank, a discharge nipple formed integral with the upper end of the tank and passing through the same to a point well within the tank so

as to form an air space in the conical space at the top of the tank, means for connecting the bottom of the tank



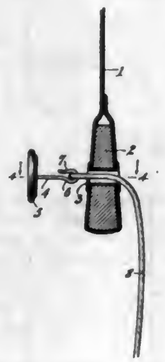
to a source of supply and control means in the outer end of the discharge pipe and means for heating the water in the tank.

1,665,950. ELECTRICAL HEATING ATTACHMENT. EDWARD C. DWYER, Clymer, and WILLIAM O. DWYER, Berlin, Pa. Filed Aug. 30, 1927. Serial No. 216,424. 2 Claims. (Cl. 15—253.)



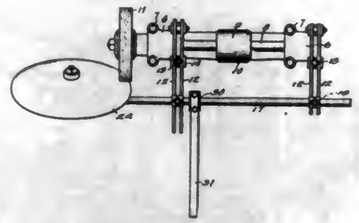
1. In an electrical heating attachment for windshield cleaners of that type including an oscillatory carrier provided with a wiper member extended therefrom for the outer face of the windshield glass, the combination of a casing opened at its top and closed at its bottom and abutting said member and to contact with said glass, coupling means extended from the carrier whereby the former will be bodily carried with the latter during the oscillation of the carrier, an electrical heating unit extending into said casing through the upper end thereof and providing means for heating the casing, said member and glass, and resilient means for detachably clamping said unit to said casing, said means surrounding the upper end of the casing and a portion of said unit exteriorly of and in proximity to the open end of the casing.

1,665,951. COMBINATION MOUSE AND RAT TRAP. FRANK J. EBEL, New Orleans, La. Filed June 30, 1925. Serial No. 40,590. 3 Claims. (Cl. 43—81.)



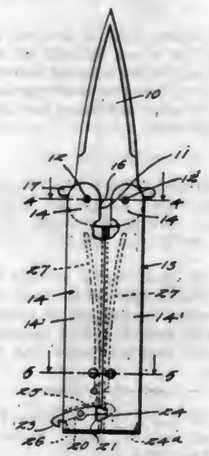
1. A trap including a base, a plurality of spring controlled members connected to the base for swinging movement, means engageable with the swinging members for holding the springs under tension, a trip for releasing said holding means, said trip having upwardly extending portions formed thereon to receive the bait, and means passing through said upwardly extending members and the bait for securing the bait to the trip.

1,665,952. AUTOMATIC LOCK. GEORGE FEENEY and THOMAS O'CONNOR, Columbus, Ohio, assignors of one-tenth to Timothy O'Brien, Columbus, Ohio. Filed Aug. 26, 1927. Serial No. 215,732. 7 Claims. (Cl. 105—395.)



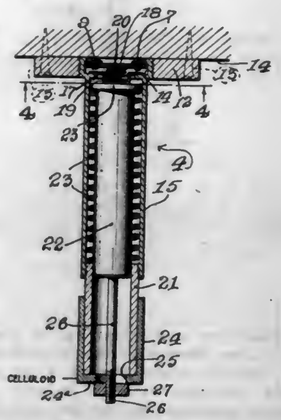
1. A locking device of the class described comprising a casing, a latching rod extending into the same, a pair of members movably arranged in the casing and when either one of which is arranged under the rod, will prevent movement of the same, means for normally holding the members apart so that the rod may be lowered between them, key operated means for moving one of the members and compressed air operated means for moving the second member against the first member.

1,665,953. SHADE-CORD HOLDER. WILLIAM J. FOSTER, Jersey City, N. J. Filed June 21, 1927. Serial No. 200,398. 6 Claims. (Cl. 156—40.)



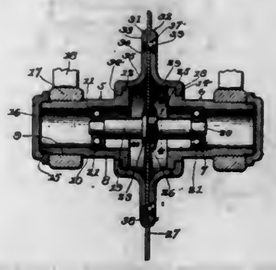
1. A shade cord holder, comprising a cord-carrying hook adapted to be positioned in an opening in a shade and its stick and said hook when in the opening preventing the cord from being disengaged therefrom and having an enlargement at its end to limit the movement of the hook in one direction in said opening.

1,665,954. HARROW-DISK SHARPENER. TOM FOX, Spalding, Nebr. Filed Aug. 8, 1923. Serial No. 656,326. 1 Claim. (Cl. 51—104.)



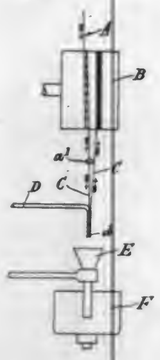
A harrow disk support for grinding machines, comprising in combination, a pair of spaced arms, means for rigidly attaching said arms to the frame of the grinding machine and in spaced relation to each other, an eye-bolt bearing supported from each arm, means for adjustably connecting each bearing to its respective arm, a shaft mounted in said bearings and parallel to the grinder shaft and capable of rocking and longitudinal movement therein, a bearing carried by one end of said shaft, stub shaft carried by said last mentioned bearing for supporting a harrow disk therein, and means carried by said first-mentioned shaft and rigidly secured thereto for rocking and sliding the shaft in its bearings to move the harrow disk relative to the grinding wheel of the grinding machine.

1,665,955. KNIFE STRUCTURE. ANDO Z. GATEWOOD, Temple, Okla. Filed Apr. 28, 1927. Serial No. 187,347. 1 Claim. (Cl. 30—10.)



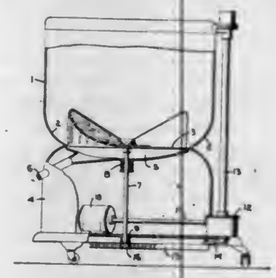
In a knife, a blade having a tang, a pair of transversely spaced pivots carried by the tang, a channeled handle section mounted on each pivot and swingable thereabout from a position where the channel thereof houses a portion of the blade to a position where it aligns with the tang, the connection between the arms of the channel in the last named position of the sections engaging the wall of the tang, means for locking the free ends of said handle sections to one another in either of said positions, comprising a lever pivoted in the channel of one of the sections adjacent the free end thereof and having its ends extended to opposite sides of the section, said ends being formed at opposite faces of the lever as latch jaws, the other of the sections having a bar extended transversely of its channel with which one of the latch jaws engages when the sections are in the first named position and having an opening formed in the connection between the arms of the channel against one wall of which the other of the latch jaws engages when the handle sections are in the last named position.

1,665,956. FIRE ALARM. SALVATORE GIANGRASSO, Portland, Me. Filed Aug. 28, 1926. Serial No. 132,284. 3 Claims. (Cl. 200—142.)



1. A thermally controlled circuit closer comprising a switch and an inflammable device for holding the switch open and adapted when ignited to permit closing of the switch, said switch including an insulation strip, a pair of contacts carried thereby and a terminal push button for the contacts, the inflammable device comprising a tubular member, a reciprocating plunger therein, an annular shoulder on the end of the plunger adjacent the push button, a pipe section threaded into the outer end of the tubular member, a coil spring surrounding the plunger between the shoulder and pipe section, a cap-shaped inflammable element on the outer end of the pipe section, and a pin and nut connection between the plunger and inflammable element for normally holding the plunger inoperative with respect to the push button.

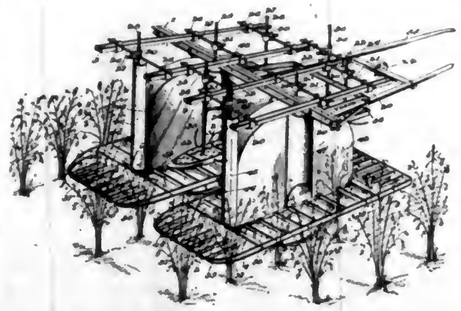
1,665,957. COLTER-WHEEL STRUCTURE. FRANK J. GLISKY, Pontiac, Mich. Filed Sept. 8, 1927. Serial No. 218,305. 4 Claims. (Cl. 308—181.)



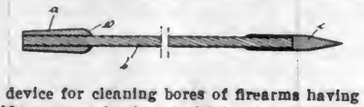
1. A colter wheel structure comprising a hub element formed of a pair of oppositely extending, opposed, spaced sections each provided with outer peripheral bearing surfaces at its inner end, a wheel member positioned between said sections, bearing devices arranged within said sections, a bearing shaft positioned within the sections and connected to said devices and to said wheel member, and a pair of oppositely disposed combined coupling, bearing and closure members connected to said wheel member exteriorly of said sections and revolubly mounted on said bearing surfaces.

1,665,958. PRODUCTION OF ARTIFICIAL SILK. WALTER HAMIS GLOVER, Leamington, and CHARLES FRED TOPHAM, Coventry, England, assignors to Courtaulds Limited, London, England. Filed Oct. 29, 1926, Serial No. 144,994, and in Great Britain Jan. 7, 1926. 5 Claims. (Cl. 18—54.)

1. The production of artificial silk by passing a solution of a cellulose ester of an organic acid, or a cellulose ether in a volatile solvent through a jet or drawplate into a space containing warm air or other gas, whereby the solvent is volatilized leaving the cellulose compound in the form of filaments, then leading the filaments in association from the warm space and collecting them in a rapidly rotating spinning box.



1,665,959. WASHING MACHINE. GEORGE C. GRAHAM, Watertown, and ROBERT S. ROSE, Boston, Mass. Filed Dec. 12, 1927. Serial No. 239,320. 21 Claims. (Cl. 259—101.)

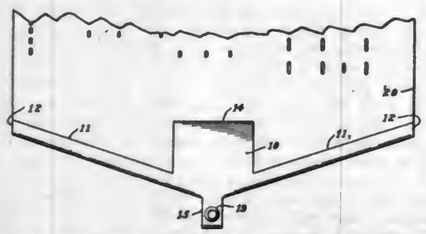


1. A washing machine comprising a container adapted to contain the articles to be washed and the washing fluid, an agitating blade projecting inward relatively to a wall of the container and having opposite agitating side surfaces and means to oscillate the agitating blade sidewise about an upwardly extending axis, one of said side surfaces being disposed at a greater angle relatively to the container wall and being longer in the direction of oscillation than the other side surface whereby the articles slide over the side disposed at the greater angle when the said side is advancing and are caught and impelled by the opposite side upon the reverse movement.

1,665,960. BOLL-WEEVIL DESTROYER. CARL ARENT HEILMANN, Skjelskor, Denmark. Filed Sept. 15, 1926. Serial No. 135,679. 8 Claims. (Cl. 43—133.)

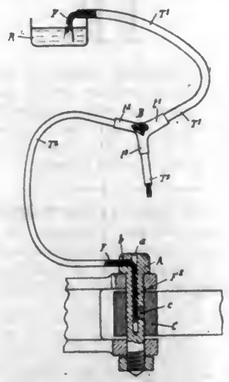
1. An insect destroyer comprising a wheeled supporting framework which is movable along rows of plants, an agitator for engaging the plant branches to dislodge insects, and pans so constructed and placed upon the framework that the front part of the pans will come beneath the branches in advance of the agitator, wheels and framework, the pans having openings centrally thereof receiving the wheels supporting the framework.

1,665,961. DEVICE FOR CLEANING FIREARMS. DUNCAN C. HOOKER, Farmington, Conn. Filed Oct. 15, 1926. Serial No. 141,759. 3 Claims. (Cl. 42—91.)



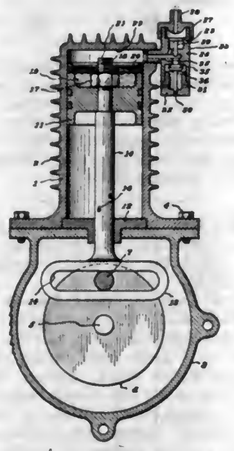
3. A device for cleaning bores of firearms having a flexible cable composed of a multiplicity of thin wires, a plug on one end of said cable adapted to receive a cleaning patch, and a pointed needle receiving and secured to the other end of said cable and being but slightly greater in diameter than the cable.

1,665,962. STORAGE-BATTERY PLATE AND METHOD OF PRODUCING SAME. CHARLES WILLIAM JENNER, New Westminster, British Columbia, Canada. Filed June 2, 1927. Serial No. 196,142. 2 Claims. (Cl. 136—26.)



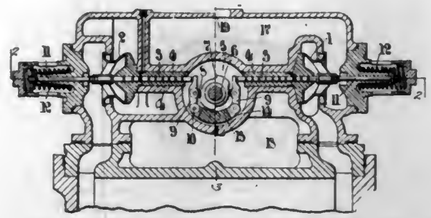
1. The method of producing a storage battery plate which consists of taking electrolytic lead, reducing it to a state of fine division by friction, of combining the resultant particles with oxygen and of mixing the oxidized material with dilute sulphuric acid and moulding the mass into a plate.

1,665,963. MUSIC-ROLL TAB. WILLIAM F. KOCH, Camden, N. J. Filed Jan. 27, 1923. Serial No. 615,354. 1 Claim. (Cl. 84—162.)



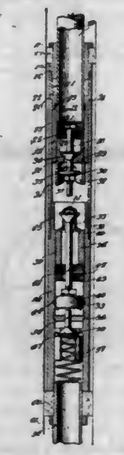
As an article of manufacture, a one piece record sheet binder, comprising a body of substantial size and having arms of comparatively reduced width reaching laterally and divergently upward from opposite ends of the body and folded throughout their lengths transversely upon themselves, said body and the arms having adhesive means on their inner sides to secure them to the end portion of a record sheet, the folded parts of the arms having their adjacent end edges parallel and at least the width of the tab apart, said body having a tongue reaching therefrom and between the arms and being folded at a point transversely of the tongue, whereby the front part may extend up between the two adjacent parallel end edges and lie against and be secured to the surface of the record sheet in the same plane as the corresponding folded portions of the arms.

1,665,964. LUBRICATING SYSTEM. MARCEL KOEHLER, Paris, France. Filed Dec. 1, 1925, Serial No. 72,504, and in France Oct. 7, 1925. 3 Claims. (Cl. 184—7.)



1. A system of lubrication for the operative parts of apparatus, comprising an elevated tank for liquid lubricant, flexible elements forming capillary ducts between the tank and the parts to be lubricated, and a flexible coating upon said elements whereby fluid-tight conditions are obtained.

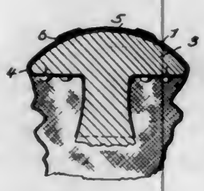
1,665,965. AIR PUMP. ELWIN O. KOENIG and GEORGE W. BRAUTIGAM, Philadelphia, Pa. Filed Dec. 12, 1923. Serial No. 680,199. 1 Claim. (Cl. 74—108.)



In a device as set forth, a reciprocatory piston provided with a hollowed-out cup portion in its upper end with a hard lubricant contained in said cup portion, a piston rod having a reduced threaded end engaging through said piston, a nut threaded on the reduced end, a semi-flexible lubricant absorbing disc cup engaged with the peripheral edge of the piston and with the nut constituting a closure for the cup portion to permit gradual feeding of the lubricant from the cup, a disc washer within the disc cup to hold the lubricant absorbing disc cup against the nut and in contact with the edge of the piston, and a cotter pin to retain the disc washer in position.

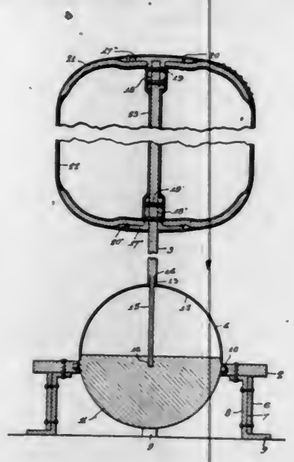
1,665,966. LOCOMOTIVE-VALVE GEAR. JOHANN KUPKA, Vienna, Austria. Filed June 18, 1925, Serial No. 38,063, and in Great Britain Feb. 24, 1925. 10 Claims. (Cl. 121—127.)

1. Valve actuating mechanism for steam locomotives comprising a spindle carrying the valve, a chamber separate from the inlet and exhaust steam spaces of the steam chest, end plates for said cam chamber, a cam and a pivotally supported lever arranged in said chamber, said lever being interposed between the cam and the end of the spindle, a bar supported by said end plates, and means to pivot the lever on said bar.



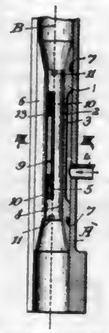
1,665,967. SAND-TESTER PUMP. GEORGE F. LE BUS, Electra, Tex. Filed May 12, 1927. Serial No. 190,858. 8 Claims. (Cl. 103—225.)

1. A sand tester pump comprising a body member, a plunger adapted for sliding movement in the body member, a stem connected with the plunger, a sleeve having a threaded connection with the plunger and adapted to be released from the plunger when the said plunger is



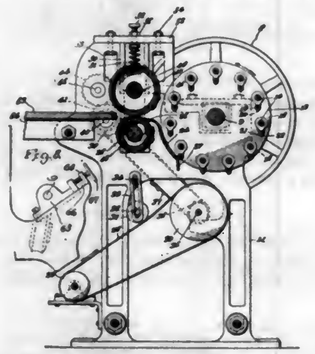
rotated in one direction, said plunger being provided with a seat, a valve slidably mounted in the plunger and adapted to normally engage the seat, a spring pressed back pressure valve slidably mounted in the body member, a seat in the body member adapted to be engaged by the back pressure valve, means movable in one direction for forcing the back pressure valve from its seat, a third valve located between the plunger valve and the back pressure valve and adapted to be opened when the last mentioned means is moved in the opposite direction.

1,665,968. METHOD OF MENDING FABRIC ARTICLES. HANS LIEDTKE, Hamburg, Germany. Filed May 2, 1927, Serial No. 188,410, and in Germany June 3, 1926. 1 Claim. (Cl. 2—243.)



A method of mending holes or openings in hosiery or like fabrics, consisting in applying the cemented side of a patch of like material to the reverse side of the article by means of a heated pressure element, and utilizing an absorbent material beneath the patch and garment to absorb the cement driven from the patch through the hole to be mended by the heated pressure element.

1,665,969. PUNCHING BAG. DENIS MCNAMARA, New York, N. Y. Filed Sept. 16, 1926. Serial No. 135,894. 6 Claims. (Cl. 272—76.)

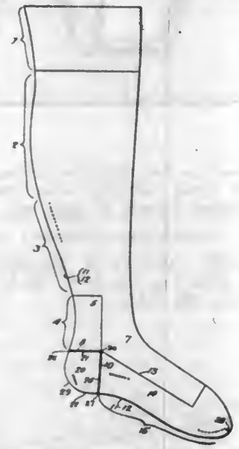


2. A punching bag including a pneumatic bag structure, a rod for supporting the bag structure, a ball connected to the lower end of said rod, said ball comprising a solid section forming substantially half the ball and a hollow section forming the other half of the ball, a rod extending through the hollow section into the solid section, and a base engaging the ball near the equator for rotatably supporting said ball.

1,665,970. DEVICE FOR SINGEING THREADS. ANTON METTLER, Reichenburg, Switzerland. Filed Mar. 12, 1926, Serial No. 94,265, and in Switzerland Apr. 9, 1925. 16 Claims. (Cl. 28—63.)

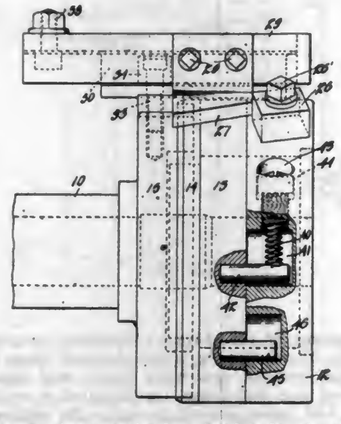
1. In a device for singeing threads by means of a combustible gas, a tubular member having part of its wall thinned to form a glowing wall, longitudinal slots being arranged diametrically opposite each other in said thin part of the wall to permit the combustible gas to pass into the interior of the tubular member.

1,665,971. DECORTICATING MACHINE. FELICIEN MICHOTTE, Paris, France, assignor, by mesne assignments, to Ramie Corporation of America, Inc., New Orleans, La., a Corporation of Louisiana. Filed Apr. 26, 1927. Serial No. 186,707. 4 Claims. (Cl. 19—26.)



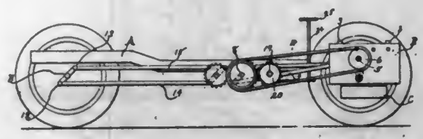
1. A decorticating machine comprising feed means, a breaker and scraping means comprising a backing plate, a cylinder mounted for rotation adjoining said backing plate, rods forming part of said cylinder, and scraper bars having offset eyes mounted pivotally on said rods, said bars having the longitudinal free edges thereof presenting a pointed scraping blade.

1,665,972. PROCESS OF MANUFACTURING FULL-FASHIONED HOSIERY. ERNST OSCAR NEBEL, Philadelphia, Pa. Filed Mar. 15, 1927. Serial No. 175,546. 5 Claims. (Cl. 66—184.)



4. A process of producing full-fashioned hosiery, comprising the formation of a flat stocking blank throughout its entire length on a single flat knitting machine and the employment of a single body thread throughout the formation of the entire blank, wherein the said body thread is first fed to all the needle wales used in the formation of the blank from selvage to selvage thereof for a given number of courses, after which a reinforcing thread is fed to a given number of needle wales located adjacent each selvage edge of the blank together with the said body thread for a given number of courses to form a heel reinforced area in each side of the blank,

for the next course of stitches to be formed the body thread is fed from one selvage edge of the blank to the needle wale immediately adjacent the inner edge of the reinforced area at the opposite side of the blank the reinforcing thread operating in this reinforced area alone forming the corresponding course of stitches therein and being separated from the stitches formed by the body thread, the body thread is then fed in a reverse direction to the needle wale adjacent the inner edge of the reinforced area at the first mentioned side of the blank and the reinforcing thread in this area alone forming the



corresponding course of stitches therein being separated from the stitches formed by the body thread, the body thread is then fed in an opposite direction to the oppositely disposed selvage edge of the blank, then back and forth across the entire width of the blank for the remainder of the courses necessary to complete the blank, the said manipulation of the threads forming a cutting line in each reinforced area composed solely of the reinforcing threads operating in the respective reinforced areas and forming a selvage edged hole at the inner end of each cutting line whereby the cutting of the body thread at the inner end of each cutting line is obviated.

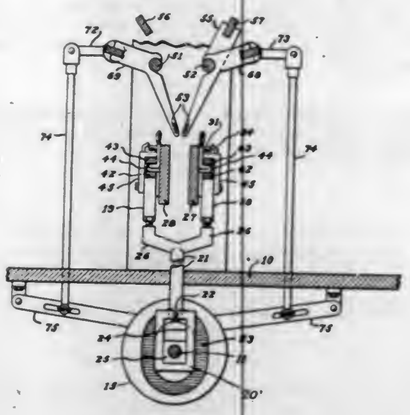
1,665,973. DIE HEAD. SAMUEL F. NEWMAN, Waynesboro, Pa., assignor to Landis Machine Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed July 11, 1925. Serial No. 43,025. 4 Claims. (Cl. 10—100.)

2. In a die head, a shank, a head body, chaser-holders pivotally supported on the body, tangential thread cutting chasers on the holders, an oscillatory ring connected to the chaserholders for moving the chasers into and out of operative position, an outwardly projecting abutment on said ring, a longitudinal guide mounted on one side of the die head, a plunger sliding on the guide parallel to the shank, a cam carried by the plunger to contact with the said abutment, said cam projecting from one side of the plunger so that the front end of the plunger will be free to act as actuator for the cam, substantially as set forth.

1,665,974. AUTOMOBILE. LOUIS NYCZ, Binghamton, N. Y. Filed Oct. 26, 1926. Serial No. 144,373. 1 Claim. (Cl. 180—70.)

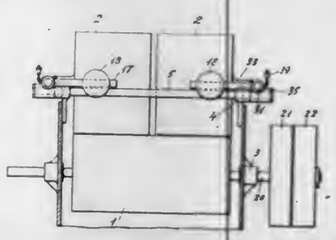
In a power transmission means, a crank shaft driven by piston rods and carrying idler gears; clutches fixed to the idler gears; sprockets fixed to the crank shaft and driving sprocket chains; idler sprockets engaging said sprocket chains; a shaft carrying the idler sprockets; clutches capable of connecting the idler sprockets and the shaft gears secured to the shaft which continuously mesh with the aforementioned idler gears; drive gears meshing with the idler gears and fixed to a driving shaft connected to the axle of the vehicle; means to engage one set of clutches and disengage the other set simultaneously or to so neutralize the clutches that movement of the vehicle is stopped.

1,665,975. STRESS BREAKER. NATHAN A. OSCHER, Brooklyn, N. Y. Filed Mar. 12, 1926. Serial No. 94,266. 3 Claims. (Cl. 32—12.)



1. A device of the character described, including a sleeve, a screw having a ball and socket connection with the sleeve, a threaded socket member adapted to be connected to a partial denture and receive the screw, said sleeve adapted to support a tooth engaging member, and a nut on the screw placed gingivally of the sleeve adapted to adjust the engagement between the screw and the sleeve.

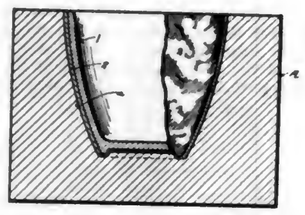
1,665,976. KNITTING MACHINE. NORMAN R. PECHIN, Philadelphia, Pa. Filed Feb. 24, 1923. Serial No. 620,986. 2 Claims. (Cl. 66—87.)



1. In a device of the class described, the combination of a pair of needle bars including a plurality of rectangular slots in the carrying frame for lateral reciprocating movement therein of said needle bars, a plurality of needles secured to and movable with said needle bars, a pair of vertically pivoted levers connected to said needle bars, an operating shaft, a pair of cams thereon for operating said pivoted levers in a horizontal reciprocating manner, a pair of needle lifting bars operatively associated with the needles on one of the needle bars, a pair of forked lifting studs secured to said needle lift-

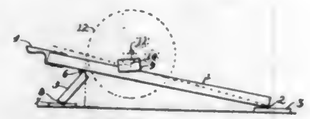
ing bars, a pair of eccentrically grooved face cams intermediate the ends of said shaft, the lower end of said forked studs provided with laterally extending pivoted

rollers which engage in the grooves of said face cams, for effecting the vertical reciprocating movement of said needle lifting bars.



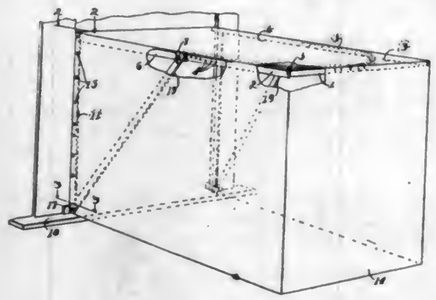
1,665,977. SCOURING MACHINE FOR WASHING FABRICS OF WOOL AND THEIR MIXTURES. FERNANDO CASABLANCAS PLANELL, Sabadell, Spain. Filed Apr. 16, 1926, Serial No. 102,508, and in Spain Apr. 21, 1925. 6 Claims. (Cl. 8—19.)

3. In a scouring machine for washing fabrics of wool and its mixtures, a lower roller revolving in bearings fixed to the frame of the machine over which roller pass the pieces of fabric which have to be washed, two upper rollers running loose arranged the one in prolongation of the other, these upper rollers resting on the lower roller with the interposition of the pieces of fabric which have to be washed and the axles of these upper rollers being mounted in such a way that they can move freely in a vertical plane so that the upper rollers may press conveniently upon the fabrics whatever may be the thickness of the same.



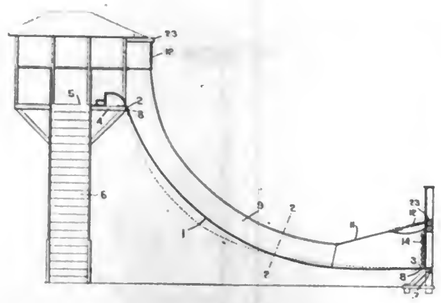
1,665,978. POTTERY-MAKING METHOD. ALBERT E. RADFORD, New Castle, Pa. Filed Oct. 1, 1923. Serial No. 666,044. 1 Claim. (Cl. 25—156.)

A method of decorating pottery consisting in kneading together a plurality of masses of plastic clay to effect a streaked mass in which the colors are still distinct, detaching part of the kneaded mass, applying to an absorbent mold, distributing to a smooth film, repeating the operation until a desired film is obtained, applying



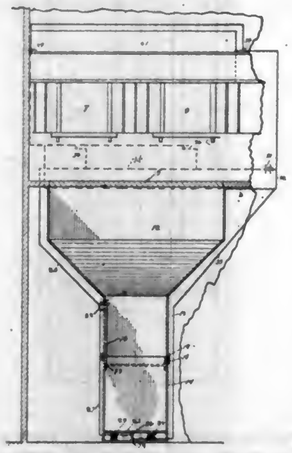
a slip to increase the wall thickness, drying to free from the mold, and firing, whereby when fired a mottled effect of any desired fineness of grain may be effected.

1,665,979. JACK. WILLIAM E. RAWLINGS, near San Jose, Calif. Filed Jan. 26, 1927. Serial No. 163,753. 2 Claims. (Cl. 254—131.)



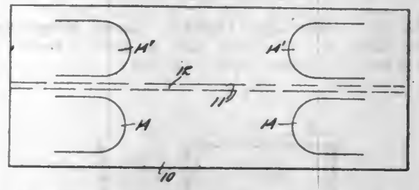
1. A jack for a revoluble axle comprising a lever having a leg mounted thereon adjacent one end and having a bearing formed therein between the leg and the other end, and a bearing member mountable upon the axle to rotate therewith and journaled in said bearing.

1,665,980. BED CANOPY. WILLIAM E. RAWLINGS, Santa Clara County, Calif. Filed Jan. 26, 1927. Serial No. 163,754. 3 Claims. (Cl. 98—89.)



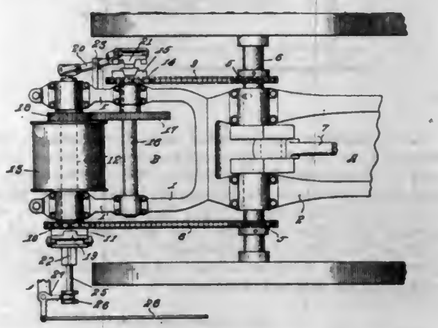
1. A canopy of the character described, comprising a collapsible frame, window frame engaging shoes mounted thereon, resilient means for urging said shoes into engagement with said frame, legs mounted on said frame adjacent said shoes adapted to engage the window stool and casing, and brace elements connecting the legs and frame.

1,665,981. AMUSEMENT APPARATUS. HERBERT N. RIDGWAY, Winthrop, Mass. Filed Mar. 17, 1923. Serial No. 625,769. 1 Claim. (Cl. 272—56.5.)



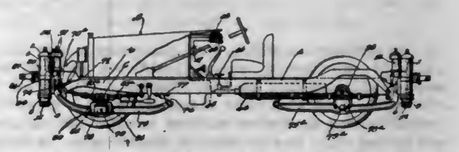
An amusement apparatus comprising two supports separated from each other and one of which is situated at a higher level than the other, a long sheet of metal flexible longitudinally, and a pivotal connection between each end of the sheet and the corresponding support, said sheet having such a length relative to the distance between the supports that normally the end of the sheet attached to the lower support extends in a substantially horizontal direction, and said sheet being sufficiently flexible so that when a person sliding down the chute arrives at the horizontal portion thereof the weight of such person will cause the sheet to sag below the lower pivotal connection so that the momentum of the person sliding down the chute will be checked by movement up the upwardly inclined lower end of sheet.

1,665,982. ROBBER TRAP. EZEKIEL M. ROCHA, Tulare, Calif. Filed May 16, 1927. Serial No. 191,896. 2 Claims. (Cl. 43—59.)



1. In a robber trap, a floor having a trap door positioned therein, a funnel shaped member secured to said floor, and surrounding said trap door, a downwardly extending pipe secured to said funnel shaped member, a receptacle positioned beneath said pipe, a vertically movable ring serving to connect said pipe and said receptacle and a hinged cover secured to said receptacle and adapted to be automatically closed after a body has been deposited within said receptacle.

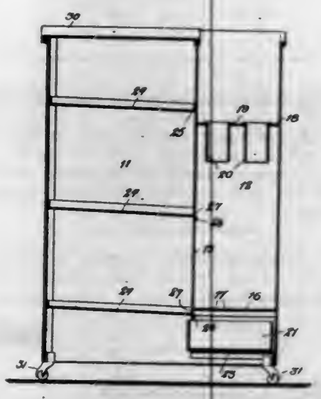
1,665,983. PANTS HOLDER. FREDERICK ARTHUR ROSE, Memphis, Tenn., assignor, by mesne assignments, to Max Finkelstein, Chicago, Ill. Filed Sept. 16, 1926. Serial No. 135,911. 7 Claims. (Cl. 223—61.)



1. A pants holder comprising an elongated body having parallel weakened lines along its central portion, tongues formed adjacent opposite ends of each of said sides said tongues projecting inwardly relative to said body and arranged to engage opposite edges of a pair of pants when the same are folded thereover, substantially as set forth.

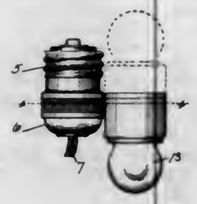
1,665,984. TRANSMISSION. LUTHER E. SCAGGS, Corsicana, Tex. Filed Oct. 23, 1925. Serial No. 64,405. 1 Claim. (Cl. 74—59.)

In combination with an engine, its crank shaft and a base upon which the crank shaft is journaled, a second base connected with the front end of the first base, a pair of shafts journaled in the second base, gears connecting the two shafts together, sprocket means connecting each shaft with the crank shaft, a pulley on one shaft, clutch means for connecting each sprocket means with each shaft, a rod slidably mounted at the front of the second base, means for sliding the rod, a pair of grooved collars on the rod, a lever for shifting each clutch means, one end of each lever engaging one of the collars.



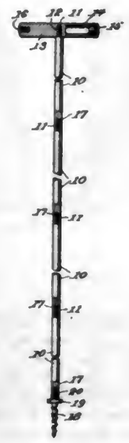
1,665,985. PNEUMATIC JACK. RAYMOND D. SCOTT, Chicago, Ill. Filed Sept. 26, 1925. Serial No. 58,878. 8 Claims. (Cl. 254—93.)

1. In a pneumatic jack, a cylinder, a piston operating in the cylinder, a barrel depending from said piston, means for normally holding the barrel in raised position



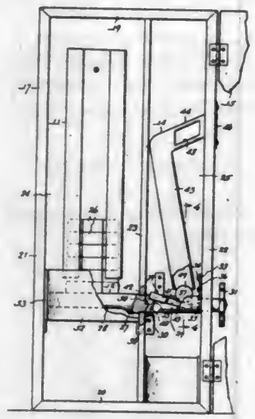
within the cylinder, means for locking the barrel in projected position beyond the cylinder, said cylinder being provided at one end with an opening accommodating the barrel during operation thereof, means for releasing the barrel and projecting it out of the cylinder and then moving said locking means into operative position and for moving the locking means into inoperative position and retracting the barrel into the cylinder and then moving said holding means into operative position.

1,665,986. ARTICLE CABINET. SARAH RUBIN SIDE, Brooklyn, N. Y. Filed Apr. 9, 1927. Serial No. 182,465. 5 Claims. (Cl. 312—146.)



1. An umbrella and overshoe cabinet, including a body having a vertical partition sub-dividing the same into a pair of compartments respectively for the reception of umbrellas and overshoes, the former compartment having a drain receptacle at its lower end and means for supporting umbrellas thereabove for drainage into said receptacle, the latter compartment having overshoe supporting sleeves inclined toward and drainable through the said partition into the receptacle.

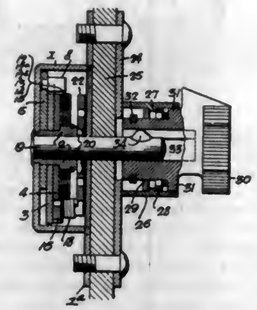
1,665,987. PILOT LIGHT. JOHN T. SMITH, San Francisco, Calif. Filed June 28, 1926. Serial No. 119,127. 2 Claims. (Cl. 173—344.)



1. In combination with a plug comprising a base and a cap, said cap having prongs positioned thereon and adapted to enter said base, a receptacle adapted to be attached to said plug, said receptacle having a pair of parallel spaced conductors secured thereto, said conductors having their free extremities perforated so as to engage the prongs of said cap in such a manner as to lie in a plane at right angles to said prongs and said conductors being positioned between said base and said cap.

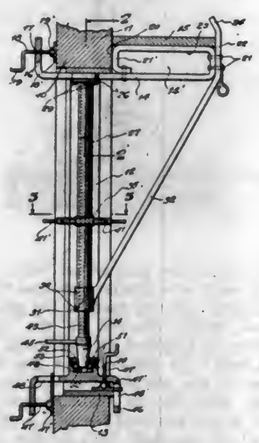
1,665,988. CLEANING ROD AND EXTRACTING DEVICE. LEONARD FRANCIS SMITH, Thompson Falls, Mont. Filed June 19, 1926. Serial No. 117,208. 2 Claims. (Cl. 42—92.)

1. In a device of the class described, a rod and a screw extending from one end thereof; the longitudinal axis of the screw being in alinement with the longitudinal axis of the rod and said rod carrying a hand operating element, socketed for connection with the rod in various angular positions.



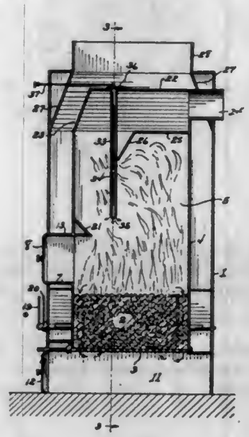
1,665,989. VENDING MACHINE. WILLARD PUTNAM SMITH, Newark, N. J. Filed Apr. 25, 1927. Serial No. 186,410. 4 Claims. (Cl. 194—48.)

1. A vending machine including a rotor adapted when rotated to deliver the articles of merchandise to be vended, one at a time, to the delivery opening of the machine, means preventing the rotation of said rotor, said means including a latch consisting of a latch member arranged in a recess in the rotor, and a fixed stop with which the latch member coacts, the latch member normally in engagement with the stop to prevent rotation of the rotor, and a coin chute for delivering coin fed thereto into said recess on to one end of the latch



member to move it out of engagement with the stop to permit the rotor to be rotated for the delivery action, the coin being precipitated from said recess by the rotation of said rotor.

1,665,990. COMBINATION LOCK. FRANK SOLEY, Philadelphia, Pa., assignor, by mesne assignments, to The Yale & Towne Manufacturing Company, Stamford, Conn., a Corporation of Connecticut. Filed Mar. 25, 1925. Serial No. 18,166. 3 Claims. (Cl. 70—53.)



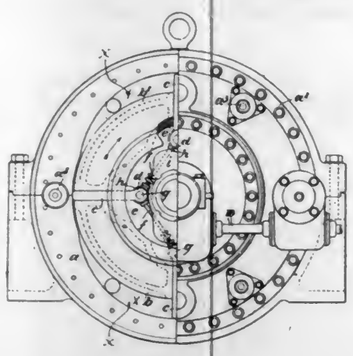
1. The combination in a lock, of a casing; a bolt, means, within the casing, for actuating the bolt, one of the means being a tumbler having a central opening and slots at each side of the opening; a spindle adapted to the central opening; a pin on the spindle extending into the slots so that, on turning the spindle, the tumblers are turned; a dial plate through which the spindle extends; a projection on the spindle; and a knob having an opening to receive the spindle, the slot at one side receiving the projection, the arrangement of the parts being such that the casing and dial plate can be adjusted to fit doors of different thicknesses.

1,665,991. WINDOW SCAFFOLD. NICOLA STRAMAGLIA, Chicago, Ill. Filed Sept. 25, 1926. Serial No. 137,737. 3 Claims. (Cl. 304—14.)

1. A scaffold structure of the class described including a supporting member adapted to support a scaffold plank, means for clamping the supporting member to the head of a window construction, means for forcing the supporting member against the bottom of the head, and means for clamping one end portion of said last mentioned means to the sill of the window construction, said clamping means embodying portions extending parallel to said head adapted to prevent lateral movement of said structure.

1,665,992. HEATING APPARATUS. WILLIAM D. STRATTON, Farwell, Mich. Filed Sept. 23, 1927. Serial No. 221,541. 8 Claims. (Cl. 126—67.)

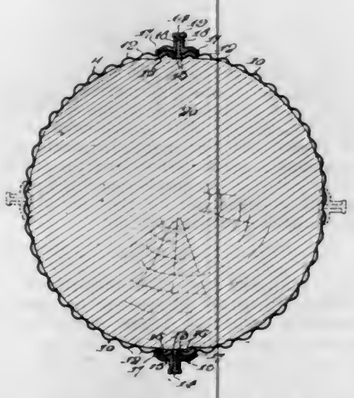
1. A hot air furnace having an ash pit therein, a fire box above the ash pit and a combustion chamber arising from the fire box, a baffle plate in the combustion chamber, and a second baffle plate in said chamber above and directed toward the first mentioned baffle plate, said chamber having a smoke outlet above the second named baffle plate, and said fire box having angle corner partitions therein providing hot air blast ducts between the combustion chamber and the ash pit.



1,665,993. PROCESS FOR THE PRODUCTION OF UNSINTERED BINDING MEANS OF OIL SHALE AND LIMESTONE AND THE LIKE. OSCAR TETENS, Oerlinghausen Lippe, Germany. Original application filed Jan. 26, 1924, Serial No. 688,831, Patent No. 1,536,165. Filed in Germany May 21, 1922. Divided and this application filed Dec. 29, 1924. Serial No. 758,774. 5 Claims. (Cl. 106—25.)

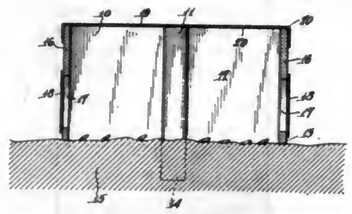
1. A process for the production of a hydraulic binding material from oil-shale and lime-containing material, which comprises mixing the raw shale with lime-containing material capable of being calcined by the shale, distilling the mixture and recovering distillation products from the oil shale and burning the mixture by the shale-coke obtained from such distillation in the same kiln and grinding the residues obtained by such burning.

1,665,994. ROTARY ENGINE AND THE LIKE. IVAN TURNER, London, England. Filed July 14, 1925, Serial No. 43,539, and in Great Britain Dec. 23, 1924. 4 Claims. (Cl. 121—85.)



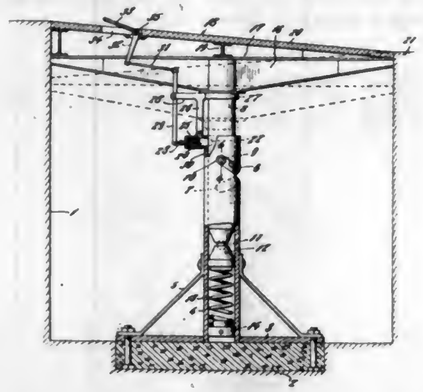
3. A rotary engine, comprising a cylindrical rotor, a non-circular casing, said rotor mounted for rotation in said casing, a plurality of vanes mounted in said rotor

and adapted to slide radially thereof, a plurality of links connecting the inner ends of said vanes, said links including telescopic members, cross members, springs press-



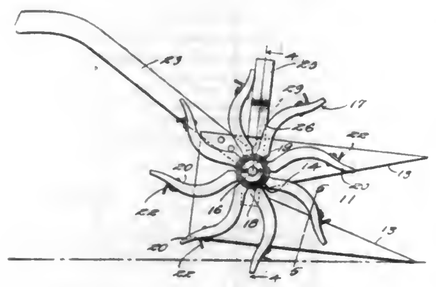
ing said cross members apart to shorten the links, and mean for limiting the extension of the links, and a stationary cam controlling the radial motion of said vanes.

1,665,995. METAL BASE FOR TIMBER POLES. ANDREW J. WILEY, Boise, Idaho. Filed Jan. 4, 1927. Serial No. 158,960. 8 Claims. (Cl. 20—100.)



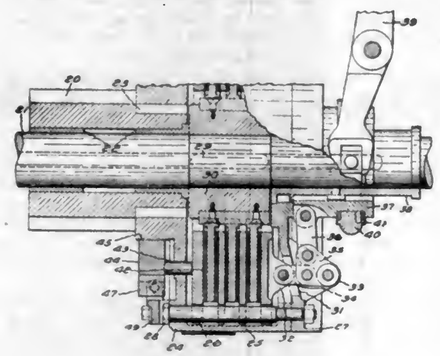
1. In a metal base for fixing timber poles in the ground a cylindrical metal sleeve divided into a plurality of sections by planes parallel to its axis, the said sections of the sleeve being firmly joined together in a circumferential direction but having free movement parallel to the axis of the cylinder along a joint made of a combination of a T shaped bar with two L shaped bars which together form the joint, the top of the T being corrugated to fit interiorly with the corrugations of the sleeves, the leg of the T passing between the parallel edges of the sections of the sleeve and having a cross at its exterior and bearing against the exterior ends of the legs of the two L bars, one leg of each of which is corrugated to fit the exterior corrugation of the sleeve, and the locking being effected by the clamping of the corrugations of the sleeves between the conforming corrugations of the interior T bars and the exterior L bars.

1,665,996. DEVICE FOR PROPAGATION OF CLAMS. RALPH C. ADAMS and JONATHAN T. ADAMS, Somers Point, N. J., assignors to Adams Elsworth Bivalve Co., Montclair, N. J. Filed Apr. 7, 1926. Serial No. 100,385. 1 Claim. (Cl. 119—4.)



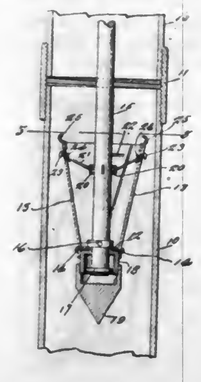
In the propagation of clams, a protecting structure for a natural bed comprising a plurality of stakes driven into the bed in upright positions and spaced a substantial distance apart substantially equal to the length of the bed, one at each end of the bed, end boards secured to and adjacent the outer faces of said stakes, side boards arranged in upright positions and secured to the ends of the end boards, thereby causing a rectangular enclosure to be constructed, a wire fabric top having depending side and end parts fitting down over the enclosure, the side boards having openings down and relatively close to the sides of the bed, and wire fabric closing said openings, said wire fabric covered openings and the wire fabric top, acting to permit water and natural food to easily enter the enclosure, without allowing the clam spats to be washed away or scattered.

1,665,997. AUTOMOBILE TURNTABLE. JAMES G. AUSTIN, Price, Utah. Filed July 15, 1927. Serial No. 206,075. 4 Claims. (Cl. 104—44.)



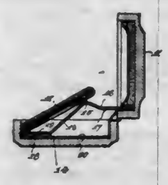
1. In a device for the purpose set forth, a pit, having one of its side walls at a greater elevation than the other, a hollow standard centrally fixed in the pit, a shaft having a portion freely received in the standard, said standard having an elliptical opening whose end walls are rounded and which are disposed in a line with the axial center of two of the opposite sides of the standard, an anti-frictional roller on the shaft received in the slot, spring means in the standard exerting a pressure against the inner end of the shaft, and a turn table fixed on the shaft having its top portion in the nature of an inclined plane, and having its ends normally arranged in a line flush with the mentioned side walls provided by the pit.

1,665,998. STRAWBERRY TOP AND RUNNER CUTTER. JOHN BECHTHOLD, Elma, Wash., assignor of one-eighth to Austin A. Foote and one-eighth to Jesse L. Paine, Elma, Wash. Filed Dec. 21, 1926. Serial No. 156,188. 3 Claims. (Cl. 55—64.)



3. In a strawberry runner cutter, a plate formed with a V-shaped notch opening through one end thereof, the edges of the notch being formed to provide cutting edges disposed at one face of the plate, the plate being provided above and below the apex of the notch with openings for the interchangeable reception of a pivot, a rotating spider mounted upon said pivot and operating against the face of the plate which is provided with the cutting edges and having arms longitudinally curved in the direction of rotation of the spider, the end of the plate through which the notch opens extending in advance of the arms of the spider and a handle secured to the plate.

1,665,999. CLUTCH. ARTHUR A. BYERLEIN, Detroit, Mich. Filed June 16, 1924. Serial No. 720,324. 11 Claims. (Cl. 192—111.)



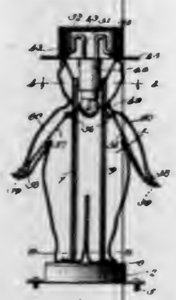
1. In a clutch apparatus of the character described, clutch members adapted to be clutched together, said clutch members carrying means adapted to be moved into and out of engagement with one another, operating mechanism for controlling the engagement of said means, and adjusting mechanism for the clutch, said mechanism comprising an abutment operatively connected with said means, means operable for effecting a rapid adjustment of the abutment, and means operable for effecting a slow adjustment of the abutment, said adjusting means being independent of said operating mechanism and adjustable while maintaining the clutch in its assembled condition.

1,666,000. WELL-CLEANING DEVICE. EARL EDGAR CAMPBELL, Gillette, Wyo. Filed Jan. 22, 1926. Serial No. 83,057. 4 Claims. (Cl. 166—18.)

1. A well cleaning device comprising an inverted hollow substantially frustro-conical receptacle closed at its lower end, radially expansible walls for said receptacle, said walls being normally held in contracted position and capable of movement to expanded position when the device is subject to impact.

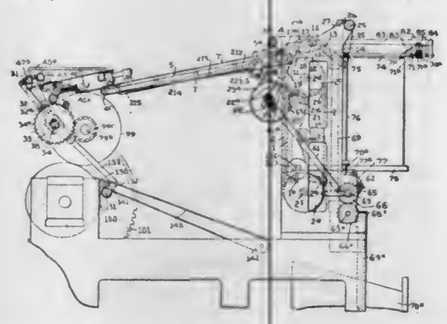
1,666,001. JEWELRY CASE. TIBURCE CATALA, Englewood Cliffs, N. J. Filed Mar. 6, 1926. Serial No. 92,906. 3 Claims. (Cl. 206—44.)

2. A case comprising a body in the form of a receptacle, a cover hingedly connected with the body, a foldable false bottom connected with the cover, the false bottom normally adapted to lie flat within the body, and means slidably retaining a portion of the false bottom, so that in the movement of the cover to an opened position, the false bottom will be moved to an inclined position.



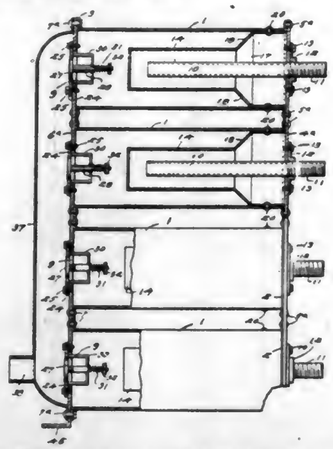
1,666,002. TIRE BOOT. MARTIN P. COLE, Goodland, Kans. Filed Sept. 20, 1927. Serial No. 220,753. 2 Claims. (Cl. 152—24.)

1. A self-vulcanizing patch or boot for the outer casings of pneumatic tires comprising a composite body portion having the elements thereof vulcanized together and consisting of a flexible base, a body portion formed of a plurality of plies of non-stretched material and of a material different from that of the base, a flexible covering formed of a plurally of plies of material and of a material different from that of said body portion, and said covering and body portion arranged in stepped relation,



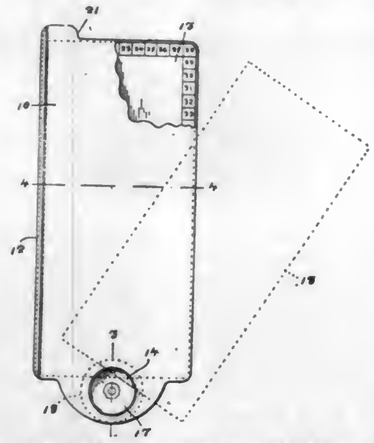
and a coating extending completely throughout the outer face of said covering and possessing a characteristic to provide from the self-vulcanizing of said body to the inner face of the outer casing of a tire.

1,666,003. SIGNAL. FRANK MICHAEL CRYSTLER, Belding, Mich. Filed Aug. 11, 1924. Serial No. 731,464. 2 Claims. (Cl. 177—329.)



1. A signal for automobiles adapted for connection to the radiator cap comprising a metal cup-shaped base member, means for connecting the base member to the radiator cap, vertically disposed channel-shaped members secured to the base member, the upper end of each channel-shaped member being provided with an arcuately-shaped plate, an insulating member carrying a contact member and secured to each plate, each contact member being provided with a groove having a notch, a transparent casing in the shape of a figure enclosing the channel-shaped members, a hat, means for securing the plates to the opposite sides of the inner wall of the hat, a lamp socket, laterally opposed resilient fingers carried by the socket adapted to engage the notches in the grooves of the contact members for locking said socket in position, electric wires passing through the base member and through the channel-shaped members, one of the wires being connected with a contact member, the other wire being connected with the other contact member.

1,666,004. SHEET-PRINTING PRESS. MICHAEL ANDREW DROITCOUR, Providence, R. I. Filed Aug. 29, 1923. Serial No. 659,937. 11 Claims. (Cl. 271—74.)

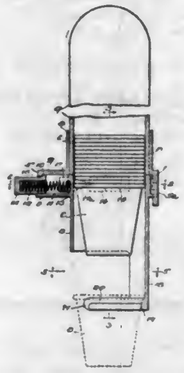


1. In a printing press of the character specified, sheet advancing means comprising a support, adjacent endless tapes having runs lying on the surface of said support, said tapes being arranged close together, the space between the tapes the support and a sheet laid on the tapes forming an air channel; and means for creating suction in said channel, whereby the sheet is held to the tapes by suction and is moved forward by the tapes when the latter are travelled.

1,666,005. EXHAUST TRAP. ARTHUR J. CULP, Clanton, Ala. Filed May 23, 1925. Serial No. 32,865. 2 Claims. (Cl. 137—160.)

1. An exhaust trap comprising a cylinder provided at its ends with outwardly directed flanges, first and second head plates secured to the flanges and the first head plate having a discharge port, an imperforate baffle tube of uniform diameter throughout and arranged within the cylinder with its ends spaced from the head plates, the end of the baffle tube adjacent the first head plate being closed and the end adjacent the second head plate being fully open, a conical baffle plate provided with openings and extending from the open end of the baffle tube in the direction of the second head plate and cylinder and terminating short of the second head plate, a cylindrical attaching flange extending from the conical baffle plate to the second head plate and contacting with the inner side of the cylinder, attaching elements engaging the cylinder and flange, and an exhaust tube secured to and extending inwardly and outwardly beyond the second head plate and extending into the baffle tube with its discharge end arranged in close proximity to the closed end of the baffle tube.

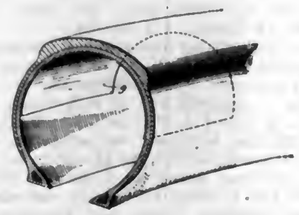
1,666,006. TICKET HOLDER. HARTVIG H. A. DUNCAN, Garden City, N. Y. Filed Aug. 20, 1926. Serial No. 130,511. 3 Claims. (Cl. 129—35.)



1. A ticket holder comprising a case having one of its sides open, a member turnably mounted in the opposed walls of said case adjacent one end thereof and

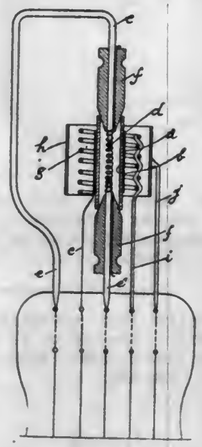
provided with manipulating heads exteriorly of the walls of said case, and yieldable co-acting clamping disks carried by said member intermediate the walls of said case for clamping the edge of a ticket therebetween.

1,666,007. SEPARATOR AND METHOD OF MAKING THE SAME. WILLIAM S. GOULD, New York, and WILLARD B. OSBORNE, Elma, N. Y., assignors to Gould Storage Battery Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 28, 1923. Serial No. 670,822. 8 Claims. (Cl. 136—150.)



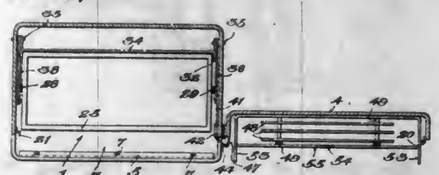
1. The method which consists in treating a separator to remove such of its constituents as would deleteriously attack lead when subjected to electrolytic action and drying the separator between heated surfaces.

1,666,008. CUP-DISPENSING MACHINE. FRIEDRICH GRAFFENBERGER, Milwaukee, Wis., assignor to Milwaukee Lace Paper Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 6, 1926. Serial No. 139,793. 6 Claims. (Cl. 312—44.)



1. In means for dispensing flanged cups arranged in a stack in nested relation, a neck defining a dispensing opening and having flattened and slotted side portions, a base plate extending from the neck, a cover member secured to the base plate and forming therewith a housing, a slide mounted on the base plate for movement toward and away from the neck and straddling the same, the arms of the slide being confined between the flattened side portions of the neck and the side walls of the cover member and guided and held against play thereby, means carried by the arms of the slide and operable through said slots for supporting a stack of cups when the slide is in its outer position and for releasing the lowermost cup of the stack and permitting it to be dispensed through the neck when the slide is moved inwardly across the neck into its inner position.

1,666,009. TIRE BOOT. MARTIN OSCAR HANEY, Iola, Kans. Filed May 27, 1927. Serial No. 194,779. 3 Claims. (Cl. 152—24.)



2. In a repair patch for tire shoes, a flat compressible element of sufficient size to extend over a substantial area of the crest of a tire shoe and having flexible strands incorporated therein, and sheets of superimposed elastic material between which the compressible element is disposed, one of which is arranged to be fastened to the walls of the shoe, and means uniting the compressible element and sheets together.

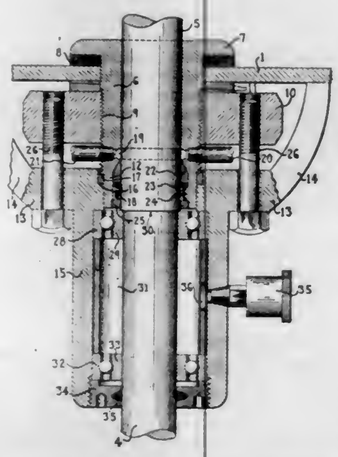
1,666,010. VALVE FOR WIRELESS TELEGRAPHY OR TELEPHONY. JACQUES ANTOINE MARIE HAWADIER, Paris, France. Filed July 18, 1925, Serial No. 43,259, and in France Aug. 2, 1924. 2 Claims. (Cl. 250—27.5.)

1. A valve for wireless telegraphy and telephony, comprising a metallic tubular cathode coated with electron emitting metallic oxides, an auxiliary heating filament in said cathode, conductors for supplying alternating current supporting the filament, a quartz tube between the filament and cathode, supporting the latter and projecting beyond the ends thereof, and collars at both ends of the quartz tube supporting the same and the said conductors.

1,666,011. WARDROBE TRUNK. EDWARD A. HOFF and WILLIAM C. SANFORD, La Oroya, Peru. Filed Apr. 9, 1926. Serial No. 100,995. 8 Claims. (Cl. 190—18.)

2. A wardrobe trunk having an open front, a door for said open front, a set of drawers mounted as a unit within the main trunk section for movement in a line perpendicular to the back of the trunk, and means actuated by the door for moving said unit to the front of the trunk by the opening of the door and for moving said unit into the back of the trunk by the closing of the door.

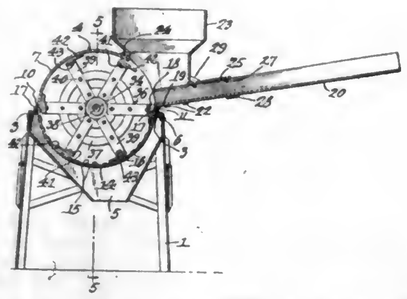
1,666,012. COOKING, FREEZING, AND STORING RECEPTACLE. CLEN S. HUMPHREY, Brooklyn, N. Y. Filed Jan. 24, 1927. Serial No. 163,258. 1 Claim. (Cl. 220—95.)



A receptacle, including a body and a friction cover, a pair of bail-like handles pivoted at diametrically opposite points to the sides of the body, said handles having

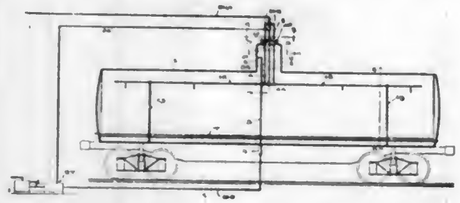
angularly bent blght portions adapted to be disposed over the upper end of the body and over a portion of the cover, and a handle swingably carried by the cover

having portions adapted for interengagement with the angularly bent portions of the body handles when swung to an upright position, for locking the cover to the body and effecting a sealing of the cover with the body.



1,666,013. MEANS FOR STERILIZING BEARINGS FOR SHAFTING. WILLIAM H. JACKSON, Douglaston, N. Y. Filed June 2, 1920. Serial No. 386,043. 6 Claims. (Cl. 308—134.)

1. The method of cleansing and sterilizing shaft bearings which are associated with containers for treatment of liquid material and which are subject to befouling influences of the liquid material therein; which consists in injecting a sterilizing fluid into and around the bearing and causing it to flow along the shaft therein whereby to remove or dislodge the befoulment therein.

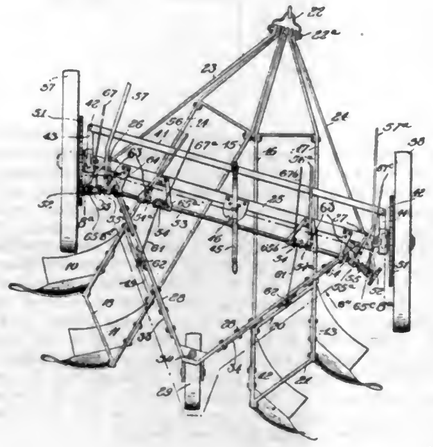


1,666,014. GRINDER CUTTER. JOHN HENRY KERSHNER, Norton, Kans. Filed Aug. 31, 1925. Serial No. 53,637. 7 Claims. (Cl. 146—123.)

2. In a device of the class described, a support, a chute carried by the support, a fixed blade at the inner end of the chute, and a rotor journaled on the support and provided with circumferentially extended blades coacting with the fixed blade, the working edges of adjacent blades on the rotor being inclined in opposite directions transversely of the rotor, said edges being provided with teeth, the above-defined construction of the working ed es of the blades being such that a draw cut will be effected

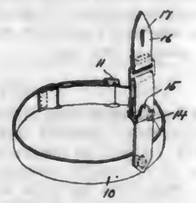
and, at the same time, the material will be centralized with respect to the chute, to prevent a crowding of the material at the sides of the chute.

1,666,015. TANK-CLEANING APPARATUS. GEORGE W. LAND, Vancouver, Wash. Filed Nov. 29, 1926. Serial No. 151,576. 9 Claims. (Cl. 141—1.)



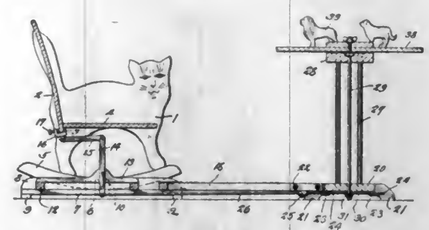
1. Means for cleaning a tank car having a valved drain outlet in its bottom and a dome at its top, said dome being provided with a filler opening at the top of the dome, comprising a distributor pipe depending through the opening at the top of the dome into the tank car, a clamp embracing said distributor pipe and having end portions resting on the top of the dome for supporting said distributor pipe, a pair of tubular spray pipes connected with the lower end of said distributor pipe and extending longitudinally of the tank car within the upper part of the tank car body, supports within the tank car body for the outer end portions of said spray pipes, said supports being foldable for passage through the opening in the top of the dome of the tank car, and a pump having its intake side connected with the outlet in the bottom of the tank car, and having its delivery side connected with the upper end of said distributor pipe.

1,666,016. TWO-WAY PLOW. KENNETH C. LIVERMORE, Ithaca, N. Y. Filed Sept. 20, 1920. Serial No. 411,558. 11 Claims. (Cl. 97—20.)



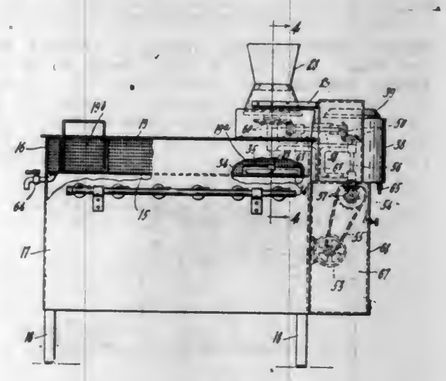
1. In an agricultural implement a plurality of separately operable ground tools, a pair of parallel supporting wheels for said tools, mechanism operable by either wheel for raising or lowering one of said wheels relative to the other, a second mechanism operable by the same wheel as the first mentioned mechanism for raising each tool from cooperation with the ground to an inoperative position, attaching means for a drawing force for the implement and a device for moving the operating tool about the attaching means into alinement with the drawing force.

7. In a two way plow, a pair of wheels, a frame member mounted between said wheels, connections between said member and the wheels permitting the latter to be adjusted to different angular positions with respect to said member, means for effecting such adjustment, a frame extending forwardly from said member, a draft connection on the front of said frame adapted to occupy a position at one side of the median line between said wheels when said member is disposed at an angle to the axis of either wheel, a rear frame connected with said member, a pair of plow carrying frames adapted to be guided vertically upon said rear frame and converging forwardly and having their front ends secured to said draft connection, and means for effecting independent raising or lowering of said plow carrying frames.



10. In a two way plow, a pair of dirigible wheels, a frame connecting said wheels and projecting forwardly and rearwardly thereof, the wheels being vertically adjustable relative to the frame and to each other, means for simultaneously steering said wheels, said steering means serving to effect relative angular adjustment between the wheels and frame whereby the latter will occupy predetermined angular positions with respect to the frame, a draft connection on the front of the frame, forwardly converging plow carrying frames inclined to the axis of the wheels and adapted to be guided vertically upon the rear portion of the frame and having their front ends pivotally engaging a portion of said draft connection, and means for independently raising said plow carrying frames.

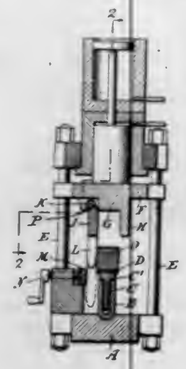
1,666,017. STOCKING PROTECTOR. BERTHA B. LININGER, Versailles, Mo. Filed Jan. 23, 1926. Serial No. 83,313. 1 Claim. (Cl. 241—1.)



A garment supporter comprising in combination an adjustable band adapted to encircle the limb of the user, an elastic tape rising from one side of the band, a headed element carried by the band, a socket member carried by the lower end of the tape, whereby the latter is detachably connected with the band, said tape being formed at its upper end with an adjustable loop to permit the tape to be varied in length, a buckle carried by the loop, and a tab associated with the buckle and having a button hole for attachment to a body garment as and for the purpose specified.

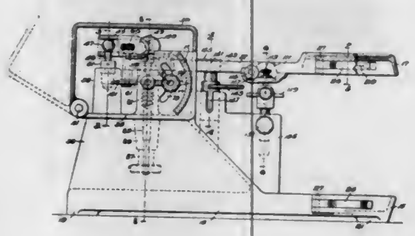
1,666,018. AMUSEMENT APPARATUS. EDGAR MAYETTE, Canisteo, N. Y. Filed Mar. 25, 1927. Serial No. 178,311. 5 Claims. (Cl. 272—1.)

1. The combination with a portable base structure, of a movable toy member, toy driving mechanism connected to said structure, a rocking chair resting on and movably mounted relative to said structure, and an operative connection between the chair and the driving mechanism.



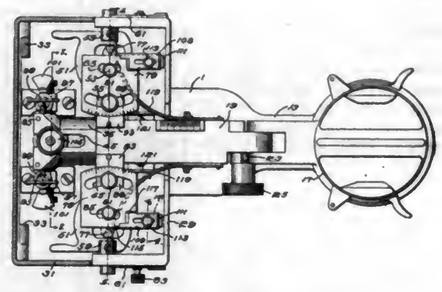
1,666,019. POTATO-CHIP MACHINE. JOHN J. MCCARTHY, Middleboro, Mass., assignor to Colonial Brass Company, Middleboro, Mass., a Corporation of Massachusetts. Filed July 19, 1927. Serial No. 206,810. 4 Claims. (Cl. 53—7.)

1. A potato chip machine comprising a tank having a partition subdividing it into a flow passage and a return passage, said passages communicating with each other at their opposite ends so that a continuous circulation of oil is permitted through the passages, and a combined slicing and oil-forcing mechanism adapted to deliver slices to the flow passage and cause a circulation of oil in the flow and return passages, said mechanism including a vertical driven shaft journalled in a fixed bearing and projecting into one end of the flow passage, a fixed hopper above the shaft, a slicer composed of a horizontal head fixed to the upper end of the shaft, and a knife fixed to the head and revoluble horizontally by the shaft across the bottom of the hopper, and an oil propeller fixed to



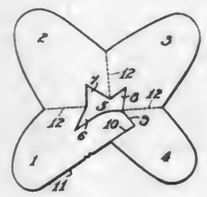
the lower end of the shaft and revoluble horizontally thereby in close proximity to the bottom of the tank, so that the propeller is submerged in a body of oil of operative depth, the propeller being formed to cause a continuous circulation of oil through said passages.

1,666,020. PRESS. FRITZ MENNE, Weidenau-on-the-Sieg, Germany, assignor to Herman F. Hoevel, New York, N. Y. Filed May 20, 1927, Serial No. 192,816, and in Germany Oct. 20, 1925. 7 Claims. (Cl. 78—42.)



1. A press of the character described, provided with a die and a pressure member cooperating with said die, said pressure member having side members of unequal length adapted to engage the die on opposite sides, the longer side member being adapted to form a stop for positioning the material to be compressed.

1,666,021. ARTICULATOR. GEORGE P. PHILLIPS, Boston, Mass. Filed Jan. 2, 1925. Serial No. 6. 12 Claims. (Cl. 32—1.)

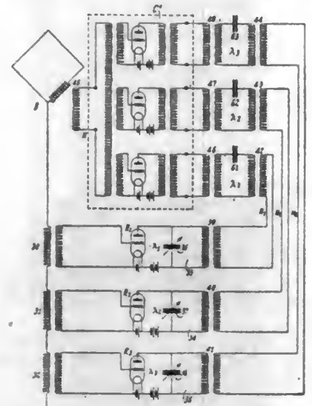


1. A dental articulator comprising a fixed lower model holder, a model holding arm cooperatively and movably related thereto and located above the fixed holder, a connection permitting free movement of the arm and providing longitudinal, lateral and vertical movements of the upper model holder relatively to the lower holder, the same comprising a ball and socket joint permitting longitudinal movement of the arm and a hinged connection of the arm thereto about a horizontal axis, and a set of guiding devices for each opposite side of the arm independently adjustable for guiding the arm in its longitudinal, lateral and vertical movements and serving to control the arm, each independently of the other in respect to its extreme right- and left movements.

1,666,022. ARTICULATOR. GEORGE P. PHILLIPS, Boston, Mass. Filed July 18, 1925. Serial No. 44,460. 35 Claims. (Cl. 32—1.)

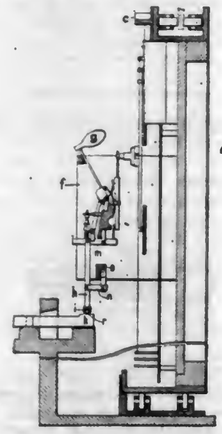
1. In an articulator, the combination with a support, of a movable model-carrying arm having a floating connection to the support providing for a bodily movement of the arm in all directions, both vertically, laterally and longitudinally, without a fixed center of rotation, with devices for adjustably defining the opposite movements of the arm, including an adjustable guide for each opposite movement to define the inclination to the horizontal plane taken by the arm in that movement, lateral guiding devices comprising for each opposite lateral movement an independently adjustable device to provide lateral guidance corresponding to the outer interference at one condyle of the natural jaw and a differently located adjustable device to provide a guidance corresponding to the inner interference at the opposite condyle, and a device to limit the protrusive movement of the arm for each opposite extreme lateral movement thereof.

1,666,023. GLOVE. FRANK X. STURM, Alexandria, Ind., assignor to The Glove Corporation, Alexandria, Ind., a Corporation of Indiana. Filed Nov. 12, 1926. Serial No. 147,883. 2 Claims. (Cl. 2—169.)



1. A blank for the backs of the fingers of a glove comprising a substantially star shaped blank having an aperture at its center and its points constituting the backs of the fingers, two of the points of the blank being separated on a line extending transversely into the base of one of the points of the star and forming a continuation of one edge of another point of the star.

1,666,024. ARRANGEMENT FOR MULTIPLEX DIRECTIONAL RECEIVING. NICOLAI VON KORSHENEWSKI, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed June 19, 1924, Serial No. 720,909, and in Germany June 28, 1923. 6 Claims. (Cl. 250—9.)

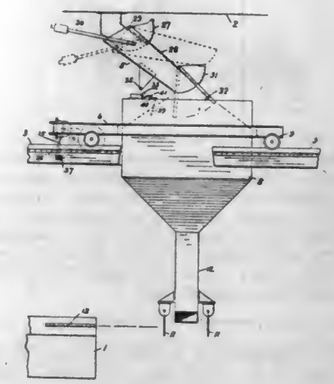


1. In combination, a directional aerial, means associated therewith and tuned to different frequencies for producing a plurality of non-directional antenna effects,

means for combining the effects produced by the directional aerial and said non-directional means, said combining means having a tuning element for each of the non-

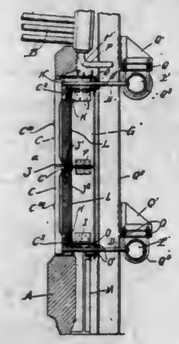
directional effects whereby more than one frequency may be simultaneously received on the aerial and first mentioned means from a single direction.

1,666,025. TRANSPOSING DEVICE FOR KEYED INSTRUMENTS. JULES ZUMBÜHL, Basel, Switzerland. Filed Feb. 26, 1925, Serial No. 11,769, and in Germany Mar. 10, 1924. 1 Claim. (Cl. 8—449.)



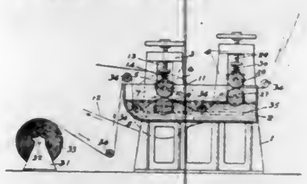
In a keyed musical instrument a board of keys, a movable string-plate, an intermediate hammer action and means for connecting the hammer action to the string-plate so that it is movable therewith relatively to the keys.

1,666,026. PROCESS OF WELDING. ROBERT APPLEGATE, Cleveland, Ohio, assignor, by mesne assignments, to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Oct. 10, 1921. Serial No. 506,851. 5 Claims. (Cl. 219—8.)



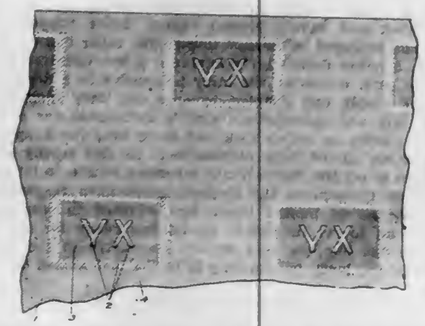
1. The process of welding copper bonds to railway rails which comprises disposing a copper bond adjacent a rail, heating the rail and melting a portion of the bond by means of an electric arc, placing a quantity of calcium silicon in contact with the molten bond metal, and melting additional copper to complete the weld.

1,666,027. AUTOMATIC FUEL-SUPPLY MEANS FOR BOILERS. ROBERT H. BEAUMONT, Radnor, Pa., assignor to R. H. Beaumont Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 7, 1926. Serial No. 139,970. 5 Claims. (Cl. 214—18.)



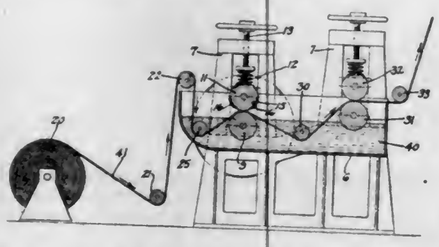
1. Automatic fuel supply means for boilers comprising a track, bunkers arranged above and toward one end of the track and having pivotal chutes, boiler hopper extensions arranged below and toward the other end of the track, a power driven larry having a power operated discharge gate, means on the larry responsive to a depleted hopper supply and adapted to open the larry discharge gate, trip and intermediate switch mechanism for causing the larry to travel back and forth over the hoppers, mechanism on the larry responsive to its fuel supply and adapted to set the intermediate reversing switch to let the larry go through to the bunkers, mechanism responsive to a depressed bunker chute and adapted to stop the larry and to set its switch mechanism ready for travel toward the hoppers, and devices responsive to the contents of the larry for starting it in the last named direction.

1,666,028. FLUID HEATING. JOHN E. BELL, Brooklyn, N. Y., assignor to Foster Wheeler Corporation, New York, N. Y., a Corporation of New York. Filed July 17, 1924. Serial No. 726,584. 13 Claims. (Cl. 122—476.)



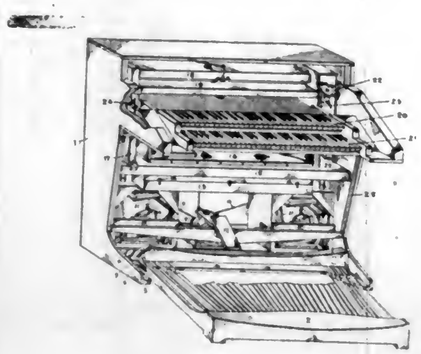
1. The method of preventing objectionable deformation of an elongated channeled element absorbing radiant heat at one side which consists in substantially restraining the tendency of the element to bend in a plane parallel to its length and transverse to its heat absorbing face while permitting the element to elongate and contract freely in response to changes in its temperature.

1,666,029. IMPRINTING DEVICE. DANIEL D. MADDEN, Portland, Oreg. Filed Nov. 30, 1925. Serial No. 72,270. 5 Claims. (Cl. 8—19.)



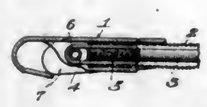
1. Means for imprinting on paper a plurality of tones with one dye, comprising, in combination, means for holding a quantity of dye, impression rollers, having varying impression surfaces, mounted in proximity to the dye in said dye holding means, means for immersing paper in the dye and passing it directly from the dye to and between said rollers and directly from said rollers to and through said dye a second time.

1,666,030. IMPRINTED PAPER. DANIEL D. MADDEN, Portland, Oreg. Filed Dec. 21, 1925. Serial No. 76,807. 1 Claim. (Cl. 41—26.)



A paper dyed throughout its structure and having a dyed design thereon, differing in its color appearance from the rest of the dyed paper surface, the paper having the dye pressed into it over approximately its whole surface with the same dye in the design as in the rest of the paper, but with different degrees of pressure, said design being visible on both surfaces of the paper.

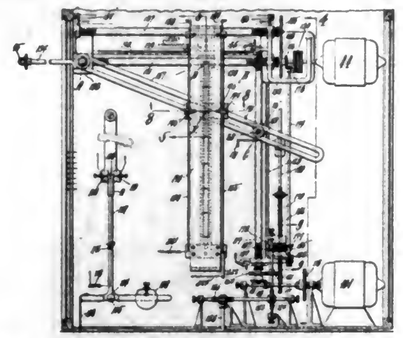
1,666,031. PROCESS OF PRODUCING IMPRINTED PAPER. DANIEL D. MADDEN, Portland, Oreg., assignor to Pacific Northwest Paper Mills, Inc., Portland, Oreg., a Corporation of Oregon. Filed Dec. 13, 1926. Serial No. 154,551. 5 Claims. (Cl. 8—5.)



1. A process of producing a plurality of tints in paper from a dye of a single color which consists in immersing the paper in the liquid dye and directly thereafter passing the wet paper under pressure between impression rollers provided with printing designs, and then passing the impressed paper as it leaves the rollers directly into and through the dye a second time.

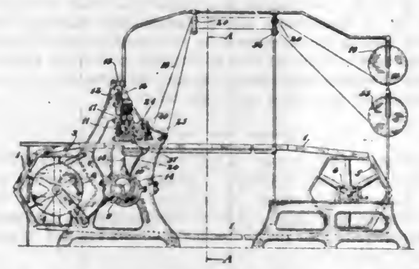
1,666,032. ORGAN. BENOIT MAURO, Brooklyn, N. Y. Filed Sept. 9, 1925. Serial No. 55,236. 4 Claims. (Cl. 84—354.)

1. In an organ of the class described, pumping mechanism in the base thereof, a pedal chest above said pumping mechanism, a wind channel above said pedal chest, and detachable bellows above said wind channel, keyboards above said bellows, and reed chests above said keyboards, said reed chests connected to said wind channel by a channel at one side of said instrument.



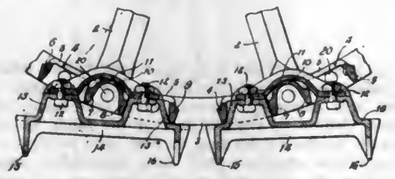
1,666,033. EXPANSIBLE BRACELET. FREDERICK W. NITTEL, Attleboro Falls, Mass., assignor to M S Co., Attleboro, Mass. Filed Aug. 18, 1927. Serial No. 213,822. 2 Claims. (Cl. 63—5.)

1. A bracelet for use with watch engaging end hooks having cross pins, including an expansible hollow fabric, U-shaped clips having the free ends of their legs received within the fabric and secured thereto, and coil springs within the fabric having their ends disposed between the legs of the clips and secured thereto, the closed ends of the clips being spaced from the adjacent ends of the coil springs whereby to receive the cross pins in said space and to confine same between the closed ends of the clips and the ends of the springs.



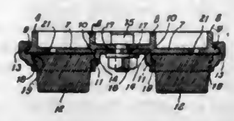
1,666,034. INDICATOR FOR AUTOMATIC SLOWNESS TESTERS. MILTON O. SCHUR, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Jan. 23, 1926. Serial No. 88,824. 31 Claims. (Cl. 92—38.)

1. In a device of the class described, a container for a pulp suspension, means for forming a mat of the pulp of the suspension, means for causing the liquid of the suspension to flow through the mat, means for subjecting the mat to a uniform and reproducible compression, and



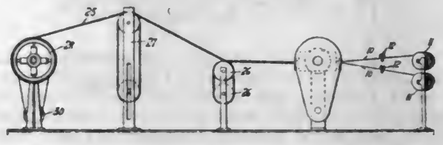
means for indicating variations in the thickness of the mat, said indicating means including a rectilinear scale and a pointer movable relatively thereto.

1,666,035. MACHINE FOR USE IN MAKING BOXES. CHARLES J. WESTIN, Rockaway, N. J., assignor to Wirebounds Patents Company, a Corporation of Maine. Filed June 22, 1925. Serial No. 38,790. 10 Claims. (Cl. 1—8.2.)



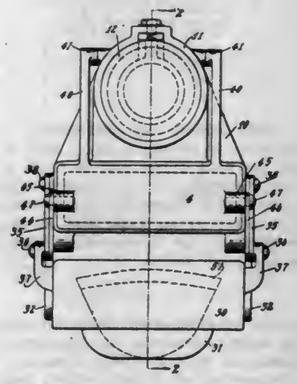
1. In a wirebound box blank machine, means for applying binding wire to box parts comprising, in combination, staple-forming and driving mechanism adapted to form a plurality of staples from a plurality of staple stock wires automatically fed thereto and to drive the same in close spaced relationship over a binding wire into the work, and means to feed a plurality of staple stock wires to said mechanism comprising a single feed roller cooperating with a plurality of tension rollers.

1,663,036. TRACTION WHEEL. WILLIAM E. WINE, Toledo, Ohio, assignor to The Tractor Grip Wheel Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 14, 1925. Serial No. 15,503. 4 Claims. (Cl. 305—13.)



1. A traction wheel comprising a rim, a plurality of transversely extending teeth on said rim and within the periphery thereof, a traction shoe having a plurality of transversely extending spaced teeth adapted to be received between the teeth on said rim, and a holder secured to two teeth on said shoe and loosely held on said rim.

1,666,037. TRACTION WHEEL. WILLIAM E. WINE and JOSEPH W. PROMENSCHENKEL, Toledo, Ohio, assignors to The Tractor Grip Wheel Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 8, 1925. Serial No. 21,729. 2 Claims. (Cl. 305—13.)

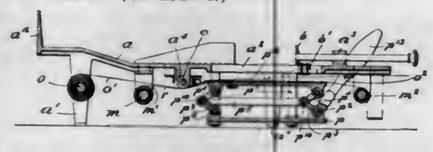


2. A traction shoe comprising a plate having flanges at the ends thereof and shoulders adjacent the center thereof, pad holders having sockets to receive said flanges and having shoulders to co-operate with the shoulders on said plate, the ends of said holders lying adjacent each other near the center of said plate, and a bolt passing through said plate and securing said ends of said holders thereto.

1,666,038. METHOD AND APPARATUS FOR THE MANUFACTURE OF TIRE BEADS. STERLING W. ALDERFER, Akron, Ohio. Filed May 28, 1926. Serial No. 112,358. 9 Claims. (Cl. 154—9.)

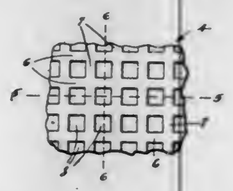
1. A method of manufacturing beads for pneumatic tires, comprising the steps of leading a plurality of separate wires from individual sources without weaving or braiding, imparting to the wires a curvature similar to that which they will assume in the completed bead, extruding a mass of tenacious rubber composition about the wires, reducing the wires and the rubber to the tape form, and winding the tape thus formed into a ring to constitute a reinforcement for the bead.

1,666,039. ADHESIVE-APPLYING DEVICE. WILLIAM H. BAYNARD, Brookline, Mass., assignor to Harry H. Beckwith, Brookline, Mass. Filed Jan. 22, 1925. Serial No. 3,956. 11 Claims. (Cl. 91—47.)



2. A device of the class described comprising a receptacle, a liquid applicator, a movable article support, and means whereby on movement of said support in one di-

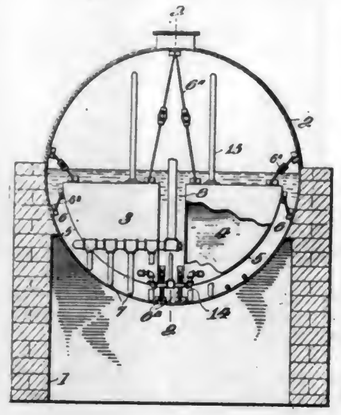
rection said applicator moves from said receptacle and applies liquid to an article on said support, and whereby on movement of said support in another direction said applicator returns into said receptacle.



11. A device of the class described, comprising a receptacle having a rearward extension shaped to receive and enclose a bottle in inverted position to feed a liquid barometrically to said receptacle, a cover for said receptacle in front of said extension, an applicator on the inside of said cover and dipping into the liquid in said receptacle, a movable article support, and connections between said cover and support, by which said cover may be raised and said applicator applied to an article on said support, said cover when closed and said bottle together closing off the liquid in said device from access of external air thereto.

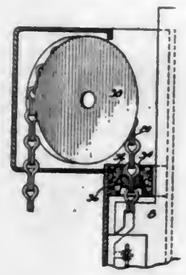
1,666,040. FOOT-MEASURING DEVICE FOR FITTING SHOES. ELMER J. BLISS, Boston, Mass., assignor to Regal Shoe Company, Whitman, Mass., a Corporation of Massachusetts. Filed Apr. 8, 1920. Serial No. 372,147. 10 Claims. (Cl. 234—1.)

1. A foot measuring device provided with a width size scale embracing in its construction a foot supporting base, a length indicating gage member movable longitudinally thereof and side gaging members laterally movable thereof, the said gaging members being provided with index members arranged to travel along appropriate measuring scales and means for imprinting said index members and scales on a strip of paper or the like to indicate thereon the length size and width size of the interposed foot being measured, substantially as described.



1,666,041. TRAFFIC SIGNAL. FRANK BUCHANAN, Syracuse, N. Y., assignor to Crouse-Hinds Company, Syracuse, N. Y., a Corporation of New York. Filed Sept. 24, 1924. Serial No. 739,744. 3 Claims. (Cl. 177—329.)

1. In a traffic signal, the combination of a casing, a light source in the casing, a signal lens in the casing in line with the light source and in front of the same, said lens being formed with a reticulated surface substantially coextensive therewith and consisting of ribs crossing each other at an angle and forming rounding depressions between the intersections, said surface resembling a fine mesh screen.

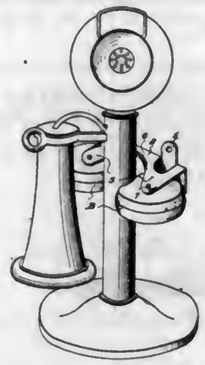


1,666,042. APPARATUS FOR AND PROCESS OF DISTILLING OILS. CHARLES B. BUERGER, Pittsburgh, Pa., assignor to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Aug. 28, 1923. Serial No. 659,823. 6 Claims. (Cl. 196—126.)

5. In the distillation of oils, the process which comprises forming a plurality of thin annular parallel bodies of oil flowing in a closed ring, the adjacent bodies having a common portion, heating the bodies on one side to cause an upward circulating flow, assisting the flow by applying a jet of steam acting in the same circular direction, and maintaining the rotary flow thus developed in the bodies at substantially the same rate of

speed at all portions thereof to prevent the settling of carbon from the oil, and superimposing upon the annular flow a longitudinal flow, whereby all parts of the entire body of oil will be constantly moved at substantially the same speed and without the formation of local portions of relatively quiescent oil.

1,666,043. SEALING MECHANISM FOR WINDOW FRAMES AND SASHES. HARRY E. CAMPBELL, Baltimore, Md., assignor to Campbell Metal Window Corporation, Baltimore, Md., a Corporation of Maryland. Filed June 24, 1927. Serial No. 201,119. 9 Claims. (Cl. 189—65.)

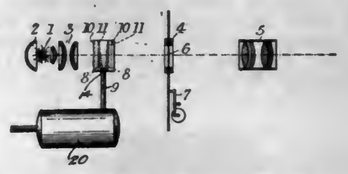


1. In a window-frame and sash construction comprising jambs having vertical openings for the upper sash leading into enlarged chambers which are connected to passages leading to another part of the jamb, an upper sash with portions extending through said vertical openings into said chambers, and sash suspension members attached to the upper sash in such chambers and running thence to another part of the jamb through said passages; partition members for such chambers positioned below said passages and adapted when the upper sash is closed to contact with movable sash members and thereby limit vertical movement of air in such chambers up around the upper sash and into such passages.

1,666,044. CONDENSER RACK. HAROLD I. DANZIGER, New York, N. Y., assignor to Condenser Corporation of America, New York, N. Y., a Corporation of New York. Filed Nov. 2, 1926. Serial No. 145,870. 5 Claims. (Cl. 91—60.)

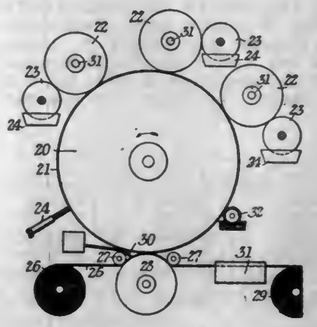
1. In a condenser rack for subjecting a stack of retained condenser bodies to impregnation treatment, a supporting frame comprising a base plate adapted to receive said stack thereon, a top plate, and a set of spaced longitudinal frame elements extending between the base and top plates; a separately applicable cover plate for the stack; and a compression spring interposed between the cover and top plates; whereby the condenser bodies may be yieldably retained under sustained pressure in stacked relationship during the impregnation treatment thereof.

1,666,045. HOLDING DEVICE. LOUIS C. GANNY and HARRY GOLDBERG, Wilkes-Barre, Pa., assignors of one-sixth to Thomas J. Mayock, and one-sixth to James M. Stack, Wilkes-Barre, Pa., and one-sixth to Michael Mayock, Miners Mills, Pa. Filed Nov. 29, 1926. Serial No. 151,548. 2 Claims. (Cl. 24—249.)



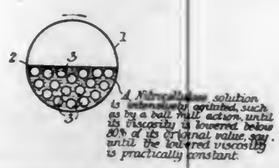
1. In a holding device, a thin frame structure comprising a bottom and sides at right angles thereto, each side being of such configuration as to provide a pair of ears and a depression therebetween, and having securing lugs adjacent each end thereof, said depression being provided with an outwardly extending flange and gripping members supported by said ears.

1,666,046. ROOFING. OTTO A. HEPPES, La Grange, Ill., assignor to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 8, 1923. Serial No. 661,574. 7 Claims. (Cl. 108—8.)



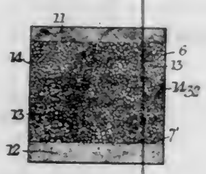
1. A roofing unit having a square piece of sheet material having one corner cut to form a tab forming a continuation of one marginal portion extending toward the apex of said corner, and a tab offset inwardly from the adjacent side edge and substantially parallel thereto and extending toward said one marginal portion.

1,666,047. PROJECTION SYSTEM. LOYD A. JONES and EARLE E. RICHARDSON, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 28, 1924. Serial No. 734,799. 6 Claims. (Cl. 88—24.)



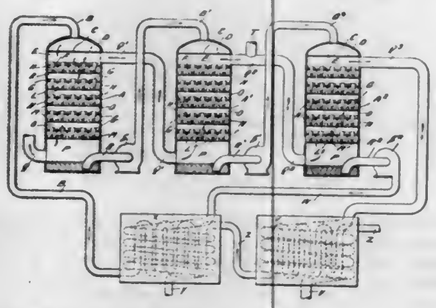
1. A projection system comprising a source of light, a film-positioning gate, a screen between said light and said gate and comprising a light transmitting support having upon one surface a thin layer having high absorptive properties for heat rays and low absorptive properties for visible rays, a source of air under pressure sufficient to have a refrigerative effect when released, and means to release air under pressure and to direct such air, as it is released, into contact with the layer.

1,666,048. METHOD OF MAKING MULTICOLOR SCREENS. CHARLES E. KENNETH MEES, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 8, 1927. Serial No. 159,816. 4 Claims. (Cl. 101—211.)



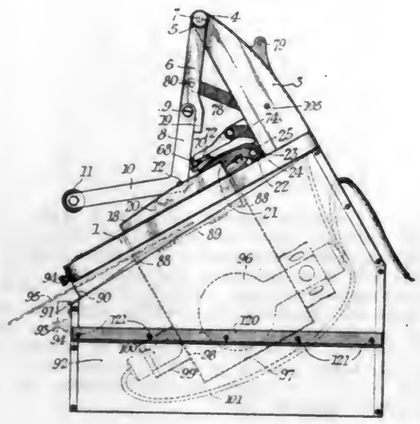
1. The method of making a multi-color pattern screen which comprises the steps of forming upon a printing blanket, a multi-color screen pattern composed of inks comprising spirit-soluble dyes, moistening a support with a material in which the dyes are soluble and then at once submitting the support and screen to contact under pressure whereby the dyes are transferred from the blanket to the support.

1,666,049. LOWERING THE VISCOSITY OF NITROCELLULOSE IN SOLUTIONS BY MECHANICAL ACTION. GEORGE H. TOZIER, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 5, 1926. Serial No. 99,825. 2 Claims. (Cl. 260—148.)



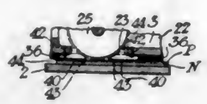
1. The process of lowering the viscosity characteristics of nitrocellulose which comprises forming a viscous solution of it in a liquid solvent, and subjecting said solution to intensive mechanical agitation until the viscosity of said solution is lowered to less than 80% of its original viscosity.

1,666,050. PASTER BAND FOR ROLL FILMS. ERWIN J. WARD, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 28, 1927. Serial No. 178,935. 9 Claims. (Cl. 95—9.)



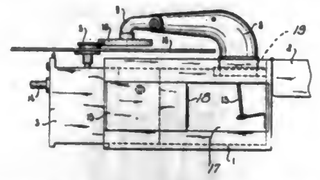
1. A photographic film cartridge including a spool, a flexible strip of protective material wound thereon, a flexible strip of film interwound therewith, a paster band adapted to join the protective material and film, said paster band including an adhesive area and an embossed area adapted to space the adhesive from the paster when folded against the embossings, said paster being interwound with the film and protective covering.

1,666,051. PROCESS OF DISTILLING HYDROCARBON OILS. WILLIAM P. DEPPE, Brightwaters, and LELAND L. SUMMERS, New York, N. Y.; Llewelyn L. B. Summers and Arthur Young administrators of said Leland L. Summers, deceased. Filed Jan. 5, 1924. Serial No. 684,479. 11 Claims. (Cl. 196—73.)



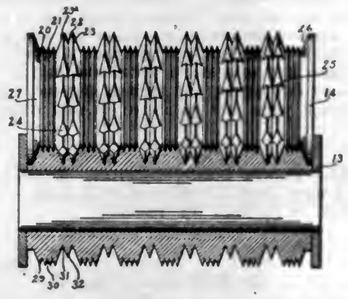
8. The process of distilling crude oils and mixtures of oils with other liquids, which comprises progressively heating and vaporizing the mixed liquids to thereby generate vapors of the constituents at increasing temperatures, keeping the vapors in contact with the liquids while continuously integrating the vapors and liquids and maintaining substantial equilibrium therebetween, then removing the vapors when a predetermined partial pressure of the various vapor constituents is reached at a predetermined temperature, and condensing them.

1,666,052. PHOTOGRAPHIC-PRINTING MACHINE. BENJAMIN D. CHAMBERLIN, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 10, 1924. Serial No. 756,347. 20 Claims. (Cl. 95—73.)



19. In a photographic printing machine, the combination with a frame having a printing panel therein, of brackets extending up from the frame, platen moving mechanism carried by the brackets, an electric lamp beneath the printing panel, a switch for the electric lamp mounted between the brackets, the brackets forming a housing for the switch, and means carried by the platen moving mechanism supported on the brackets for actuating the lamp switch.

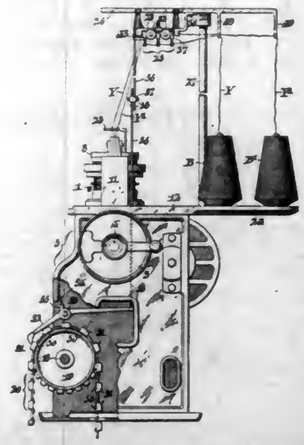
1,666,053. PHOTOGRAPHIC-PRINTING MACHINE. ALBERT K. CHAPMAN, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 15, 1924. Serial No. 756,124. 18 Claims. (Cl. 95—73.)



1. In a photographic printing machine, the combination with an apertured platen adapted to move to and from a printing panel to press printing paper and a negative together, of a printing stamp adapted to operate through the aperture in the platen and a spring carried by the platen and lying adjacent a side of the aperture in the platen for securing contact between the paper and negative adjacent the stamp.

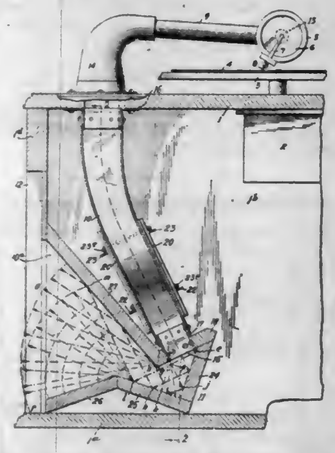
1,666,054. PORTABLE CABINET TALKING MACHINE. HEINRICH WILLEM KAREL DE BREY, The Hague, Netherlands. Filed June 14, 1926, Serial No. 116,024, and in the Netherlands June 18, 1925. 6 Claims. (Cl. 274—2.)

1. A portable phonograph machine comprising a motor and record support, a tone arm, and a casing for housing said support and tone arm, said casing including a lid mounted to move in and out of closed position covering said tone arm and support, means in the casing for supporting said tone arm in operative and inoperative positions, said motor and record being mounted in said casing to be displaced through an opening in a side wall of the casing, the casing providing a sound chamber when said motor casing is so displaced and said tone arm is in operative position and a second opening in the side wall of said casing to permit sounds to emanate from said sound chamber.



1,666,055. ROLL FOR CANE MILLS, CRUSHERS, AND THE LIKE. ALBERT DE LA HABA and ERASMO GARCIA, Ansonia, Conn. Filed Oct. 4, 1926. Serial No. 139,421. 17 Claims. (Cl. 100—47.)

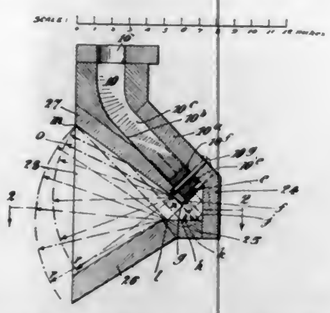
8. In an apparatus for treating sugar cane, a roll having a plurality of groups of relatively fine circumferential grooves forming ribs of relatively fine pitch, and circumferential grooves forming teeth of relatively coarse pitch between said groups, the bottoms of the fine grooves lying closer to the roll axis than the bottoms of the coarse grooves, and a mating roll having relatively fine and relatively coarse grooves to mate with those of the first named roll, the bottoms of the relatively fine grooves being at a greater distance from the roll axis than the bottoms of the coarse grooves.



1,666,056. REVERSE-PLAITING KNITTING MACHINE. CARL EPPS, Athens, Ga., assignor to Climax Hosiery Mills, Athens, Ga., a Corporation of Georgia. Filed June 3, 1924. Serial No. 717,466. 5 Claims. (Cl. 66—137.)

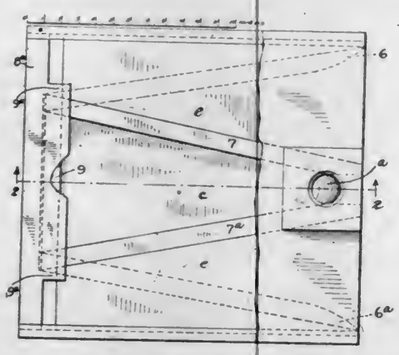
1. The combination in a knitting machine equipped with needles and actuating mechanism therefor, of automatically operative means effective to alternately tension and slack feeding yarns of different kinds to determine alternate appearance of one or another of said yarns on the face of the fabric; said means comprising a bearing bracket with spool-like friction members, individual guides independently swingable to vertically elevate the yarns respectively into and out of engagement with the friction

members, and pattern means controlling movement of said guides to vary the tension and slack feeding relation as between the yarns.



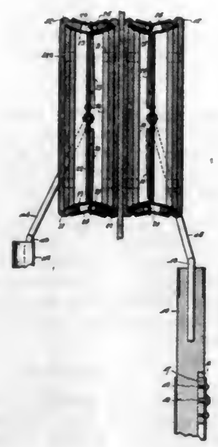
1,666,057. SOUND-PROJECTING APPARATUS. ELWOOD GRISSINGER, Buffalo, N. Y. Original application filed July 12, 1921, Serial No. 484,240. Divided and this application filed Aug. 18, 1923. Serial No. 658,007. 19 Claims. (Cl. 181—27.)

1. A phonograph cabinet having the usual record supporting and driving means and any known or desired reproducer and tone arm defining a slender air column in operative relation thereto, the vertical axis of the tone arm being located approximately in the central front-to-rear vertical plane of the cabinet and discharging downward, said cabinet being of substantially greater diameter than said record supporting and driving means in combination with a primary expansion conduit communicating directly with the slender part of the air column, said conduit expanding the waves to a relatively wide, thin beam and delivering said beam through a projector discharging through a side wall of the cabinet and having vertically diverging walls adapted to afford limited and



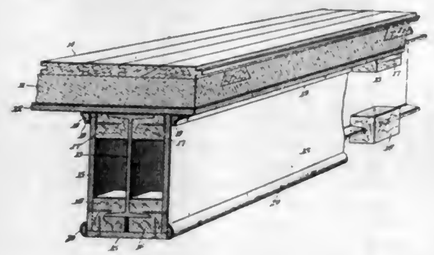
guided but rapid expansion of the wave front in the dimension in which the beam is thin, the mouth of said projector having a width approximating the width of said cabinet.

1,666,058. SOUND PROJECTOR. ELWOOD GRISSINGER, Buffalo, N. Y. Filed Dec. 11, 1923, Serial No. 679,911. Renewed Nov. 5, 1927. 31 Claims. (Cl. 181—27.)



1. A sound amplifying conduit for expanding the wave fronts of complex sound waves, said conduit being solidly constructed of thick, stiff, light material, and comprising a portion having walls arranged to permit guided and limited but rapid expansion of the wave front in one dimension along widely diverging lines and other walls nearly parallel with each other, arranged to guide said waves in the other dimension, thereby forming a thin sound beam with widely divergent flanks and a deeply curved wave front; and, as a continuation thereof, a projector portion having walls diverging at an angle permitting guided but rapid expansion of said beam in said second dimenson, one of said latter walls being integral with one of said nearly parallel walls and, in combination therewith one or more piers rigidly secured near the outlet of said nearly parallel walls.

1,666,059. SOUND PROJECTOR. ELWOOD GRISSINGER, Buffalo, N. Y. Filed Dec. 12, 1923. Serial No. 680,091. 15 Claims. (Cl. 181—27.)



1. A sound amplifying conduit for expanding the wave fronts of complex sound waves, said conduit being solidly constructed of thick, stiff material, and comprising walls arranged to permit wide expansion of the wave front in one dimension along widely diverging lines and other walls approximately parallel with each other, arranged to guide said waves in the other dimension, said conduit being curved in the direction of its thinness approximately midway of its length.

1,666,060. WINDOW CLEANER. KENJI HORIHATA, New York, N. Y. Filed Feb. 16, 1927. Serial No. 168,732. 1 Claim. (Cl. 15—232.)

In a window cleaner a cleaning head comprising a central plate having curved flanges on each side of said plate at the top and bottom, clamp plates for said flanges, a fabric sheet having its edge portions disposed between said flanges and said clamp plates and held in clamped position by said plates, and springs disposed adjacent to said flanged plate and connected to said clamp plates.

1,666,061. FLOOR CONSTRUCTION. THOMAS J. FOSTER, Ridgewood, N. J. Filed Apr. 22, 1926. Serial No. 103,800. 8 Claims. (Cl. 72—66.)

1. The substantially fire proof and sound proof floor construction comprising light weight steel beams spread at substantially uniform distances apart, floor supports of sheet-like insulating material extending in a substantially continuous layer over and between said beams, sheet-like insulating material encasing said beams and adjoining the underside of said floor supports, and a floor slab of cementitious material upon said floor supports to form a continuous floor.

Patents Nos. 1,666,062 to 1,666,883.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 369—No. 3. TUESDAY, APRIL 17, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Mar. 28, 1928.*

Spinks & McIlwain, their assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Edward P. Read, 1721 Lombard Street, Philadelphia, Pa., for registration of a trade-mark and trade-mark registered September 11, 1923, No. 172,502 to Spinks & McIlwain, 102 Washington Street, Selma, Ala., and a notice of such declaration sent by registered mail to said Spinks & McIlwain at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Spinks & McIlwain, their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, Mar. 30, 1928.*

Porter-Seitz Shoe Stores Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Edward J. Ramsey, 347 Rider Avenue, New York, N. Y., for registration of a trade-mark and trade-mark registered February 5, 1924, No. 179,325, to Porter-Seitz Shoe Stores Company, 208 Pittsburgh Life Building, Pittsburgh, Pa., and a notice of such declaration sent by registered mail to said Porter-Seitz Shoe Stores Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Porter-Seitz Shoe Stores Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Notice of Cancellation.

U. S. PATENT OFFICE, *Washington, Mar. 29, 1928.*

The Chillicothe Packing Company, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of John Morrell & Co., of Ottumwa, Iowa, to effect the cancellation of the trade-mark registration of The Chillicothe Packing Company, of Chillicothe, Ohio, No. 40,832, dated July 28, 1908, and the notice of such proceeding sent by registered mail to The Chillicothe Packing Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless The Chillicothe Packing Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,460,073, C. S. Oldroyd, Mining and quarrying machine, decided March 5, 1928, claim 91.

Pat. 1,460,077, C. S. Oldroyd, Mining machine, decided March 5, 1928, claim 37.

Pat. 1,598,174, Tarlton and Klems, Attachment for automobile brakes, decided February 29, 1928, claim 1.

Pat. 1,634,215, L. Rosenfeld, Bottle washing and sterilizing apparatus, decided March 29, 1928, claims 1 to 4, inclusive.

Final decisions in interferences have been rendered against the following trade-marks:

T. M. 69,619, Chocolate and cocoa, Staengel & Ziller, Unterturkheim, Germany. Registered June 23, 1908. Decided February 29, 1928.

T. M. 190,289, Hair nets and dress linings, Marshall Field & Company, Chicago, Ill. Registered March 17, 1925. Decided March 30, 1928.

T. M. 215,499, Fresh citrus fruits—namely, oranges, lemons, grapefruit—Ventura Citrus Association, Ventura, Calif. Registered July 20, 1926. Decided March 24, 1928.

Condition of Applications Under Examination at Close of Business April 6, 1928.

(Total number of applications awaiting action, excluding Trade-Mark Division, 99,210; Trade-Mark Division, 2,406. Oldest new case, July 1, 1927; oldest amended, June 29, 1927. The dates given are 1927 except where † indicates 1928.)

Room No.	Divisions, Examiners, and Subjects of Inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

DE JAHN *v.* GAUS AND WILD.

Decided May 7, 1926.

1. INTERFERENCE—BURDEN OF PROOF.

Where one of the parties to the interference files his application within the statutory period from the filing of a foreign application and makes specific reference in the oath of his application to said foreign application, *Held* that he should be given the benefit of the foreign date in determining the burden of proof if it appears from his certified copy of the foreign application that it was for the same invention as that in issue, whether that foreign application was filed in the name of the inventor or the assignee (*Kislovitz* v. *Rosenberg*, 284 O. G. 959 explained).

2. SAME—FOREIGN APPLICANT—TESTIMONY.

Where one of the parties refused to take testimony because, in his opinion, the burden of proof was improperly shifted in view of the foreign application of his opponent, *Held* that he is in no position to complain if such foreign applicant is allowed to take testimony in order to overcome objections raised.

3. SAME—SAME—SAME.

Testimony offered on behalf of the foreign joint applicants *Held* sufficient to show that they were in the employ of the company in whose name the foreign application was filed, that the invention was a joint one, and the foreign application had been filed with the inventor's consent.

[Decision affirmed by the Court of Appeals of the District of Columbia, 369 O. G. 488.]

APPEAL from Examiners in Chief.

Messrs. Briesen & Schrenk for De Jahn.

Messrs. Hauff & Warland for Gaus and Wild.

KINNAN, *First Assistant Commissioner:*

The party, De Jahn, appeals from the decision of the Examiners in Chief affirming the decision of the Examiner of Interferences awarding priority to Gaus and Wild.

The application of De Jahn was filed in this Office before the application of Gaus and Wild, and in setting up the interference the Primary Examiner made De Jahn the senior party. On motion, the Examiner of Interferences shifted the order of the parties, placing the burden of proof on De Jahn. This was done in view of the German patent referred to in the oath of the United States application of Gaus and Wild, and of which a certified copy was filed and in view of the Nolan Act, the benefit of which was claimed by Gaus and Wild. It appears that this German application was filed on July 2, 1915, which is prior to the filing date of De Jahn. This application was numbered B 79,781, which was the number of the application as specified in the oath to the Gaus and Wild United States application.

One of the contentions raised below was that the oath in the application of Gaus and Wild was not valid because executed before a Spanish consul. This, however, as pointed out by the lower tribunals, was cured by the express provisions of section 5 of the Act of March 3, 1921, 41 Stat. L. 1313, usually known as the Nolan Act.

After the burden of proof was shifted De Jahn took no testimony. Thereafter Gaus and Wild were given permission to take testimony in Germany to prove that they were the inventors of the invention of the German application and that it was filed by their legal representative. De Jahn vigorously protested against permission being given to take this testimony, but his protest was, and it is deemed properly, overruled. The interrogatories were transmitted in the regular way and the answers thereto filed in this Office.

[1] The shifting of the burden of proof was in accordance with the practice of this Office as announced in *Steel and Steel* v. *Myers*, 205 O. G. 1021. The statement in *Kislovitz* v. *Rosenberg*, 284 O. G. 959, as to what was held in the *Steel and Steel* v. *Myers* case is deemed to have been in error, in so far as it stated that that decision held that if the foreign application was filed in the name of another than the United States applicant the benefit of the foreign application could be given to the United States applicant only upon stipulation of the parties or upon proofs. It was not necessary in the Kislovitz case to pass on this question, since the United States application of Rosenberg and the English application were both filed in Rosenberg's name, and, as stated above, the statement in this respect as to the holding in *Steel and Steel* v. *Myers* is believed to have been erroneous.

A careful reading of that decision shows that it was intended to hold that where a foreign inventor who filed his United States application within the statutory period made specific reference in the oath thereof to his foreign application he should be given the benefit of the foreign date in determining the burden of proof if it appeared from a certified copy of the foreign application that it was for the same invention. This is shown not only by the language of the decision itself, but by the fact that the Commissioner referred to two prior decisions of the Office, in one of which—namely, *Greenbaum* v. *Barker and Jeapes*, 98 MS. Dec. 425—it appears that the foreign application was filed in the name of the assignee.

[2] Having declined to take testimony because of his opinion that the burden of proof was improperly shifted, it is not seen what right De Jahn has to complain if thereafter, in order to overcome various possibilities suggested by him, testimony was allowed to be taken on behalf of Gaus and Wild.

[3] That testimony is clearly to the effect that Gaus and Wild were employees of the company in whose name the German application was filed, that under their contract with that company inventions made during the term of their employment belonged to it, that the invention was a joint one made by the parties Gaus and Wild, and the German application was filed with their knowledge and consent.

Under the decisions cited by the lower tribunals the testimony of these inventors is certainly sufficient to establish their joint inventorship in the absence of any testimony in rebuttal thereof. Their

testimony as to joint inventorship can not be overthrown by speculations as to what might have been done or what might have been the reasons for filing the application in the way in which it was done. If De Jahn was of the opinion that the testimony of these parties was not true, he had his right of cross-examination, of which he availed himself by filing cross-interrogatories, and he had the further right to have taken rebuttal testimony, which he did not do.

It may be noted that the question of the burden of proof in such cases was considered by the court of appeals in the recent case of *Kling* v. *Haring*, 345 O. G. 5, 56 App. D. C. 153, 11 F. (2d) 202. In that case it appears that Haring had been made the senior party by virtue of his German application, the benefit of which he had been given under the Nolan Act, and that thereafter Kling moved to shift the burden of proof to Haring on the ground that the Haring German patent had been allowed to lapse. In that case the court said:

> The burden of proving that Haring was not the prior inventor was on Kling, and Kling's motion to shift that burden to Haring was therefore properly denied. Kling having failed to introduce any evidence whatever showing or tending to show that Haring was not the prior inventor, the award of priority to Haring, the senior party, was correct and cannot be disturbed.

In that decision, as in this, the German application was not filed in Kling's name, but in that of his assignee. In that case the German application was identified by a patent number, which corresponds to the number of the patent granted on the German application, of which the certified copy was introduced. In the present case Gaus and Wild identified their German application by its serial number, which corresponds to the serial number of the application, the certified copy of which was introduced in evidence.

While the question of the necessity of proving that the German application was filed with the knowledge and consent of the inventor was not referred to in the court's decision, it was raised in the interference proceedings and was specifically ruled upon by the Examiner of Interferences. As the entire record of the case was before the court, it was presumed that they had this point in mind.

It is held, therefore, that the burden of proof was properly shifted and Gaus and Wild made the senior party, that testimony was properly permitted to be taken on behalf of Gaus and Wild, and that testimony fully complies with the rulings of this Office prior to and in the decision in *Steel and Steel* v. *Myers*, supra, that therefore, in view of the provisions of the Nolan Act, Gaus and Wild are entitled to the benefit of the filing date of the German application, which corresponds to the United States application directly involved herein, and that since De Jahn took no testimony to establish any date earlier than the filing of his United States application, which was subsequent to the date of the German application filed on behalf of Gaus and Wild, priority was properly awarded to Gaus and Wild.

The decision of the Examiners in Chief is affirmed.

Court of Appeals of the District of Columbia.

DE JAHN *v.* GAUS AND WILD.

No. 1,991. Decided December 5, 1927.

INTERFERENCE—PRIORITY.

The foreign joint applicants *Held* properly made senior party by virtue of their foreign application, which the record shows was filed by the assignee with their knowledge and consent and within the time fixed by the Nolan Act.

[For Commissioner's decision see 369 O. G. 487.]

APPEAL from the Commissioner of Patents. Affirmed.

Mr. Hans v. Briesen and *Mr. Conway P. Coe* for De Jahn.

Mr. Wm. E. Warland for Gaus et al.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

MARTIN, *C. J.:*

An appeal in an interference proceeding.

The invention in question is a process of manufacturing nitrogen-hydrogen mixtures suitable for the synthetic production of ammonia. The issue is defined in three counts of which count 3 is copied for illustration:

> 3. The process of manufacturing nitrogen-hydrogen mixtures suitable for the synthetic production of ammonia by subjecting to catalytic decomposition with steam mixed gas generated in a water-gas producer by simultaneously employing preheated steam and suitably controlled quantities of air, said mixed gas having such composition that by the subsequent removal of carbon dioxid and of impurities, a gas mixture of the composition required for the production of ammonia is obtained.

De Jahn filed his application on November 3, 1917, and inasmuch as he took no testimony he is restricted to that date for both conception and reduction to practice. Gaus and Wild filed their application in the United States Patent Office on July 9, 1920, but relied for conception and constructive reduction to practice upon an application filed in Germany on July 2, 1915, which was filed by the Badische Anilin and Soda Fabrik with their consent and as their assignee. According to the respective filing dates in this country De Jahn would be the senior party, and the burden of proof would rest upon Gaus and Wild. The latter parties however filed a motion to shift the burden of proof relying upon the date of the earlier application filed in Germany, which was prior to De John's filing date. The motion was granted over the objection of De Jahn, and the burden of proof was imposed upon him as the junior party. De Jahn took no testimony, and therefore failed to discharge this burden, and priority was awarded to Gaus and Wild. An appeal was taken by De Jahn to the Examiners in Chief, who affirmed the decision of the Examiner of Interferences. The decision of the Board was affirmed upon appeal by the Commissioner of Patents; whereupon the present appeal was taken.

The controlling question in the case is whether the Examiner of Interferences was right in imposing the burden of proof upon De Jahn. We think the ruling was right. The record discloses by lawful evidence that Gaus and Wild were joint inventors of the process in question; that by their authority the German application was filed by the Badische Anilin and Soda Fabrik on July 2, 1915, and that their joint application when filed in this country was entitled to the rights defined by section 4887, Revised Statutes, and the Nolan Act (41 Stat. 1313). It appears that this application was verified in Germany by Gaus and Wild on June 11, 1920, before a Royal Spanish consul charged with the protection of American interests. Such an oath is valid under the provisions of section 5 of the Nolan Act.

The questions herein involved are discussed with great clearness, and with full citation of authorities, in the opinions written by the tribunals of the Patent Office, and it is unnecessary for us to do more than refer to them with the approval of the court. The decision appealed from is affirmed.

Court of Appeals of the District of Columbia.

SCHOCK INDEPENDENT OIL COMPANY *v.* SINCLAIR REFINING COMPANY.

No. 2,026. Decided February 6, 1928.

1. TRADE-MARKS—SIMILARITY.

The word "Sico," as a trade-mark for petroleum products, *Held* deceptively similar to the word "Sinco," as applied to the same goods.

2. SAME—ABANDONMENT.

That a mark which had been used both in domestic and foreign commerce was subsequently used only in foreign commerce does not establish abandonment of the mark.

APPEAL from Patent Office. Affirmed.

Mr. A. M. Houghton and *Mr. A. R. Henry* for Schock Independent Oil Company.

Mr. E. S. Rogers, Mr. T. L. Mead, jr., and *Mr. N. J. Jewett* for Sinclair Refining Company.

By stipulation of counsel this case was heard before two members of the court, ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.:*

Appeal from concurrent decisions of the Patent Office tribunals in a trade-mark opposition proceeding, in which the opposition was sustained and registration of the word "Sico" as a trade-mark for petroleum products was refused appellant.

In 1916 the appellee, the Sinclair Refining Company, adopted the word "Sinco" as a trade-mark for petroleum products, and in 1919 it secured registration of this mark. From the time of its adoption until about 1922 the mark was continuously used by appellee in both domestic and foreign commerce. Since 1922 the use of the mark has been confined to shipments in foreign commerce. Officials of the Sinclair Company denied any intent to abandon the mark.

The adoption in 1921 of the word "Sico" by appellant was with full knowledge of the adoption and use by appellee of the word "Sinco" upon the same class of goods. See *Guggenheim* v. *Cantrell & Cochrane*, 352 O. G. 533, 56 App. D. C., 10 F. (2d) 895. Appellant contends, first, that there is not such a similarity in the marks as to be likely to cause confusion and mistake in the minds of the public, or to deceive purchasers; and, second, that appellee has abandoned its mark.

[1, 2] As to the first ground, we think it apparent that the two marks are similar in appearance and sound and that their concurrent use on the same class of goods would be likely to result in confusion. As to the second ground, there is no evidence warranting a finding of abandonment. See *Saxlehner* v. *Eisner & Mendelson Co.*, 93 O. G. 947, 179 U. S. 19; *Baglin* v. *Cusenier Co.*, 169 O. G. 449, 221 U. S. 580. The mere fact that the Sinclair Company is not now using the mark in domestic commerce certainly does not establish such an intent. The decision is affirmed.

Affirmed.

Patent Suits.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

889,864, C. H. Loew, Mechanism for rinsing, spraying, and brushing bottles, C. C. A., 7th Cir., Dec. 3917, *G. J. Meyer Mfg. Co. et al.* v. *Miller Mfg. Co.* Decree affirmed Feb. 23, 1928.

TRADE-MARKS

OFFICIAL GAZETTE, APRIL 17, 1928.

[VOL. 369. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1.

Raw or Partly-Prepared Materials.

Ser. No. 258,156. W. NORMAN WILLIS, Louisville, Ky. Filed Nov. 28. 1927.

Particular description of goods.—Coal.
Claims use since Feb. 15, 1927.

Ser. No. 258,417. LEAVELL COAL COMPANY, Tulsa, Okla. Filed Dec. 3, 1927.

The words "That Good Coal" and "Coal" are disclaimed.
Particular description of goods.—Coal.
Claims use since about Jan. 1, 1921.

CLASS 2.

Receptacles.

Ser. No. 259,932. UNION BAG & PAPER CORPORATION, New York, N. Y. Filed Jan. 10, 1928.

Exclusive right to the words "Self Opening," "Paper Bags," and "Kraft" and the representation of a bag are disclaimed apart from the other features on the mark. The drawing is lined to denote red color.
Particular description of goods.—Paper Bags.
Claims use since 1872.

Ser. No. 261,183. FEDERAL CONTAINER COMPANY, Philadelphia, Pa. Filed Feb. 4, 1928.

TUF-FIR

Particular description of goods.—Boxes and Shipping Cases of Fibrous Material.
Claims use since on or about Jan. 5, 1928.

CLASS 4.

Abrasive, Detergent, and Polishing Materials.

Ser. No. 245,124. WEST COAST SOAP COMPANY, Oakland, Calif. Filed Mar. 2, 1927.

Lemoco

The drawing is lined for the color yellow.
Particular description of goods.—Soap.
Claims use since Nov. 1, 1924.

Ser. No. 253,906. THE PALMOLIVE-PEET COMPANY, Chicago, Ill. Filed Aug. 24, 1927.

The representation of the carton and all wording appearing in the drawing except the word "Palmolive" in each instance and the name of the applicant are claimed only to the extent that the same are a component part of the trade-mark as a whole, and such wording is disclaimed apart from the mark as shown.
Particular description of goods.—Saponaceous Shaving Cream.
Claims use since January, 1900.

Ser. No. 260,962. I. ROKEACH & SONS, INC., Brooklyn, N. Y. Filed Jan. 31, 1928.

The translation of the Hebrew words appearing in the drawing are "Rokeach's Kosher Brooklyn, New York," and the slogan is "Keep your kitchen clean and kosher." No claim is made to the representation of the outline of a carton, the words "Kosher" and "Brooklyn, New York" and "Keep your kitchen clean and kosher."
Particular description of goods.—Soap.
Claims use since May 4, 1922.

Ser. No. 261,180. E. I. DU PONT DE NEMOURS AND COMPANY, Wilmington, Del. Filed Feb. 4, 1928.

DUPONT
DUCO
7
POLISH

All wording with the exception of the words "Duco" superimposed upon the Du Pont oval, "Dupont," and the numeral "7" is disclaimed apart from the mark shown in the drawing.
Particular description of goods.—Polishes Acting as Dirt and Grease Removers and Cleaning Materials.
Claims use since Jan. 13, 1925.

Ser. No. 261,181. J. EAVENSON & SONS, INCORPORATED, Philadelphia, Pa. Filed Feb. 4, 1928.

EVON

Particular description of goods.—Soap.
Claims use since Dec. 28, 1927.

CLASS 5.

Adhesives.

Ser. No. 249,232. MILLER CEREAL MILLS, Omaha, Nebr. Filed May 19, 1927.

PASTICK
DRY PASTE

No claim is made to the words "Dry Paste" apart from the mark as shown.
Particular description of goods.—Dry Paste (a Flour Adapted to Form an Adhesive by Admixture with Cold Water).
Claims use since Mar. 23, 1926.

Ser. No. 261,626. THE B. F. GOODRICH COMPANY, New York, N. Y. Filed Feb. 13, 1928.

Plastikon

Particular description of goods.—Adhesives Containing Rubber as the Principal Ingredient.
Claims use since about Jan. 10, 1928.

Ser. No. 262,593. R. E. BURTON & SON, North Weymouth, Mass. Filed Mar. 5, 1928.

Rubberette

Particular description of goods.—Auto Top-Patching Cement.
Claims use since February, 1927.

CLASS 6.

Chemicals, Medicines, and Pharmaceutical Preparations.

Ser. No. 239,604. THE SOUTHERN MANUFACTURING CO., Richmond, Va. Filed Nov. 2, 1926.

NEW NEW
GOOD LUCK
BAKING POWDER

The words "Baking Powder" appearing in the drawing are hereby disclaimed.
Particular description of goods.—Baking Powder.
Claims use since Jan. 24, 1880.

Ser. No. 243,131. BOURJOIS, INC., New York, N. Y. Filed Jan. 21, 1927.

MON PARFUM

Particular description of goods.—Perfume, Toilet Water, Face Powder, Bath Powder, Talcum Powder, Toilet Cream, and Brilliantine.
Claims use since 1914.

Ser. No. 243,692. J. DOAK AND COMPANY, Philadelphia, Pa. Filed Feb. 2, 1927.

Diasporal

Particular description of goods.—Intravenous and Intramuscular Injections for the Treatment of Anæmia, Arthritis, Cancer, Goitre, Lues, Malignant Growths, Pleurisy, Sciatica, Skin Diseases, and Syphilis; Ointments and Lotions for the Treatment of Diseases of the Skin.
Claims use since January, 1926.

Ser. No. 243,889. SCHNEIDER SISTERS COMPANY, Chicago, Ill. Filed Feb. 5, 1927.

Schneider Sisters

The use of the words "Schneider Sisters" is disclaimed apart from the mark shown in the drawing.

Particular description of goods.—Face Cream, Massage Cream, Vanishing Cream, Complexion Powder, Hair Stain, Cream Lotion, and Hair Tonic.

Claims use since about 1892 on face cream, and since 1907 on other products.

Ser. No. 246,137. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed Mar. 21, 1927.

Salicionyl

Particular description of goods.—Effervescent Salt for the Treatment of Rheumatism.

Claims use since June 22, 1926.

Ser. No. 250,246. HILDA LEVEEN, doing business as Trinity Pharmacal Co., Boston, Mass. Filed June 9, 1927.

Boralin

Particular description of goods.—Ointments Used in the Treatment of Cold Sores, Chapped Hands and Lips, Skin Eruptions, Pimples and Blackheads, Ivy Poisoning, Burns and Scalds, Sunburn, Scratches, Cuts, and Wounds, and in the Treatment of Dry, Rough, Chapped and Reddened (Specifically Infants) Skin, and the Mucous Membrane.

Claims use since July, 1925.

Ser. No. 251,588. HELENA J. TITUS, doing business as Madame Helena Rubenstein, New York, N. Y. Filed July 6, 1927.

REDCARDINAL

The words "Red Cardinal" are disclaimed apart from the mark as shown on the drawing.

Particular description of goods.—Rouges and Lip Sticks.

Claims use since Dec. 1, 1925.

Ser. No. 251,589. HELENA J. TITUS, doing business as Madame Helena Rubenstein, New York, N. Y. Filed July 6, 1927.

RED CARNATION

The words "Red Carnation" are disclaimed apart from the mark shown on the drawing.

Particular description of goods.—Rouges and Lip Sticks.

Claims use since Dec. 1, 1925.

Ser. No. 251,590. HELENA J. TITUS, doing business as Madame Helena Rubenstein, New York, N. Y. Filed July 6, 1927.

RED RUBY

The words "Red Ruby" are disclaimed apart from the mark shown on the drawing.

Particular description of goods.—Rouges and Lip Sticks.

Claims use since Dec. 1, 1925.

Ser. No. 253,570. BUFFALO ELECTRO-CHEMICAL CO., INC., Tonawanda, N. Y. Filed Aug. 17, 1927.

BECO

The trade-mark is ordinarily printed in contrasting colors, the letters in black and the head and jagged line in red, but the mark is not restricted as to color.

Particular description of goods.—Hydrogen Peroxide.

Claims use since Apr. 20, 1926.

Ser. No. 254,008. CAGGIE PEDRICK, doing business as The Pedrick Laboratories, Inc., Tulsa, Okla. Filed Aug. 26, 1927.

ANTI SCRATCH

The term "Anti Scratch" is disclaimed apart from the mark as shown in the drawing.

Particular description of goods.—Specific for Skin Diseases of Dogs.

Claims use since Aug. 1, 1927.

Ser. No. 255,540. EDWARD E. SPITZ, Boston, Mass. Filed Oct. 1, 1927.

PUT YOUR SKIN LACTAY VÉGÉTAL ON A MILK DIET

The words "Put Your Skin on a Milk Diet" and "Végétal" are disclaimed apart from the mark as shown on the drawing.

Particular description of goods.—Face Lotions, Cold Cream, Massage Cream, Vanishing Cream, Toilet Powder, Dusting Powder, Face Powder, and Talcum Powder, and Compacts.

Claims use since Apr. 15, 1927.

Ser. No. 256,731. ISAAC D. LEVINSON, Detroit, Mich. Filed Oct. 28, 1927.

S-T-37

Particular description of goods.—Compound for the Treatment of Rheumatism of the Joints and Muscles, Subacute or Chronic Lumbago, Gout, Neuralgia, and Pains of Rheumatic Nature.

Claims use since Aug. 1, 1922.

Ser. No. 257,147. COCKBURN & CO. LTD., Glasgow, Scotland. Filed Nov. 7, 1927.

"Little Victor"

Particular description of goods.—Medicated Inhaler for Treatment of Diseases of the Respiratory Organs.
Claims use since 1911.

Ser. No. 258,529. E. R. MANSFIELD CO., doing business as Adele Millar, Los Angeles, Calif. Filed Dec. 6, 1927.

Adele Millar

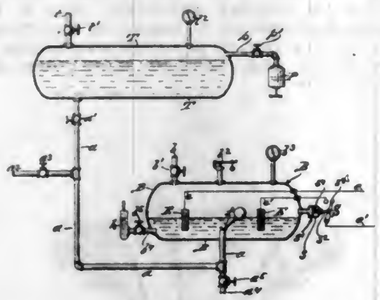
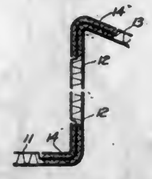
REISSUES

APRIL 17, 1928.



16,934. BAG-FILLING MACHINE. ANTONY WERTENBRUCH, Detroit, Mich., assignor to Larrowe Milling Company, Detroit, Mich., a Corporation of Ohio. Filed Dec. 5, 1927. Serial No. 237,962. Original No. 1,616,016, dated Feb. 1, 1927, Serial No. 67,984, filed Nov. 9, 1925. 9 Claims. (Cl. 226—55.)

6. The combination with means for discharging material into the mouth of a container, of a support for the bottom and one side of the container comprising a platform and a vertically extending wall mounted on said platform, said platform adapted to be mounted on a frame comprising a pair of horizontally extending parallel bars, and means for imparting an oscillatory movement to said frame in a vertical plane and in a direction to press the wall against said container on reversal from downward to upward movement of the platform.

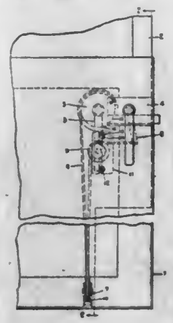


9. The combination with means for discharging material into the mouth of a receptacle, of a support for said receptacle, means for imparting to said support a gyratory movement in a vertical plane and in a direction to press the material by its inertia against one side of said receptacle during and subsequent to reversal from downward to upward movement of said support.

16,935. ELECTRICAL STEAM GENERATION. THEOBALD H. NOLL, Bronx, N. Y., assignor to Andrew J. Dispenza. Filed May 10, 1927. Serial No. 190,849. Original No. 1,539,692, dated May 26, 1925, filed Aug. 31, 1923, Serial No. 660,287. 16 Claims. (Cl. 219—40.)

1. In electrical steam heating apparatus of the character designated, the combination of a liquid reservoir tank, means for injecting air under pressure thereinto, a boiler connected with said reservoir tank by means which admit of the transfer of liquid from said tank to said boiler, electrodes positioned in said boiler and connected with an electric circuit, and an exit service steam conduit connected with said boiler, substantially in the manner and for the purpose set forth.

16,936. BOX CONSTRUCTION. CARL R. SHAFER, Detroit, Mich., assignor to Box Patents Corporation, Bordentown, N. J., a Corporation of New Jersey. Filed May 21, 1926. Serial No. 110,827. Original No. 1,417,776, dated May 30, 1922, Serial No. 413,182, filed Sept. 27, 1920. 4 Claims. (Cl. 229—49.)

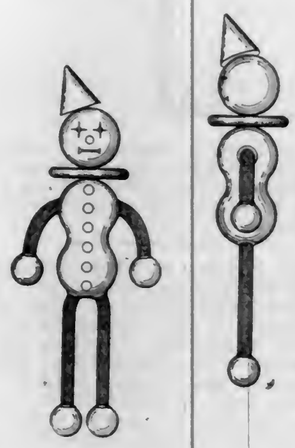


1. As a new article of manufacture, a container having walls made of cellular material having an inset cellular reinforcement, the installation of which changes the original shape of the cells of the reinforcement and of the material.

16,937. FUEL FOR USE IN INTERNAL-COMBUSTION ENGINES. SAMUEL ISERMAN, Summit, N. J., and WALDEMAR VERNET and EDMUND QUINCY MOSES, New York, N. Y., assignors, by mesne assignments, to Frank J. Hall and L. B. Rattermann, Cincinnati, Ohio. Filed Mar. 10, 1928. Serial No. 260,800. Original No. 1,654,259, dated Dec. 27, 1927, Serial No. 727,426, filed July 22, 1924. 11 Claims. (Cl. 44—9.)

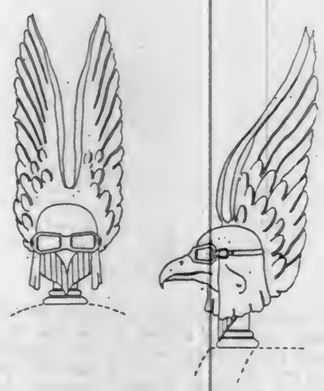
1. A fuel ingredient for removing carbon from the cylinders of internal combustion engines, said ingredients containing 1.4 ditoluido anthraquinone as a coloring matter.

16,938. OPERATING MEANS FOR AUTOMOBILE-DOOR LATCHES. FREDERICK KLEINSMITH, Indianapolis, Ind., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 15, 1925. Serial No. 30,601. Original No. 1,484,031, dated Feb. 19, 1924, Serial No. 526,188, filed Dec. 31, 1921. Renewed Oct. 19, 1923. 11 Claims. (Cl. 296—48.)



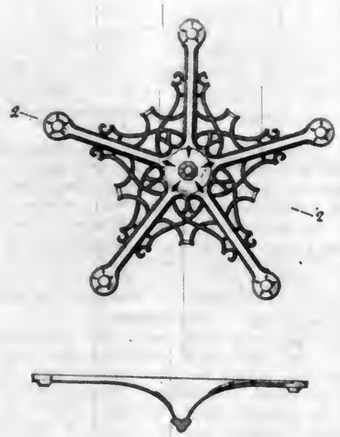
1. The combination with an automobile door having a sliding panel therein, of a latch at one side of the path of the panel, an operating handle at the opposite side of the path of said panel, a sheave in the lower portion of said door, and a flexible member extending from said handle to said latch and beneath said sheave for removing the flexible member from the path of the panel.

DESIGNS



APRIL 17, 1928.

74,911. DOLL. EDWIN V. BABBITT, Fairhaven, Mass. Filed Jan. 12, 1926. Serial No. 16,029. Term of patent 14 years.

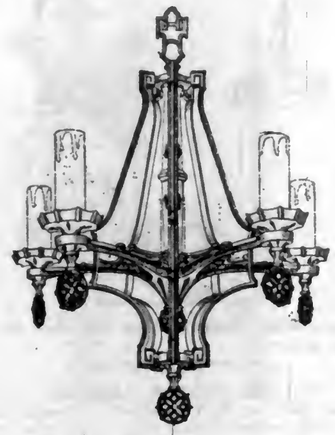


The ornamental design for a doll substantially as shown.

74,912. RADIATOR CAP. LENORE BOATRIGHT, Sausalito, Calif. Filed Aug. 18, 1927. Serial No. 23,139. Term of patent 3½ years.

The ornamental design for a radiator cap as shown.

74,913. BODY FRAME FOR LIGHTING FIXTURES OR SIMILAR ARTICLES. JOHN A. BOEHRINGER, Springfield, N. Y., assignor to Star Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 24, 1928. Serial No. 25,011. Term of patent 3½ years.

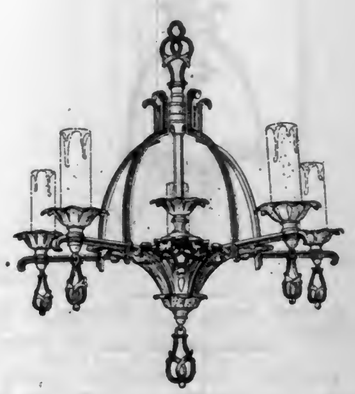


The ornamental design for a body frame for lighting fixtures or similar articles, as shown.

74,914. CANOPY FOR ELECTRIC-LIGHTING FIXTURES OR SIMILAR ARTICLES. JOHN A. BOEHRINGER, Springfield, N. Y., assignor to Star Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 24, 1928. Serial No. 25,012. Term of patent 3½ years.

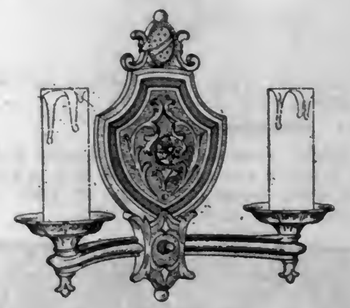
The ornamental design for a canopy for electric lighting fixtures or similar articles, as shown.

74,915. CHANDELIER OR SIMILAR ARTICLE. JOHN A. BOEHRINGER, Springfield, N. Y., assignor to Star Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 24, 1928. Serial No. 25,013. Term of patent 3½ years.



The ornamental design for a chandelier or similar article, as shown.

74,916. ELECTRIC WALL-BRACKET PLATE OR SIMILAR ARTICLE. JOHN A. BOEHRINGER, Springfield, N. Y., assignor to Star Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 31, 1928. Serial No. 25,092. Term of patent 3½ years.



The ornamental design for an electric wall bracket plate or similar article, as shown.

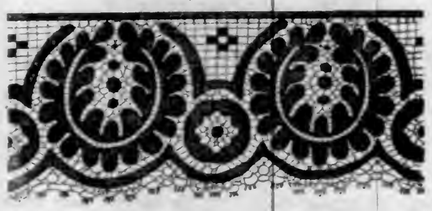
74,917. CHANDELIER OR SIMILAR ARTICLE. JOHN A. BOEHRINGER, Springfield, N. Y., assignor to Star Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 31, 1928. Serial No. 25,093. Term of patent 3½ years.

The ornamental design for a chandelier or similar article as shown.

74,918. ELECTRIC WALL-BRACKET PLATE OR SIMILAR ARTICLE. JOHN A. BOEHRINGER, Springfield, N. Y., assignor to Star Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 31, 1928. Serial No. 25,094. Term of patent 3½ years.

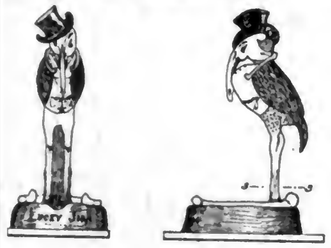
The ornamental design for an electric wall bracket plate or similar article, as shown.

74,919. CHANDELIER OR SIMILAR ARTICLE. JOHN A. BOEHRINGER, Springfield, N. Y., assignor to Star Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 31, 1928. Serial No. 25,095. Term of patent 3½ years.



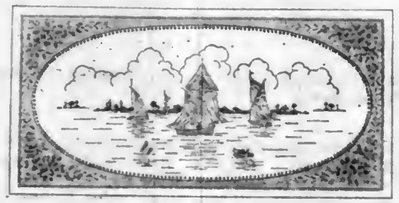
The ornamental design for a chandelier or similar article, as shown.

74,920. ELECTRIC WALL-BRACKET PLATE OR SIMILAR ARTICLE. JOHN A. BOEHRINGER, Springfield, N. Y., assignor to Star Chandelier Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 31, 1928. Serial No. 25,096. Term of patent 3½ years.



The ornamental design for an electric wall bracket plate or similar article, as shown.

74,921. LACE. ALPHONSE M. DODD, Warwick, R. I., assignor to Phenix Lace Mills, Phenix, R. I., a Corporation of Rhode Island. Filed Mar. 17, 1927. Serial No. 21,173. Term of patent 3½ years.

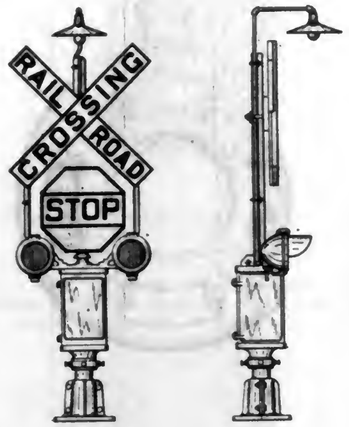


The ornamental design for lace, substantially as shown.

74,922. ASH TRAY OR SIMILAR ARTICLE. DORIS M. EATON, Springfield, Mass. Filed Jan. 18, 1928. Serial No. 24,911. Term of patent 7 years.

The ornamental design for an ash tray or similar article, as shown.

74,923. RUG OR SIMILAR ARTICLE. OSCAR W. FAUSER, Bellerose, N. Y., assignor to Congoleum-Nairn, Inc., a Corporation of New York. Filed Nov. 19, 1927. Serial No. 24,207. Term of patent 7 years.

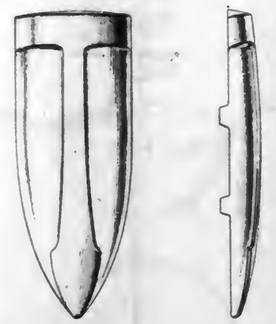


The ornamental design for a rug or similar article, substantially as shown.

74,924. COMBINED SALT AND PEPPER SHAKER. ALFRED J. FLAUDER, Bridgeport, Conn., assignor to The Weidlich Bros. Mfg. Co., Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 2, 1927. Serial No. 20,937. Term of patent 7 years.

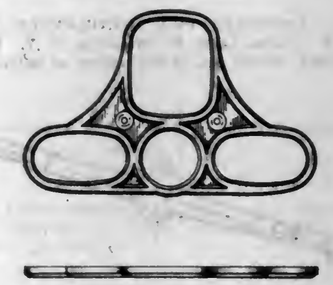
The ornamental design for a combined salt and pepper shaker substantially as shown.

74,925. TRAFFIC SIGNAL. FRANK W. GRISWOLD, Minneapolis, Minn. Filed Nov. 4, 1927. Serial No. 24,008. Term of patent 14 years.



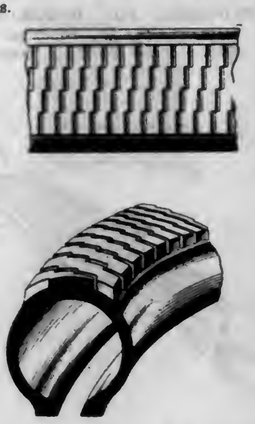
The ornamental design for a traffic signal, as shown.

74,926. FINGER RING OR ARTICLE OF SIMILAR NATURE. BENJAMIN GROSS, New York, N. Y., assignor to Benjamin & Edward J. Gross Co. Inc., New York, N. Y. Filed July 30, 1927. Serial No. 22,961. Term of patent 3½ years.



The ornamental design for a finger ring or article of similar nature, as shown.

74,927. CLAMP PLATE. HERBERT S. JANDUS and NORMAN VAN HUSEN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Dec. 23, 1927. Serial No. 24,614. Term of patent 14 years.

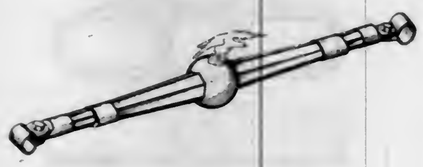


The ornamental design for a clamp plate substantially as shown.

74,928. SIGNAL FACEPLATE. ALLAN ROLAND PYE JOHNSON, Toronto, Ontario, Canada. Filed Aug. 12, 1927. Serial No. 23,074. Term of patent 7 years.

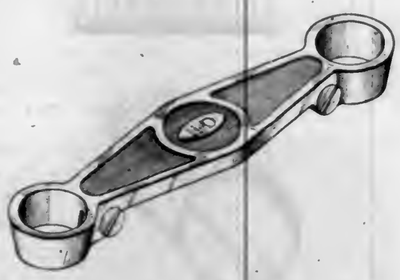
The ornamental design for a signal face plate, as shown.

74,929. TIRE. ROBERT H. KEATON, San Francisco, Calif. Filed July 25, 1927. Serial No. 22,858. Term of patent 14 years.



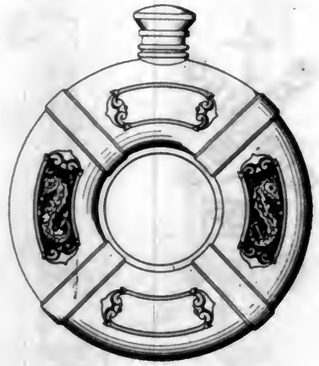
The ornamental design for a tire, substantially as shown.

74,930. LAMP STAND. IRWIN H. KRAVITT, Philadelphia, Pa. Filed Apr. 30, 1927. Serial No. 21,799. Term of patent 14 years.



The ornamental design for a lamp stand as shown.

74,931. CROSSBAR FOR MOTOR-CYCLE HANDLEBARS. JAMES LAKE, Jr., Brooklyn, N. Y. Filed Jan. 18, 1928. Serial No. No. 24,914. Term of patent 7 years.

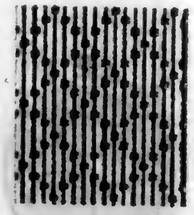


The ornamental design for a crossbar for motorcycle handlebars substantially as shown.

74,932. STABILIZER FOR MOTOR-CYCLE FRONT FORKS. JAMES LAKE, Jr., Brooklyn, N. Y. Filed Jan. 18, 1928. Serial 24,915. Term of patent 7 years.

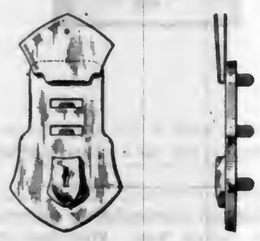
The ornamental design for a stabilizer for motor-cycle front forks substantially as shown.

74,933. FLASK. FREDERICK W. LAUER, Chicago, Ill. Filed Jan. 27, 1928. Serial No. 25,055. Term of patent 14 years.



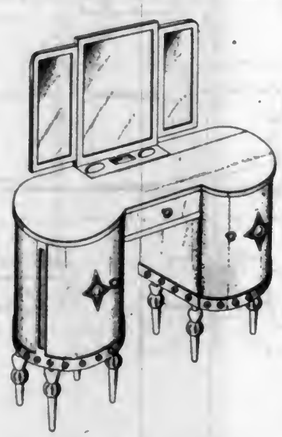
The ornamental design for a flask, as shown.

74,934. COMBINED DISPLAY STAND AND CASE. SAMUEL B. LAVICK, Chicago, Ill. Filed May 23, 1927. Serial No. 22,134. Term of patent 7 years.



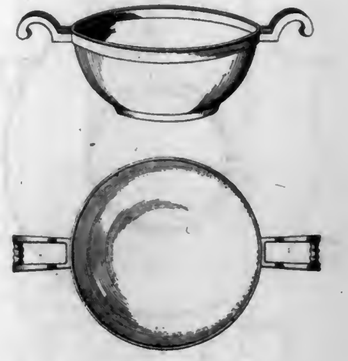
The ornamental design for a combined display stand and case, as shown.

74,935. PILE FABRIC. JOHN LEIPER, New York Mills, N. Y., assignor to New York Mills Corporation, New York Mills, N. Y., a Corporation of New York. Filed May 25, 1926. Serial No. 17,845. Term of patent 7 years.



The ornamental design for a pile fabric as shown.

74,936. LOCK FRAME OR SIMILAR ARTICLE. MITCHELL LEVENTHAL, Brooklyn, N. Y. Filed Sept. 14, 1927. Serial No. 23,409. Term of patent 7 years.

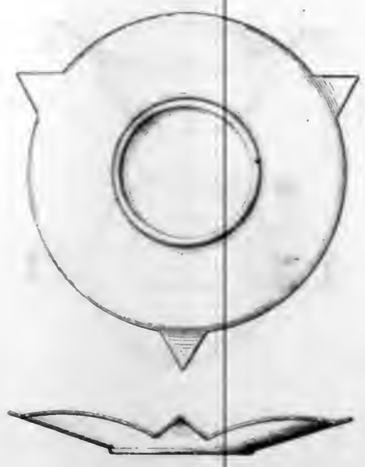


The ornamental design for a lock frame or similar article as shown.

74,937. COMBINATION DESK AND DRESSING TABLE. GEORGE MAIER, Evansville, Ind. Filed Dec. 31, 1927. Serial No. 24,724. Term of patent 14 years.

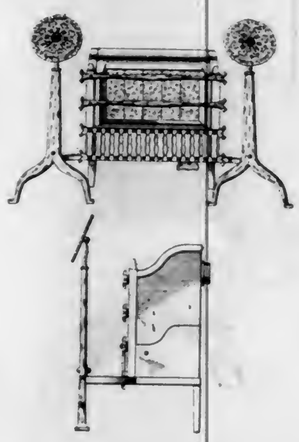
The ornamental design for a combination desk and dressing table, as shown.

74,938. CITRUS-FRUIT SERVING DISH. REGINA MANN, New London, Conn. Filed Oct. 19, 1927. Serial No. 23,798. Term of patent 3½ years.



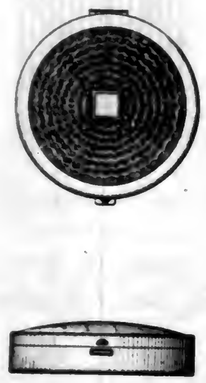
The ornamental design for a citrus fruit serving dish as shown.

74,939. FLAG STAND. IDA K. MARTIN, Minneapolis, Minn. Filed Jan. 16, 1928. Serial No. 24,894. Term of patent 14 years.



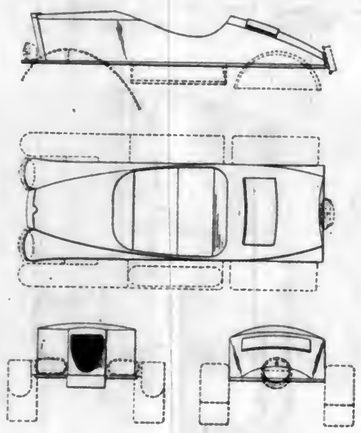
The ornamental design for a flag stand, as shown.

74,940. SANDWICH TRAY OR SIMILAR ARTICLE. ROBERT E. MCELDOWNEY, New Martinsville, W. Va., assignor to New Martinsville Glass Mfg. Co., New Martinsville, W. Va., a Corporation of West Virginia. Filed Feb. 8, 1928. Serial No. 25,265. Term of patent 3½ years.



The ornamental design for a sandwich tray or similar article, as shown.

74,941. HEATER. ANTHONY A. NIEBERDING, Brookpark, Ohio. Filed Jan. 26, 1927. Serial No. 20,510. Term of patent 7 years.

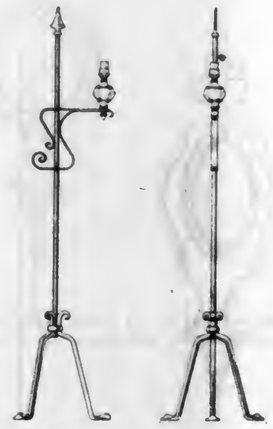


The ornamental design for a heater as shown.

74,942. VANITY CASE. ARTHUR H. NOBLE, Pawtucket, R. I., assignor to Theodore W. Foster & Brother Company, Providence, R. I. Filed Nov. 23, 1927. Serial No. 24,248. Term of patent 14 years.

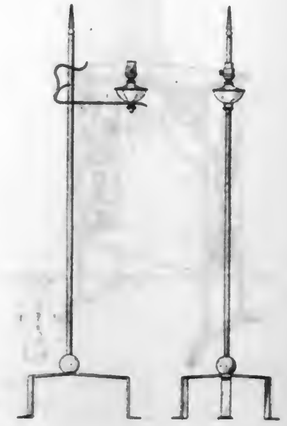
The ornamental design for a vanity case, as shown.

74,943. COMBINED AUTOMOBILE BODY AND HOOD. COY ORSETT, Boston, Mass. Filed Aug. 20, 1927. Serial No. 23,158. Term of patent 14 years.



The ornamental design for a combined automobile body and hood as shown.

74,944. FLOWER SCONCE OR SIMILAR ARTICLE. JOHN R. PEIRCE, 3d, and GEORGE MASON ANDREWS, 2d, Phoenixville, Pa. Filed Aug. 23, 1926. Serial No. 18,812. Term of patent 3½ years.



The ornamental design for a flower sconce or similar article, as shown.

74,945. BRIDGE LAMP. JOHN B. SALTERINI, New York, N. Y. Filed Feb. 4, 1928. Serial No. 25,201. Term of patent 3½ years.

The ornamental design for a bridge lamp, as shown.

74,946. BRIDGE LAMP. JOHN B. SALTERINI, New York, N. Y. Filed Feb. 4, 1928. Serial No. 25,202. Term of patent 3½ years.

The ornamental design for a bridge lamp, as shown.

74,947. TABLE FOR RADIO RECEIVING SETS AND THE LIKE. FREDERICK SCHWARTZ, Brooklyn, N. Y., assignor to Robert Findlay Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Jan. 9, 1928. Serial No. 24,784. Term of patent 7 years.

The ornamental design for a table for radio receiving sets and the like, as shown.

74,948. TABLE FOR RADIO RECEIVING SETS AND THE LIKE. FREDERICK SCHWARTZ, Brooklyn, N. Y., assignor to Robert Findlay Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Jan. 9, 1928. Serial No. 24,785. Term of patent 7 years.

The ornamental design for a table for radio receiving sets and the like, as shown.

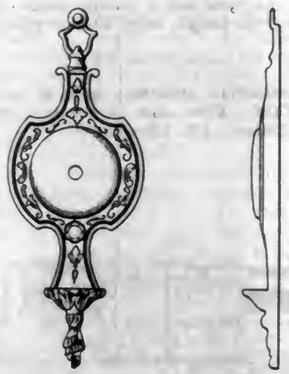
74,949. LIGHTING-FIXTURE BACKPLATE OR ARTICLE OF ANALOGOUS NATURE. ALFRED P. SEIDELL, Bloomfield, N. J., assignor to Orange Lighting Fixture Manufacturing Co., a Corporation of New Jersey. Filed Feb. 10, 1928. Serial No. 25,358. Term of patent 7 years.

The ornamental design for a lighting fixture backplate or article of analogous nature substantially as shown.

74,950. LIGHTING-FIXTURE BACKPLATE OR ARTICLE OF ANALOGOUS NATURE. ALFRED P. SEIDELL, Bloomfield, N. J., assignor to Orange Lighting Fixture Manufacturing Co., a Corporation of New Jersey. Filed Feb. 10, 1928. Serial No. 25,359. Term of patent 7 years.

The ornamental design for a lighting fixture backplate or article of analogous nature substantially as shown.

74,951. LIGHTING-FIXTURE BACKPLATE OR ARTICLE OF ANALOGOUS NATURE. ALFRED P. SEIDELL, Bloomfield, N. J., assignor to Orange Lighting Fixture Manufacturing Co., a Corporation of New Jersey. Filed Feb. 10, 1928. Serial No. 25,360. Term of patent 7 years.



The ornamental design for a lighting fixture backplate or article of analogous nature substantially as shown.

74,952. LIGHTING-FIXTURE BACKPLATE OR ARTICLE OF ANALOGOUS NATURE. ALFRED P. SEIDELL, Bloomfield, N. J., assignor to Orange Lighting Fixture Manufacturing Co., a Corporation of New Jersey. Filed Feb. 10, 1928. Serial No. 25,361. Term of patent 7 years.

The ornamental design for a lighting fixture backplate or article of analogous nature substantially as shown.

74,953. LIGHTING-FIXTURE BACKPLATE OR ARTICLE OF ANALOGOUS NATURE. ALFRED P. SEIDELL, Bloomfield, N. J., assignor to Orange Lighting Fixture Manufacturing Co., a Corporation of New Jersey. Filed Feb. 10, 1928. Serial No. 25,362. Term of patent 7 years.

The ornamental design for a lighting fixture backplate or article of analogous nature substantially as shown.

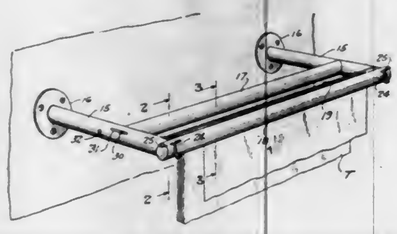
74,954. COMBINED ELECTRIC-LAMP HOLDER AND REFLECTOR. ROBERT SWIMMER, New York, N. Y. Filed Mar. 30, 1925. Serial No. 12,953. Term of patent 7 years.

The ornamental design for a combined electric lamp holder and reflector, as shown.

74,955. BOOK END OR SIMILAR ARTICLE. THOMAS S. WOODWARD, Leetonia, Ohio. Filed July 19, 1927. Serial No. 22,810. Term of patent 14 years.

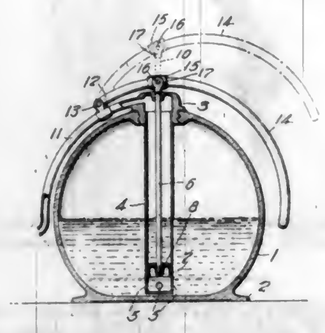
The ornamental design for a book end or similar article as shown.

PATENTS



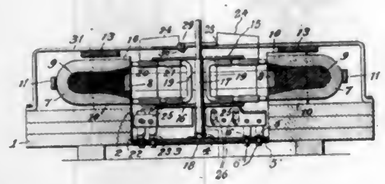
GRANTED APRIL 17, 1928.

1,666,062. CIGARETTE. HARRY ALEXANDER, Allentown, Pa. Filed Mar. 27, 1926. Serial No. 97,976. 1 Claim. (Cl. 131—52.)



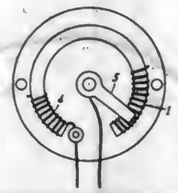
A cigarette comprising a tubular noncombustible tobacco containing receptacle of relatively heavy flexible material, said receptacle having an end crimped inwardly so as to lie well within the receptacle body, the inward crimping of said end defining a plurality of connected flap-like folds the contiguous surfaces of opposite ones of which are in normal contact adjacent their inner ends whereby to confine the ashes and tobacco against dropping out, and said flap-like folds yielding slightly under suction from the opposite end of said tubular receptacle to permit a draft to be drawn through the cigarette while smoking.

1,666,063. TOWEL RACK. ANDREW W. AUSREY, Los Angeles, Calif. Filed Aug. 12, 1926. Serial No. 128,858. 5 Claims. (Cl. 211—16.)



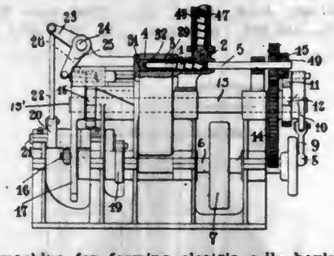
1. A towel rack comprising a frame having a stationary part and a removable part, the latter including companion towel clamping members one of which is secured between the other member and the stationary part, co-acting latching means on the stationary part and the said other member for securing the removable part to the stationary part to prevent removal of the towels, and means for locking the latching means against release.

1,666,064. LIQUID-DISPENSING PUMP. LUCY COTTON AMENT, New York, N. Y. Filed Sept. 9, 1927. Serial No. 218,510. 4 Claims. (Cl. 221—80.)



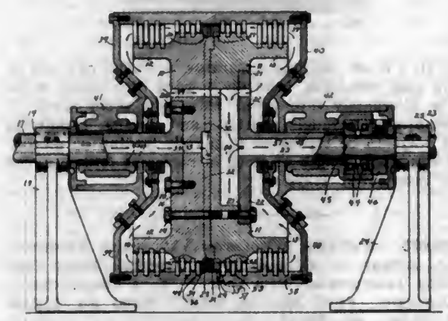
1. In combination, a liquid container, a pump therein for removing the contents, a spout for receiving the contents from the pump and a pivoted handle for operating the pump, the handle being slidably fulcrumed to the spout.

1,666,065. MAGNETIC MOTOR. OLAF R. ANDERSON, Pasadena, Calif. Filed Apr. 1, 1924. Serial No. 703,570. 4 Claims. (Cl. 172—36.)



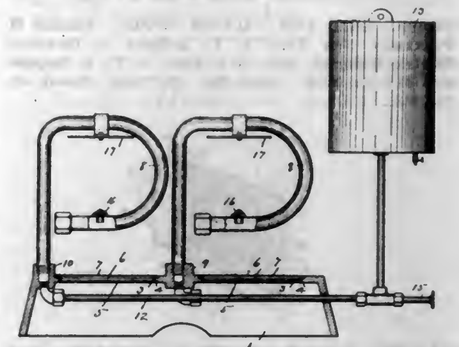
1. A motor of the character described comprising a base having a recess formed therein, contacts secured to the base within said recess, a plurality of permanent magnets of alternate polarity arranged on the base around the recess, a rotor operable in the recess, a plurality of electromagnets carried by the rotor, insulating strips secured to the rotor, and contacts secured to the insulating strips, said last mentioned contacts adapted to engage the contacts within the recess of the base for changing the polarity of the electromagnets.

1,666,066. RESISTANCE COIL. NOEL ASHBRIDGE, Wanstead, England, assignor to Radio Corporation of America, a Corporation of Delaware. Filed Jan. 4, 1924, Serial No. 684,282, and in Great Britain Jan. 5, 1923. 9 Claims. (Cl. 201—55.)



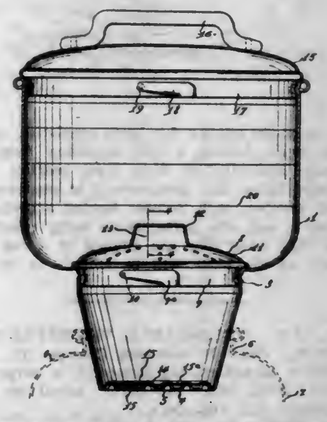
5. A bare resistance coil comprising a supporting structure of insulating material, a conductive covering of low permeability for said supporting structure, an insulating covering for the conducting covering, a winding of resistance wire around the insulating covering, and a slider cooperating therewith.

1,666,067. MACHINE FOR MAKING DRY-CELL ELEMENTS. ROBERT BAILLIE and MATTHEW ATKINSON ADAM, London, England; said Baillie assignor to said Adam. Filed Feb. 26, 1925, Serial No. 11,848, and in Great Britain Mar. 3, 1924. 1 Claim. (Cl. 18—5.)



In a machine for forming electric cells having a depolarizer mass, a mould, means for feeding said depolarizer mass into said mould, means for inserting a carbon electrode in said mould and means carried by said electrode for spacing said electrode from the walls of the mould, said spacing means comprising a washer at each end of the electrode, one of said washers being slidably mounted on the electrode.

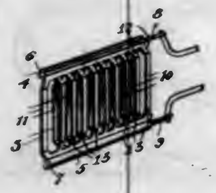
1,666,068. STEAM TURBINE. ALONZO W. BENNETT, New Haven, Conn. Filed June 14, 1927. Serial No. 198,718. 17 Claims. (Cl. 253—85.)



1. A steam turbine, having a stator-member consisting of two stator-disks, each of which has a substantially flat face and is provided with an outwardly-extending supporting-arm; means for securing the said stator-disks together with the flat face of one disk engaging the flat face of the other disk; standards connected to each supporting-arm for preventing the rotation of the said stator-member; a hollow, cylindrical rotor-member enveloping the said stator-member; and bearings interposed between each of the opposite side-walls of the said stator-member and the said supporting-arms.

1,666,069. OIL BURNER. WILLIAM BORKOWICZ, Baltimore, Md., assignor of one-fourth to John Borkowicz, Baltimore, Md. Filed Mar. 24, 1925. Serial No. 17,885. 1 Claim. (Cl. 158—63.)

An oil burner comprising a raised hollow base having a number of air vents in its sides and a number of openings in its upper surface, each opening having a flange on its lower edge, a number of burners each having one end connected to the base adjacent to one of said openings and its opposite end bent over said opening and provided with a nipple, a baffle plate secured to each of said burners above said nipples, a baffle plate secured to each of said burners above said nipples, a supply tank, a pipe connected to each of said burners and each having a valve therein, a supply pipe connecting said burners with the supply tank, a flanged pan fitted in each of said openings under said burners and having its flanged edge resting on the flanged edge of said openings, a wire gauze piece resting on the upper flange of each of said pans, and an asbestos disk resting in each of said pans below the flange thereof and leaving a space between the gauze piece and said asbestos disk.



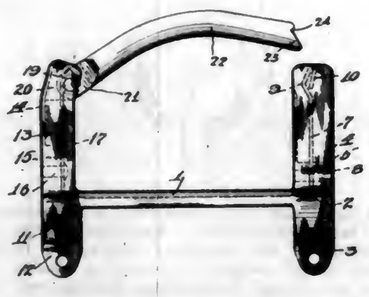
1,666,070. COFFEE MAKER. CHARLES E. PAGE, Los Angeles, Calif. Filed Jan. 30, 1928. Serial No. 250,446. 6 Claims. (Cl. 53—3.)

1. In a coffee maker, the combination of a container in the form of a metal water bowl of relatively large

diameter, said bowl having an extension of reduced diameter at its lower end, constituting a receptacle for the ground coffee, and adapted to be received in the upper opening of a coffee pot, said reduced extension having an integral bottom with corrugations formed therein with the principal perforations in the side walls of the corrugations, and operating to support a sheet of filter paper with the ground coffee disposed above the same, and a perforated cover for the reduced extension operating as a bottom for the said water bowl.

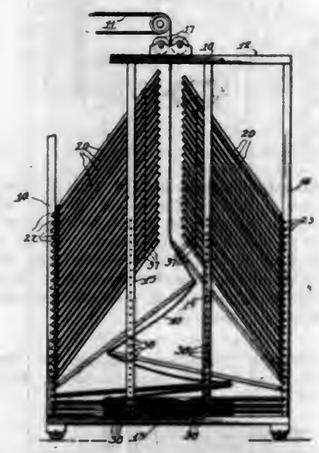
1,666,071. GRID FOR VACUUM TUBES. GEORGE H. PERRYMAN, New York, N. Y., assignor to Perryman Electric Company, Inc., New York, N. Y., a Corporation of New York. Filed May 22, 1926. Serial No. 110,863. 1 Claim. (Cl. 250—27.5.)

An article of the class described consisting of a sheet metal plate provided with a plurality of spaced integral ribs, one series of said ribs being bent outwardly from the body of the plate, a second series of said ribs alternating with the first series and being bent outwardly in an opposite direction whereby a channel is provided between both series of ribs, each of the ribs of both series being provided with a pair of bends, with one bend located near each of the points of junction of each rib with the body of the plate whereby both series of ribs in substantial parallelism with each other and with the body of the plate, and the longitudinal side edges of the body of the plate being curled in reverse directions for their entire length to provide grooves for the reception of supporting wires.



1,666,072. SPINNER. CHARLES P. SCHILPP, Cleveland Heights, Ohio, assignor to William A. Foss, Cleveland, Ohio. Filed Aug. 17, 1927. Serial No. 213,503. 6 Claims. (Cl. 43—45.)

6. A one-piece spinner for lures consisting of a plate of sheet metal having a cut extending from its circumference inwardly to form two bearing members, one member being bent transversely to separate it from the other member, each member having a perforation to fit around a rod, the perforations being relatively disposed so that when they are aligned by a rod, the general plane of the plate will be oblique to the axis of rod.



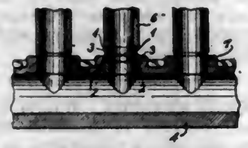
1,666,073. RELEASABLE VESTIBULE-CURTAIN HANDLE. JOHN B. SMOUSE, Chicago, Ill., assignor to Morton Manufacturing Company, a Corporation of Illinois. Filed Mar. 14, 1927. Serial No. 175,094. 12 Claims. (Cl. 105—24.)

1. The combination with a car vestibule curtain and a car vestibule curtain hook, of a handle base section secured to said curtain, a resilient support in said handle base section, a handle bar pivoted on said resilient support, and a spring latch in said handle base section adapted to be frictionally engaged on one end of said

handle bar to hold the same latched in a closed position under normal operating conditions and releasable under abnormal operating conditions when said handle bar is subjected to abnormal tensional strains.

1,666,074. STOCK-STORAGE APPARATUS. ADOLF A. STEINHILBER, Rock Island, Ill. Filed June 6, 1927. Serial No. 196,987. 5 Claims. (Cl. 211—45.)

1. In a stock handling apparatus, a frame, two sets of trays each extending inwardly toward each other so as to be alternately interleaved with each other when in substantially parallel position, and means permitting said trays to be separated to permit loading or unloading of a single length of stock in recurrent folds between said interleaved trays.



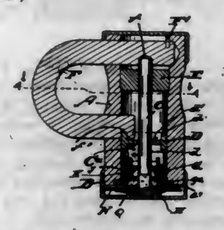
1,666,075. METER. WHOLSTON VANDERBILT STOCKTON, Jr., Albany, N. Y., assignor to American Meter Company, Incorporated, New York, N. Y., a Corporation of Delaware. Filed Jan. 14, 1926. Serial No. 81,166. 1 Claim. (Cl. 73—1.)

In a meter, the combination of a casing having a port, a pipe connection adapted to be secured to said casing and provided with a baffle chamber for covering said port and having a peripheral wall and a front wall, a conduit opening into said chamber through said peripheral wall, a downwardly curved baffle projecting rearwardly from the front wall of said chamber to the casing between said port and said conduit, said peripheral

wall having a recess portion effectively positioned opposite said conduit opening to intercept the end of a tampering wire or the like.

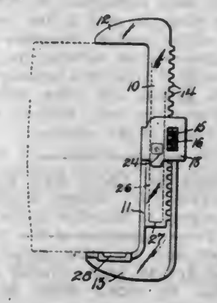
1,666,076. ECONOMIZER. ALFRED UPER, Bochum, Germany. Filed Nov. 30, 1921, Serial No. 518,973, and in Germany Dec. 1, 1920. 1 Claim. (Cl. 285—45.)

In a header and tube connection, a header having a tube receiving opening provided with an inner cylindrical seat portion of uniform diameter throughout and an outer conical locking recess whose outer end opens through a face of the header and is of a diameter coinciding substantially with the diameter of the cylindrical seat portion and whose inner end is of greater diameter than said cylindrical seat portion, whereby an annular shoulder is formed at the intersection of the seat portion and recess, the inclined side wall of said recess tapering uniformly between said shoulder and said face of the header, a tube having an end provided with a cylindrical portion of the same diameter as the body of the tube and fitting in and having a ground joint engagement with the cylindrical seat portion of the opening in the header and formed in rear of said cylindrical portion with an annular locking groove lying wholly within the circumference of the body of the tube and presenting at its inner end an annular shoulder alining with the annular shoulder of the locking recess in the header, said groove being of greater length than the depth of the locking recess and extending beyond the said face of the header, and a wedge-shaped metallic packing compressed in said recess and groove and against said shoulders and coacting with the inclined wall of the recess to hold the seat portion of the tube into engagement with the seat portion of the opening.



1,666,077. FILM CONTAINER. ALEXANDER FERDINAND VICTOR, Davenport, Iowa. Filed June 24, 1926. Serial No. 118,254. 9 Claims. (Cl. 242—71.)

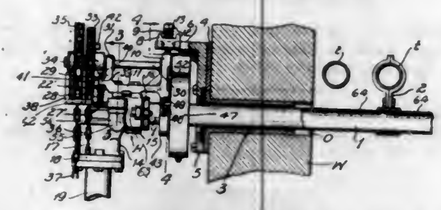
1. A film container consisting of a walled storage chamber, a walled receiving chamber, and a substantially straight flat member providing a neck connecting said chambers in spaced relation, the walls of said chambers forming at all times a rigid portion of the



container and are provided adjacent said neck with slits through which the film is passed from one chamber along the neck and into the other chamber.

1,666,078. LOCK. HARRY WILLIAMS, Detroit, Mich. Filed May 18, 1927. Serial No. 192,206. 5 Claims. (Cl. 70—113.)

1. In a device of the character described, a lock barrel; a manually rotatable cap fitted to one end of the lock barrel; a rotatable and longitudinally movable bolt secured to the cap having a projecting tongue; a staple extending through lateral openings into the lock barrel, one leg of said staple being longer than the other and provided with a socket to receive the end of the longitudinally movable bolt; a plunger secured to said bolt having an annular flange adapted to enter a peripheral groove in the short leg of the staple synchronously with the entry of the bolt in the socket in the long leg of the staple; a serrated click plate sleeved upon the bolt and adapted to rotate therewith and through which the bolt has a limited longitudinal movement; a ball supported in the wall of the lock barrel over which the click plate travels to produce a series of audible sounds; a spring located between the click plate and the rotatable cap; and a plurality of co-ordinating tumblers sleeved upon the bolt adapted to cooperate for adjustment with reference to each other through the manual rotation of the cap, whereby the tumbler mechanism may be so positioned that the bolt may be released from locking engaging with the staple or the tumblers rearranged to secure the bolt against the release of the staple.



1,666,079. CLAMP. JAMES ANDERSON, Elizabeth, N. J. Filed Apr. 5, 1927. Serial No. 181,070. 2 Claims. (Cl. 144—299.)

1. A clamp comprising two arms in sliding engagement one having teeth on one edge and the other having a transverse opening, and a wedge slidable in the

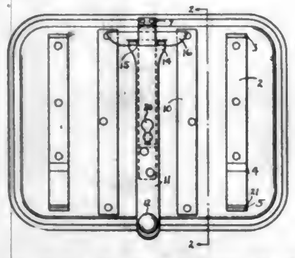
opening and having inclined teeth to engage the teeth of the arm, the wedge having the teeth terminate short of one end and having a flange on each end to prevent the wedge from being entirely withdrawn.

1,666,080. SOOT BLOWER FOR BOILERS. LEO JOHN BAYER, St. Louis, Mo. Filed Nov. 1, 1926. Serial No. 145,690. 5 Claims. (Cl. 122—392.)

1. A soot blower for boilers including a head, a rotatable blower tube, and a steam supply pipe for said tube, said head comprising a suitable standard supported from the wall of the boiler, a valve casing suspended by said standard and connecting the tube with the supply pipe, an anti-friction bearing for the tube suspended by the standard, a stuffing-box in the valve casing for supporting and packing the end of the tube, and means for actuating the blower tube.

1,666,081. HAIRBRUSH. WILLIAM H. BLAKE, Attleboro, Mass., assignor to James E. Blake Co., Attleboro, Mass., a Corporation of Massachusetts. Filed Dec. 8, 1927. Serial No. 238,549. 2 Claims. (Cl. 132—86.)

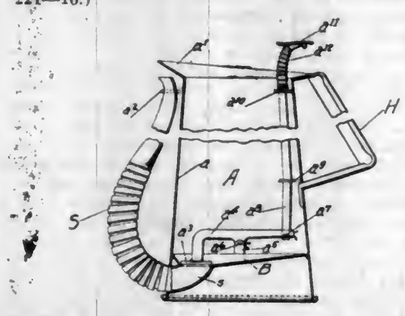
1. In a hair brush, a shell, a flange upon the shell, a filler block in the shell provided with a longitudinal hole, a second block in the shell embraced by the flange and engaging the filler block, bristles in the second block, and a comb slidably mounted in the hole and engageable at one end with the shell.



1,666,082. PERMANENT FINISH VEGETABLE MATERIAL AND PROCESS OF PRODUCING SAME. ALBERT BODMER, Wattwil, Switzerland, assignor to Heberlein Patent Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 11, 1923, Serial No. 631,374, and in Germany Apr. 15, 1922. 15 Claims. (Cl. 8—20.)

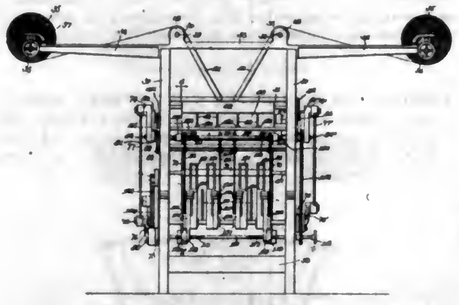
1. Method of treating vegetable fibrous material (yarns and goods made therefrom) to chemically structurally alter the fibres to give to the material a permanent finish, which method comprises treating the material with a concentrated cellulose dissolving mineral acid in the presence of a suitable heterocyclic base containing a pyridin nucleus and which will stabilize the reaction by retarding its rate without inhibiting the ultimate desired extent of the reaction.

1,666,083. VEGETABLE YARN AND FABRIC WITH WOOLLIKE EFFECTS. ALBERT BODMER, Wattwil, Switzerland, assignor to Heberlein Patent Corporation, New York, N. Y., a Corporation of New York. Original application filed Apr. 11, 1923, Serial No. 631,374, and in Germany Apr. 15, 1922. Divided and this application filed Apr. 12, 1923. Serial No. 631,745. 6 Claims. (Cl. 8—20.)



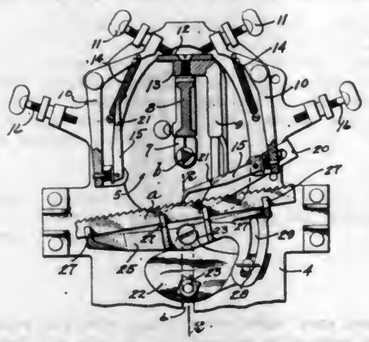
1. Vegetable fibrous material (yarns and goods made therefrom) the fibres of which have been structurally altered by chemical treatment, which treatment comprises a treatment with a suitable concentrated mineral acid in the presence of a suitable heterocyclic compound having pyridin characteristics for the purpose, to produce a permanent finish wool-like effect.

1,666,084. ADJUSTABLE TRAY SUPPORT. MAURICE S. BRIGHT, Houston, Tex. Filed Dec. 15, 1925. Serial No. 75,526. 6 Claims. (Cl. 45—51.)



1. In a device of the character described a tray, stationary legs on the bottom thereof adjacent one side, a central bracket between said legs, the central portion of said bracket being spaced from said tray to form a track, an adjustable leg comprising a strip of rigid metal having a foot at one end and having a slot adjacent the other end to receive said bracket and slide on said track, lateral arms on the end of said leg adjacent said slot, said slot being formed at a predetermined distance from the upper end, whereby both sides of said slot will engage said track and said arms will engage said tray when said adjustable leg is swung on said track as a pivot into supporting position.

1,666,085. LIQUID MEASURE. WALTER R. BROOKINS, Dayton, Ohio, assignor to Brookins Manufacturing Company, Dayton, Ohio, a Corporation of Ohio. Filed May 2, 1927. Serial No. 188,246. 3 Claims. (Cl. 221—16.)

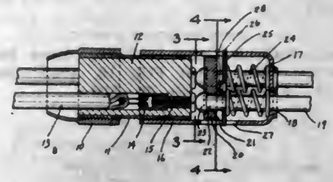


1. A liquid measure having in combination, a side wall and a handle secured to the outer surface of the side wall at the back near the top thereof, a bottom horizontally secured within said side wall and spaced above the bottom thereof, an eccentrically placed outlet in said bottom near its front, said bottom sloping downwardly in all directions toward said outlet, a flexible metal discharge spout connected to said bottom underneath said outlet, a valve normally closing said outlet, a lever pivotally mounted between its ends on said bottom, said valve secured to one end of said lever, a push rod pivotally secured to the other end of said lever, guide means secured to the inner surface of said side wall slidably supporting said push rod, and means for holding said rod in raised position normally closing said valve.

1,666,086. ARTICLE FORMING AND FOLDING MACHINE. SAMUEL J. CAMPBELL, Green Bay, Wis., assignor to Hudson & Sharp Machine Company, Green Bay, Wis., a Corporation of Wisconsin. Filed Aug. 13, 1926. Serial No. 128,931. 18 Claims. (Cl. 270—66.)

1. In a cutting and folding machine, the combination with means for feeding a plurality of strips of material and doubling each strip and feeding said doubled strips side by side; mechanism operating on all of said folded strips simultaneously for cutting a plurality of articles therefrom; a folding mechanism, comprising a single folding blade operating on a plurality of said folded articles simultaneously to double said folded article, thereby producing quarter-folded articles.

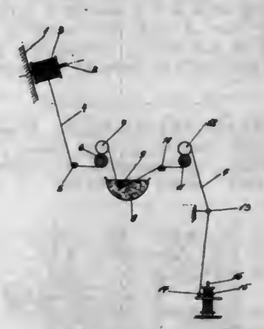
1,666,087. TILTING SAW GUIDE. FREEMAN E. COLLIER, Minneapolis, Minn., assignor to Foley Saw Tool Company, Incorporated, Minneapolis, Minn., a Corporation of Minnesota. Filed Mar. 19, 1927. Serial No. 176,660. 2 Claims. (Cl. 76—35.)



2. In a saw filing machine, a file holder, means for imparting filing action to the file holder, a tilting saw guide attachment comprising a bearing plate, means for rigidly securing the bearing member to the saw filing machine, a member intermediately pivoted to the bearing plate to rock about an axis in the filing plane and transversely thereof, and a bifurcated saw-holding lug on said member on each side of its pivot, and means for securing the guide member in different adjustment.

1,666,088. ROOFING. JOSEPH W. FARR, Oak Park, Ill. Filed Oct. 4, 1926. Serial No. 139,291. 3 Claims. (Cl. 108—7.)

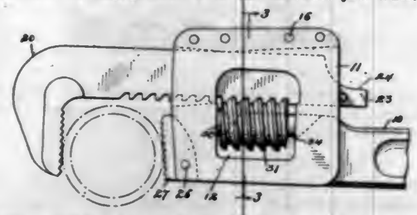
1. An articulated roofing comprising a plurality of weather resisting elements of asphalt composition of curvilinear transverse conformation, a series of upstanding parallel supports, caps of cementitious material secured to said supports and entering the reverse depressions of and secured to said tile elements, and transverse base members disposed parallel with each other and obliquely with said supporting members secured to said supporting members.



1,666,089. CONNECTER FOR ELECTRIC CIRCUITS. HARRY C. FOSTER, Connersville, Ind., assignor to Indiana Lamp Corporation, Connersville, Ind., a Corporation. Filed July 25, 1927. Serial No. 208,070. 6 Claims. (Cl. 173—328.)

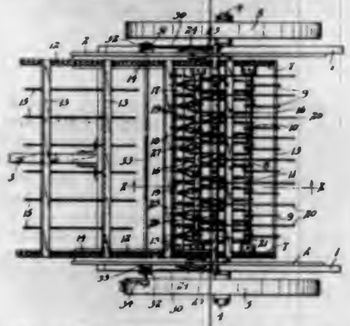
1. A multiple circuit socket for three or more current conducting lines including a plug receiving and detachably supporting tubular shell, a terminal plate yieldingly mounted therein, at least three current conducting members extending thru the plate for plug contact terminal engagement, yielding means positioned between the end of the shell and said terminal plate, and a compensating plate having a rocking connection with the terminal plate and against which the yielding means bears, whereby the current conducting members are assured of positive plug contact.

1,660,090. PROCESS FOR THE AFTERTREATMENT OF FRESHLY-SPUN ARTIFICIAL SILK. FRANZ JOSEF GAHLERT, Dresden-Loschwitz, Germany. Filed July 28, 1926, Serial No. 125,355, and in Germany June 9, 1925. 3 Claims. (Cl. 117—2.)



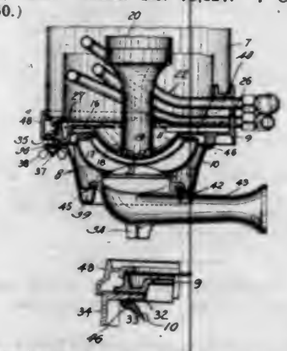
1. A process for treating freshly spun artificial silk, consisting in treating the thread of artificial silk with a softening agent, in stretching the softened thread, and in retwisting this thread.

1,666,091. WRENCH. JULIAN A. GILES, Derby, Conn. Filed July 12, 1926. Serial No. 121,898. 13 Claims. (Cl. 81—157.)



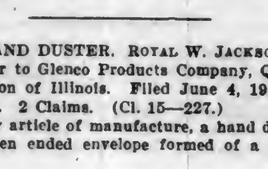
1. A wrench having a head; a fixed jaw; a movable jaw associated with the fixed jaw so as to have a rocking and lengthwise movement relatively thereto; a worm

for imparting lengthwise movement to the movable jaw, having a separable toothed engagement therewith; and means for mounting the worm, whereby the same will maintain its engagement with the movable jaw while the



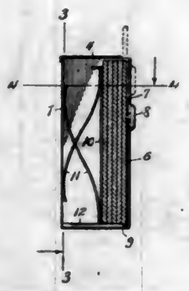
same is rocked relatively to the fixed jaw and also movable into and out of its engagement with the movable jaw in a circular path, the center of which is adjacent to one end of the worm.

1,666,092. HAY-LOADING DEVICE. MIKE HEGERLAND, Woodville, Wis. Filed Feb. 16, 1923. Serial No. 619,374. 4 Claims. (Cl. 56—359.)



1. A hay loading machine having in combination, a frame, a wheel-carrying axle mounted therein, an elevator driven from said axle, a reel, comprising rows of teeth, secured on said axle and rotated thereby for delivering to said elevator, a bar disposed forwardly of said reel adjacent the upper side thereof, and stripper members comprising wires or rods secured in pairs to said bar, the wires or rods of each pair extending downwardly over the top of said reel in substantially parallel relation, around said reel and upwardly in diverging relation to said bar.

1,666,093. WATER-HEATER BASE. ROBERT C. HOYT, Oakland, Calif., assignor to Hoyt Heater Company, Los Angeles, Calif., a Corporation of California. Filed Nov. 23, 1925. Serial No. 70,827. 7 Claims. (Cl. 122—250.)

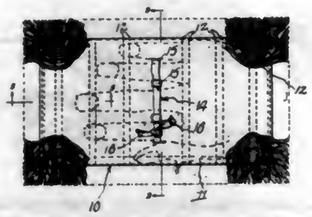


1. A water-heater base adapted to support therein the burner for the heater, said base comprising an upper and a lower element; legs for supporting the heater provided with lateral dovetail extensions shaped to be driven into corresponding dovetail grooves provided in the underside of the upper element; and sealing means between the elements for additionally securing the legs to the upper element and for joining the elements so that products of combustion can not escape from the sides of the base, the said sealing means seated in a circumferential groove provided between the elements including the driven legs.

1,666,094. WATER-HEATER GAS BURNER. ROBERT C. HOYT, Oakland, Calif., assignor to Hoyt Heater Company, Los Angeles, Calif., a Corporation of California. Filed Nov. 23, 1925. Serial No. 70,829. 2 Claims. (Cl. 122—250.)

1. In a water heater having a base provided with an annular chamber at the bottom thereof for the collection of products of condensation and unburned products of combustion from the heater, a burner connected with a gas-supply source and secured within said base, said burner having an annular flange integral therewith and provided with a peripheral bead on the underside of said flange extending over said chamber.

1,666,095. GUM-STICK HOLDER. ALVIN L. JACKSON, Logan, Okla. Filed Feb. 19, 1923, Serial No. 619,798. Renewed Jan. 30, 1928. 1 Claim. (Cl. 206—40.)



A gum stick holder comprising a receptacle adapted to contain gum sticks disposed side by side, and having an open end for the insertion of gum sticks, a cover slidably removable on said open end and in the closed position having one end spaced from the adjacent side of the receptacle, thereby providing an ejecting opening, an ejecting member slidably mounted on the inner side of said side of the receptacle in alinement with said opening and having means for engaging and forcing an adjacent gum stick through said opening, and means for normally forcing the gum sticks against said ejecting member.

1,666,096. HAND DUSTER. ROYAL W. JACKSON, Quincy, Ill., assignor to Glenco Products Company, Quincy, Ill., a Corporation of Illinois. Filed June 4, 1927. Serial No. 196,437. 2 Claims. (Cl. 15—227.)

1. As a new article of manufacture, a hand duster comprising an open ended envelope formed of a continuous

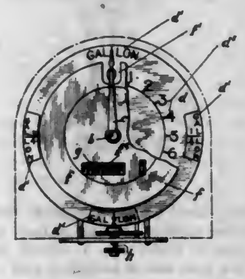
piece of flexible material having rubbing material attached to opposite sides thereof, and a line of lacings

connecting opposite sides of said envelope at a plurality of points across the central portion thereof to form openings for the fingers of the hand.

1,666,097. IMPRESSION TRAY. ROLLAND R. JONES, Minneapolis, Minn. Filed Aug. 25, 1926. Serial No. 131,364. 6 Claims. (Cl. 32—6.)

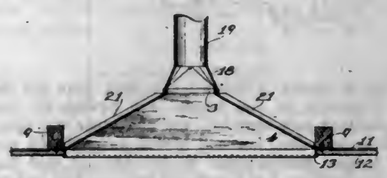
1. An impression tray comprising a body portion having a lingual wall, an occlusal wall and a proximal wall, a flange issuing outwardly from said occlusal wall substantially parallel to said lingual wall and extending in the opposite direction therefrom, and an ear formed on said flange co-operating with said proximal wall for resisting internal pressure.

1,666,098. BATHING CAP. GEORGE P. KAUL, Detroit, Mich. Filed Aug. 5, 1926. Serial No. 127,383. 2 Claims. (Cl. 2—68.)



1. A bathing cap of the class described, comprising: an elastic water-proof crown forming member; a reinforcement mounted on said crown at its forward side adjacent its edge; a flexible peak of comparatively stiff material secured to said reinforcement inwardly of the edge thereof and adapted for tilting to operative or inoperative position.

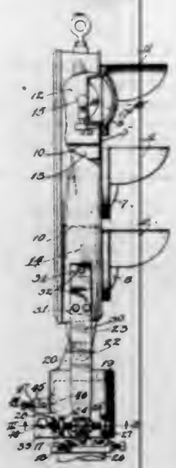
1,666,099. DECORATIVE ORNAMENT. RUSSELL B. KINGMAN, Orange, N. J., assignor to Metal Textile Corporation, West Orange, N. J., a Corporation of Rhode Island. Filed Sept. 21, 1927. Serial No. 220,928. 5 Claims. (Cl. 41—10.)



1. A decorative ornament, comprising a substantially rigid base element of desired shape and a decorative surface element enveloping said base element, said surface element consisting in a metallic fabric knitted from flat ribbon-like wire to provide a multiplicity of light reflecting facets.

1,666,100. DIAL INDICATOR FOR GASOLINE PUMPS, ETC. WILLIAM L. MARDEN, New York, N. Y., assignor to Neptune Meter Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 26, 1927. Serial No. 163,825. 1 Claim. (Cl. 235—121.)

In a dial indicator for gasoline pumps, the combination of a fixed dial having thereon two concentric rows of figures of different denominations, a pointer for coaction with the outer row of figures, a rotatable notched dial concentric with the pointer and arranged to disclose through the notch one at a time the figures of the inner row, said disc having also a sight opening, a totalizing register disclosed through the sight opening in the disc when the disc is in zero position, and means to actuate the pointer and the disc, whereby the totalizing register is concealed during operation of the pump.

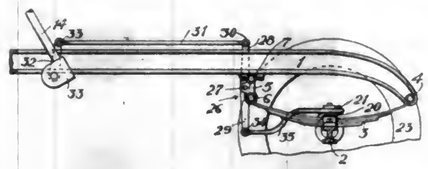


1,666,101. COMBINATION VENTILATOR AND CANOPY. REGINALD G. W. MAYHOOD, San Leandro, Calif. Filed May 10, 1926. Serial No. 108,060. 1 Claim. (Cl. 98—42.)

In combination, parallel ceiling joists of the character described, a sheet metal canopy having a flange extending outwardly from its bottom end, means for securing the

said flange to the bottom faces of the joists, and a second flange extending downwardly from the inner margin of the first flange, the second flange serving as an abutment for and being co-extensive with a ceiling secured to the bottom of the floor joists.

1,666,102. SIGNAL-LIGHT-SUPPORTING STRUCTURE. DANIEL J. MCCARTHY, Elgin, Ill., assignor to Chicago Railway Signal & Supply Company, Carpentersville, Ill., a Corporation of Illinois. Filed Sept. 30, 1926. Serial No. 138,587. 3 Claims. (Cl. 248—220.)



1. In a light signal device, a support therefor, a sleeve rotatable on the support having a pair of spaced arms projecting radially therefrom, a second sleeve rotatably mounted on the first sleeve having a pair of radially projecting lugs with confronting loose bores and a threaded bolt extending through the bores and a tailed nut in threaded engagement on the bolt, said lugs encompassing the said arms of the first sleeve and the tail of said nut positioned intermediate and adapted to movably engage said arms, and screw means to lock the first sleeve in position on its support.

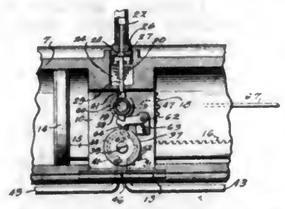
1,666,103. WRENCH. BERNARD MCGILVRAY, Quincy, Mass. Filed Mar. 29, 1926. Serial No. 98,069. 3 Claims. (Cl. 81—184.)

1. In a wrench, a handle; two main jaws one immovable relatively to said handle and having its working face inclined and serrated, and the other movable relatively to said fixed jaw and having an unbroken working face always perpendicular to the axis of said handle; and an auxiliary jaw interposed between and slidable towards and from said main jaws and adapted to be locked to either, said auxiliary jaw being wedge shaped with an inclined working face serrated and opposed to the serrated face of the fixed jaw.

1,666,104. STEERING GEAR FOR MOTOR VEHICLES. JOHN F. MCMURTRIE, Springfield, Mass., assignor of one-half to William W. Hopkins, Springfield, Mass. Filed Apr. 24, 1926. Serial No. 104,339. 8 Claims. (Cl. 280—93.)

1. In a steering mechanism for motor vehicles, the combination with the forward axle of the chassis frame, and the forward spring which is located between the said axle and the chassis frame, of a shackle lever pivotally attached to the chassis frame at one end and to the other end of which lever the rear end of the said spring is pivotally attached, the forward end of the spring being attached to the chassis frame, a steering box attached to the chassis frame, a two arm lever which is pivotally secured to the shackle lever, a link connection from one end of the two arm lever to the steering knuckle of the vehicle, and a link interposed between the other end of the two arm lever and the steering box, whereby the compression and deflection of the spring will automatically maintain the distance constant between the steering box and the axle.

1,666,105. BOX. ARTHUR R. MOSLER, New York, N. Y. Filed Dec. 7, 1926. Serial No. 153,071. 3 Claims. (Cl. 206—52.)



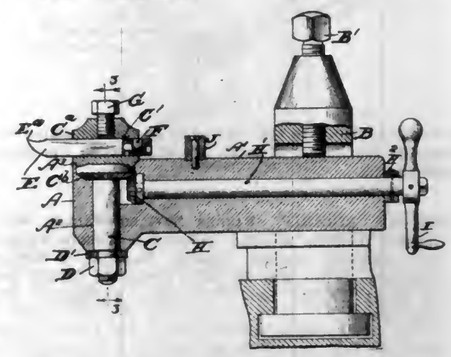
1. A box for containing clamp supply parts including a clamp band roll, the sides of the box having a slot through which the band may be withdrawn, and a removable tray forming a partition for dividing the interior of the box into a compartment for the band roll and a compartment for the other supply parts.

1,666,106. SPOON. MAX NORMAN, Brooklyn, N. Y. Filed Jan. 3, 1927. Serial No. 158,479. 6 Claims. (Cl. 30—22.)

4. A spoon of the class described, the head and handle portions of which are of stiff, fibrous material, the handle portion where it joins the head portion extending in a rib forming a groove on the under face of the head portion, and said handle portion being tubular in form.

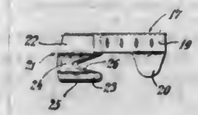
1,666,107. WINDSHIELD CLEANER. JOHN X. PHILLIPS, Jr., Washington, D. C., assignor, by mesne assignments, to Trico Products Corporation, Buffalo, N. Y., a Corporation of New York. Filed June 30, 1923. Serial No. 648,818. 19 Claims. (Cl. 121—164.)

1. In a windshield cleaner, a fluid pressure motor comprising a casing, a movable member mounted in said casing to be actuated by differential pressure, a conduit connected to said motor, a main supply valve controlling the flow of fluid through said conduit, an automatic valve to alternately place said motor casing on opposite sides of said movable member in communication with said conduit, and means for locking said automatic valve against operation, and closing said main supply valve.



19. In a windshield cleaner motor comprising a casing, a piston movable therein, valve mechanism for applying operating pressure alternately to the opposite sides of the piston, a shaft operable by the piston, said piston being movable beyond its normal path of travel when said valve mechanism is arrested from actuation, means for arresting said valve mechanism, a valve for shutting off the supply of fluid pressure to said valve mechanism, and a sleeve slidable on the shaft and having a part for rendering said arresting means operative upon movement of the sleeve on the shaft whereby said piston may override its normal path of travel, said sleeve also having a part normally out of its operative plane of movement and adapted to be brought into said operative plane upon movement of said sleeve to actuate the arresting means, said second part acting to render said shut-off valve operative.

1,666,108. WINDSHIELD CLEANER. JOHN X. PHILLIPS, Jr., Washington, D. C., assignor, by mesne assignments, to Trico Products Corporation, Buffalo, N. Y., a Corporation of New York. Filed Jan. 7, 1924. Serial No. 684,823. 5 Claims. (Cl. 121—164.)



1. In a windshield cleaner, a casing, a movable member mounted in said casing, a disk arranged in said casing, means controlled by the movement of said movable member for oscillating said disk, an arm pivotally connected to said disk, a valve supporting member connected to said arm, a spring arranged on said arm and engaging said member, said spring being compressed when said disk and said arm are oscillated to move said valve supporting member, and a member for being moved into the path of said valve supporting member on either side thereof for effecting a parking of the movable member in either end of the casing.

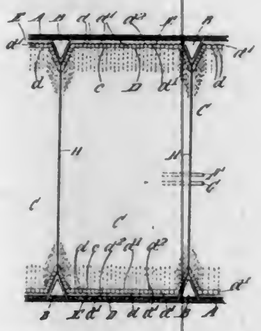
1,666,109. RADIUS TOOL. ANDREY SHEBERASHENKO, Detroit, Mich. Filed Apr. 10, 1925. Serial No. 22,115. 1 Claim. (Cl. 29—98.)

A radius tool comprising a tool stock having a laterally projecting shank and provided therein with a longitudinal bore extending from one end of the shank and terminating at the tool stock interiorly thereof, said tool stock being provided with a vertical bore intersected by the said longitudinal bore and enlarged at its upper end, the enlarged end being surrounded by an annular shoulder, a vertical spindle having an enlarged head seated on the annular shoulder of the stock and fitting in the enlarged portion of the vertical bore and entirely filling the same and provided at its lower face below said annular shoulder with a horizontal gear, a horizontal spindle mounted in the longitudinal bore and provided at its inner end with a gear meshing with the said gear, means for mounting a tool on the enlarged head of the vertical spindle, and means for rotating the horizontal spindle.

1,666,110. FASTENING MEANS AND OPERATING MEMBER THEREFOR. NOEL STATHAM, Irvington-upon-Hudson, N. Y. Filed May 2, 1925. Serial No. 27,427. 8 Claims. (Cl. 24—205.)

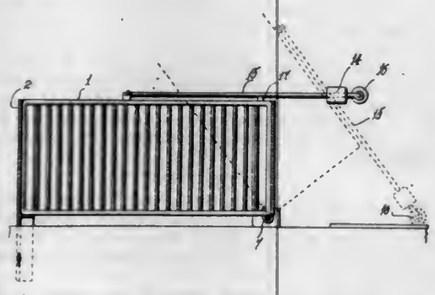
1. Operating means for a longitudinally disposed series of cooperating pairs of fasteners, comprising a main body portion and a depending substantially centrally disposed key portion, said key portion being adapted to enter in between and to open cooperating pairs of the fasteners and being provided with a channel for receiving a portion of each one of the fasteners of each pair of fasteners, said key portion being provided with a cutaway guiding portion.

1,666,111. AUTOMOBILE BUMPER. VICTOR SUSSIN, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed July 6, 1926. Serial No. 120,659. 6 Claims. (Cl. 293—55.)



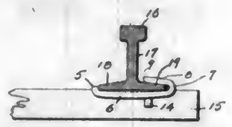
3. A bumper for motor vehicles comprising a flat spring impact bar mounted edgewise vertically and having its opposite end portions looped by being flexed forwardly and inwardly and lapped against the forward surface of the bar, clamps applied over the lap of the

loop ends for closing the loops and a mounting bar having a middle portion arched forwardly for connection to the impact member at its middle and having end



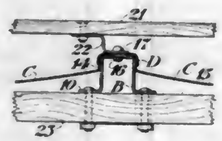
portions attached to the rear parts of the respective end loops of the impact member laterally beyond the aforesaid clamps.

1,666,112. AIRSHIP. BARNES NEVILLE WALLIS, Westminster, London, England, assignor to Airship Guarantee Company, Limited, London, England, a British Company. Filed May 29, 1925, Serial No. 33,680, and in Great Britain June 12, 1924. 8 Claims. (Cl. 244—3.)



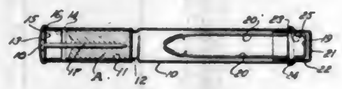
2. A hydrogen gas bag for an airship provided externally with a surrounding envelope comprising inner and outer walls and partitions which serve to connect together said outer and inner walls, some of said partitions being gas-tight and some non gas-tight.

1,666,113. MECHANISM FOR OPENING AND CLOSING GATES, WINDOWS, AND SIMILAR STRUCTURES. FREDERICK E. WELLFARE, Dallas, Tex. Filed Aug. 21, 1926. Serial No. 130,581. 4 Claims. (Cl. 39—44.)



1. A device of the character described comprising a vertically swinging gate adapted to be swung from horizontal to oblique position about a pivot located at one corner thereof, and a rod carried at the top of said gate and extending outwardly therefrom, the outer end of said rod serving as one support for said gate when in raised position.

1,666,114. RAIL ANCHOR. BENJAMIN B. BETTS, St. Louis, Mo. Filed Jan. 24, 1927. Serial No. 163,048. 5 Claims. (Cl. 238—330.)

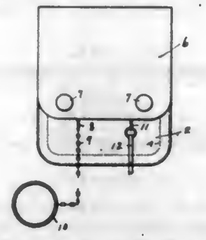


1. A rail anchor formed of a single bar of spring material circular in cross section and adapted to contact with the opposite edges of the base flanges of a railway rail at longitudinally spaced apart points and be out of contact with the underside of said flanges throughout the greater portion of their width, said anchor having a downturned end adapted to abut the side of a railway tie.

1,666,115. CAR ROOF. CHARLES DAVID BONSALL, Pittsburgh, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed May 29, 1926. Serial No. 112,509. 8 Claims. (Cl. 108—5.4.)

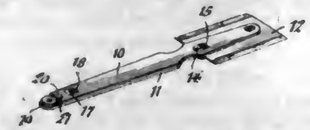
1. A car roof comprising side plates, carlines extending from side plate to side plate, roof sheets extending from side plate to side plate between carlines, said roof sheets having upwardly offset marginal portions resting on the tops of said carlines, and seam covers positively secured to said carlines and straddling said carlines and the upwardly offset marginal portions of the sheets, said seam covers snugly embracing the upwardly offset marginal portions of the sheets engaged therewith, thereby firmly clamping said portions to said carlines.

1,666,116. EYELASH APPLICATOR. EARL C. BUNNELL, Stratford, Conn. Filed Apr. 9, 1926. Serial No. 100,937. 7 Claims. (Cl. 128—260.)



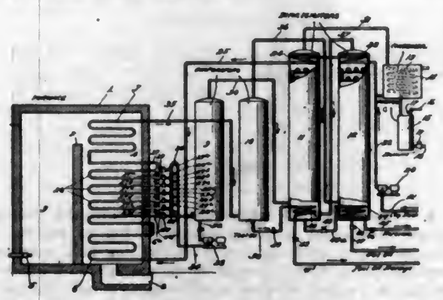
1. A device of the character described, comprising an enclosing body, a container for coloring material removably secured therein, a coloring material spreader adapted to enter said container, and an applicator for the coloring material removably fitted in said enclosing body.

1,666,117. CASE FOR LICENSES, ETC. ELLIS R. BURRELL, Baltimore, Md. Filed Dec. 10, 1926. Serial No. 153,787. 1 Claim. (Cl. 150—40.)



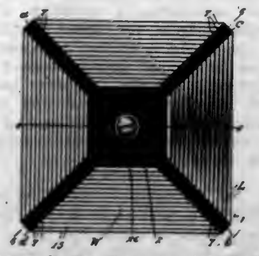
A case for licenses etc. comprising two pieces of suitable material secured together at their edges and having pockets therebetween, a metal frame between said two pieces of material and having one end projecting below

the other, a flap secured to said case and adapted to fold over the said pockets, fasteners for holding said flap in position over said pockets, a chain secured to



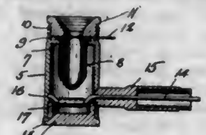
one end of said frame and having a key ring secured thereto, and a hook secured to the lower end of the frame over which said key ring is adapted to fit.

1,666,118. RAZOR-BLADE HOLDER. JOSEPH P. COLGROVE, Buffalo, N. Y. Filed Jan. 14, 1925. Serial No. 2,423. 2 Claims. (Cl. 80—25.)



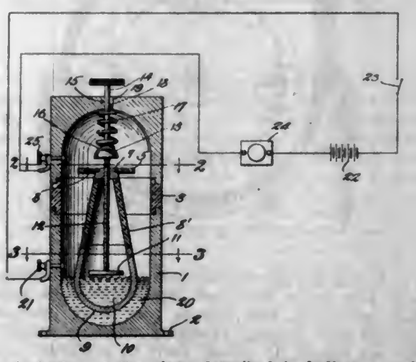
1. A blade holder, comprising a pair of separable bars movable lengthwise relatively to each other and each having a head-portion, and a handle-portion, the head-portion of one bar having a forwardly-facing hook and that of the other bar having a rearwardly-facing hook, the latter interlocking with an opening in the other bar, the bar which carries the first-named hook extending beyond the front end of the other bar while the latter shorter bar is adapted to clamp the blade between itself and the longer bar, and means for holding said bars against relative longitudinal displacement.

1,666,119. PROCESS FOR CONVERTING PETROLEUM HYDROCARBONS. WALTER M. CROSS, Kansas City, Mo. Filed July 20, 1925. Serial No. 44,781. 3 Claims. (Cl. 196—73.)



1. A process of distilling petroleum hydrocarbons, comprising the steps of heating the oil in a preliminary heating stage to a temperature to vaporize the lighter hydrocarbons, passing said heated oil to a vaporizing stage and there separating the liquid and volatilized material, returning the liquid products for further heating to vaporize additional fractions of higher boiling points, and passing the reheated material to a separate vaporizing stage and controlling the relative heating to which the charging stock and recycled stock are subjected by limiting the extent of their circulation through the heating zone.

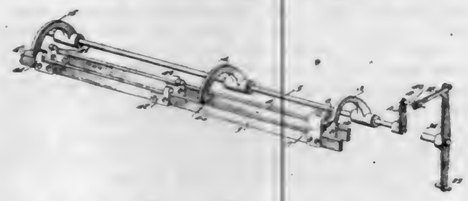
1,666,120. COIL. HIRAM D. CURRIER, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 18, 1924. Serial No. 744,465. 3 Claims. (Cl. 175—359.)



1. In a device of the character described including a rectangular shaped core provided with chamfered edges to form angular faces diametrically opposite, strips superimposed upon said diametrically opposite chamfered edges of said core to form arms, said arms being at right angles to the adjacent arms and lying in the same plane as the diametrically opposite arm, slots in said strips, and a winding rectangular in form supported upon said strips in said slots to maintain said winding in spaced relation, said winding being effective to bind said strips in position to form a self-supporting structure whereby said winding maintains said strips and said strips support said winding to form a coil.

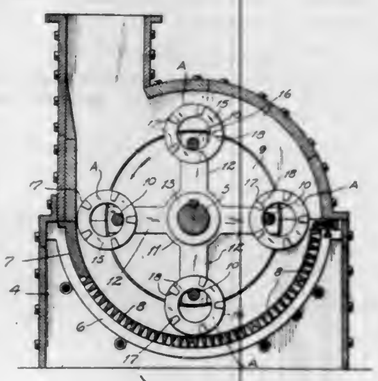
1,666,121. AMALGAMATOR. FREEMAN DAVIS and LOYD DAVIS, Centerville, Iowa. Filed Jan. 17, 1927. Serial No. 161,618. 5 Claims. (Cl. 259—72.)

1. An amalgamator including a body portion, a container supported in the body portion, a removable measuring member supported on the upper end of the body portion, a valve disposed between the upper end of the container and mensuring member for controlling the passage of material to the container, and means for agitating the container to amalgamate the material contained therein.



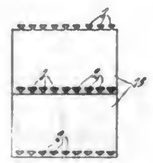
1,666,122. CIRCUIT CLOSER. JONATHAN W. DENNISTON, Bedford, Ind. Filed May 19, 1926. Serial No. 110,245. 3 Claims. (Cl. 200—52.)

1. A device of the class described including a casing having upper and lower portions of conducting material



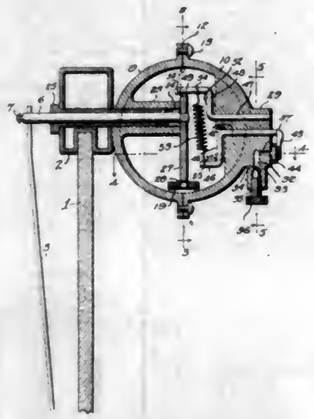
but insulated from each other, said portion being included in a circuit, a hollow pendulum suspended within the casing from the upper member for swinging movement in any direction, said pendulum being electrically connected to the upper member of the casing, the lower portion of the pendulum constituting a container of conducting material insulated from the upper portion which is connected to the casing, a contact suspended within the pendulum from the upper portion thereof, a mercury conductor interposed between the lower portion of the pendulum and the lower member of the casing, and a mercury conductor within the lower portion of the pendulum and normally close to but out of contact with the contact within the pendulum.

1,666,123. PLATING ATTACHMENT. JOHN J. EGAN and EUGENE GREGOR, Northampton, Mass., assignors to McCallum Hosiery Company, Northampton, Mass., a Corporation of Massachusetts. Filed Apr. 30, 1925. Serial No. 24,408. 10 Claims. (Cl. 66—137.)



1. In a stocking knitting machine the combination comprising a friction rod, friction arms thereon, thread carrier rods, each of said thread carrier rods having a fork for engaging one of said friction arms to travel therewith, and lugs for engagement with said friction arms to permit the said carrier rods to lag, said friction arms, forks and lugs being so arranged that when one of said friction arms is in engagement with the fork of any one of said carrier rods, the carrier rods for the following threads are actuated by the engagement of said friction arms with their said lugs.

1,666,124. PULVERIZING MACHINE. ERNST H. ELZEMEYER, St. Louis, Mo., assignor to American Pulverizer Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 9, 1925. Serial No. 61,563. 6 Claims. (Cl. 83—11.)

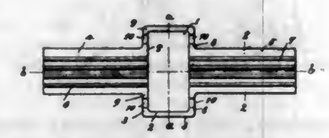


1. A ring for pulverizing machines comprising an annular body whose inner and outer surfaces are substantially concentric, said annular body being provided at one side with laterally extending annularly spaced lugs that are spaced far enough apart to constitute hammer faces and diggers.

1,666,125. CARD REGISTER. DAG AGNAR ENGSTRÖM, Stockholm, Sweden. Filed July 29, 1925, Serial No. 46,733, and in Sweden Aug. 23, 1924. 2 Claims. (Cl. 129—2.)

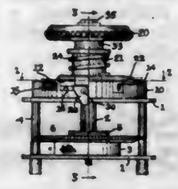
1. In a card register comprising a box or casing and rolls journalled in said casing, a plurality of connected cards adapted to be wound on said rolls, each card having near one edge a plurality of openings and at the opposite edge having integral therewith a plurality of hooked members lying in the plane of the card, said openings having a shape corresponding to that of the hooked members, whereby said hooked members on one card may be interlocked with or separated from the openings in the adjacent card without being bent.

1,666,126. AUTOMATIC WINDSHIELD CLEANER. FREDERICK G. FOLBERTH and WILLIAM M. FOLBERTH, Cleveland, Ohio, assignors to Trico Products Corporation, Buffalo, N. Y., a Corporation of New York. Filed Oct. 3, 1923. Serial No. 666,367. 6 Claims. (Cl. 121—164.)



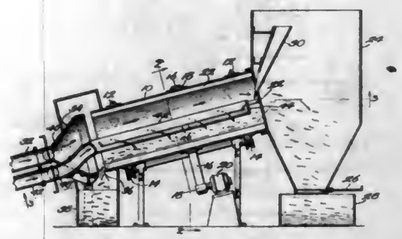
1. Valve actuating mechanism for windshield cleaner motors comprising a motor casing having an exteriorly arranged valve seat, said valve seat having fluid passages communicating with the ends of the casing and a suction passage interposed between said passages, a valve movable on the seat to connect the suction passage alternately with each fluid passage, an arm journaled in said casing and connected to the valve for shifting the same on its seat, the inner end of said arm being extended toward said rack member, a second arm journaled in the casing and extending away from the rack member within the casing, said second arm having a lateral extension operable by and during movement of a moving part of the motor, and a spring connecting the two arms together for moving the first arm to effect a shifting of the valve following a preliminary movement of the second arm by either lug of said segmental gear.

1,666,127. WINDSHIELD CLEANER. FREDERICK G. FOLBERTH and WILLIAM M. FOLBERTH, Cleveland, Ohio, assignors to Trico Products Corporation, Buffalo, N. Y., a Corporation of New York. Filed Apr. 15, 1924. Serial No. 706,748. 15 Claims. (Cl. 121—164.)



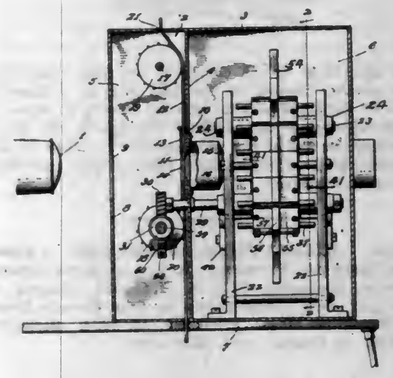
1. Valve actuating mechanism for windshield cleaners having a casing, a movable member mounted in said casing and adapted to be actuated by a difference in pressure in the opposite ends of the casing, and means actuated by the movement of said member to alternately establish communication between the opposite ends of said cylinder and a source of operating pressure, said means comprising an element connected to said movable member, a spring means arranged on said element, a pivotally mounted valve supporting member adapted to be engaged by said spring means, a valve carried by said supporting member, means for positively locking said valve supporting member in either of two positions, and means for releasing said locking means.

1,666,128. STEAM GENERATOR. ATTILIO FRANCO, Milan, Italy. Filed Feb. 11, 1925, Serial No. 8,590, and in Italy Feb. 11, 1924. 6 Claims. (Cl. 122—54.)



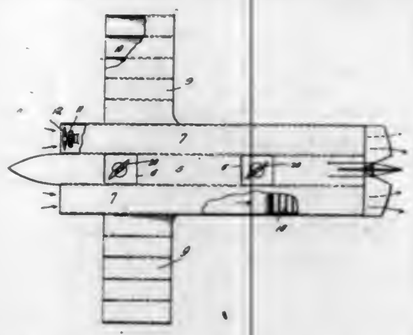
1. A boiler comprising, a central furnace provided with cross walls, and a bank of fire tubes mounted in either cross wall of said furnace and extending parallel to the boiler axis, said furnace cross walls having portions projecting laterally of said tube banks, said portions provided with openings for longitudinal firing.

1,666,129. TIME SWITCH. WALTER A. FRANTZ, Cleveland, Ohio. Filed Jan. 21, 1924. Serial No. 687,509. 9 Claims. (Cl. 200—36.)



1. In a time switch, a stationary member having a discontinuous circular track terminating in an abrupt shoulder, a movable member adapted to sweep over said track and to jump abruptly from said shoulder, means for rotating said member in opposite directions, and means operative upon the approach of said member toward said shoulder in the opposite direction from which the jump occurred for elevating said member automatically to contact with the track.

1,666,130. MICA-SEPARATING MACHINE. LOUIS T. FREDERICK, Valparaiso, Ind., assignor to Chicago Mica Company, Valparaiso, Ind., a Corporation of Illinois. Filed Aug. 16, 1926. Serial No. 129,374. 3 Claims. (Cl. 125—24.)

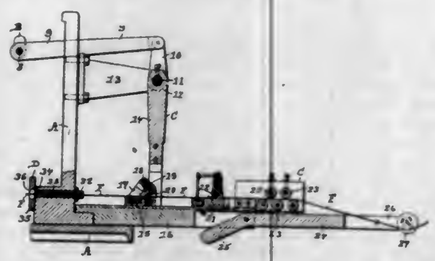


1. A machine for separating mica flakes having a rotating tumbling drum, baffles within the drum for tumbling the loosened mica slabs, and an air blast pipe having an opening adjacent to the inside of the drum and facing in a direction opposite to the direction of rotation of the drum for blowing the loosened flakes from the mica blocks.

1,666,131. MOTION-PICTURE-PROJECTION APPARATUS. MCCLELLAN C. FULLENLOVE, Toledo, Ohio, assignor of thirty per cent to Albert J. Buchheit and twenty-five per cent to Walter V. Ghislin, Park Ridge, Ill., and twenty per cent to William Buchheit, Asbury Park, N. J. Filed Jan. 15, 1926. Serial No. 81,489. 12 Claims. (Cl. 88—16.8.)

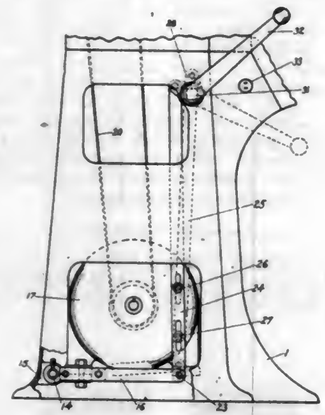
1. In motion picture projection apparatus, an optical system including a fixed objective lens, means for continuously moving a film past the said lens, a series of objective lenses movable across the focal axis of the fixed objective lens in a rectilinear path parallel with the plane of the picture area of the film, the said movable objective lenses having spaced parallel upper and lower margins and being of a height equal to the height of the picture areas of the film, and means for moving said lenses in consonance with the movement of the film and automatically grouping successive lenses in marginal engagement with one another as they successively pass the focal axis of the fixed objective lens and in optical registration with the respective successive picture areas of the film, the marginal engagement of the lenses registering with the lines of demarcation between successive picture areas.

1,666,132. AEROPLANE. MAURICE GALLET and ADOLPH B. ANDERSON, Poughkeepsie, N. Y. Filed July 28, 1927. Serial No. 209,044. 3 Claims. (Cl. 244—18.)



1. In an aeroplane, a body comprising a pair of longitudinally extending tubular side members, the bottoms of which adjacent their rear ends are depressed, to form compartments and turbines journaled in the side members so that their blades move longitudinally of the side members and in the compartments, being actuated by currents of air through the side members.

1,666,133. HAIR CLASP AND METHOD OF PRODUCING THE SAME. CLARK A. GIBSON, Shelbyville, Ill., assignor to Sta-Rite Hair Pin Company, Shelbyville, Ill., a Corporation of Delaware. Filed June 4, 1927. Serial No. 196,543. 6 Claims. (Cl. 132—41.)

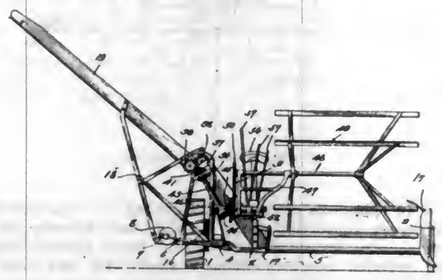


1. A hair clasp of the character described comprising a wire member formed of two legs and an ornamental element of hardened plastic material having a groove in one side extending substantially throughout its length and having one leg of the wire member attached to said ornamental element throughout substantially the whole length of said groove.

1,666,134. WIRE-CUTTING MECHANISM. ALBERT ABBE GRISWOLD, Providence, R. I., and ALVIN CARROLL GODDARD, Richmond Hill, N. Y.; said Goddard assignor, by mesne assignments, to John Francis Chevalier, Brookline, Mass. Filed Oct. 22, 1924. Serial No. 745,150. 2 Claims. (Cl. 140—140.)

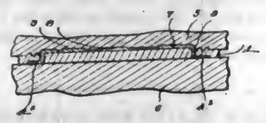
1. A wire cutting mechanism comprising a hardened tubular steel wire cutting bushing secured in the frame of a machine and having a small flat wire bore and a squared off wire cutting end, a flat cutting plate having a comparatively large round cutting aperture, the circular edge of the aperture forming a continuous cutting edge larger than the small flat wire bore of the cutting bushing and secured to a slide of the machine and bearing against the squared off wire cutting end of the wire cutting bushing, said slide having up and down movements for the purpose as described.

1,666,135. BELT-TENSIONING DEVICE FOR THREADING MACHINES AND THE LIKE. LESLIE S. HALL, Erie, Pa., assignor to Williams Tool Corporation, Erie, Pa. Original application filed Feb. 18, 1924, Serial No. 693,604, and in Canada Mar. 20, 1924. Divided and this application filed Mar. 25, 1925. Serial No. 18,245. 2 Claims. (Cl. 308—11.)



1. In combination with a power machine including an upright frame, rotatable means mounted in upper portion of said frame, a platform pivoted in said frame below said rotatable means, a motor on said platform, a substantially vertical link in said frame secured at its lower end to and supporting the free side of said platform, a stub shaft in said frame carrying at one end an arm secured to the upper end of said link, driving means between said motor and said rotatable means, means on said stub shaft for rotating the same to raise and lower said link whereby the tension of said driving means is relieved, and means for locking said link in raised position.

1,666,136. STEAM-ACTUATED AIR INJECTOR. LLOYD E. HARTER, Richmond, Ind., assignor to Crown Fuel Saver Company, Richmond, Ind., a Corporation of Indiana. Filed July 8, 1926. Serial No. 121,251. 1 Claim. (Cl. 110—60.)



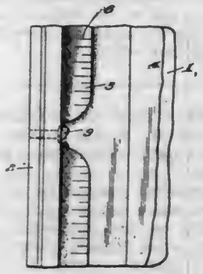
A secondary air injector, to be employed in connection with a furnace or the like, and comprising a pluralitw of cone-shaped rings spaced apart and integrally connected to form air inlets between each two and leading from the outside to the interiors thereof, a steam jet nozzle concentric with said rings and adapted to direct a jet of steam through the centers of all of said rings, means for detachably connecting said nozzle with one of said rings which is most remote to the ring to which said nozzle is connected, an air discharge nozzle extending from the outer end of said stem and formed flattened and fan-shaped horizontally with a slot formed through the end thereof for the discharge therethrough of air, and a dividing pier connecting the upper and the lower portions of said air discharge nozzle.

1,666,137. HARVESTER. HENRY HEUER, Cobb, Wis. Filed Sept. 13, 1924. Serial No. 737,527. 1 Claim. (Cl. 56—185.)

In a harvester of the class described, the combination with a main supporting wheel and a laterally extending frame supported at one end thereby, an endless apron moving from one side to the other of the frame, a sickle bar mounted for reciprocation in front of the apron, and a reel mounted for rotation above the sickle bar; of a structure extending over and laterally beyond the main supporting wheel upper and lower endless aprons for elevating material delivered from the apron on the first named frame, a longitudinal shaft supported by said structure at the outer side of the main wheel, means for transmitting motion from one end of said shaft to the sickle bar, means for transmitting motion from the other end of said shaft to the aprons, and mechanism for transmitting motion from the aprons to the reel.

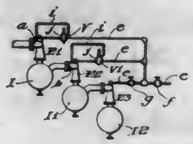
1,666,138. ORNAMENTED ARTICLE AND METHOD OF MAKING THE SAME. GUY R. HOUGHTALING, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y. Filed Jan. 11, 1926. Serial No. 80,489. 4 Claims. (Cl. 41—10.)

1. An ornamental article comprising a piece formed of soft sheet metal and having an opening therein and an endless groove and an insert formed of soft sheet metal lying in flowed intimate contact with the first mentioned piece, and having its marginal edges flowed and coincident with the inner wall of the endless groove of the first mentioned piece, said insert having a prong extending therefrom through the opening of the first mentioned piece and deflected on the rear face of the latter.



1,666,139. TRUCK FOR STOVES OR THE LIKE. JOHN ADOLPH JOHNSON, Meriden, Conn., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 20, 1925. Serial No. 51,285. 3 Claims. (Cl. 280—61.)

1. In a truck for stoves, or the like, a sheet metal frame including a central dished leg receiving portion, spaced radially extending caster mounting portions bent outwardly from said central portion, and reinforcing flanges extending along said mounting portions and the



periphery of said leg receiving portion at each side of the bend between said portions, and casters swivelly supported on said mounting portions.

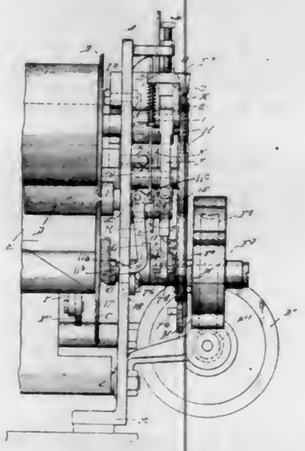
1,666,140. FORM-LOCATING MEANS. LOUIS G. JULIHN, Washington, D. C., assignor to Elliott-Fisher Company, a Corporation of Delaware. Filed Apr. 12, 1926. Serial No. 101,593. 2 Claims. (Cl. 197—127.)

1. In combination, a flat platen, a locator disposed at one edge of the platen and having a convexly curved semi-circular face, and a work sheet movable on the platen past the locator to different line positions by pressure exerted on the sheet and having a locator engaging edge formed of alternately reversed curves of the same arc of a circle providing equi-distantly spaced arcuate indentations for receiving said face of the locator to determine line positions of the sheet and a line of intermediate arcuate cams movable on the locator when pressure is exerted on the shet in the longitudinal direction of the line of indentations and cams.

1,666,141. EJECTOR CONTROL. GOTTDANK L. KOTHNY, Strafford, Pa., assignor to C. H. Wheeler Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 30, 1925. Serial No. 40,515. 8 Claims. (Cl. 230—104.)

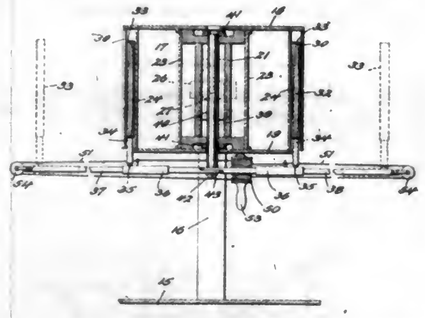
1. The method of comprising elastic fluid in stages, which comprises entraining and raising the pressure of elastic fluid in each of successive stages by elastic motive fluid in each stage, substantially completely discontinuing application of elastic motive fluid in an earlier of said stages by the motive fluid in response to rise to predetermined magnitude of the suction pressure in said earlier stage, whereby in continuing the operation a greater weight of elastic fluid is compressed per unit of elastic motive fluid utilized.

1,666,142. RIM SPREADER. PATRICK J. MCCRINK, Detroit, Mich. Filed Sept. 2, 1926. Serial No. 133,185. 1 Claim. (Cl. 157—1.)



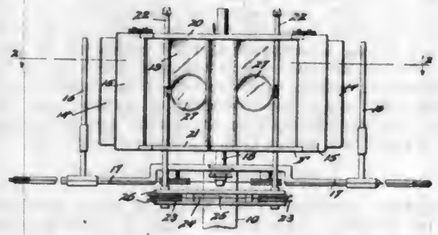
A rim spreader of the class described comprising a pair of bars pivotally connected together at one end, a pair of arms, each connected at one end pivotally to the opposite end of said bars; means for connecting said arms in pivotal relationship to each other adjacent their free ends; a slot bearing arm fixedly connected to the free end of one of said bars and projecting toward the other of said bars; and a tooth bearing arm pivotally connected to the free end of the other of said bars and engaging in said slot for resisting movement of said bars inwardly towards each other.

1,666,143. COMPOSITION OF MATTER FOR USE IN EDGING FABRICS. TILLIE MILLER, Cheyenne, Wyo. Filed May 26, 1927. Serial No. 194,534. 1 Claim. (Cl. 134—13.)



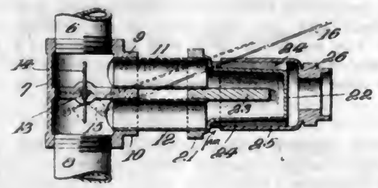
The herein described composition of matter for use in edging fabrics, which consists of the following ingredients substantially in the proportions stated, to wit, shellac 15 parts; rosin 5 parts; stearic acid 5½ parts; and a metallic powder 5½ parts.

1,666,144. BRAKE DEVICE. OSCAR PETERSON, Chicago, Ill., assignor to Mills Novelty Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 24, 1926. Serial No. 97,004. 8 Claims. (Cl. 84—134.)



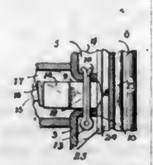
1. In means of the character set forth, the combination with sheet-feeding and rewinding mechanism comprising a music roll, a take-up roll, and a reversible electric motor for driving the rolls, of a brake for the take-up roll, and means actuated by said motor controlling the application of said brake, said means maintaining the brake in braking position during rewinding and in released condition during the music-playing operation.

1,666,145. REFLECTING AND REFRACTING DEVICE FOR STEREOSCOPES. WILLIAM P. REAVES, Greensboro, N. C. Filed Aug. 29, 1923. Serial No. 659,983. 2 Claims. (Cl. 88—29.)



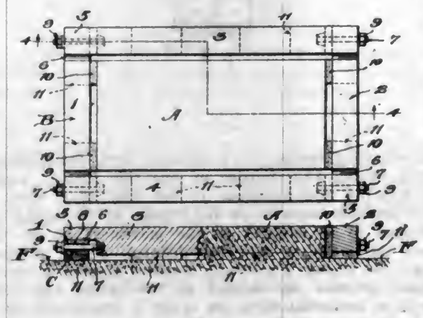
1. In apparatus of the class described, in combination, two lenses, supporting means for the lenses whereby they are mounted for rotatory movement about parallel axes and swinging movement about a single axis, and means for attaching said supporting means to a mirror frame.

1,666,146. REFLECTING AND REFRACTING DEVICE FOR STEREOSCOPES. WILLIAM P. REAVES, Greensboro, N. C. Filed Sept. 26, 1923. Serial No. 664,954. 5 Claims. (Cl. 88—29.)



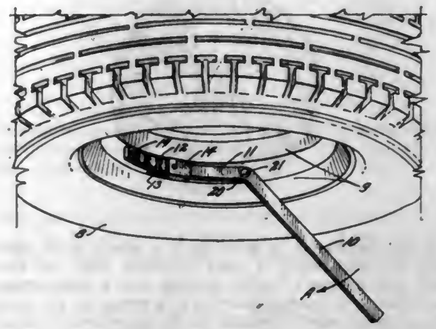
1. In an apparatus of the class described, in combination, a frame, mirrors mounted on the frame and arranged at an angle to each other, two lenses for each mirror, the axes of the lenses of each set intersecting at an angle of 90° and the lenses being adjustable into or out of operative position.

1,666,147. AIR HEATER FOR CHARGE-FORMING DEVICES. ALBERT G. REDMOND, Indianapolis, Ind., assignor to The Marvel Carbureter Company, Flint, Mich., a Corporation of Indiana. Filed Dec. 15, 1919. Serial No. 344,931. 1 Claim. (Cl. 257—241.)



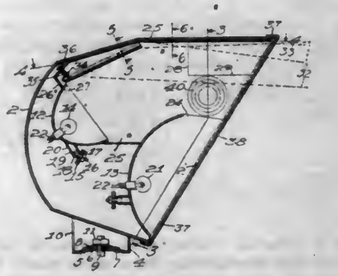
The combination with an internal combustion engine having an intake manifold and exhaust manifold, of a charge forming device connected to the intake manifold and having an air inlet, a casting arranged at the outlet of said exhaust manifold having a valve for controlling the passage of exhaust gases therethrough, said casting having outlet and inlet apertures, a tubular shaped member having a closed end and provided with a longitudinally disposed partition terminating short of its closed end and connected to said apertures of said casting by pipes forming a passageway for the exhaust gases when said valve is in closed position, said tubular member being provided with longitudinally disposed fins and a shell of a larger diameter than said tubular member arranged over said tubular member upon said fins, said shell being connected to the air inlet of said carbureter.

1,666,148. GRAVE VAULT. HERBERT R. RICK, Kent, Ohio. Filed Aug. 10, 1926. Serial No. 128,470. 1 Claim. (Cl. 27—35.)



A grave vault comprising a base having depending marginal walls provided with outstanding flanges at their lower edges, the outer edge portions of said flanges being bent upwardly and inwardly to provide a pocket, a continuous gasket extending about the walls and seated in said pocket, said walls having tongues cut horizontally therefrom and bent outwardly to form openings and tongues extending outwardly from opposite margins thereof, housings mounted beneath said base in enclosing relation to said openings, latches in said housings spring pressed outwardly through said openings, the tongues extending outwardly from the walls at opposite margins of the openings being perforated to receive removable fasteners for holding the latches in an inoperative position, and a casing open at its bottom and having walls resting upon said gasket and adapted to be engaged by said latches to securely hold the casing in engagement with said base.

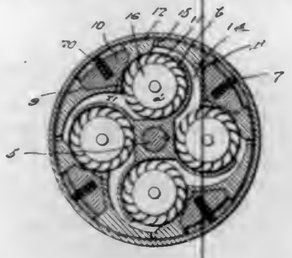
1,666,149. MOUNTING FOR MACHINERY. SIEGFRIED ROSENZWEIG, New York, N. Y. Filed July 30, 1925. Serial No. 47,116. 3 Claims. (Cl. 72—77.)



1. A mounting for machinery comprising a building part, a frame surrounding said building part and spaced therefrom, sound and vibration insulating elements adapted to be interposed between said frame and said building part and also between said frame and the floor of the building, and means for clamping certain parts only of said frame against the insulating material positioned between the frame and said building part.

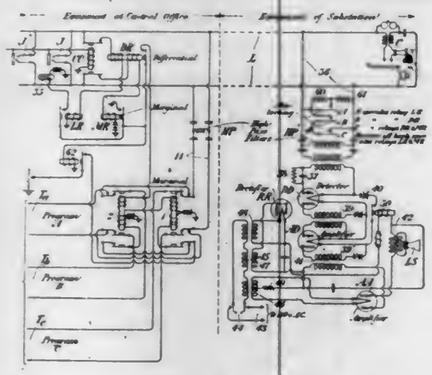
1,666,150. TIRE-CASING SPREADER. JOSEPH P. SHEVLIN and STUART E. NORTON, Denver, Colo. Filed Aug. 26, 1927. Serial No. 215,724. 6 Claims. (Cl. 152—27.)

6. A tire casing spreader comprising a handle; a lever projecting from said handle; a lug projecting adjacent the junction between said handle and said lever; a sleeve adapted to surround said lever; a second lug projecting from said sleeve, said sleeve being slidable upon said lever; means for locking said sleeve in predetermined positions upon said lever, the opening in said sleeve for the reception of said lever being larger at one extremity than at the other; a tongue projecting inwardly into the enlarged portion of said opening notches in said lever adapted to receive said tongue and spring actuated means arranged to move said sleeve on said lever so as to maintain said tongue in any desired one of said notches.



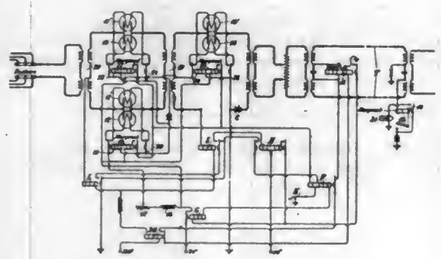
1,666,151. AUTOMOBILE HEADLIGHT. RALPH BERNARD STIERT, Sapulpa, Okla. Filed Dec. 27, 1926. Serial No. 157,296. 4 Claims. (Cl. 240—41.)

1. A headlight of the type described, comprising a casing having a detachable glass front, a reflector disposed adjacent said glass front, a source of light for said reflector disposed between the reflector and said glass front, said reflector being arranged to project light to a distance relatively near the headlight, an inner casing disposed within said casing, said inner casing having corrugations and arranged to reflect light, a reflector disposed near the rear end of said first named casing and partially encased by said inner casing, said



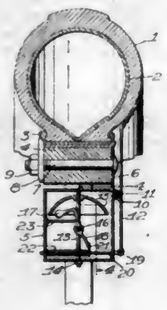
second named reflector having a source of light disposed in front thereof and arranged to project a beam of light against said corrugations, whereby the beam of light is reflected to a distance relatively far from the car.

1,666,152. TRANSMISSION MECHANISM. KARL JOSEF STRIGL, New York, N. Y. Filed Feb. 2, 1928. Serial No. 251,355. 9 Claims. (Cl. 74—34.)



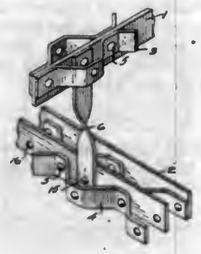
1. In combination, a drive shaft, a driven shaft alined with the drive shaft, a block rotatable with the drive shaft and having a radial cylinder and a compartment connected by a conduit therewith, a piston in the cylinder, a pocket wheel rotatable in the compartment, means urging the piston inwardly of the cylinder, a pinion operatively connected with the wheel, and a gear on the driven shaft meshing with the pinion.

1,666,153. PROGRAM-SELECTING CIRCUITS. JOHN F. TOOMEY, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 10, 1923. Serial No. 679,736. 9 Claims. (Cl. 179—2.)



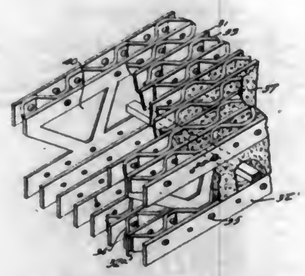
5. In a program transmission system, a subscriber's telephone line terminating in a subscriber's telephone apparatus at the subscriber's station, switching means at the central office whereby connections may be established between said subscriber's line and another subscriber's line, a plurality of trunks at the central office upon which programs may be impressed, relay operated switching means independent of said first mentioned switching means at the central office for establishing connections between any one of said trunks and said line to the exclusion of the others, and means at the subscriber's station for controlling the switching operation of said relay means while the receiver is on the switch hook.

1,666,154. DISTRIBUTION OF PROGRAMS OVER WIRES. JOHN F. TOOMEY, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed July 12, 1924. Serial No. 725,643. 3 Claims. (Cl. 179—171.)



2. In a transmission circuit, an amplifier comprising a normal vacuum tube and circuits therefor, a spare vacuum tube, a current supply circuit for energizing the filament of said normal tube, a marginal relay connected in parallel with said filament, said marginal relay remaining deenergized while current flows through said filament and adapted to be energized when the filament burns out, and means controlled by said marginal relay for switching said spare tube into the amplifier circuit in place of the normal tube.

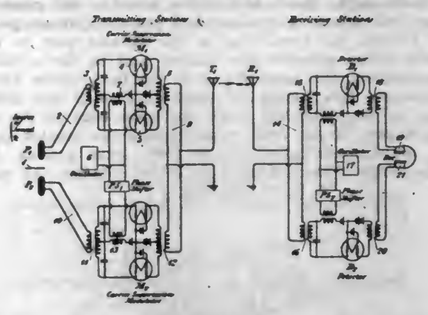
1,666,155. PNEUMATIC-TIRE SIGNAL. LEWIS H. UNGLESBY, Baton Rouge, La., assignor of one-half to Merrill H. Hughes, Baton Rouge, La. Filed Oct. 25, 1926. Serial No. 144,105. 1 Claim. (Cl. 116—34.)



A signaling device for pneumatic tires, comprising a casing having an extension on one side thereof, means for securing said extension to the felly of a wheel, a lever pivotally mounted on the outside of the casing and arranged to be engaged by the movement of the tire when the latter is partially deflated, a bell disposed within the casing, a pivotally mounted clapper, a spring-pressed slidable bar carried by the casing and being pivotally connected with the lever, a finger carried by said slidable bar and arranged to engage one end of said pivoted clapper for initially moving and subsequently releasing the latter, and a spring connected to said clapper for retracting the same after its release by the finger.

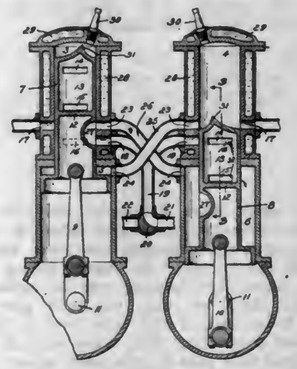
1,666,156. ARMORED REENFORCED-CONCRETE SLAB. JOHN A. VOSKAMP, New York, N. Y., assignor to Irving Iron Works Company, a Corporation of New York. Filed Oct. 25, 1926. Serial No. 143,808. 12 Claims. (Cl. 94—8.)

1. A reenforced concrete structure comprising, in combination, a plurality of parallel spaced-apart supporting sills and a reenforced concrete slab supported thereby, said slab having two reticular reenforcing members embedded therein and lying in substantially parallel planes, one, near the lower surface thereof, having tension members extending across said supporting sills and the other, near the upper surface thereof, arranged crosswise of the first mentioned reticular member.



1,666,157. ARMORED REENFORCED-CONCRETE SLAB. JOHN A. VOSKAMP, New York, N. Y., assignor to Irving Iron Works Company, a Corporation of New York. Filed Oct. 25, 1926. Serial No. 143,809. 2 Claims. (Cl. 94—8.)

1. A structure adapted to serve as a reenforcement in concrete slabs, which structure comprises the combination of two similar gratings, each composed of a series of straight bars and a series of bent strips, each of which strips is located between, and fastened to, the straight bars of either side of it, a few of said straight bars uniformly spaced apart being wide enough to extend from one grating to the other and form an element in each, and having the portions between said gratings cut away into skeleton form.

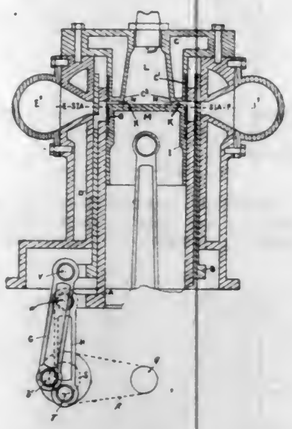


1,666,158. SYSTEM FOR BINAURAL TRANSMISSION OF SIGNALS. HERMAN A. AFFEL, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 31, 1925. Serial No. 78,710. 6 Claims. (Cl. 179—15.)

1. In a system for the binaural transmission of signals, the combination with a transmitting circuit of two similar input circuits connected therewith, each having a microphone and a modulator, a source of carrier

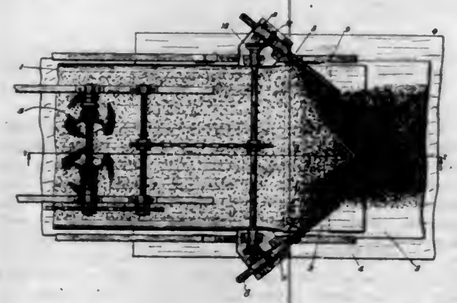
current common to both modulators, and a phase shifter interposed between the said source and one of the said modulators.

1,666,159. INTERNAL-COMBUSTION ENGINE. JEAN A. H. BARKEIJ, Los Angeles, Calif. Filed Apr. 30, 1924. Serial No. 710,075. 9 Claims. (Cl. 123—59.)



3. In a valveless two stroke cycle engine, in combination, a pair of differential cylinders with differential pistons therein operatively connected to a crankshaft for opposite reciprocation, transfer passages connecting the upper end of each large cylinder bore with a transfer port in the lower end of the adjacent small cylinder bore, ports connected to the atmosphere in the lower ends of each of said small bores below said transfer ports, and passages in said trunks adapted to connect said transfer and atmospheric ports when their respective pistons have reached the upper ends of their strokes.

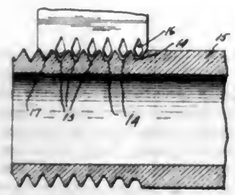
1,666,160. SLEEVE-VALVE INTERNAL-COMBUSTION ENGINE. JEAN A. H. BARKEIJ, Los Angeles, Calif. Filed Mar. 26, 1925. Serial No. 18,456. 4 Claims. (Cl. 123—75.)



1. In a sleeve valve internal combustion engine, comprising a cylinder, two concentric sleeve valves within said cylinder, a reentrant head within said sleeves and a reciprocating piston within the inner one of said sleeves, an exhaust port opposite an inlet port in said cylinder communicating with the space inside said sleeves and below said head, and exhaust port opposite an inlet port in the inner sleeve at its upper end at about the same level, an exhaust port opposite an inlet port in the outer sleeve, said exhaust port above the level of the inlet port, connecting rod attached to said sleeves at their lower ends, said connecting rods attached to cranks on an eccentric shaft, the connecting rod of

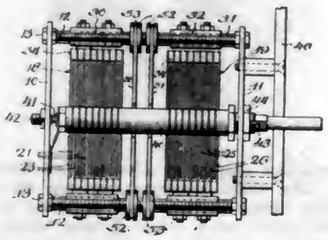
the outer sleeve attached to a crank which moves ahead of that of the inner sleeve, said eccentric shaft rotating at half engine speed, said sleeves covering and uncovering their exhaust and inlet ports and the cylinder ports as follows, the lower edge of the exhaust port in the outer sleeve uncovers the exhaust port in the cylinder downwardly, the exhaust port in the inner sleeve being uncovered downwardly in cooperation with the lower edge of the detachable head, the lower edge of the exhaust port in the outer sleeve closing the exhaust port in the cylinder upwardly, its lower edge passing the upper edge of the exhaust port in the cylinder; the inlet

port in the outer sleeve uncovering the inlet port in the cylinder upwardly, the upper edge of the inlet port in the outer sleeve passing the lower edge of the inlet port in the cylinder; the lower edge of the inlet port in the inner sleeve passing over the lower edge of the reentrant head to cover the inlet port in this sleeve, the lower edge of this inlet port in this sleeve having passed downwardly this lower edge of the head to uncover this inlet port in this inner sleeve; the inlet port in the outer sleeve covering the inlet port in the cylinder downwardly, the upper edge of the inlet port in the outer sleeve passing over the lower edge of the inlet port in the cylinder.



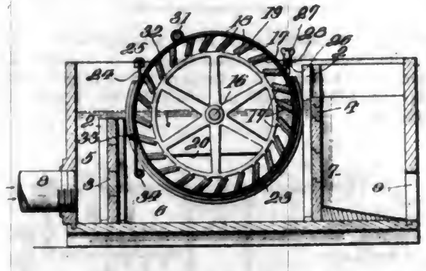
1,666,161. DELIVERY GUIDE. CHARLES R. BIRDSEY, Hinsdale, Ill., assignor to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 12, 1924. Serial No. 737,237. 7 Claims. (Cl. 198—188.)

1. In a device of the character described, an endless travelling mixing and conveying belt, an end pulley over which said belt passes and rotating directing delivery guides in marginal contact with the upper face of said belt travelling thereunder, and marginally located adjacent the discharging end of the mixing and conveying belt.



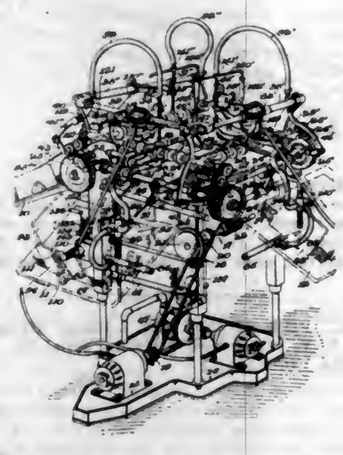
3. In a device for continuously discharging plastic material including an endless conveyor belt, means for inclining a portion of the belt adjacent its discharge end, delivery guides on each side of the inclined portion and under which the belt travels, and means arranged on the underside of the belt maintaining the inclined portion in contact with said guides.

1,666,162. THREAD CUTTER. HARVEY P. BOSTAPH, Detroit, Mich. Filed Aug. 6, 1923. Serial No. 655,944. 2 Claims. (Cl. 10—111.)



1. A threading device comprising a cutting member having cutting teeth formed thereon, said teeth having a recess formed in the advancing face of said teeth adjacent to and inwardly of the cutting edge thereof; and a guide tooth, free from a cutting edge, adapted for riding in the channels formed and for resisting the backward thrust of said member.

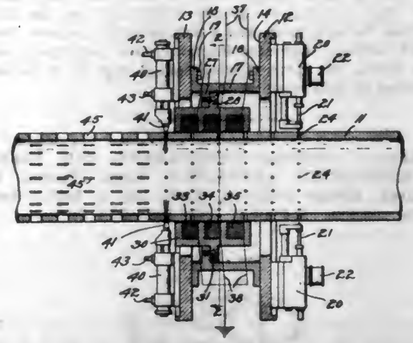
1,666,163. RADIOCONDENSER. PAUL A. CHAMBERLAIN, Chicago, Ill. Original application filed July 2, 1924, Serial No. 723,617. Divided and this application filed Jan. 22, 1926. Serial No. 82,934. 3 Claims. (Cl. 175—41.5.)



1. A multiple variable condenser comprising, in combination, a pair of end plates, frame members interconnecting said end plates, a plurality of independent sets of stator plates, insulation means interposed between said frame members and each of said sets of stator plates, whereby one set of said stator plates is substantially insulated from another set of said stator plates, a shaft journaled in said end plates, sets of rotor plates carried by said shaft and arranged to be interleaved between said sets of stator plates whereby the mutual capacity between said sets of plates may be simultaneously varied by rotation of said central shaft.

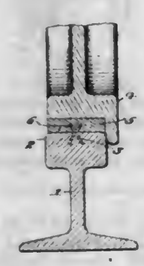
1,666,164. APPARATUS FOR AERATING AND SCREENING LIQUID. FRED B. CHAPPELL, Glens Falls, N. Y., assignor of one-half to Glens Falls Machine Works, Glens Falls, N. Y., a Corporation of New York. Filed Apr. 11, 1922. Serial No. 551,564. 10 Claims. (Cl. 210—190.)

1. An apparatus of the kind described comprising a receptacle, a foraminated cylinder revolubly mounted in said receptacle having a plurality of pockets disposed beneath the foraminous surface thereof, means for scaling said pockets, said pockets being adapted to collect water on the ascent of said pockets and to collect air on the descent of said pockets for aerating and cleaning the surface of said cylinder.



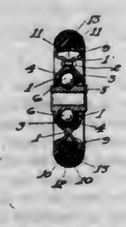
1,666,165. SHEET-FEEDING MACHINE. CARL E. CHRISTOPHEL, Pearl River, N. Y., assignor to Dexter Folder Company, New York, N. Y., a Corporation of New York. Filed Mar. 14, 1925. Serial No. 15,641. 26 Claims. (Cl. 271—64.)

1. In a device of the character described, the combination of a plurality of receivers angularly disposed with relation to each other, and means for successively delivering sheets from a common pile into said receivers.



1,666,166. METHOD OF CUTTING SLOTS IN METAL. CLARENCE J. COBERLY, Los Angeles, Calif., assignor to Kobe, Inc., Los Angeles, Calif., a Corporation of California. Filed Dec. 2, 1925. Serial No. 72,690. 8 Claims. (Cl. 148—9.)

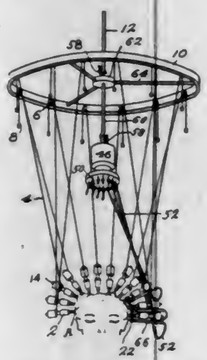
1. A method of forming a slot in a piece of metal and determining the rate of quench of the walls of said slot, said method comprising: uniformly heating an extensive area of said metal; directing a cutting jet through said metal in an interior portion of said extensive heated area to form a slot in said metal, the difference in temperature between the walls of said slot and said extensive area of metal being much less than otherwise, due to said



uniform heating of said extensive area; and permitting said metal to cool gradually, the temperature of said extensive area determining the rate of quench of the walls of said slot.

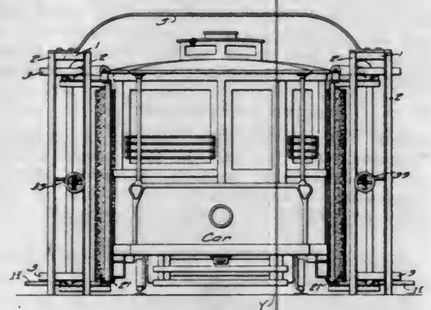
1,666,167. RAILWAY RAIL, WHEEL, AND BRAKE SHOE. JOHN LAURENCE CONNOLLY, New York, N. Y. Filed Sept. 27, 1927. Serial No. 222,867. 4 Claims. (Cl. 238—148.)

1. The combination of a rail provided with a substantially inverted V-shaped groove containing friction material, and a wheel having a peripheral groove of the same shape as that in the rail and containing friction material adapted to contact with the material in the rail.



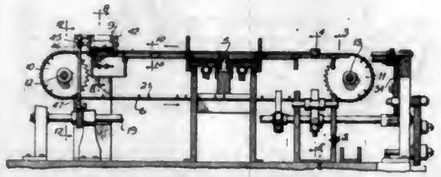
1,666,168. SKATE ROLLER. EUGENE A. COPELAND, Worcester, Mass., assignor to The Samuel Winslow Skate Manufacturing Company, Worcester, Mass., a Corporation of Massachusetts. Filed June 6, 1927. Serial No. 196,915. 1 Claim. (Cl. 208—181.)

A skate roller comprising a pair of annular side plates assembled in opposed relation to make a substantial contact with each other on a circle intermediate their inner



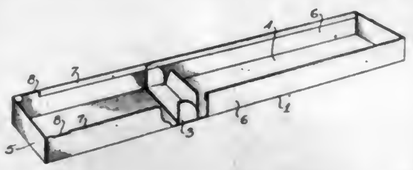
and outer peripheries, fastening means to hold said plates together, on said intermediate circle of contact, said plates, both inwardly and outwardly of said circle of contact, being laterally flared, a pair of cooperating ball race sections disposed within said inner lateral flaring portions of said plates, balls in said race sections, a hub with a peripheral groove which provides the inner raceway for said balls, and a circular tread member interposed between the outer lateral flaring portions of said side plates, the latter having spaced lugs to fit in slots provided by said tread member.

1,666,169. COOLING ATTACHMENT FOR PERMANENT-WAVING APPARATUS. LOUIS VICTOR DORANGE, Kansas City, Mo. Filed July 5, 1927. Serial No. 203,523. 8 Claims. (Cl. 132—36.)



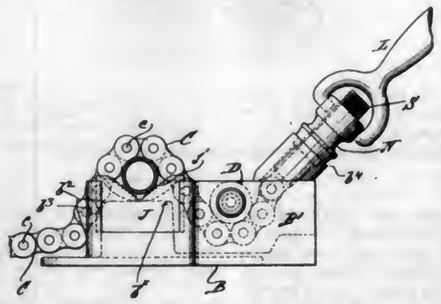
1. In combination with permanent hair waving apparatus including curling pins, devices adapted to be applied to said curling pins and having air chambers with outlets directed towards the scalp, and means for forcing air through said chambers and said outlets.

1,666,170. VEHICLE SIDE AND WINDOW WASHING MACHINE. JAMES R. FITZPATRICK, New York, N. Y. Filed July 27, 1926. Serial No. 125,139. 3 Claims. (Cl. 15—53.)



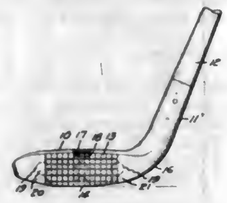
1. In a vehicle side and window washing machine the combination of spaced means defining a vehicle passageway, each of such means comprising an upstanding stationary frame for a brush carriage; of a brush carriage supported by said frame and movable toward and away from the passageway; cooperating means between said frame and carriage for supporting the latter movably on said frame; a plurality of vertical shafts revolubly journalled in said carriage; brushes carried by said shafts adapted to clean a vehicle by contact therewith; brush driving mechanism carried by said carriage and movable therewith with respect to said frame, said mechanism comprising motor means and gearing operated thereby for driving the brushes; a water supply apparatus for the brushes; and means under control of an operator for adjusting the brushes into and out of working position, toward and away from the passageway.

1,666,171. SHEET-HANDLING MECHANISM. PAUL A. GOLLNICK, Chicago, Ill., assignor to Spiegel, May, Stern Co., Chicago, Ill., a Corporation of Illinois. Filed May 12, 1926. Serial No. 108,502. 23 Claims. (Cl. 271—1.)



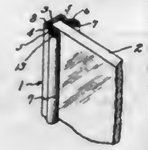
1. In a device adapted for the flatwise handling of sheets, an endless conveyer having projecting parts adapted to engage apertures in said sheets for feeding them through a predetermined path.

1,666,172. TRAY. PAUL A. GOLLNICK, Chicago, Ill., assignor to Spiegel, May, Stern Company, Chicago, Ill., a Corporation of Illinois. Filed June 11, 1927. Serial No. 198,171. 15 Claims. (Cl. 101—47.)



1. A device of the class described, comprising a tray, a follower slidably supported in said tray, said follower being also tiltable, and interengaging means on said tray and follower for frictionally securing said follower against shifting when the latter is tilted to one position.

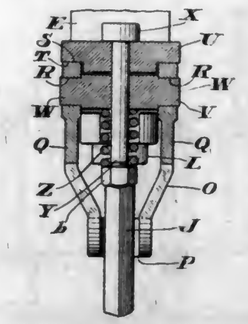
1,666,173. PIPE CHAIN VISE. HENRY HEIDE, New York, N. Y. Filed June 9, 1925. Serial No. 35,864. 6 Claims. (Cl. 81—19.)



1. A chain vise of the character designated comprising a base, means thereon for supporting an article to be clamped, a clamping chain, means for holding one end of said chain, an adjustive tightening screw connected with the other end of said clamping chain, a stationary abutment sleeve projecting from said supporting means and inclined upwardly and outwardly at an angle to said base, a power nut engaging said screw and bearing upon said abutment sleeve for moving said screw in an upward and outward direction to tighten said chain, and a deflector interposed between said adjustive tightening screw and the means of support for the article to be clamped.

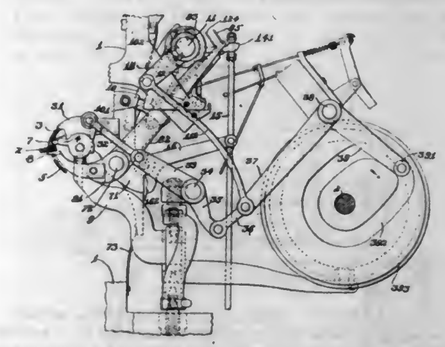
1,666,174. GOLF PUTTER. ELMER R. HOLLAND, San Francisco, Calif. Filed Mar. 17, 1927. Serial No. 175,963. 2 Claims. (Cl. 273—77.)

2. A golf putter comprising a head of aluminum having a striking face, a bulged rear side and a sole, said head having a plurality of recesses disposed at spaced points along the sole of the head, a like number of recesses disposed at spaced points along the rear side of the head and spaced apart substantially the same distance as said first named recesses, and weighting material within said recesses.



1,666,175. WINDOW GUIDE. ELMER M. KENNEDY, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 3, 1925. Serial No. 20,500. 2 Claims. (Cl. 296—44.5.)

1. A runway for a glass panel comprising a channel shaped member of flexible material, and reinforcing means for said channel shaped member including a wire extending longitudinally of said channel shaped member having alternately arranged oppositely extending successive substantially symmetrical loops disposed in the sides of said channel member, the sides of each loop being substantially parallel and inclined with respect to the longitudinal median line of said runway, the inner ends of the parallel sides of the loops on one side of said median line connecting to the inner ends of the parallel sides of the loops on the other side of the median line and forming therewith flat substantially V-shaped portions that are disposed in and reinforce the base of said channel shaped member.

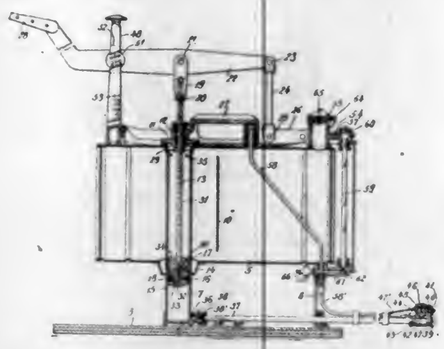


1,666,176. STEEL RETAINER FOR ROCK DRILLS. EARL B. LEAR, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 16, 1927. Serial No. 199,258. 3 Claims. (Cl. 121—32.)

1. A steel retainer for a rock drill, comprising in combination a front head, an enlargement on the front head having seating surfaces on one side thereof, a floating pin beneath the enlargement and extending transversely of the front head, means for guiding the pin, a retainer pivoted on the pin having end surfaces shaped to conform to the

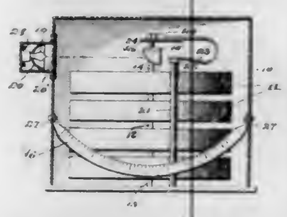
seating surfaces, and a spring on the said guiding means exerting a pressure on the pin for holding the end surfaces firmly against the seating surfaces.

1,666,177. SEWING MACHINE. FRANK W. MERRICK, Boston, Mass. Filed July 15, 1925. Serial No. 43,635. 9 Claims. (Cl. 112—48.)



1. In a sewing machine, the combination with a work-penetrating and feeding implement, a presser movable toward and from the plane of the work engaging with one side of the work, an automatic presser-lift by which pressure of the presser upon the work is relieved at time of feed-movement, and a work-table or support for the other side of the work movable toward and from the plane of the work of means acting to move the work-table or support out of contact with the latter side of the work for and during the feed-movement so that as the latter occurs the work is advanced without necessary contact with either the presser or the work-table or support.

1,666,178. DISPENSING APPARATUS. JOSEPH D. NEULS, Los Angeles, Calif., assignor to California Cyanide Company, Inc., New York, N. Y., a Corporation of Delaware. Filed June 25, 1925. Serial No. 39,588. 5 Claims. (Cl. 221—103.)

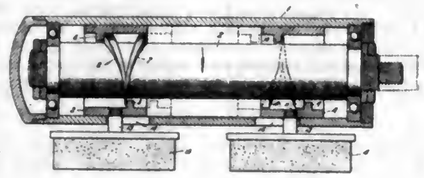


1. In an apparatus for delivering liquids which consists of a cylinder and a piston in the cylinder for ejecting the liquid therefrom, a lever operable to reciprocate the piston and means for limiting the ejecting stroke of the lever, this means comprising a rack divided by a web, holes in the rack on both sides of the web and adjustable pins adapted to fit in these holes, the pins on one side of

the rack limiting the movement of the lever to permit the ejection of a measured quantity of liquid and the pins

on the other side of the rack limiting the movement of the lever to permit the ejection of a multiple of the first mentioned quantity.

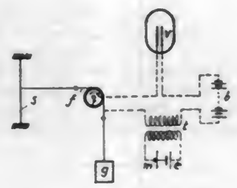
1,666,179. PRECISION ALTIMETER. DACHE M. REEVES, Lee Hall, Va. Filed Apr. 10, 1922. Serial No. 551,348. 4 Claims. (Cl. 73—4.)



1. An altimeter comprising an expansible means, a source of artificial light and means movable in a vertical path by said expansible means for deflecting a light ray at different angles in accordance with the degree of expansion and contraction of the expansible means.

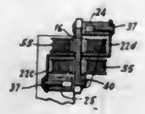
1,666,180. LIGHT-WEIGHT GYPSUM PRODUCTS. CARLISLE K. ROOS and MURRELL G. ALLISON, Fort Dodge, Iowa, assignors to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 23, 1924. Serial No. 745,419. 2 Claims. (Cl. 106—34.)

2. The process for increasing the bulk and decreasing the weight of gypsum products which consists in adding 2.3 parts by weight of a solution of sodium silicate to the gauging water therefor, in mixing it with one hundred parts of calcined gypsum, in rendering plastic the gypsum and forming the product of the resultant mass, and in allowing it to set.



1,666,181. PORTABLE POLISHING TOOLS. RICHARD SCHMID and WALTER WEZEL, Stuttgart, Germany, assignors to Biax Flexible Shaft Co., Incorporated, a Corporation of New York. Filed July 7, 1926, Serial No. 121,003, and in Germany July 31, 1925. 2 Claims. (Cl. 51—170.)

1. In a polishing tool, the combination of a casing; reciprocable sleeves mounted in and guided by said casing; a revoluble shaft carried by said casing and surrounded by said sleeves; driving connections between

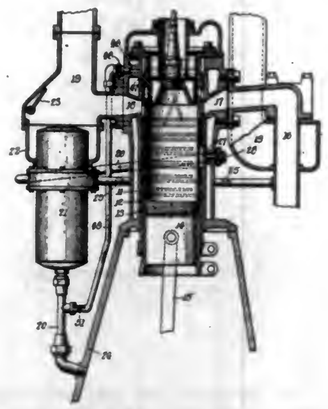


said shaft and said sleeves; polishing elements mounted on said sleeves; and means for applying power to revolve said shaft.

1,666,182. ELECTRICAL OPERATING APPARATUS. JOHANNES MICHAEL SCHMIERER, Gross-Lichterfelde, near Berlin, Germany, assignor to Radio Patents Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 20, 1925, Serial No. 24,662, and in Germany Nov. 19, 1923. 5 Claims. (Cl. 179—108.)

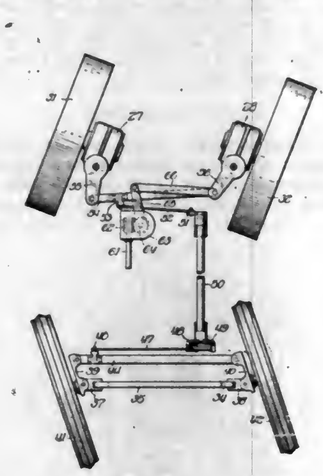
4. The method of detecting weak electrical oscillations which consists of applying them to a glow discharge device in the state of pre-glow discharge and thereby operating an electro-mechanical device.

1,666,183. ELECTROMAGNETIC TRANSLATING DEVICE. LAZARUS SHAPIRO, New York, N. Y. Filed Apr. 11, 1927. Serial No. 182,555. 8 Claims. (Cl. 179—119.)



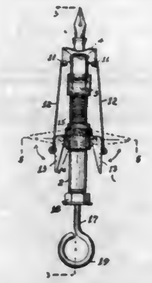
1. In an electro-magnetic translating device having an air gap, an armature co-operating with said gap, a mounting for said armature, a portion of said device and said mounting having co-operating surfaces extending parallel to the plane of vibration of the armature, and means for securing said mounting to said portion of the device permitting relative movement of said co-operating surfaces to permit of adjustment of the armature in said plane of vibration.

1,666,184. SLEEVE TYPE OF INTERNAL-COMBUSTION-ENGINE LUBRICATION. RALPH L. SKINNER and EDMOND H. LAMBERT, Detroit, Mich., assignors to Skinner Automotive Device Co., Inc., Detroit, Mich., a Corporation of California. Filed Sept. 13, 1926. Serial No. 135,046. 13 Claims. (Cl. 123—196.)



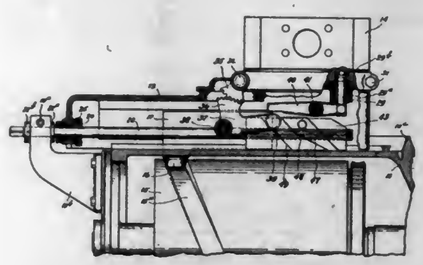
1. In an internal-combustion engine, the combination of an engine-cylinder having intake and exhaust ports,

sleeve means in said cylinder controlling said ports, means to move said sleeve means, a reciprocatory piston in said sleeve means, means to lubricate said cylinder, sleeve means and piston, and additional means to intro-



duce lubricant into the sealing-head compartment of the engine and to remove at least a part of such lubricant after it has passed down a portion of the length of said sleeve-means.

1,666,185. GARDEN TRACTOR. GEORGE T. STRITE, Port Washington, Wis., assignor of two-thirds to Harry W. Bolens, Port Washington, Wis. Filed July 2, 1923. Serial No. 648,921. 3 Claims. (Cl. 280—9.1.)

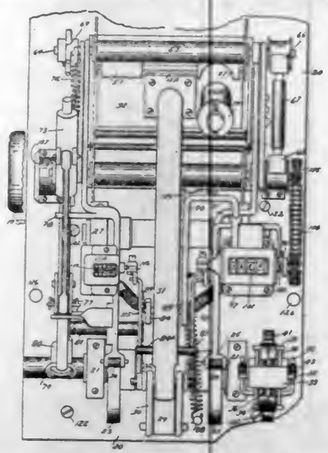


1. In a vehicle having front and rear wheels, means of ordinary type for steering certain of the wheels, and supplemental means connecting the steered wheels and other wheels, said means comprising a shaft adapted to be rotated by steering movement of the steered wheels, a yoke rotated by said shaft, a slide on said yoke and means for moving the slide and connecting it to the other wheels whereby the other wheels may be selectively caused to steer with, or opposite to the steered wheels or to remain unaffected by steering movement of the steered wheels.

1,666,186. DEVICE FOR CLEANING FOUNTAIN PENS. WOO TONG, Cleveland, Ohio. Filed Aug. 8, 1927. Serial No. 211,373. 8 Claims. (Cl. 141—1.)

1. A device for cleaning the detachable pen section of a fountain pen, comprising a cylinder, a piston within said cylinder, and means supported by said cylinder for holding and drawing said pen section axially against said cylinder.

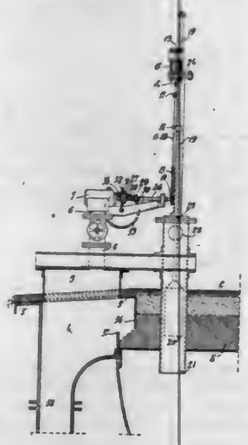
1,666,187. TURRET MECHANISM FOR MACHINE TOOLS. JOHN J. N. VAN HAMERSVELD, Cleveland, Ohio, assignor to The Warner and Swasey Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 4, 1924. Serial No. 753,869. 17 Claims. (Cl. 29—44.)



1. In a machine tool of the turret type, a bed, a turret slide movable along the bed, a turret carried by the slide, a member supported by the bed independently of the slide and having a device for causing the indexing of the turret during the movement of the slide, and adjusting means connected to the slide and to said member for simultaneously adjusting both.

10. In a machine tool of the turret type, a bed, a turret slide movable back and forth along the bed and provided with a turret, a ram normally connected with the turret slide for reciprocating the same, means for locking the turret to the slide, devices for actuating the locking means, and for indexing the turret while the slide is being given its normal movement, and means for adjusting the slide relative to the ram and at the same time maintaining a fixed relation between the slide and said devices.

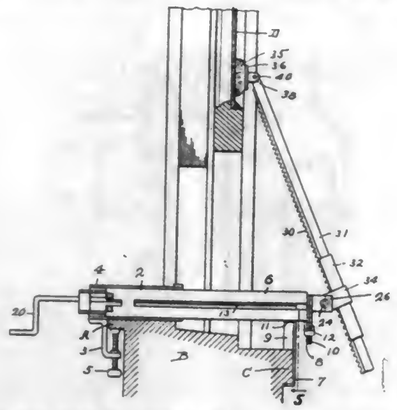
1,666,188. PRINTING PRESS. RALPH G. WHITLOCK, Los Angeles, Calif. Filed June 25, 1925. Serial No. 39,558. 40 Claims. (Cl. 101—93.)



1. In combination, a printing means; a printing arm therefor; means for actuating said printing arm to lower

said printing means for printing purposes and for alternately elevating the same; and means operating coordi-

nately with said printing means for holding the matter being printed to prevent removal of the same and the insertion of other matter during one printing operation.

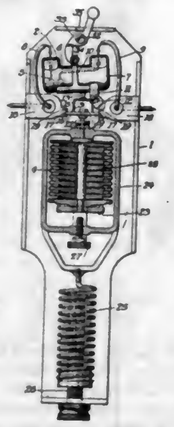


1,666,189. WASHING APPARATUS FOR COALS. PHILIPPE WOLF, Paris, France. Filed June 28, 1926, Serial No. 119,016, and in France July 3, 1925. 2 Claims. (Cl. 209—491.)

1. In an apparatus for washing coals, in combination, a perforated bed on which the materials to be washed are disposed in layers with the lightest materials at the top, a piston device for intermittently forcing water through said bed and the materials thereon, a chamber communicating with the bed through which the heavier materials are evacuated, a float responsive to the pulsations of water through said materials, a valve controlling communication of said chamber with the atmosphere and means operated by said float for governing said valve.

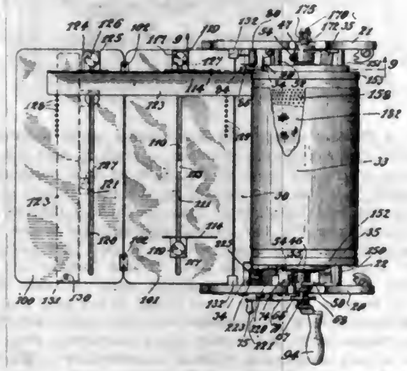
1,666,190. WINDOW WASHER. JOHN E. ZOOK, Kansas City, Mo. Filed May 23, 1927. Serial No. 193,509. 1 Claim. (Cl. 15—103.)

In a machine of the character described, a frame adapted to be secured to a window sill, a window cleaning device, a rack, a guide for said rack, a yoke to which said guide is fixed, a plate rockably mounted at the forward portion of the frame and provided with bearings in which a shaft is journaled, a gear wheel mounted.



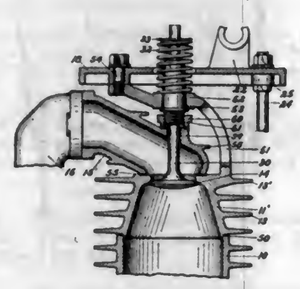
upon said shaft for driving the rack, intermeshing bevel gears for driving said shaft, and a drive shaft mounted in the frame and upon which one of said bevel gears is mounted.

1,666,191. METHOD OF TREATING MAGNETIZABLE MATERIALS. ADOLPH FRANCIS BANDUR, Berwyn, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 12, 1924. Serial No. 755,370. 10 Claims. (Cl. 178—45.)



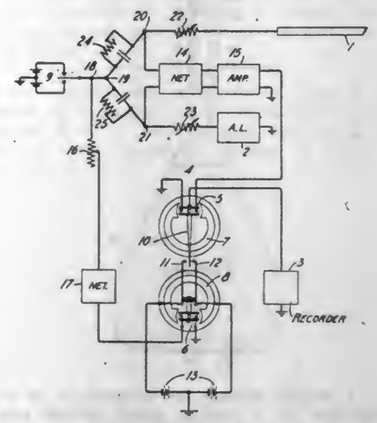
1. A method for improving the magnetic characteristics of magnetizable materials, which consists in locally flash heating said material to a high temperature, cooling the material, and controlling the rate of cooling to cause a rapid loss of heat in the material from a temperature not below 500° C.

1,666,192. THERMOSTAT. JOHN E. BOLLING, Chicago, Ill., assignor to Drying Systems, Inc., Chicago, Ill., a Corporation of Illinois. Filed May 21, 1925. Serial No. 31,826. 9 Claims. (Cl. 236—1.)



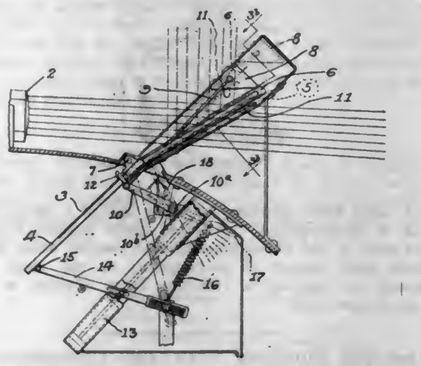
1. In a device of the class described, the combination with control means for temperature regulating equipment, of a support, an expansion element on said support, a yoke carried by said expansion element so as to be actuated thereby, a spring arranged to resist expansion of said element, and a stop for limiting the expansion of said element, said spring and stop being adjustable for varying the range of movement of said element, said element being arranged to immediately actuate said control means upon a reversal in the direction of movement of said element.

1,666,193. STENCIL-DUPLICATING MACHINE. ERNEST J. BRASSEUR, Chicago, Ill., assignor to A. B. Dick Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 8, 1925. Serial No. 61,172. 18 Claims. (Cl. 101—118.)



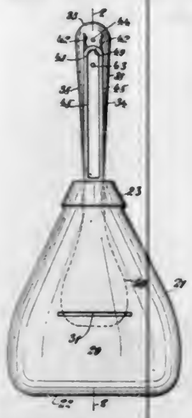
1. In an apparatus of the character described, in combination, a rotatable printing cylinder, a releasable detent for the cylinder, positively preventing rotation of the cylinder in one direction until the detent is released, and another releasable detent for the cylinder, positively preventing rotation of the cylinder in the opposite direction until this detent is released.

1,666,194. AIR-COOLED INTERNAL-COMBUSTION ENGINE. CARL P. BROCKWAY, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed June 8, 1921. Serial No. 475,954. 4 Claims. (Cl. 123—171.)



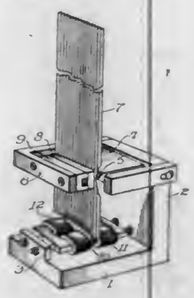
1. An air cooled engine including a cylinder and a cylinder head having a central exhaust valve seat, heat conducting and radiating means immediately adjacent thereto arranged to cool said seat, an exhaust pipe section connected to said head immediately surrounding said valve seat, a heat insulated gasket at said connection and a valve stem guide supported from said head independently of said exhaust pipe.

1,666,195. DUPLEX TELEGRAPH SYSTEM. ALLISON A. CLOKEY, Rutherford, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 18, 1927. Serial No. 190,999. 7 Claims. (Cl. 178—69.)



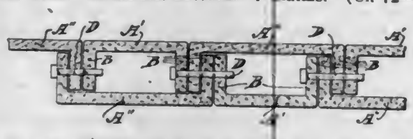
1. A duplex system terminal arrangement comprising a main and an artificial line, a source of current for transmitting signals, a translating device responsive to incoming signals, and means for neutralizing disturbing effects due to imperfect balance between the main and artificial lines, said means including independently movable members arranged to move simultaneously in the same direction in response to outgoing signals and the unbalance currents produced thereby, so as to prevent relative movement therebetween and the subsequent operation of said translating device.

1,666,196. VERTICAL BEACON. HERMANN F. CUNTZ, Hartford, Conn. Filed Aug. 16, 1922. Serial No. 582,171. 15 Claims. (Cl. 240—1.)



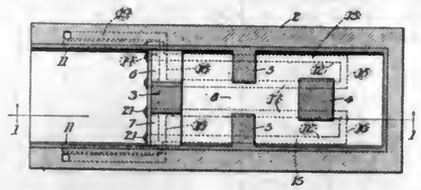
1. A beacon for guiding aircraft at night, comprising a source of light beam, means for controlling the projection of said beam skyward and means for varying the angle a limited amount from the vertical, means for progressively varying said angularity of the beam synchronously with the speed of movement of the source of light along the ground, whereby ground motion of the source continuous in a substantially horizontal direction is accommodated with vertical angular change of the beam in a ratio to keep a point of the beam at a predetermined height above the source in a fixed position, for the purpose described.

1,666,197. EXPANDIBLE VAGINAL SYRINGE. AARON DOLMATCH, Bayonne, N. J. Filed Aug. 16, 1926. Serial No. 129,422. 4 Claims. (Cl. 128—244.)



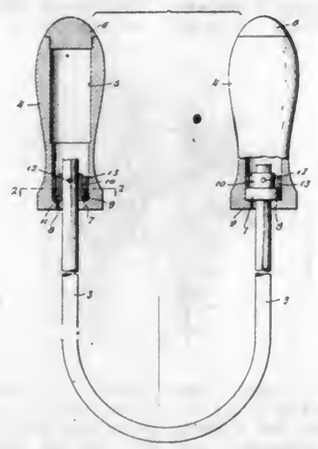
1. In a vaginal syringe the combination of a compressible bulb for a fluid, a pocket formed with the wall of the bulb, a nozzle having openings extending from the bulb and fingers having a shank formed therewith, said shank located in said pocket of the bulb, a compression of the bulb simultaneously swinging said fingers outwardly from the wall of the nozzle and discharging the fluid from the bulb through the openings of the nozzle.

1,666,198. LOUD SPEAKER. HENRY M. DRESSEL, Chicago, Ill. Filed Apr. 7, 1926. Serial No. 100,332. 4 Claims. (Cl. 179—115.)



1. In a sound producer, a frame having a linear bearing, a longitudinally corrugated plate secured between the ends to the linear bearing, said bearing being transverse with respect to corrugations of the plate, and means for applying a vibrating force effective at one end of said plate.

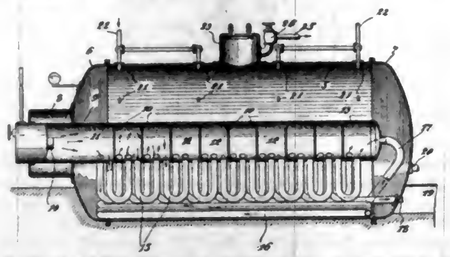
1,666,199. BUILDING UNIT AND CONSTRUCTION. FRANCIS W. FITZPATRICK, Evanston, Ill. Filed Sept. 22, 1926. Serial No. 137,044. 7 Claims. (Cl. 72—39.)



1. A wall construction comprising an assemblage of channel units, each channel unit being made up of a relatively long body having spaced edge flanges and the said units being arranged so that the units at the outer side of the wall have their edge flanges projecting inwardly and the units at the inner side of the wall have their edges projecting outwardly, the said edge flanges overlapping one another and means securing the said edge flanges together and passing transversely through the overlapped portions.

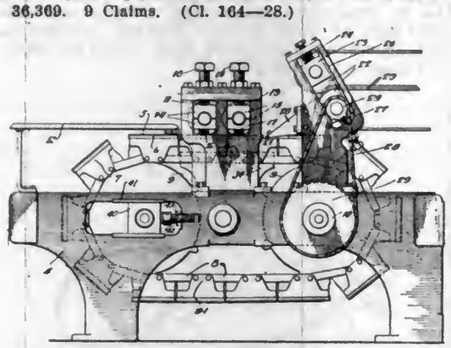
1,666,200. FURNACE. IRA W. FOLTZ, Chicago, Ill. Original application filed Oct. 16, 1920, Serial No. 417,443. Divided and this application filed Sept. 17, 1923. Serial No. 663,177. 3 Claims. (Cl. 110—82.)

1. A furnace comprising surrounding walls forming a fire-box and combustion chamber, a grate in said fire-box located above the level of the floor of said combustion chamber, a bridge wall located at the rear of said grate, a pier on said bridge wall near the middle thereof and extending from the top thereof substantially to the roof of said furnace, the front surface of said pier being at right angles with the side walls of said furnace and the lateral sides thereof being paralel with the side walls of the furnace, and wing piers joined to the side walls of said furnace at a point rearwardly and equidistant from said bridge wall, said wing piers extending from the floor of said combustion chamber substantially to the roof thereof, the front surfaces of said wing piers being at right angles with the side walls of said furnace, a pier located rearwardly from said wing piers near the middle of said combustion chamber and extending from the floor thereof substantially to the roof thereof, the front surface of said pier being at right angles with the side walls of said furnace.



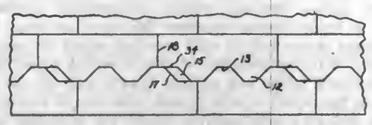
1,666,201. JUMPING ROPE. ISIDORE M. GOLDSTEIN, Brooklyn, N. Y., assignor to Morris Becker, Brooklyn, N. Y. Filed Sept. 30, 1926. Serial No. 138,617. 3 Claims. (Cl. 272—75.)

1. A device of the character described including a rope, handles therefor, an antifriction device carried by each handle and including cooperating members one of which



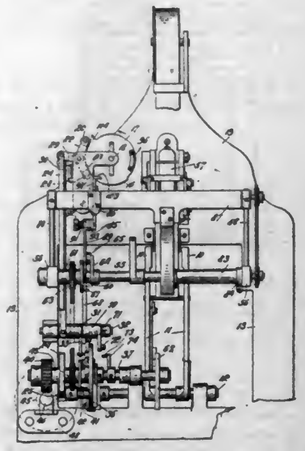
is rotatable relative to the other and to said handle, means for securing one end of said rope to the first named member, and a collar in each handle engageable with said other member of the device therein and in spaced relation to said first named member for retaining said device in position.

1,666,202. STEAM BOILER. KARL HAMM, Hartford, Conn. Filed May 14, 1926. Serial No. 109,055. 8 Claims. (Cl. 122—41.)



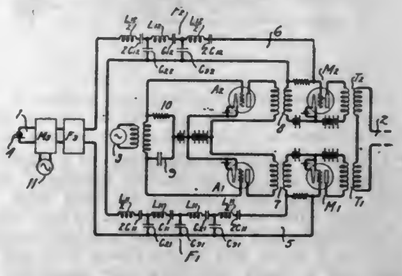
8. In a steam boiler, a boiler shell, a plurality of chambers arranged serially within said shell in axial alignment, depending tubes connecting said chambers, a fluid supply heating medium for one end chamber, means for discharging the gases and products of combustion from the other end chamber, and a coil connected to the discharge and arranged in the shell below the depending tubes.

1,666,203. SHINGLE MACHINE. NORMAN P. HARSHBERGER, Chicago, Ill. Filed June 11, 1925. Serial No. 36,369. 9 Claims. (Cl. 164—28.)



8. In a machine for cutting articles from a relatively flat sheet of material, a block mounted for movement in a substantially straight path, a cutting member projecting from said block for cutting the sheet, strippers mounted adjacent said block for stripping the articles therefrom, and fingers fixed to the ends of said strippers and adapted to pass immediately over the surface of said blocks upon which said knives are mounted.

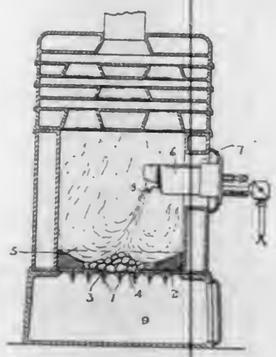
1,666,204. SHINGLE. NORMAN P. HARSHBERGER, Chicago, Ill. Filed June 16, 1926. Serial No. 116,279. 13 Claims. (Cl. 164—17.)



10. A method of cutting shingles from a strip of shingle material which consists in severing the strip longitudinally along a line having bends therein, so as to form similar and equal projections and recesses on the two severed edges, until a certain point is reached, and from this point in severing the strip along two bent lines meeting at another point, thus severing from the strip a waste piece, and in then from the point of meeting severing the strip longitudinally along another line similar to the first mentioned line, and in severing the strip transversely across some of the narrow portions of the severed strips.

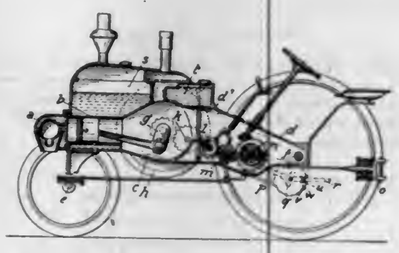
1,666,205. BUNDLING MACHINE. JOSEPH J. HART, Newark, N. J., assignor to The Clark Thread Company, Newark, N. J., a Corporation of New Jersey. Filed Sept. 23, 1926. Serial No. 137,202. 4 Claims. (Cl. 93—93.)

1. A machine of the character described having, in combination, means for gathering together the articles to be made into a bundle, a carrier for receiving the gathered articles, means for wrapping a binder around the articles, means for applying adhesive to the binder, a shaft on which the carrier is mounted, a constantly driven sleeve journaled on the shaft, means for operatively connecting the sleeve and the shaft to cause the latter to make a complete rotation, and means for temporarily disconnecting the sleeve from the shaft during the rotation of the latter to permit the adhesive to set.



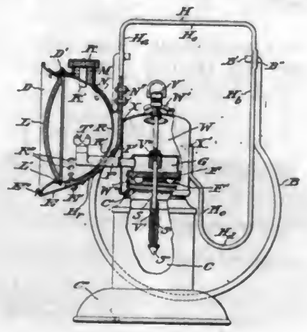
1,666,206. MODULATION SYSTEM. RALPH V. L. HARTLEY, South Orange, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Jan. 15, 1925. Serial No. 2,483. 20 Claims. (Cl. 179—171.)

19. A method of producing a single side-band carrier modulated wave which comprises generating a modulating frequency band, converting said band into two por-



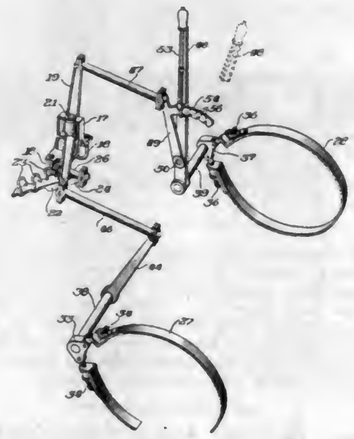
tions which have the same frequency characteristics but in which there is between the components of the same frequencies occurring in the respective portions, a phase difference which is the same for all components, and utilizing such portions.

1,666,207. METHOD OF AND MEANS FOR BURNING OIL. ARTHUR P. HOLDEN and PHILIP MORGAN, Toronto, Ontario, Canada. Filed Mar. 19, 1926. Serial No. 96,073. 6 Claims. (Cl. 158—4.)



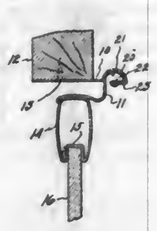
1. A method of burning oil consisting in directing a stream of atomized oil downwardly into a fire-box and igniting the same, and directing a concentrated stream of preheated air upwardly to meet and spread the downwardly directed flame laterally outward in all directions.

1,666,208. MOTOR VEHICLE WITH HORIZONTAL ENGINE. FRITZ HUBER, Mannheim, Germany, assignor to Heinrich Lanz Aktiengesellschaft, Mannheim, Germany, a Corporation of Germany. Filed Jan. 22, 1926. Serial No. 83,058, and in Germany Jan. 23, 1925. 4 Claims. (Cl. 180—54.)



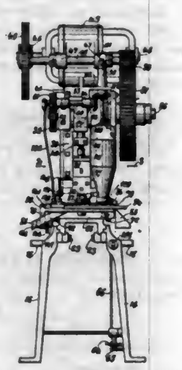
1. In a motor vehicle, the combination of a single casting comprising a horizontal internal combustion engine cylinder, a crank casing carrying the crank shaft, part of a cooling water container supported on said cylinder and crank casing, and part of a fuel container supported on said crank casing, said casting having a vertical rear surface, and a casing containing gear mechanism and crrying the rear axle, the vertical front of said gear casing being adapted to be detachably secured to the rear vertical end of said casting.

1,666,209. OUTDOOR LAMP. WILLIAM F. HUNT, New Brighton, N. Y., assignor to The Oxweld Railroad Service Company, a Corporation of Delaware. Filed June 30, 1924. Serial No. 723,382. 12 Claims. (Cl. 240—1.)



1. In a portable lamp, the combination of a case carrying lighting means at the front side thereof, a handle for said lamp secured to the front and rear sides of said case and having sections thereof spaced from the top and rear side of said case, and a bail connected to said handle and foldable down alongside said case.

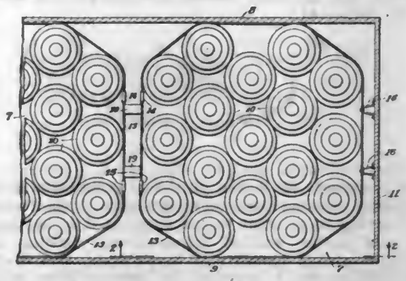
1,666,210. TRACTOR STEERING MECHANISM. GEORGE C. JETT, Milwaukee, Wis., assignor of two-fifths to Walter H. Stiemke, Milwaukee, Wis. Original application filed Sept. 27, 1922, Serial No. 590,848. Divided and this application filed Nov. 16, 1925. Serial No. 69,262. 7 Claims. (Cl. 180—9.2.)



1. A steering mechanism for vehicles having differentially driven driving wheels comprising, a steering wheel, a single brake member for each driving wheel operatively connected to said steering wheel for selective operation whereby rotation of said steering wheel in one direction will apply one of said brakes and in the other direction the other of said brakes, and means independent of and adjacent said steering wheel for applying one of said brakes when said steering wheel is operated to apply the other whereby said brakes may be applied simultaneously.

1,666,211. WINDSHIELD HINGE. HOMER G. KELLOGG, Detroit, Mich., assignor to Motor Products Corporation, Detroit, Mich., a Corporation of New York. Filed Mar. 22, 1926. Serial No. 96,045. 3 Claims. (Cl. 296—92.)

1. A hinge consisting of a pair of metal plates each having a bead adjacent one edge, and having said edge turned in, the bead and inturned edge of one of said plates being of such dimentions as to embrace the bead and inturned edge of the other of said plates and contact therewith substantially throughout when said hinge is in closed position, the outer inturned edge extending beyond and over the inner inturned edge.

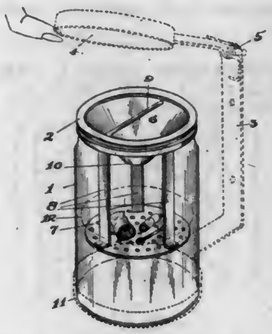


1,666,212. POWDER PRESS. WILLIAM G. KENDALL, Newark, N. J. Filed Dec. 4, 1925. Serial No. 73,172. 6 Claims. (Cl. 226—71.)

6. In a powder press the combination of a table having openings for the disposal of any powder that may be spilled thereon, a rotatable disc having openings for receptacles and for charges of powder for said receptacles pivoted to the upper face of said table, a charging hopper with its outlet located over said disc and in the path of the openings thereof, a scraper bearing on the upper face of the disc to scrape off powder spilled thereon, a reciprocating cross head guided in the press, pressing dies reciprocating with the cross head to simultaneously compress powder in the receptacles and means to eject the receptacles from the openings in said disc and from the press after the powder has been compressed in the receptacles.

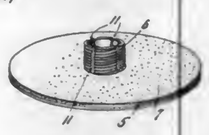
1,666,213. METHOD OF LOADING FREIGHT CARS. JOHN W. LESLIE, Evanston, Ill., assignor to Consolidated Steel Strapping Company, Chicago, Ill., a Corporation of Delaware. Filed July 17, 1926. Serial No. 123,244. 10 Claims. (Cl. 105—369.)

1. The method of loading containers in a vehicle which consists in strapping a plurality of containers together so as to form a unit and providing buffer elements positioned so as to contact with said strap at a point



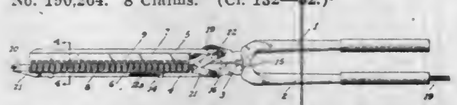
where the latter is free from the containers so as to take up the energy which may be imparted through movement of the containers in the vehicle.

1,666,214. METHOD OF COATING CORES. JOHN SHIRLEY LITTLE, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 17, 1926. Serial No. 102,714. 11 Claims. (Cl. 92—41.)



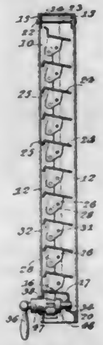
1. A method of coating a core in strand form consisting in subjecting the core to a liquid containing pulp in the presence of soap in such manner that pulp is applied thereto, and then forming the pulp around the core to constitute a coating conforming with the core and retained on the core by a felting of the pulp fibers.

1,666,215. SANITARY RECEPTACLE FOR CIGAR, CIGARETTE, AND MATCH STUBS. HENRY J. MILLER, San Francisco, Calif. Filed Dec. 16, 1922. Serial No. 607,387. 2 Claims. (Cl. 131—51.)



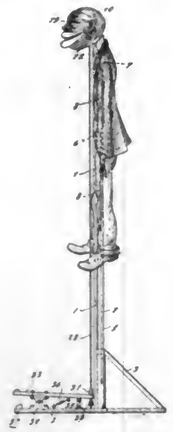
1. A sanitary receptacle for the reception of cigar, cigarette, and match stubs and the like, comprising a container adapted to contain a liquid, a removable receptor apertured at its upper end to receive the material to be collected and adapted to be inserted within said container, said receptor having a bottom portion spaced from said apertured top and provided with openings to permit the liquid content of the receptacle to pass therethrough, and spacing members disposed between the apertured top and the bottom portion of said receptor to openly space the latter from said container to permit the solid content of said receptor to be removed laterally therefrom after the receptor has been removed from said container.

1,666,216. SUPPORT FOR THREAD COPS. JAMES R. MOWAT, Kearny, N. J., assignor to The Clark Thread Company, Newark, N. J., a Corporation of New Jersey. Filed Oct. 1, 1926. Serial No. 138,820. 2 Claims. (Cl. 242—141.)



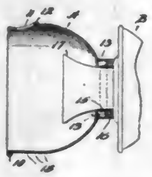
1. A support for a cop of thread comprising, a disk, a hollow bushing projecting upwardly from the disk and having an external thread adapting it to be screwed into the bottom end of the cop, said bushing being provided with a plurality of longitudinal slots dividing the bushing into a plurality of resilient walls adapted to press yieldingly against the inner surface of the cop, the front faces of the slots acting to cut a thread in the bottom of the cop as the bushing is screwed therein, and a pad of yielding material covering the upper surface of the disk and against which the bottom of the body of thread is adapted to press when the bushing is screwed fully into the bottom of the cop.

1,666,217. HAIR-WAVING IMPLEMENT. WILLIAM L. NANCOLAS, Modesto, Calif. Filed May 10, 1927. Serial No. 190,204. 8 Claims. (Cl. 132—32.)



1. A hair-waving implement comprising opposed jaws between which the hair to be waved is placed transversely, heating means for the hair mounted in connection with one jaw, means for clamping the hair along one side of the jaws, means on the other side of the jaws preventing movement of the hair longitudinally of the implement while permitting free sliding movement of the hair transversely of the jaws, and means for drawing the hair lengthwise in the implement between the sides of the jaws.

1,666,218. VENTILATOR. ANDREW L. RIKER, Fairfield, Conn. Filed Oct. 1, 1925. Serial No. 59,891. 9 Claims. (Cl. 98—107.)

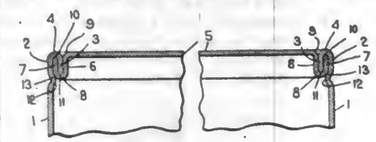


4. In a device of the character described, a frame plate and a louver having an ear pivoted on said plate, the plate including an annular flange, the ear having drawn metal entering the annular flange, and the frame plate having an inwardly set portion adjacent the louver pivot adapted to be situated contiguous with an end of said louver.

1,666,219. AMUSEMENT DEVICE. CHARLES ROBLES, Brooklyn, N. Y. Filed July 10, 1925. Serial No. 42,686. 29 Claims. (Cl. 46—40.)

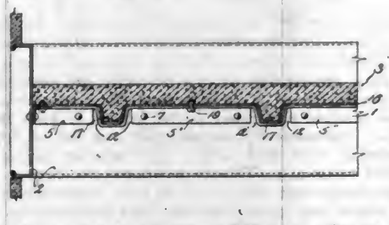
5. In an amusement device, an upright vibratory standard, a figure characterization supported by said standard adjacent its upper part, a plurality of approximately taut flexible guy members connected at one end to the upper part of said standard, passing through portions of the figure, and anchored at their other ends, whereby when the standard receives its vibratory impulses the figure will shake in the portions through which the guy members pass, and means for imparting vibratory movement to said standard.

1,666,220. TELEPHONE MUFFLER. GEORGE W. SCHULTZ, Bowers, Pa. Filed May 24, 1927. Serial No. 193,756. 1 Claim. (Cl. 179—188.)



In combination with a telephone transmitter having a metal face and a hard rubber flaring mouthpiece screwed therein, a voice muffler consisting of a metal cup having a neck portion bent to form an annular shoulder in a plane perpendicular to the axis of the cup and a sleeve coaxial with said cup, and a soft rubber washer secured on said shoulder, so that when the threaded end of the transmitter mouthpiece is inserted through said sleeve and screwed up to its normal position said sleeve will be frictionally engaged with the conical surface of the mouthpiece and said washer will be pressed firmly against the metal face of the transmitter.

1,666,221. CONTAINER. HARRY SEBELL, Boston, Mass. Filed Jan. 29, 1924. Serial No. 689,228. 1 Claim. (Cl. 220—66.)

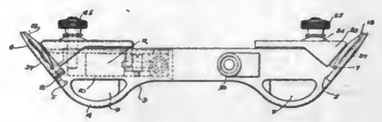


A metal container comprising a body having an opening therein and a closure removably retained in said opening and having a central portion and a rim comprising an inner flange and an outer flange uniformly spaced from each other throughout their extent but

connected to provide a recess in the closure to receive a sealing compound, said flanges being parallel and lying substantially perpendicular to said central portion, said body being formed with an annular bead which engages the closure and which is resilient laterally, the end of the body around the opening being turned over said outer flange into the space between said flanges to provide a recess in the body to receive a sealing compound and to press the outer flange between the body and said body

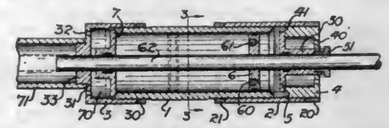
end, the body end being pressed between said flanges, whereby the closure is held in position closing the opening by the frictional engagement of the outer flange with the body and end thereof, and by the frictional engagement of the body end with the flanges and by the engagement of the bead with the closure, but the closure may be removed from the opening by pressing downwardly on the closure adjacent the inner flange to disengage the flanges from the container end and force the closure over said bead.

1,666,222. STAIR-LANDING CONSTRUCTION. ARTHUR L. SMITH, Melrose, Mass., assignor to The A. L. Smith Iron Works, Chelsea, Mass., a Corporation of Massachusetts. Filed July 9, 1926. Serial No. 121,354. 10 Claims. (Cl. 189—43.)



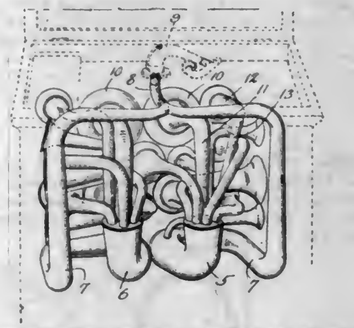
1. A structural support, comprising a continuous member having a stirrup element therein and another member in a plane at an angle to the first member and joined thereto along a common edge.

1,666,223. ELECTRIC-FIXTURE SUPPORT. WHITMAN SYMMES, San Francisco, Calif. Filed Oct. 23, 1922. Serial No. 596,322. 1 Claim. (Cl. 247—20.)



The combination with an outlet box having a plaster ring, of a bracket secured to the rear face of said box and disposed centrally within said box, an attaching plate secured to said bracket and provided with a plurality of screw threaded apertures, said plate and apertures being disposed eccentrically with respect to said box, a receptacle plate having a plurality of holes spaced substantially evenly from the center thereof and screws extending through the holes in the receptacle plate and engaging in the holes in the attaching plate.

1,666,224. HAIR CLIPPER. NESTOR N. TOMASULO, Philadelphia, Pa., assignor to Evelyn Julian, Philadelphia, Pa. Filed Sept. 30, 1925, Serial No. 59,744. Renewed Mar. 1, 1928. 16 Claims. (Cl. 30—1.)

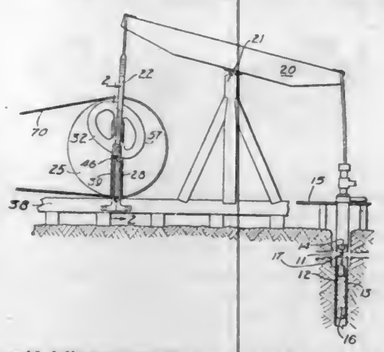


1. A power operated hair clipper comprising a casing, a clipper element at one end, means for operating said element and an air chamber below said operating mechanism.

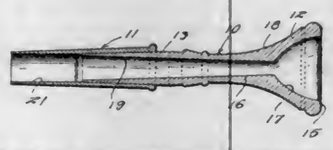
1,666,225. CLUTCH-OPERATING DEVICE. FREDERICK K. WARD, Seattle, Wash. Filed May 5, 1927. Serial No. 188,925. 3 Claims. (Cl. 192—109.)

1. A dash pot attachment for spring-applied power transmitters, comprising a pneumatic cylinder and piston, one anchored and the other connected with the spring-actuated parts, a piston rod extending in both directions from the piston and a controlling valve at each end of the cylinder movable between open and closed positions by frictional engagement with the piston rod, said valve seating to be held closed by the air under the action of the piston when moving in the direction required for applying the power.

1,666,226. MUSICAL INSTRUMENT. EDWIN M. WEAVER, Reading, Pa. Filed Sept. 8, 1926. Serial No. 134,198. 1 Claim. (Cl. 181—27.)



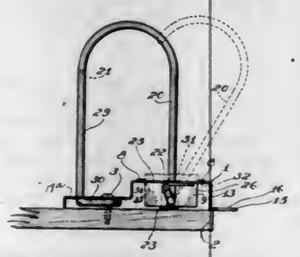
In a device of the character described, a pair of pipes merging into a substantially short pipe to be connected with a phonograph tone arm, said pipes having enlarged end portions defining sound tubes, plugs fitted in the ends of the tubes, said plugs having a plurality of openings, said openings being of various sizes, and horns fitted in the openings to receive sound waves from the sound tubes.



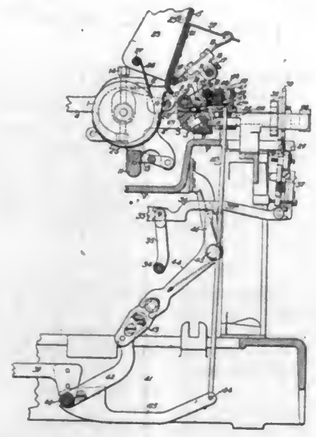
1,666,227. PUMP-OPERATING MECHANISM. EDGAR G. WILLRICH, Los Angeles, Calif. Filed Aug. 19, 1926. Serial No. 130,302. 4 Claims. (Cl. 74—14.)

1. In combination: a pump having a pump plunger; a string of sucker rods attached to said plunger; a walking beam, said string of sucker rods being attached to

said walking beam; a pitman joined to said walking beam; a band-wheel assembly, a cam connected to said band-wheel assembly; a follower connected to said pitman, said follower operating on a cam face of said cam; a vertical guide; and a slide associated with the lower end of said pitman, said slide operating in said vertical guide.

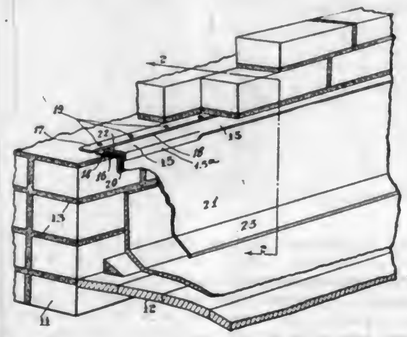


1,666,228. MOUTHPIECE FOR HORNS. WILLIAM WOLFE, Ebensburg, Pa. Filed Dec. 28, 1926. Serial No. 157,585. 1 Claim. (Cl. 84—398.)



A pipe section for converting the type of instruments of analogous character consisting of a sleeve section having an exterior surface tapered longitudinally and provided with an internal bore having at one end a tapered surface, the taperings of the said surfaces being of the same pitch whereby a mouthpiece having exterior dimensions corresponding with the dimensions of the exterior surface of the sleeve may fit snugly within the tapered surface of the internal bore, and the other end of the interior bore having a cylindrical surface of the same diameter as the major diameter of the bore of the mouthpiece.

1,666,229. FILING DEVICE. ULYSSES S. ARMSTRONG, New Kensington, Pa., assignor to Armstrong & White, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 22, 1926. Serial No. 156,447. 3 Claims. (Cl. 129—11.)

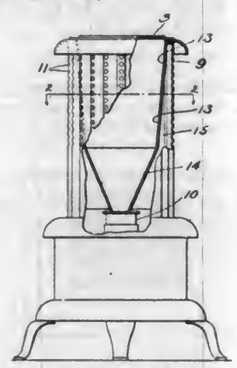


1. A filing device comprising in combination a base having a plurality of filing posts consisting of an integral member projecting upwardly from the base and rigidly secured thereto, a plurality of integrally formed retaining arms in cooperative alignment with said posts and pivotally mounted on said base, and an elongate spring borne by the base, the axial portion of said retaining arms being provided with an offset section bearing upon said spring and movable in a flat arc lying in the general plane of the longitudinal extent of said spring, whereby said spring frictionally resists the opening and closing movements of said retaining arms.

1,666,230. TYPEWRITING MACHINE. EDWIN E. BARNEY, New Rochelle, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed July 5, 1924. Serial No. 724,186. 39 Claims. (Cl. 197—176.)

1. In a typewriting or like machine, the combination of a carriage; and means for controlling the movement of the carriage comprising a feed pinion, a plurality of members independently movable into and out of holding engagement with said pinion, each member having one or more teeth and normally positioned to have a path of movement that will bring it into engagement with said pinion, and means whereby said members are successively and automatically disengaged from said pinion at given points in the travel of the carriage by co-operation with said pinion.

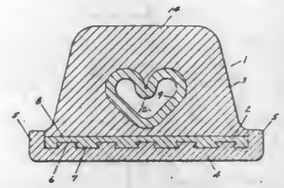
1,666,231. ROOF FLASHING. ARTHUR BLOXHAM, Montreal, Quebec, Canada. Filed May 23, 1925. Serial No. 32,368. 1 Claim. (Cl. 108—26.)



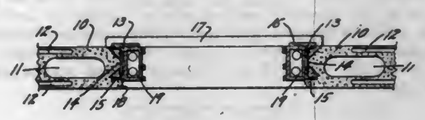
A flashing holder formed of a single sheet of material shaped to provide a U shaped guide having relatively long upper and lower legs spaced apart and adapted to project beyond the face of the wall in which the holder is embedded, said lower leg being folded upon itself to provide a double thickness of material, said folded portion being extended beyond the curve of the U in parallel relation thereto and being formed with a ridge located close to said curve, the two thicknesses of material forming the lower leg being bent to extend downwardly from a point located between the curve of the U and the terminal of the upper leg, a flashing arranged in contact with the outer surface of the inwardly extending portion of the lower leg and provided at its upper edge with a flange fitted in the space reserved between the two legs, the portion of the upper leg which normally projects outwardly beyond the downwardly bent portion of the lower leg being bent downwardly to clamp the flashing against the correspondingly bent portion of the lower leg.

1,666,232. METHOD OF MAKING MOSAICS. SIDNEY HOLLIS BOYNTON, Los Angeles, Calif. Filed July 16, 1927. Serial No. 206,251. 3 Claims. (Cl. 18—61.)

1. The method of making mosaic comprising filling a rubber matrix having a mosaic design with cementitious inlay material to provide inlays separated by joints, placing a cementitious foundation material against said inlay material so as to bond therewith, causing said cementitious materials to harden, removing said matrix, and filling the joints with pointing material.



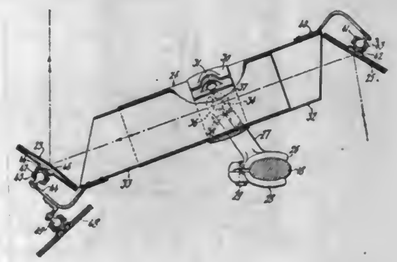
1,666,233. HEATER. JAMES H. CAMPBELL, Cambridge, Mass., assignor of one-half to James D. Moore, Boston, Mass. Filed Apr. 4, 1927. Serial No. 180,630. 4 Claims. (Cl. 126—93.)



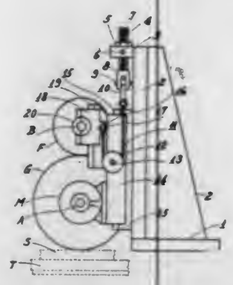
1. A heater of the class described comprising a burner, a vertical cylindrical drum housing the burner, said drum having openings in its side walls, and a deflector within and concentric with the drum, said deflector being of less diameter than the drum to provide an annular space between it and the drum, the deflector extending down from an imperforate top cover of the drum substantially to the top of the burner.

1,666,234. MANUFACTURE OF CUSHION-TIRED WHEELS. JULIEN F. CULLEN, Portland, Oreg. Filed June 26, 1923. Serial No. 647,822. 5 Claims. (Cl. 18—55.)

1. The process of making "solid" cushion tires which comprises only partially vulcanizing a resilient tubular core body sufficiently to retain a filler, incorporating a relatively non-compressible filler in said body, incorporating the body within a solid rubber body on a one piece metallic rim and enclosing the same within said body and the rim, vulcanizing the core and tire body to a point sufficient to create a unitary homogeneous structure with the core vulcanized to the wall of the solid rubber body and without destroying the resiliency of the core, and finally removing the filler.

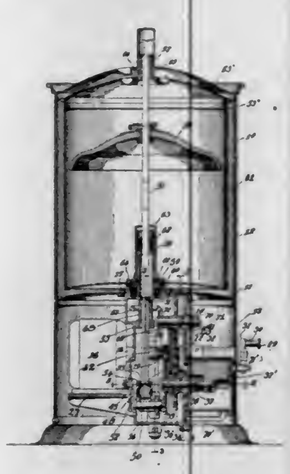


1,666,235. BUILDING CONSTRUCTION. FRITZ HUGO FRANSON, Denver, Colo. Filed Sept. 28, 1926. Serial No. 138,151. 5 Claims. (Cl. 72—98.)



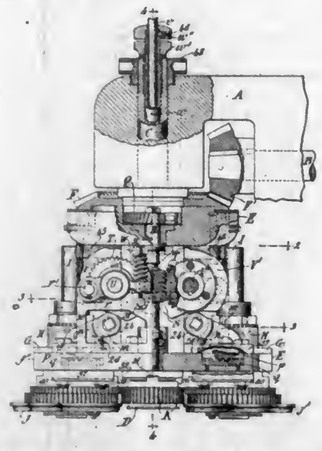
1. In a building having walls of cast material with window and door openings therethrough; angle frames surrounding said openings and forming corners therefor; and ties secured to said angle frames and extending within said walls.

1,666,236. SIGHT INSTRUMENT FOR AUTOMOBILES. SYDNEY W. FUERTH, Maplewood, N. J. Filed Jan. 19, 1927. Serial No. 162,003. 1 Claim. (Cl. 88—1.)



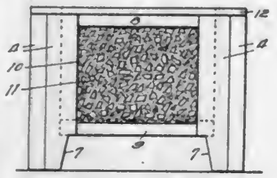
In a forward sight-instrument for automobiles, the combination of a barrel, said barrel open at both ends, parallel mirrors at the ends of the barrel, said mirrors cooperative to reflect back to the driver objects in front and to one side of the car, a clamp securing means securing said instrument to the side post of the automobile, said securing means including a bracket-arm having at one end a bracket-post clamp, and having at its outer end an annular clip, said barrel being held to said bracket by means of said clip, and a universal joint connecting said barrel to said bracket-arm or base.

1,666,237. AUTOMATICALLY-ADJUSTABLE GRINDING WHEEL. ALBERT M. FULLER, Pittsburgh, Pa. Filed Feb. 27, 1922. Serial No. 539,421. 16 Claims. (Cl. 51—166.)



1. A grinding mechanism comprising a circular rotary abrasive member, a circular non-abrasive rotary follower member, having a common plane of rotation with the abrasive member and contacting tangentially at its periphery with the periphery of the abrasive member, the abrasive member being constantly urged towards the stock being ground and the follower towards the axis of the abrasive member, and a connection between the abrasive member and the follower member whereby travel of the abrasive member toward the stock is governed by travel of the follower toward the abrasive member.

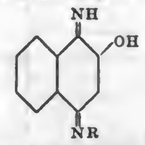
1,666,238. WASHING MACHINE. ALEXANDER GRAYDON, Buffalo, N. Y. Filed Oct. 18, 1921, Serial No. 508,597. Renewed Feb. 5, 1924. 21 Claims. (Cl. 74—14.)



1. In a device of the class described, a rotatable and reciprocable shaft, a gear on said shaft, a gear case adapted to contain a lubricant enclosing a portion of the shaft, a removable cover on said case, a gearing adapted either to reciprocate or to rotate said shaft, means for driving said gearing, and controlling means for said gearing operable from the exterior of said casing, said gearing being mounted upon the said cover whereby the gearing may be assembled thereon before application of the cover to the case.

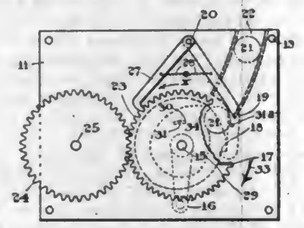
1,666,239. CAN-HEADING MACHINE. CHARLES GUERITEY, Passaic, N. J., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of Delaware. Filed Dec. 31, 1926. Serial No. 158,283. 28 Claims. (Cl. 113—24.)

1. A can-heading machine having a can-supporting mandrel and a seamer of complementary contour, adapted respectively to hold and seam a non-circular can, with means for positively producing a relatively rotary motion between the seamer and mandrel whereby the seamer contour is maintained in complementary relation to the non-circular contour of the can being seamed, and means for moving the seamer toward the mandrel to seam the can and away from it to clear the can, combined with means for maintaining the seamer always in a plane at right angles to the axis of the can and with its seaming surface in the plane of the seam.



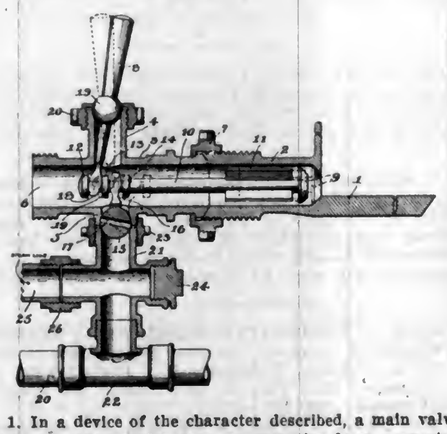
1,666,240. FLOWER AND PLANT BOX. BARNEY A. HUBERT, Pine Lawn, Mo. Filed June 15, 1925. Serial No. 37,039. 1 Claim. (Cl. 47—34.)

A flower and plant box comprising four side walls, a bottom member provided with a drain opening, a pair of supporting legs fixed to each corner of the box terminating at their lower ends in feet below the lower plane of the bottom member with the outer side faces of the legs and feet forming a vertically disposed V-shaped groove in plan view, which groove extends from the top face of the box to the lower face of each pair of feet, a filler strip receivable in each of the vertically disposed grooves and extending from the top face of the box to the lower face of the feet, a narrow marginal strip and a second narrow marginal strip fixed to each side wall between the supporting legs to provide a facial depression for each side wall, a mosaic panel disposed in each facial depression with its outer face substantially flush with the outer faces of the supporting legs, the marginal strips, and the second marginal strips; and facing strips covering the upper faces of the side walls, supporting legs, corner filler strips and the first-mentioned marginal strips.



1,666,241. MANUFACTURE OF NEW DERIVATIVES OF NAPHTHOQUINONES. ROBERT LANTZ, Paris, and ANDRÉ WAHL, Enghien, France, assignors of one-half to Societe Anonyme des Matieres Colorantes & Produits Chimiques de Saint-Denis, Paris, France. Filed Jan. 21, 1926, Serial No. 82,878, and in France Jan. 21, 1925. 2 Claims. (Cl. 260—56.)

1. As new products, the derivatives of imino-1-hydroxy-2-naphthoquinone corresponding to the general formula:



wherein R designates an aromatic radical.

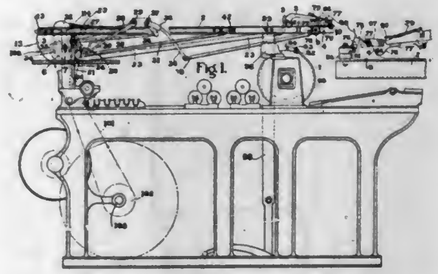
1,666,242. COIN-CONTROLLED MECHANISM FOR USE WITH VENDING MACHINES. LYNN T. LEET, Montreal, Quebec, Canada. Filed Feb. 23, 1926. Serial No. 90,109. 4 Claims. (Cl. 194—63.)

1. Coin controlled mechanism comprising, a frame, a shaft rotatably mounted in the frame, a plurality of discs rotatably mounted on the shaft, a coin receiving pawl secured to the shaft to rotate therewith and positioned between the discs, means connecting the pawl to the discs to allow a predetermined free movement between them, a locking pawl engaging with notches formed in the discs to prevent movement of them in one direction and so positioned that it may be released by a coin held in the coin receiving pawl, and means to prevent rotation of the discs in the opposite direction.

1,666,243. DRIP VALVE. EDWARD MANNING, Rutland, Vt., assignor to Manning Manufacturing Company, Rutland, Vt. Filed Dec. 29, 1926. Serial No. 157,835. 2 Claims. (Cl. 277—10.)

1. In a device of the character described, a main valve having a casing and a stem, an operating lever connected with the stem for opening and closing the valve, a drip valve in the casing connected with the stem in such a manner that when the operating lever moves to open the main valve, the drip valve will close and vice versa, means for sterilizing the valve mechanism when the main valve is closed, and the drip valve is open.

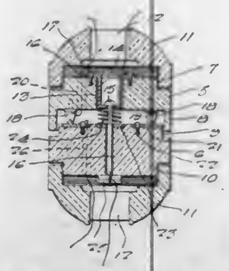
1,666,244. ADJUSTABLE STRAIGHTEDGE. BERNARD E. MCLAUGHLIN, Melrose Park, Ill. Filed Dec. 28, 1926. Serial No. 157,505. 4 Claims. (Cl. 33—75.)



1. An adjustable straight edge comprising a body member, a flexible strip member, screw members rotatably journaled in the flexible strip member having engagement in the body member for axial movement therein upon rotation to adjust the strip member relative thereto, and a retaining member mounted on the edge of the strip member for retaining said strip member and the adjusting screw members in assembled relation.

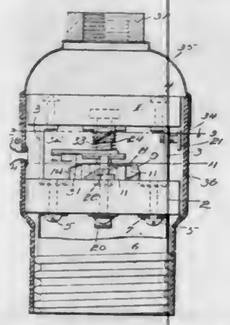
1,666,245. PROCESS OF CLOSING CAVITIES IN TREES. ELBERT PEETS, Cleveland, Ohio. Filed July 15, 1925. Serial No. 43,715. 2 Claims. (Cl. 47—8.)

1. For cavities in trees, a closing curtain consisting of a plurality of plates supported by a means permitting the movement, relatively to the tree, of the edge portions of said plates adjacent to said tree.



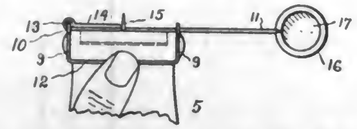
1,666,246. SHEET-DELIVERY APPARATUS FOR USE ON PRINTING MACHINES. ARTHUR WILLARD RANGER, London, England. Filed Jan. 5, 1927, Serial No. 159,197, and in Great Britain Jan. 8, 1926. 6 Claims. (Cl. 101—279.)

1. A sheet delivery apparatus for a printing machine comprising means including grippers for gripping a sheet and withdrawing it from the cylinder of the machine without making rubbing contact with any part, a support of the roller blind type adapted to unroll and to roll up below said sheet so as to receive and to relinquish it respectively without rubbing contact, and a reciprocatory endless tape carrier adapted to co-operate with said



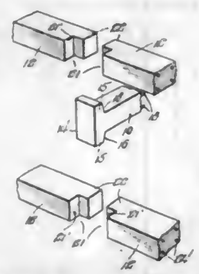
support, so that as said support rolls up and reliquishes the sheet the tapes of said carrier travel relatively to their rollers and are thereby extended beneath the sheet to receive it without rubbing contact between said sheet and the tapes of said carrier.

1,666,247. ELECTRIC CORD SWIVEL CONNECTER. CLARENCE SCHULDT, Des Plaines, Ill. Filed Mar. 27, 1925. Serial No. 18,725. 1 Claim. (Cl. 173—324.)



A device of the class described including a pair of blocks of non-conducting material, one of said blocks provided with a centrally located bore, an annular flange on one face, and a reduced externally threaded extension on the other face, a U-shaped conductor in the bore having its ends offset, screws extending through the offset ends into the said block, the intermediate portion of the conductor being apertured, a pair of brushes disposed on the face of the said block, the other block provided with a centrally disposed bore, a reduced extension on its inner face, and a reduced threaded extension on its outer face, a ring disposed on the inner face of the last mentioned block, screws for holding said ring in place, a washer disposed on the inner face of said last mentioned block, said brushes adapted to wipe over said ring, a bolt extending thruogh the aperture of the U-shaped conductor, through the bore of the second block, means for holding the bolt in place, a spring disposed between the washer and the intermediate portion of the U-shaped conductor and tensioned by said bolt, both of said blocks being provided with off-center openings, and a pair of caps threadedly engageable with the reduced extensions of the blocks.

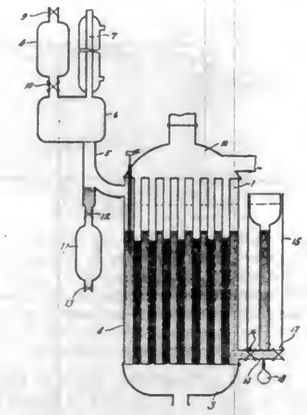
1,666,248. THREE-WAY LAMP SOCKET. CLARENCE SCHULDT, Des Plaines, Ill. Filed July 22, 1925. Serial No. 45,340. 1 Claim. (Cl. 173—354.)



A circuit controlling and operating mechanism for three way lamp sockets, comprising a pair of insulating plates, means mounting said plates in spaced parallel relation, circularly arranged ratchet teeth formed on one plate, a pair of single contacts arranged on adjacent ratchet teeth, a double contact mounted on a pair of adjacent ratchet teeth in diametrically opposed relation to the first mentioned pair of ratchet teeth, said double contact being formed of a single strip of substantially semi-circular sheet material having the opposite end portions offset in spaced parallel relation to correspond with the offset of said adjacent ratchet teeth, and a manually operable switch having the central portion rotatably mounted between the plates and the ends adapted to engage one of the single contacts and one offset portion of said double contact in each position of rotation.

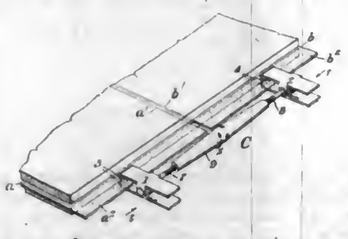
1,666,249. BOTTLE OPENER. FERDINAND H. SCHULTZ, Council Bluffs, Iowa. Filed Feb. 4, 1927. Serial No. 165,835. 1 Claim. (Cl. 65—47.)

A cap remover for use with disc caps seated in depressed ledges of the mouths of milk bottles and wherein the bottles have annular beads at the upper ends of their necks, comprising an anchoring frame curved to the configuration of one side of the neck and adapted to fit thereagainst beneath said bead, said frame comprising a length of wire having its oposite ends extending upwardly at substantially right angles to the intermediate part of the frame and rolled over to provide pivot eyes, a shaft member of wire extending through said eyes of the frame and having one end returned upon itself about the adjacent eye and extending along the shaft member to a point thereof intermediate said eyes, the returned extremity of said shaft having a curved tapering hook projecting spirally from one side of the shaft member and adapted to engage in an adjacent underlying portion of the disc cap whereby upon rotation of the shaft member said spirally positioned hook is adapted to engage in the cap and elevate the same from the depressed ledge in the bottle neck.



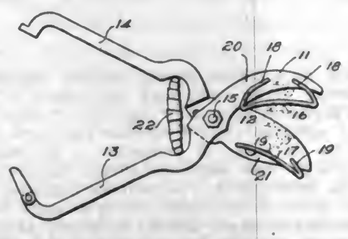
1,666,250. CRIBBING. EARL C. ALEXANDER, Chicago, Ill., assignor to Massey Concrete Products Corporation, Chicago, Ill., a Corporation of Virginia. Filed May 23, 1925. Serial No. 32,249. 5 Claims. (Cl. 61—47.)

1. A cribbing structure comprising a plurality of headers having T-shaped ends and having flat sides, and a plurality of stretchers of rectangular shape lying transversely and alternately on said headers and having sufficient of the ends of said stretchers removed to form a complementary space for receiving said T-shaped ends.



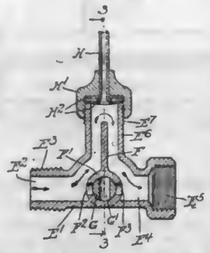
1,666,251. TEMPERATURE-REGULATING SYSTEM. CHESTER E. ANDREWS, Carnegie, Pa., assignor to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Feb. 19, 1927. Serial No. 169,572. 11 Claims. (Cl. 260—172.)

1. A method of varying the boiling point of two-phase, liquid-vapor temperature-regulating systems in which the liquid phase contains a plurality of components at least one of which is normally solid and which system includes reflux condensing means for the vapor phase, which com-



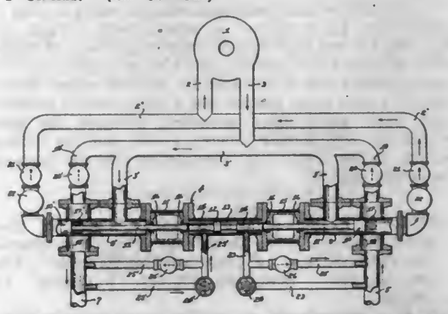
prises varying the composition of the reflux condensate before returning the latter to the main body of the liquid phase of the system.

1,666,252. METHOD OF SPLICE-LAMINATING GLASS. LOUIS BARTELSTONE, Flatbush, N. Y. Filed July 27, 1926. Serial No. 125,211. 4 Claims. (Cl. 49—81.)



1. The method of splice-laminating glass which consists in forming an edge of each of two sheets of non-brittle material so that said edges are counter-parts; placing the counterpart edges in abutting contact; placing these abutted sheets between plates of glass; holding the abutted sheets against relative movement, and applying pressure upon the glass plates to effect cohesion between the glass and the two intervening sheets.

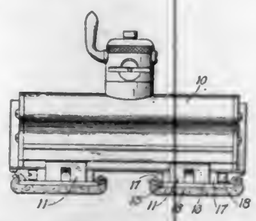
1,666,253. STEM-GRIPPING PRUNING SHEARS. FELIX H. BLINCOE, Long Beach, Calif., assignor of one-fourth to Glenn M. Peterson, Los Angeles, Calif. Filed Feb. 24, 1926. Serial No. 90,238. 3 Claims. (Cl. 30—24.)



1. In a device of the general character described: a pair of shearing jaws pivotally connected; and cooperating movable members, spaced therefrom, for the gripping of a part cut off by the closing of said jaws, one of said gripping members being resiliently supported, from one of said shearing jaws, by insertion therethrough near the rear edge thereof, one of said jaws being provided with a gripping edge and neither of said jaws being adapted at any time to overlie the last mentioned jaw, although both of said gripping members are adapted to so overlie the other of said jaws at the completion of a closing movement as to hold the cut branch in a slightly inclined position relatively to said jaws, with its end braced against said abrupt edge.

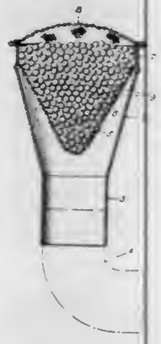
1,666,254. GASOLINE RESERVE. HAROLD M. COOPER, Marshalltown, Iowa. Filed Jan. 8, 1926. Serial No. 80,108. 1 Claim. (Cl. 158—46.5.)

A reserve supply attachment for fuel tanks consisting of a casting having a straight tubular portion with open ends adapting it to be attached to the fuel line, and having also an intermediate vertical tubular portion disposed at right angles to the first-named tubular portion and connecting therewith intermediate its ends, a partition in the said intermediate tubular portion terminating short of the open end thereof, and forming a barrier to the fluid passage through the horizontal tubular portion, the portion of the partition in the horizontal tubular part of the attachment being formed into a hollow cylindrical enlargement shaped to constitute a valve seat, such enlargement having openings which are respectively beside the open ends of the horizontal portion of the attachment, a valve seated in said enlargement provided with a cross opening adapted to register with the openings through the valve seat and put them in communication with each other or to intercept such communication accordingly as the valve is adjusted and a vent tube connected with the open end of the vertical tubular part of the attachment the several passages through the casting and the valve being disposed opposite the open ends of the tubular parts for ready cleaning when the attachment is disconnected.



1,666,255. HYDRAULIC PUMPING POWER. WILLIAM G. COREY, San Francisco, and CHARLES A. TROW, Coalinga, Calif. Filed Mar. 29, 1926. Serial No. 98,119. 4 Claims. (Cl. 60—52.)

1. In an apparatus for the described purpose, means adapted to supply fluid under pressure; a fluid pressure actuated motor device comprising a cylinder and a plunger



operable therein; a conduit connecting said device with said fluid supply means; a valve controlled by said device for cutting off its communication with said conduit; and means controlled by the rise in pressure of the fluid in said conduit caused by the closing of said valve for cutting off the supply of fluid from said supply means to said conduit.

1,666,256. RUBBING MACHINE. GUSTAF H. EKSTROM, Rockford, Ill., assignor to C. Paul Parker, trustee, Evanston, Ill. Filed June 11, 1923. Serial No. 644,565. 3 Claims. (Cl. 51—175.)

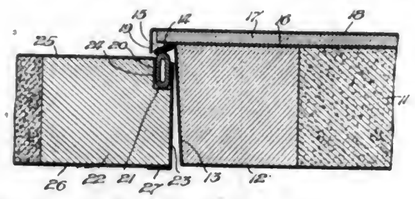
2. A rubbing machine having, in combination, a bearing slide, a downwardly displaced attaching portion on said slide, parallel downwardly extending projections on said portion, and two pad holders pivotally secured to said projections, said pad holders being mounted in parallel closely spaced relation on fixed pivotal axes extending in the direction of reciprocation.

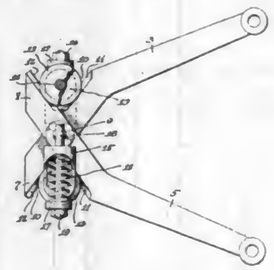
1,666,257. EXHAUST SILENCER. WILLIAM HENRY GRAHAM FURNIVALL, DAVID BERTHA MCLAREN, and EDGAR JACOB LASCHINGER, Johannesburg, Transvaal, South Africa. Filed Sept. 17, 1925. Serial No. 56,830. 2 Claims. (Cl. 137—160.)

1. An exhaust silencer comprising a casing having an imperforate upper portion of substantially uniform section and a lower downwardly tapered portion and formed with an inlet at its smaller end, a cover screen above the upper portion and a downwardly tapered screen extending below said upper portion and a loose mass of hardened steel balls which when quiescent occupies the space within the downwardly tapered screen and the uniform section of the casing but incompletely fills the space between the screens.

1,666,258. REFRIGERATOR DOOR. EARL R. HAMMOND, Fremont, Nebr., assignor to Crystal Refrigerating Co., Fremont, Nebr., a Corporation of Nebraska. Filed Oct. 12, 1927. Serial No. 225,717. 9 Claims. (Cl. 20—35.)

2. In a refrigerator, the combination of a door casing provided with inner and outer metallic wall plates, a metallic edge facing plate, the metallic wall plates contiguous to the edge being spaced to afford a socket recess, an insulating compressible gasket socketed within said recess, and a door provided with inner and outer metallic wall plates and a metallic edge plate, the edge





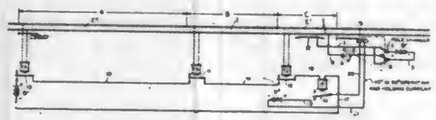


plate being shouldered to afford an abutment adapted to engage said gasket when the door is closed, and the door being provided with a metallic surfaced panel, a gap being provided between the surfacing of the panel and the metallic edge plate of the door, substantially as described.

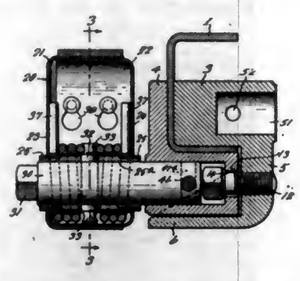
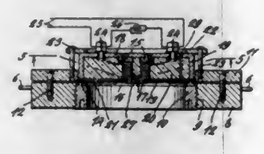
1,666,259. SHOCK ABSORBER. OTTO A. KRENKE, Port Huron, Mich., assignor of one-half to Ernest L. Powers, Port Huron, Mich. Filed Feb. 7, 1927. Serial No. 166,416. 9 Claims. (Cl. 267—20.)



1. A shock absorber comprising pivotally connected members affording V-ways, anti-frictional bearings in said V-ways, and compound equalizers supported from said bearings and adapted to resist retraction of said V-ways by a pivotal movement of said members.

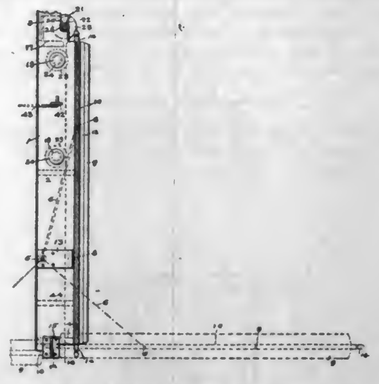
1,666,260. TRAIN-CONTROL SYSTEM. CLAUDE A. LYON, Chicago, Ill., assignor to The Regan Safety Devices Company, Inc., New York, N. Y., a Corporation of New York. Filed May 5, 1926. Serial No. 106,818. 13 Claims. (Cl. 246—28.)



1. In a train control system, roadside apparatus for transmitting traffic controlling indications to vehicle carried apparatus, and track controlled circuits controlling the operation of said roadside apparatus for governing the character of indication to be transmitted thereby, said track controlled circuits including mechanism for producing one transmittable indication in said roadside apparatus for trains having a length less than a predetermined length and for producing another and different transmittable indication in said roadside apparatus for trains having a length exceeding the said predetermined length.

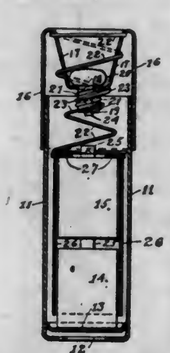
1,666,261. SHOCK ABSORBER. BONNIE L. MALLORY, Cleveland Heights, Ohio. Filed Jan. 11, 1926. Serial No. 80,495. 11 Claims. (Cl. 267—8.)

1. A shock absorbing device for use with two relatively movable members comprising a stud supported for rotary adjustment by one of said members, an elongated body journaled on the stud, a spring having a part anchored to the stud and a part co-acting with the body whereby the spring tends to rotate the body in one direction, a flexible element having one of its ends attached to the body and its opposite end fastened to the other of said members, said element exerting a pull upon the body in opposition to the spring, means for angularly adjusting the stud with respect to the member whereby it is carried, and means for locking the stud in any of a plurality of adjusted positions.



1,666,262. SOUND TRANSMITTER. HARRY A. MILLS and WILLIAM D. PYLE, Denver, Colo. Filed Jan. 26, 1927. Serial No. 163,638. 1 Claim. (Cl. 179—138.)

A transmitter for radio broadcasting comprising, in combination, a ring having its inner surface threaded, a clamping ring of substantially the same size as the first mentioned ring, a diaphragm having its outer edge located between the rings, means for forcing the rings towards each other so as to clamp the diaphragm, a third ring having its outer surface threaded and in co-operative engagement with the threaded surface of the first mentioned ring, a separator ring between the last mentioned ring and the diaphragm and means for preventing the separator ring from rotating with respect to the diaphragm whereby the latter will not be subjected to friction when the third ring is rotated.



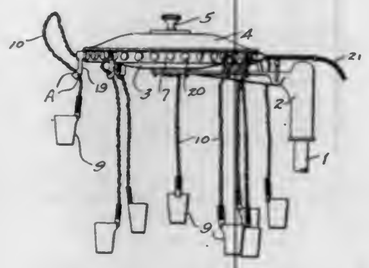
1,666,263. PORTABLE COMBINATION DESK. LEWIS E. MYERS, Valparaiso, Ind., assignor, by mesne assignments, to The Northern Trust Company and Harold H. Rockwell, trustees. Filed Mar. 27, 1918, Serial No. 396,589. Renewed July 15, 1920. 3 Claims. (Cl. 45—51.)

1. In portable desks, a suitable frame having a plurality of notches formed in the sides thereof to accommodate roller extensions and having a scroll compartment near one end, a removable scroll carrying unit comprising top, bottom and end members, scroll rollers in said unit having a scroll mounted thereon, roller extensions terminating in knobs projecting outside the holder and beyond the edges of the frame, enlargements on such extensions for turning the rollers, a board pivoted to the frame adapted to cover the scroll unit to

protect the same, elastic means for holding the scroll unit in position in the frame, and separate means for holding the board in closed position.

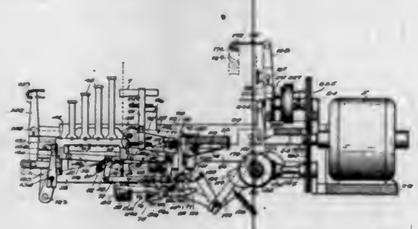
1,666,264. FLASH LIGHT. HAROLD OLANETA, Brooklyn, N. Y. Filed May 23, 1927. Serial No. 193,547. 3 Claims. (Cl. 240—10.5.)

1. In a flashlight a casing, enclosing batteries and comprising an upper part and a lower part, a lamp, a threaded stem thereon, an opening in said upper part, for said stem to pass therethrough, and a spring, for separating said batteries from said stem, said spring having thereon one or more coils, to fit between the threads on said stem, thereby keeping said lamp in position.



1,666,265. TONGUE-BLADE HOLDER. JOSEPH E. ROSENFELD, Battle Creek, Mich. Filed Apr. 23, 1927. Serial No. 186,028. 1 Claim. (Cl. 128—15.)

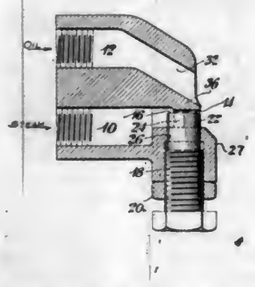
The combination with a flash light barrel, a battery carried in said barrel and a lamp deriving light from said battery carried by said barrel, of a portable split



holding member carried by said barrel, said member having an elongated projection formed opposite its split portion and extending in substantially parallel alinement with said barrel, said extension having underly curved edges between said split portion and its outer end, a stop formed at the juncture of said split holding portion of said member and said extension, whereby a tongue blade may be held in an operable position.

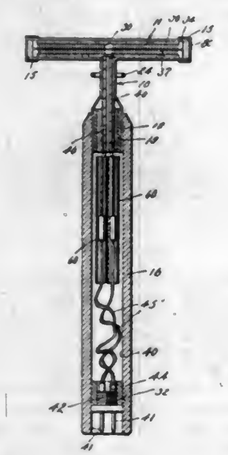
1,666,266. HAIR-WAVING APPARATUS. WILLIAM G. SHELTON, St. Louis, Mo. Filed Feb. 9, 1928. Serial No. 253,018. 14 Claims. (Cl. 132—36.)

1. In a hair waving heating machine, a dome, a wired member within said dome, a plurality of electric terminals mounted on said member, a series of open-ended slots in said dome, lifts detachably seated in said slots, heater cords adjustably carried by said lifts and terminals on said cords for engaging said terminals on said member.



1,666,267. WRITING MACHINE. DANIEL W. SHIEK, Aurora, Ill., assignor to S. E. Miller, trustee, Aurora, Ill. Filed Apr. 24, 1925. Serial No. 25,524. 14 Claims. (Cl. 197—17.)

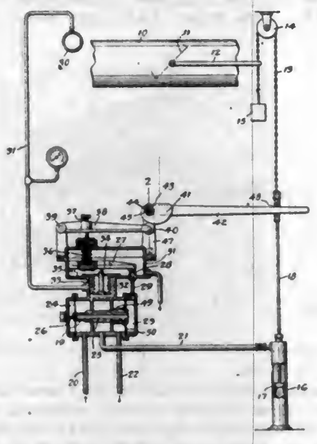
1. In apparatus of the kind described, a plurality of impression members, keys, spring-actuated mechanism controlled by said keys for actuating the impression members, power driven means for tensioning the springs of the spring-actuated mechanism, means independent of said spring-actuated mechanism and controlled by the keys for actuating said impression members, and means for rendering said spring-actuated means functionally inoperative.



1,666,268. OIL BURNER. EDWARD SKILLMAN, Bartlesville, Okla., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed June 12, 1926. Serial No. 115,465. 7 Claims. (Cl. 299—141.)

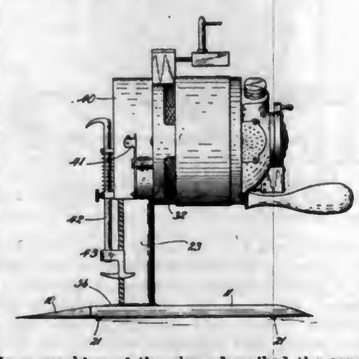
1. A fuel oil burner comprising a body having a steam passage therein, the outlet of the passage being formed by two opposed parallel plane surfaces one of which is constituted by a screw adjustably mounted in the body, a fuel nozzle extending back and upwardly from said plane surfaces at an acute angle with respect thereto whereby fuel oil issuing from the fuel nozzle is received

at an acute angle on the sheet of steam issuing from between said plane surfaces, the bore of the fuel nozzle being circular in cross-section and the end thereof being formed on a slant which is substantially perpendicular to the plane surfaces of the steam outlet.



1,666,269. HAIR CURLER. LULAH M. SMIDT, Los Angeles, Calif. Filed July 29, 1924. Serial No. 728,852. 5 Claims. (Cl. 132—33.)

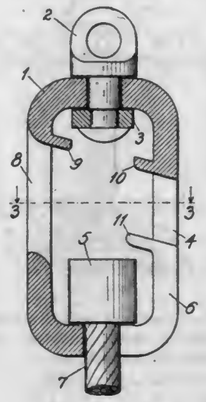
1. A hair curler comprising two sections arranged together to form a main part and a projection, a cap applied to the outer ends of the main part of the sections to hold them together, and a handle applied to the ends of the projecting parts of the sections to hold them together.



1,666,270. COMPENSATION FOR REGULATION. STEN ERIC BERNHARD SÖDERBERG, New York, N. Y., assignor to Arca Regulators, Inc., New York, N. Y., a Corporation of Virginia. Filed July 6, 1925. Serial No. 41,707. 10 Claims. (Cl. 137—78.)

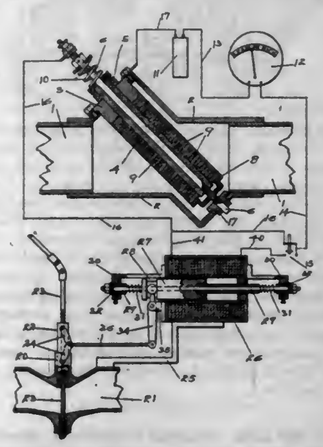
1. In a liquid pressure operated regulator, in combination, a relay housing, means to discharge a stream of liquid into said housing, a baffling member to control said stream of liquid, means to move said baffling member, a main regulating member affected by changes of pressure in said stream of liquid and return motion mechanism in-

cluding a cam movable in response to movement of the regulating member, and means operated by said cam acting on said baffling member.



1,666,271. CUTTING MACHINE. ADOLPH SPIELMAN, Philadelphia, Pa. Filed Dec. 13, 1923. Serial No. 680,481. 10 Claims. (Cl. 164—74.)

1. In a machine of the class described the combination of a base plate, a channeled standard, a driving wheel and idlers operatively mounted above the standard, an idler of relatively large diameter the faces of which are disposed in a plane paralleling the base plate, an endless cutting band or chain having a continuous cutting edge adapted to pass down through the standard with its cutting edge exposed in vertical position, thence around the idler below the standard with its cutting edge in horizontal position and thence upward through standard with its cutting edge hidden and in vertical position and around said driving wheel and idlers above the standard with the cutting edge in horizontal position, and means for shifting the cutting band runs out of alignment.

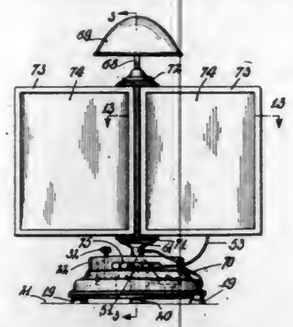


1,666,272. LOGGING HOOK. CHARLES WILLIAM SPIERING, Cathlamet, Wash., assignor of one-fourth to T. C. Black, Cathlamet, Wash. Filed Aug. 20, 1927. Serial No. 214,250. 3 Claims. (Cl. 24—128.)

1. A logging hook, comprising a tubular housing closed at the top and bottom, a swivel attached to the top of the housing, the bottom of the housing being adapted to hold the ferrule of the choker, a round hole in the side wall of the housing, an oblong hole in the side wall of the housing opposite the round hole, the upper edge of the oblong hole being higher than the upper edge of the

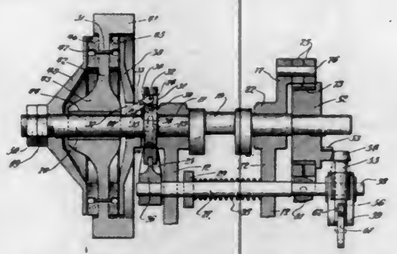
round hole, a ridge in the interior of the housing at the bottom of the round hole, and a slot in the housing, said slot extending from the bottom of the round hole, through the ridge to the bottom of the housing.

1,666,273. ELECTRIC TESTER. ARTHUR L. SMITH, Portland, Oreg. Filed June 28, 1926. Serial No. 119,072. 4 Claims. (Cl. 23—253.)



1. In an electrical tester: an electro-chemical analyzing unit mountable in the path of the products of combustion from a fuel burning device; an electrical recording instrument; and an electric circuit connecting said analyzing unit and said instrument.

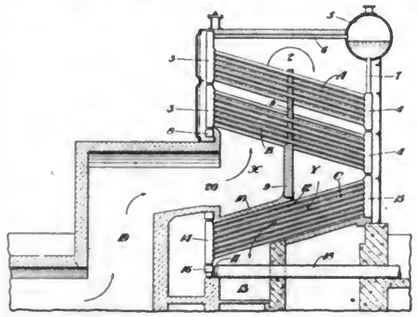
1,666,274. AUTOMATIC ROTARY BOOK-DISPLAY DEVICE. MICHAEL V. VENTRELLA, New York, N. Y. Filed Apr. 18, 1927. Serial No. 184,591. 9 Claims. (Cl. 40—104.)



1. An advertising device, comprising a base with feet of such height so as to tilt backwardly, a cover therefor, a bracket adjustably secured on the cover, a projecting post, supported by the bracket, a top and bottom leaf holder on the post, leaves supported from the leaf hold-

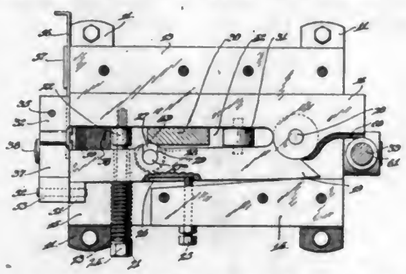
ers, and due to the obliquely backward tilt of the base, and the post thereon, the leaves assume a position with the front two leaves substantially in a plane, and a leaf

turning device on the base and beneath the cover, and having a projecting finger adapted to turn the said leaves periodically in succession.



1,666,275. POWER PRESS. HARRY C. H. WALSH, Chicago, Ill. Filed Nov. 1, 1926. Serial No. 145,415. 11 Claims. (Cl. 192—144.)

4. In a machine of the class described, the combination of a cranked shaft, and a reciprocating head actuated thereby, a driving element freely mounted upon the shaft, a clutch element slidably mounted upon and rotatable with the shaft, a toggle mechanism adapted when actuated to bring the clutch element toward the driving element to effect a clutching relation therewith, a spring actuated thrust rod having engagement with the toggle mechanism and adapted when released to throw the toggle mechanism into clutching relation by spring pressure, a roller carried by the thrust rod, a disk carried by the shaft and provided on its rear face with a cam elevation adapted to engage said roller to retract the roller and the thrust rod to release the clutch, substantially as described.

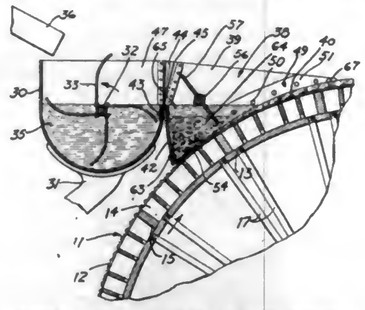


1,666,276. BOILER. GEORGE L. WELLER, Elyria, Ohio, assignor to National Tube Company, a Corporation of New Jersey. Filed Apr. 16, 1927. Serial No. 184,329. 1 Claim. (Cl. 122—7.)

A waste-heat boiler comprising a heating chamber, a plurality of banks of tubes inclined from front to back of said chamber, tube headers connecting the tubes of said banks at each end, an expansion and steam drum above said banks of tubes, means connecting said headers with said expansion and steam drum, a baffle wall extending vertically in said heating chamber intermediate the front and back walls of said chamber so as to divide said chamber into primary and secondary heating zones, an inlet for the waste-heat gases communicating with said primary heating zone, an outlet passageway for the waste-heat gases communicating with said secondary heating zone, a bank of tubes extending longitudinally of and inclined from back to front of said outlet passageway, tube headers connecting the rear ends of the tubes of said last bank and communicating with the tube headers connecting the rear ends of the tubes of said first named banks of tubes, other tube headers connecting the forward ends of the tubes of said last named bank of

tubes, a combined feedwater and blow-off drum communicating with all of the tube headers, connecting the forward ends of the tubes of said last named bank of tubes, and a stack line communicating with said outlet passageway below the forward end of said last bank of tubes.

1,666,277. WIRE-STRIPPING MACHINE. JESSEE MERCER WHITE, Philadelphia, Pa. Filed Aug. 6, 1927. Serial No. 211,048. 16 Claims. (Cl. 81—9.5.)



2. A stripping machine including a fixed gripping jaw, a rockable gripping jaw, means tending to hold said jaws together, a slidable stripping element, a swingable stripping element hinged to the slidable stripping element, means tending to move said elements toward each other, means for moving said elements relatively to the jaws, and means for opening the jaws and separating the stripping elements.

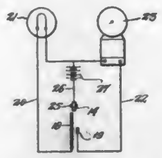
1,666,278. HOLLOW BRACING UNIT. HARRY WOODHEAD and CLINTON W. STOVER, Cleveland, Ohio. Filed July 28, 1926. Serial No. 125,395. 4 Claims. (Cl. 280—106.)

1. A tubular bracketed frame brace consisting of a section of drawn steel tubing upset at its end to provide a thickened tapered portion, flanges extending integrally therewith and outwardly from the thickened portion at an angle, the metal of the flanges being highly compressed and the metal at the edge of the thickened portion between the flanges being stronger than the metal of both the flanges and tube.

1,666,279. CAKE FORMER FOR CONTINUOUS ROTARY FILTERS. ROBERT O. BOYKIN, Los Angeles, Calif., assignor to N. Russell Vail, Los Angeles, Calif. Filed Mar. 3, 1926. Serial No. 91,967. 8 Claims. (Cl. 210—199.)

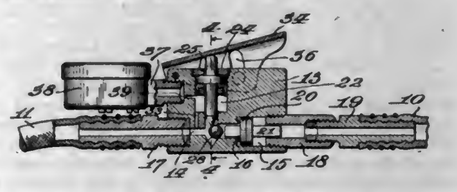
1. A vacuum filter comprising: a filter medium; means for moving said filter medium; a distributor for retaining a body of mixture above said filter medium, the lower part of said body of mixture contacting said filter medium; a reservoir for said mixture, by means of which said mixture is supplied to said distributor; and means for flexibly connecting said distributor to said reservoir.

1,666,280. MATTRESS. HENRY G. BRANDWEIN, Chicago, Ill. Filed Nov. 21, 1921. Serial No. 516,822. 3 Claims. (Cl. 5—356.)



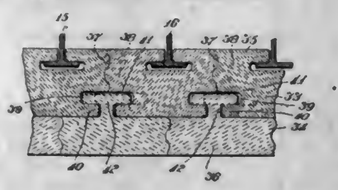
1. A mattress of the kind described, comprising a pair of superimposed sheets, filling material therebetween, and a narrow strip of material extending along the inner surface of one of said covers and adapted to contact with and be secured at spaced intervals to the inner surface of the other cover to form tufting therebetween.

1,666,281. MAIL BOX. AMBROSE E. DEIBERT, Seattle, Wash. Filed June 4, 1927. Serial No. 196,564. 3 Claims. (Cl. 200—57.)



1. The combination with a mail box having a normally closed, spring pressed, outer door and a slotted inner door, and means for limiting the opening movement of the inner door, of a circuit maker within the box normally open when the outer door is closed, and means for closing the circuit maker when the outer door is opened.

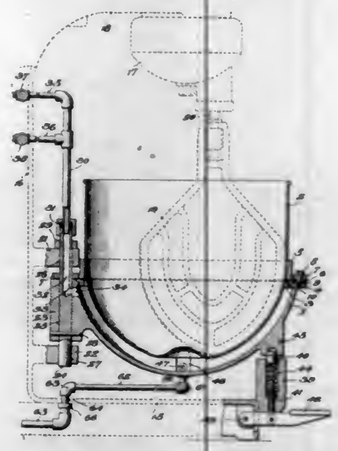
1,666,282. PRESSURE-FLUCTUATING ALARM FOR MINES. RAY C. FAGAN, Spangler, Pa. Filed Oct. 29, 1924. Serial No. 746,657. 3 Claims. (Cl. 200—83.)



1. In a pressure-fluctuating alarm, a circuit closer comprising a pair of relatively long and short contacts disposed oppositely to each other and arranged so that the short contact is approximately midway the ends of the long contact, a switch arm pivotally mounted for reciprocation between the said contacts and having brushes adapted for engagement with the contacts when the said arm is moved inwardly between the contacts, and means for moving the switch arm inwardly between the said contacts.

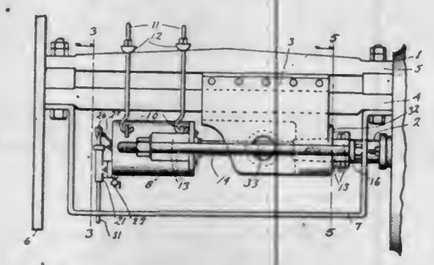
1,666,283. COMBINED TIRE-INFLATING VALVE AND GAUGE. GEORGE E. FARLEY, Southgate, Calif., assignor to Service Equipment Co., Southgate, Calif., a Corporation of California. Filed June 23, 1925. Serial No. 39,014. 11 Claims. (Cl. 277—21.)

6. In a device of the class described, a valve body provided with a main fluid pressure duct in which is formed a valve seat, a valve normally resting on said seat and adapted to be maintained in such position by fluid pressure, said valve being provided with a stem, a manually operable plunger arranged for operation within said member, the inner end of which plunger projects into said main duct and a ball arranged for movement within said main duct between the inner end of said plunger and the adjacent end of the valve stem.



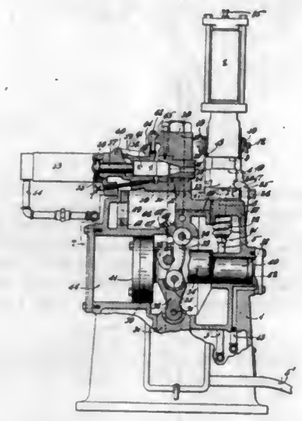
1,666,284. CONSTRUCTION OF FURNACE WALLS AND ARCHES. WILLIAM A. GILCHRIST, Chicago, Ill. Filed Feb. 20, 1920. Serial No. 360,190. 14 Claims. (Cl. 110—99.)

1. A furnace wall or roof comprising in combination, two layers of blocks of different character with respect to their heat insulating and refractory properties, the blocks of one layer being of heat insulating material and



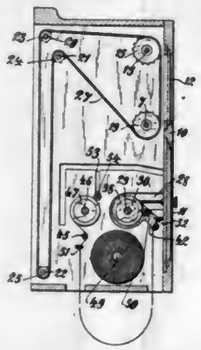
the blocks of the other layer being of refractory material and having portions interlockingly engaged with portions of said heat insulating blocks and being supported thereon and covering the same upon the inside of the furnace.

1,666,285. MIXING MACHINE. HERBERT H. HACKSTEDDE, Cincinnati, Ohio. Filed June 21, 1924. Serial No. 721,452. 9 Claims. (Cl. 257—108.)



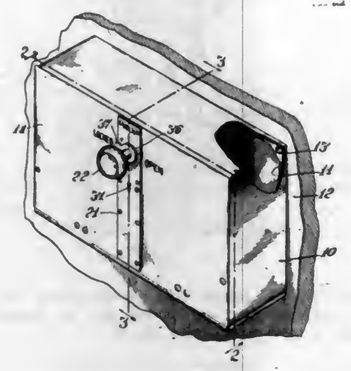
3. In a mixing machine, the combination with a base, a standard, and beater actuating means carried by the standard and overhanging the base, of a bowl-holder carried by the standard and mounted to swing upon a vertical axis, a bowl removably supported within the bowl-holder and spaced from the walls thereof, means for supplying a tempering fluid through the axis of movement of the bowl-holder to the space between the holder and the bowl, a drain pipe, and a pipe connection leading from the bowl-holder to the drain pipe and swiveled to the latter in alignment with the axis of movement of the bowl-holder.

1,666,286. PISTON KICKER. EVERET HOLLOWELL, Kansas City, Kans. Filed Feb. 15, 1926. Serial No. 88,395. 3 Claims. (Cl. 29—85.)



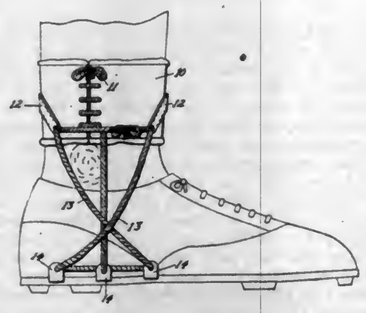
1. In a piston kicker for removing piston rods from the cross-heads of locomotives, a pair of supporting bars adapted to rest transversely upon the guide bar of a locomotive, a cylinder, a plunger in said cylinder, a plunger rod projecting from said plunger and said cylinder, a plurality of bolts detachably engageable with said cylinder whereby said cylinder can be suspended rearwardly of the cross-head from said supporting bars, said plunger rod adapted to bear against the piston rod when said cylinder is so suspended, a pair of clamp bars adapted to be positioned on opposite sides of the piston rod and bear against the front end of the cross-head adjacent the piston rod, bolts to connect said clamp bars and said cylinder, and a pump connected to said cylinder.

1,666,287. FORGING MACHINE. FRANK A. HALLECK, Oak Park, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed May 2, 1919. Serial No. 294,268. 25 Claims. (76—5.)



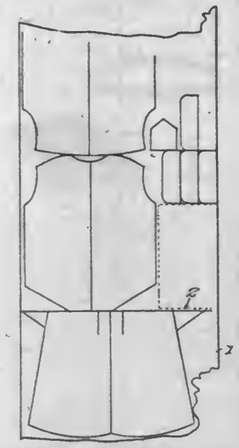
1. In a forging machine, a tool, a movable die operated thereby, an anvil die disposed in alinement with the path of movement of said other die, and means for normally insuring that the first mentioned die will take a given position with respect to the anvil die including means for exerting a force on said first mentioned die and means cooperating therewith for varying the force exerted by said force exerting means upon said first mentioned die.

1,666,288. COMBINED TOWEL SERVICE AND ADVERTISING DEVICE. CARL HELMRICH, New York, N. Y. Filed Feb. 1, 1926. Serial No. 85,243. 1 Claim. (Cl. 312—38.)



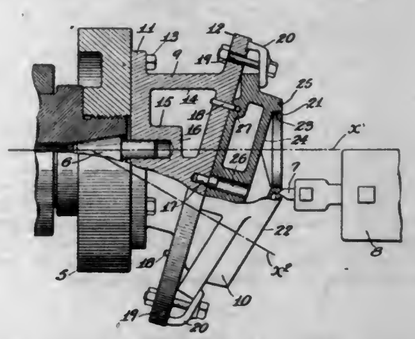
A towel service device, consisting in combination with a casing, of a pair of rollers, a roll of clean toweling adapted to engage one of said rollers, the other of said rollers receiving the soiled toweling, a plurality of guide rolls and bars in position to guide said toweling, a spindle journalled in the casing having a flattened end, a sliding crank mounted on said flattened end, a stop in the casing projecting into the path of said sliding crank, a spring pressed button in the front wall, and a rod attached to said button to abut against the head of said sliding crank to disengage the same from the path of said stop.

1,666,289. MILK-BOTTLE CONTAINER. TRYGVE IVERSEN, Chicago, Ill. Filed Aug. 16, 1926. Serial No. 129,331. 2 Claims. (232—41.)



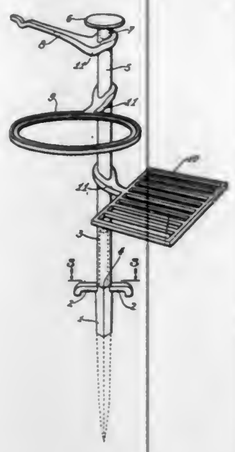
1. In a device of the type described, the combination of housing means adapted completely to enclose the contents and comprising a pivotally mounted door, a hooked member mounted on the body of said housing, a disk revolubly mounted on the door, hook means carried by the disk adapted upon a slight rotation when the door is closed to engage said hooked member, and locking means mounted on the door adapted upon continued rotation of the disk to lock the disk against reverse movement.

1,666,290. ANKLE BRACE. HARRY LEIGH JOHNSTON, Indianola, Iowa. Filed Oct. 29, 1926. Serial No. 144,963. 2 Claims. (Cl. 128—166.)



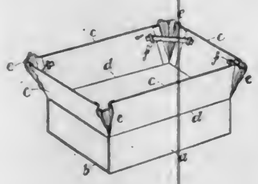
1. An improved ankle brace, comprising in combination a shoe, an ankle strap, means for adjustably securing it to a wearer's ankle above the ankle joint, and a limiting device attached to the ankle strap and to the sole of the shoe, and of such length that when properly adjusted to the wearer's foot it will permit of a limited lateral tilting movement of the shoe sole and will limit said lateral tilting movement in one direction when it has passed beyond a certain predetermined point, said limiting means being connected to the ankle strap and shoe in such positions that when it is properly adjusted to fit the wearer's foot it will not interfere with the up and down movement of the wearer's foot about the ankle joint.

1,666,291. SHIRT-MAKING SYSTEM. MORRIS L. KAPLAN, Hazleton, Pa. Filed May 18, 1927. Serial No. 191,180. 2 Claims. (Cl. 2—243.)



1. A system of shirt making comprising the steps of first laying out a pattern of the parts in a piece of material, then cutting out a blank section of the material, subjecting said blank section to a shrinking treatment, and finally laying out a pattern for the collar or the neck band of the shirt on said section.

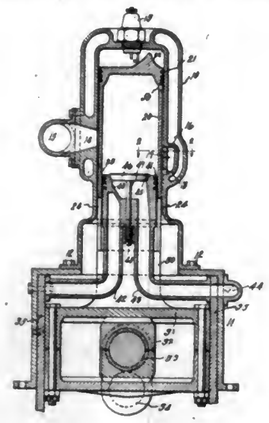
1,666,292. WORK-PIECE-SUPPORTING FIXTURE FOR TURNING MACHINES. CARL H. KNUDSEN, Brooklyn, N. Y., assignor to The Knudsen Motor Corporation, Wilmington, Del., a Corporation of Delaware. Filed June 19, 1924, Serial No. 720,942. Renewed July 1, 1927. 5 Claims. (Cl. 82—40.)



1. A fixture of the class described having faces angularly disposed with reference to each other, means on one of said faces for centering the fixture on the rotatable member of a turning machine, means for centering and alining a workpiece on the other face of said fixture whereby angularly disposed faces of said workpiece may be moved and retained in position in a plane at right angles to the axis of the rotatable member of the machine.

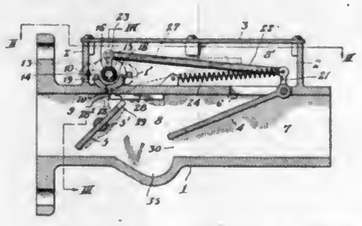
1,666,293. CAMP-FIRE OUTFIT. FRANK D. LORTON, St. Louis, Mo., assignor to Emil Nathan, trustee. Filed Nov. 22, 1921. Serial No. 517,030. 1 Claim. (Cl. 126—30.)

A campfire outfit, comprising, a supporting stake having a blade adapted to be forced into the ground, a pedal for forcing the same, and a fluted shank above said pedal and terminating in a shoulder, a standard fitting freely but snugly over said shank to be supported on said shoulder, and racks adjustably mounted on said standard.



1,666,294. MATCH BOX, ASH TRAY, AND OTHER BOXES AND TRAYS. LELIA DOWNES-MARTIN, Christchurch, England. Filed Apr. 27, 1926. Serial No. 104,991, and in Great Britain Oct. 1, 1925. 4 Claims. (Cl. 229—6.)

1. A box comprising an outer casing, a tray or drawer adapted to fit inside the casing, and members hingeably affixed to the casing, the said members constituting a tray in the open position and adapted to be folded over the sides of the casing when not in use.

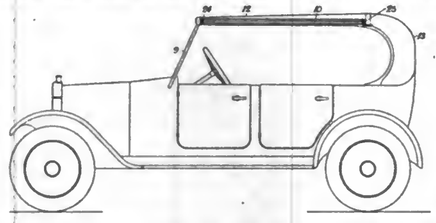


1,666,295. INTERNAL-COMBUSTION ENGINE. WARD W. MARVIN, Royal Oak, Mich. Filed Mar. 4, 1927. Serial No. 172,621. 1 Claim. (Cl. 123—74.)

In an internal combustion engine of the two-stroke cycle type, a cylinder having a piston reciprocable therein, a stationary piston head mounted within said piston and provided with an intake valve, supporting means for said head including an intake conduit, packing rings for said piston and for said head, a conduit connecting the interior of the piston above said head and the cylinder above said piston when the latter is in its lowest position, a forked skirt on said piston, a divided piston rod fixed to the piston and adapted to actuate a crankshaft, and means for compelling a rectilinear movement

of said rod and piston, said forked piston and divided piston rod providing an opening for the passage therethrough of said supporting means.

1,666,296. CARBURETOR. CLAYTON E. MONOSMITH and DAVID J. MONOSMITH, Spencer, and OLNEY B. MONOSMITH, Lorain, Ohio, assignors of one-fourth to George W. Saywell, Cleveland, Ohio. Filed Nov. 20, 1922. Serial No. 602,032. 14 Claims. (Cl. 261—50.)

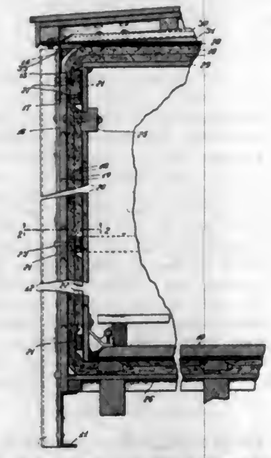


13. In carburetors, the combination of a casing formed at one end with a motor connection and at the other end with an airopening; a spring-loaded suction-actuated valve for said opening; a throttle valve; a port formed in the casing in the rear of said throttle valve; a concave boss formed exteriorly of the casing, said port intersecting said boss; an auxiliary casing forming a chamber communicating with the main casing through the said port and also communicating with the main casing adjacently behind said air valve; means forming a conduit adapted to communicate with a source of fuel supply and having a fuel port and a movable valve controlling said fuel port, said last-named valve permitting fuel discharge into said auxiliary chamber within said boss and adjacent said casing port; means connecting said air valve and said fuel valve to move the latter proportionately to the movements of the former; and means for regulating said proportion.

1,666,297. TOP FOR MOTOR VEHICLES. CLARENCE LONGTON NORMANDALE, Yeovil, England. Filed Sept. 28, 1925, Serial No. 59,049, and in Great Britain Nov. 5, 1924. 4 Claims. (Cl. 296—98.)

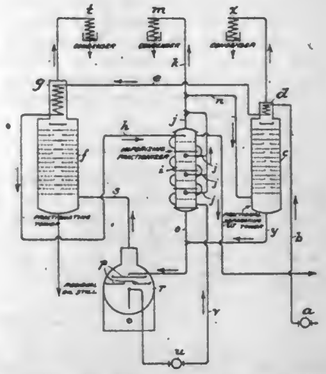
1. In a motor vehicle, a top structure having a rigid closed-in back portion and an opening in the upper portion, said top at its forward end being permanently

secured to and supported by the wind screen of the vehicle, roller blinds disposed longitudinally of the top adjacent said opening and adapted to be drawn inwardly



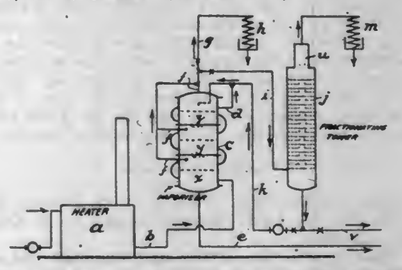
and transversely to close the opening, a housing for each blind, and automatic interlocking members carried by said blinds for maintaining them in closing position.

1,666,298. CURTAIN RING. ARTHUR J. NORRIS, Greenwich, Conn. Filed Jan. 26, 1927. Serial No. 163,647. 2 Claims. (Cl. 156—21.)



2. A curtain ring, comprising, a split ring having two extremities, one extremity having a flat portion bounded by an out-turned flange at one end, and a part of the ring at the other end, the other extremity forms a hollow bridge against the flat portion, a screw through the bridge projecting through the flat portion, a nut for the screw held fast by the out-turned flange and part of the ring.

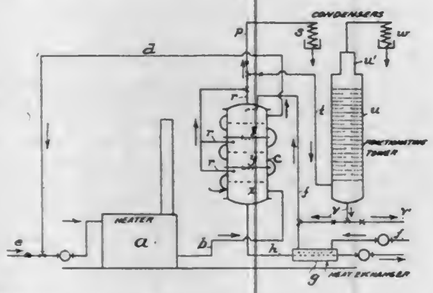
1,666,299. CAR CONSTRUCTION. KARL F. NYSTROM, Chicago, Ill. Filed Apr. 19, 1924. Serial No. 707,570. 7 Claims. (Cl. 105—355.)



1. In a steel frame car provided with steel carlines, a blind ceiling and a main ceiling, spaced apart, and outer sheathing and inner sheathing spaced apart, insulating material disposed between the outer and inner sheathing, extending upward and continuing intermediate of the blind ceiling and the main ceiling, cleats suspended from the carlines, disposed beneath the insulating material and constituting nailing strips for the main ceiling, sub-posts and girths arranged between the insulating material and the inner sheathing, the sub-posts and girths being provided with bolt-head receiving sockets, bolts extending through to the car exterior for securing the sub-posts and girths in place, and a sealing medium for the heads of the bolts extending to the car exterior.

1,666,300. PROCESS AND APPARATUS FOR SEPARATING GASOLINE FROM CRUDE OIL. ARTHUR E. PEW Jr., Bryn Mawr, and HENRY THOMAS, Ridley Park, Pa., assignors to Sun Oil Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Feb. 23, 1924. Serial No. 694,471. 9 Claims. (Cl. 196—128.)

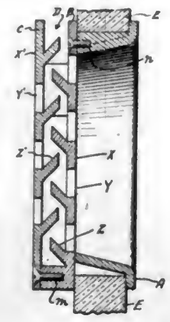
1. The process of vaporizing mineral oil which comprises heating mineral oil to a distilling temperature and flowing a stream of said hot oil within a still at successively higher elevations and dividing the hot oil flowing at each elevation into confined, multiple, spaced apart streams, flowing mineral oil to be vaporized into the upper part of the still and so disseminating it that it passes into heat exchange relation, but out of contact, with said first mentioned hot oil streams and distributes itself in thin films in heat exchange relation with successively lower oil streams and with progressively hotter multiple oil streams at successively lower elevations so as to produce an intensive heating action and progressive fractional vaporization as well as the substantially complete vaporization of fractions having boiling points below the progressively rising temperatures to which the downflowing distributed and disseminated oil is subjected.



1,666,301. PROCESS AND APPARATUS FOR DISTILLING MINERAL OIL. ARTHUR E. PEW, Jr., Bryn Mawr, and HENRY THOMAS, Ridley Park, Pa., assignors to Sun Oil Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Feb. 23, 1924. Serial No. 694,472. 7 Claims. (Cl. 196—128.)

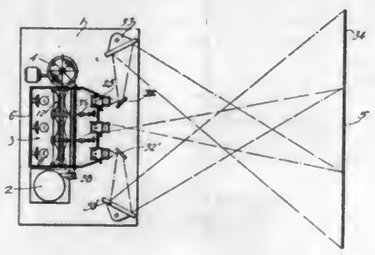
5. The process of vaporizing mineral oil which comprises heating oil to a temperature required to vaporize

the heaviest constituents that it is desired to vaporize, flowing a stream of such hot oil toward a vaporizing chamber, dividing said stream into a multitude of fine streams and flowing said streams in multiple in confined spaced-apart paths repeatedly through said vaporizing-chamber and at successively higher elevations, consolidating the multitude of fine streams after they flow through said vaporizing chamber at one elevation and before they flow through the vaporizing chamber at a higher elevation, and after the oil has so flowed through the vaporizing chamber at the highest elevation again consolidating the flowing oil and allowing it to flow downward through said vaporizing chamber and so disseminating it in its downward flow that it passes into heat-exchange relation, but out of contact, with said multiple hot oil streams and distributes itself in thin films in heat-exchange relation with successively hotter oil streams at successively lower elevations so as to produce an intensive heating action and progressive fractional vaporization and the substantially complete vaporization of fractions having boiling points below the progressively rising temperatures to which the downflowing distributed and disseminated oil is subjected.



1,666,302. PROCESS AND APPARATUS FOR DISTILLING MINERAL OIL. ARTHUR E. PEW, Jr., Bryn Mawr, and HENRY THOMAS, Ridley Park, Pa., assignors to Sun Oil Company, Philadelphia, Pa., a Corporation of New Jersey. Filed Feb. 23, 1924. Serial No. 694,473. 4 Claims. (Cl. 196—128.)

3. The process of vaporizing mineral oil which comprises heating a mineral oil to a distilling temperature of the oil to be vaporized and flowing a stream of said hot oil within a still at successively higher elevations and dividing the hot oil flowing at each elevation into confined, multiple, spaced apart streams, flowing an independent stream of mineral oil to be vaporized into the upper part of the still and so disseminating it that it passes into heat exchange relation, but out of contact with said hot oil streams and distributes itself in thin films in heat exchange relation with successively lower oil streams and with progressively hotter multiple oil streams at successively lower elevations so as to produce an intensive heating action and progressive fractional vaporization as well as the substantially complete vaporization of fractions having boiling points below the progressively rising temperatures to which the downflowing distributed and disseminated oil is subjected, and reheating the cooled oil of the first stream after it flows out of heat exchange relation with the oil of the second stream and recirculating it as hereinbefore specified.

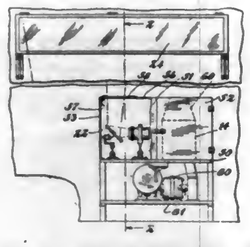


1,666,303. AMPLIFIER. JOSEPH PLATT, Detroit, Mich. Filed Feb. 17, 1926. Serial No. 88,871. 2 Claims. (Cl. 89—36.)

1. In a construction of the kind described, the combination of two sets of shields in parallel, and spaced relation, each set of shields consisting of individual shields arranged parallel to each other and inclined to the plane of the set with a space between adjacent

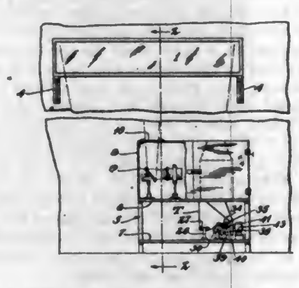
shields, the sets being so arranged with reference to each other that a shield in one set shall cover a space in the other set.

1,666,304. PROJECTING MACHINE. BARTON A. PROCTOR, New York, N. Y., assignor, by mesne assignments, to News Projection Corporation, New York, N. Y., a Corporation of New York. Filed July 31, 1924. Serial No. 729,308. 9 Claims. (Cl. 88—24.)



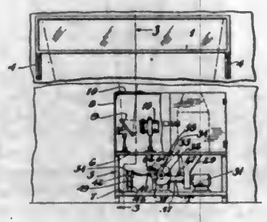
9. The combination with a ticker tape having printed thereon a single row of successive configurations, of a plurality of adjacent light apertures disposed to the rear of said tape so that the light rays from said apertures will simultaneously be projected through successive adjacent portions of the tape and project images of the printed matter formed on said tape, a lens for each light aperture to receive the images projected from its light aperture, a screen for receiving the images of the printed matter so projected, and means for preventing the superimposition upon said screen of any image upon another image including reflecting means for intercepting the images projected from some of said lenses and directing them onto said screen to reproduce the printed matter on said tape in its original order of printing.

1,666,305. NEWS-PROJECTION MACHINE. BARTON A. PROCTOR, New York, N. Y., assignor to News Projection Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 19, 1926. Serial No. 82,295. 23 Claims. (Cl. 88—24.)



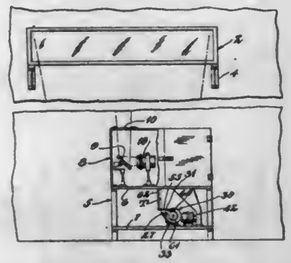
1. In a news projection machine, the combination with a stock ticker or the like, having tape printing mechanism and means for delivering the printed tape, of a light tight box supported directly below the printing

mechanism and to one side of the ticker, said box having a window in one side past which the tape moves, an opening in the side remote from the ticker, a condensing



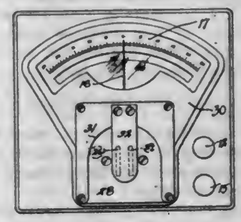
lens adjacent the window, a second condensing lens in said opening, and a mirror to reflect light from one lens to the other, so as to illuminate the tape.

1,666,306. TENSION CONTROL FOR TICKER TAPE. BARTON A. PROCTOR, New York, N. Y., assignor to News Projection Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 26, 1926. Serial No. 90,982. 17 Claims. (Cl. 88—24.)



16. In a news projecting machine, the combination with a printing mechanism for printing news items on tape and the like, of a projecting mechanism, means for feeding the tape through the projecting mechanism, an abutment located between the projecting mechanism and the printing mechanism, and a finger for pressing the tape into engagement with said abutment and functioning to dissipate the jump transmitted to the tape by the printing mechanism before the tape reaches the projecting mechanism.

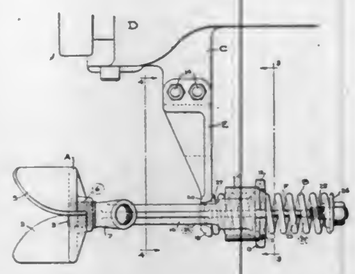
1,666,307. JUMP-ABSORBING MECHANISM. BARTON A. PROCTOR, New York, N. Y., assignor to News Projection Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 1, 1926. Serial No. 91,458. 10 Claims. (Cl. 88—24.)



1. The combination with a printing mechanism for printing news items on a tape, of a projecting mechanism for projecting images of the items printed on the tape, means for imparting a feeding impulse to the tape after a given printing impression, a rewinding roll for winding up the tape after same has been projected, means for imparting a rotation to the said roll, means for stopping the rotation of said roll normally out of stopping position when the tape is slack and actuatable into stopping position by the tape when the tape becomes taut, and means for absorbing the jump transmitted to the tape by the starting and stopping of the rewind roll to prevent transmitting the jump to the portion of the tape located in the projecting mechanism.

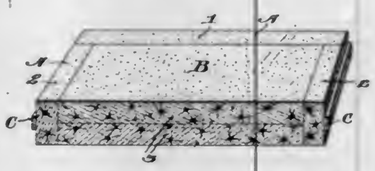
1,666,308. MECHANISM FOR CONTROLLING THE TENSION OF TICKER TAPE. BARTON A. PROCTOR, New York, N. Y., assignor to News Projection Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 4, 1926. Serial No. 92,226. 13 Claims. (Cl. 88—24.)

1. The combination with a tape, of a projecting mechanism having a vertically extending projecting position, a printing mechanism for printing news items on said tape and feeding the tape forward in a vertical direction across said projecting position when printing, a lever having one end resting on said tape between said printing mechanism and said projecting position to form a loop in the tape when the tape is being fed, a rewind roll for drawing the tape past said projecting position and for winding up the tape as it is being fed and taking up the slack in said tape to raise said lever when the printing mechanism is at rest, a driving friction member, a driven friction member secured to said rewind roll and facing said driving member to be engaged thereby, a second lever cooperating with said rewind roll, and a link connecting said second lever with said first lever, said first lever being actuatable by said tape when the slack is taken up in said tape to actuate said link in turn to actuate said second lever to anchor said rewind roll against actuation with said motor.



1,666,309. MAGNOMETER. JOHN N. RAY, Newark, N. J., assignor, by mesne assignments, to Brandes Laboratories, Inc., Newark, N. J., a Corporation of New Jersey. Filed Nov. 26, 1924. Serial No. 752,431. 2 Claims. (Cl. 175—183.)

1. An apparatus for determining the magnetic properties of electromagnetic sound reproducing devices comprising a substantially horizontal test board, a guide for

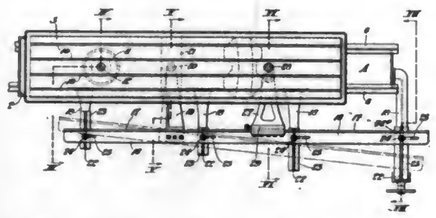


positioning an electromagnetic sound reproducing device with respect to said test board, a pair of pole pieces projecting upwardly into said test board and extending below said test board on opposite sides of a rotatable armature, an indicator carried by said armature and arranged to swing over a graduated scale, and means whereby an electromagnetic sound reproducing device when positioned on said test board in said guide may be caused to furnish magnetic flux for moving said armature and driving said indicator over said scale through distances proportional to the magnetic strength of said electromagnetic sound reproducing device.

1,666,310. AUTOMATIC TRAIN-PIPE COUPLING. JOSEPH ROBINSON, New York, N. Y. Filed Nov. 24, 1920, Serial No. 426,176. Renewed May 2, 1925. 13 Claims. (Cl. 285—58.)

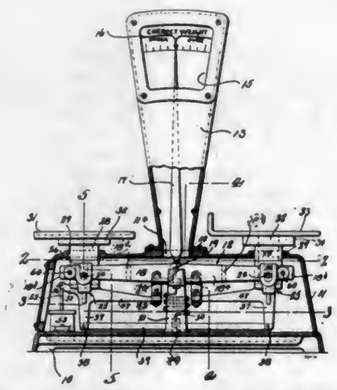
1. In an automatic train pipe coupling, the combination with a coupling head and a supporting bracket therefor, of a spring for extending the head, and means to permit limited longitudinal movement of said head toward and from the bracket without movement of the spring.

1,666,311. INSULATING UNIT FOR DEADENING VIBRATION AND SOUND. SIEGFRIED ROSENZWEIG, New York, N. Y. Filed Aug. 25, 1923. Serial No. 52,393. 5 Claims. (Cl. 20—4.)



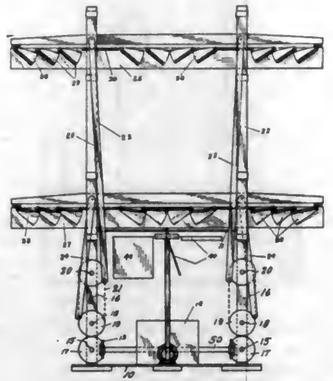
1. An insulating unit for preventing transmission of vibration and sound to buildings and the like, comprising a load carrying frame consisting of a plurality of cork strips, and a central sound deadening portion consisting of a plurality of horizontally disposed slabs of sound deadening material of less combined thickness than the height of the cork strips constituting the frame, and a clamping band surrounding the frame.

1,666,312. METALLURGICAL BRIQUETTE AND PROCESS OF USING IT. WILLIAM B. RUNYAN, Dayton, Ohio. Filed Mar. 31, 1921. Serial No. 457,567. 3 Claims. (Cl. 75—27.)



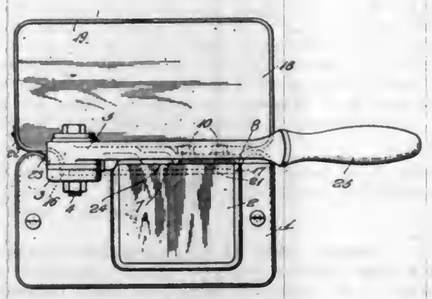
1. A briquette free from an admixture of metallic ore comprising ground coke, a silicon sand and lime, the sand and lime being present in about equal parts and in sufficient quantities to hold the carbonaceous matter together.

1,666,313. GRINDING MACHINE. OTTO SANN, Johnstown, Pa. Filed Mar. 28, 1925. Serial No. 19,005. 1 Claim. (Cl. 51—96.)



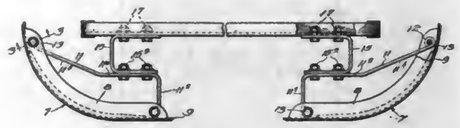
In a machine for cutting curved or arcuate grooves or paths in a work-piece, a stationary base member, a bed slidably mounted on said base and adapted to be reciprocated longitudinally thereof, a work supporting table mounted on said bed, said table being pivotally connected to said bed adjacent one end and slidably supported on said bed adjacent the other end whereby said table may be swung about said pivot transversely of said bed, a tool mounted above said table, a guide rail extending along one side of and longitudinally of said bed and arranged at an angle to the longitudinal axis of said bed, a bracket arm for supporting said guide rail, said bracket arm having one end fixedly secured to said guide rail intermediate its ends and having its other end pivotally mounted on a fixed pivot pin whose center line intersects the longitudinal center line or axis of said bed, means for moving said rail about said pivotal mounting of said bracket arm, means for locking said rail in adjusted positions, and a guide arm mounted to travel along said rail, said arm being pivotally connected to said table at a point spaced from the slidably supported end of the table a distance equal to the distance the pivotal mounting of the table is from the opposite end of the table, whereby said table will be swung transversely of said bed as said bed and table are reciprocated longitudinally so as to cause the tool to cut an arcuate path in the work-piece carried by said table.

1,666,314. EVEN-BALANCE-INDICATING SCALE. HARRY C. SCHAPER, St. Louis, Mo., assignor, by mesne assignments, to Schaper Scale Company, a Company of Missouri. Filed Feb. 28, 1926. Serial No. 90,049. 24 Claims. (Cl. 265—58.)



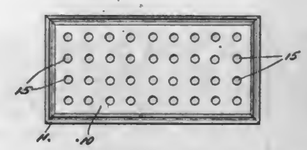
1. An even-balance scale comprising a scale beam, platform supports carried by said beam, a pivotally suspended lever operatively connected to said platform supports, a weight indicating member extending from said lever, and a resisting element anchored at one end and having its opposite end secured to said lever for controlling the movement of said weight indicating member to indicate a predetermined amount of over and under weight.

1,666,315. HELICOPTER. HENRY A. SHUMAN, Fairbury, Nebr. Filed Nov. 16, 1925. Serial No. 69,400. 3 Claims. (Cl. 244—11.)



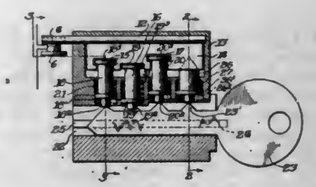
3. In a helicopter, a plane mounted for reciprocatory movement in vertical directions, and a plurality of slat valves pivotally secured to said plane and normally inclined thereto when they are in their opening position, some of said valves being angularly adjustable so that all of said valves may be parallel with each other or so that some of said valves may be oppositely inclined with reference to the others of said valves.

1,666,316. DENTAL APPARATUS. MANLEY A. SPARKS, Atlanta, Ga. Filed Apr. 9, 1927. Serial No. 182,495. 5 Claims. (Cl. 32—5.)



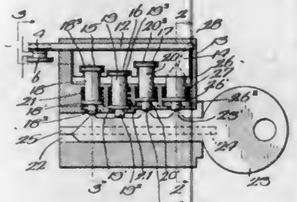
1. Dental apparatus comprising a plaster trimmer having a supporting body portion, a tray arranged to be brought adjacent the supporting body portion of said plaster trimmer, and means for interlocking said tray with the supporting body portion of said plaster trimmer, said means comprising a pair of upstanding lugs arranged to engage one side of the supporting body portion of said plaster trimmer, and spring means for forcing said lugs into engagement with the supporting body portion of said plaster trimmer.

1,666,317. BUMPER DEVICE FOR VEHICLES. HERBERT W. TINKER, Milwaukee, Wis., assignor to Federal Pressed Steel Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 17, 1926. Serial No. 102,805. 3 Claims. (Cl. 293—55.)



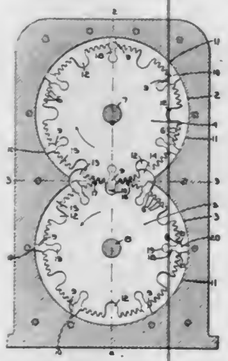
1. An impact member comprising a channel bar of arcuate form, a flexible strap member having its opposite ends pivotally connected to the said bar adjacent to the ends thereof, and means for securing said strap member to a frame.

1,666,318. BUILDING ELEMENT. FREDERICK M. VENZIE, Philadelphia, Pa. Filed July 7, 1923. Serial No. 650,018. 1 Claim. (Cl. 72—37.)



A thin, rectangular slab for building purposes having a flat inner dished upper surface, said dished part being marginally bevelled, and the outer surface of said slab being bevelled in an opposite direction with the two bevelled parts coming together to form a sharp marginal edge, the flat upper surface of said slab being provided with a plurality of shallow depressions having inclined walls so arranged that the diameter of said depresalons increase as they near the slab centre.

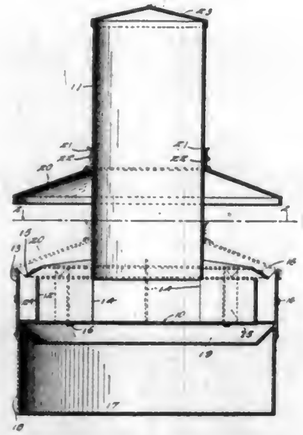
1,666,319. LOCK. FELIX J. WATTS, Bronson, Mich., assignor to Harry A. Douglas, Bronson, Mich. Filed Mar. 7, 1927. Serial No. 173,584. 4 Claims. (Cl. 70—47.)



1. The combination with a motion communicating bar; of a key operated detent constrained to one position to prevent effective movement of the bar and adjustable to another position to free the bar of its restraining influence; a second key operated detent constrained to one position to permit effective movement of the bar and adjustable to another position to prevent effective movement of the bar; a member in moving relation with the bar when the bar is free of said detents; and a key receiving element with which said detents and member are assembled.

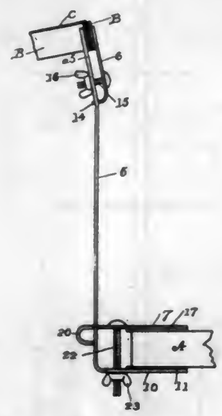
1,666,320. LOCK-CONTROLLED ELECTRIC SWITCH. FELIX J. WATTS, Bronson, Mich., assignor to Harry A. Douglas, Bronson, Mich. Filed Aug. 3, 1927. Serial No. 210,337. 6 Claims. (Cl. 200—44.)

1. The combination with a motion communicating bar; of an electric switch controlled by said bar; a detent constrained to one position to prevent effective movement of the bar and adjustable to another position to free the bar of its restraining influence; a member in moving relation with the bar when the bar is free of the detent; a key receiving element with which said detent and member are assembled; and a key having a ward formation adapted to engage and move said detent to free it from the bar and to engage and then operate the bar actuating member.



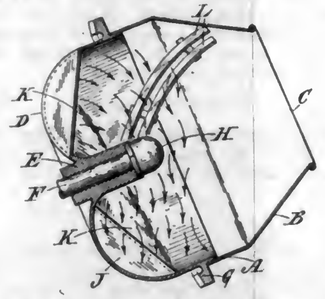
1,666,321. ROTARY MOTOR OR PUMP. ARTHUR W. WEEDEN, Quincy, Mass., assignor of three-fifths to Ella May Freeman, Quincy, Mass. Filed Feb. 16, 1927. Serial No. 168,523. 2 Claims. (Cl. 103—126.)

1. In a device of the class described, the combination with a casing having a plurality of circular chambers communicating with each other and also having inlet and outlet ports leading to said chambers, a rotor in each chamber, each rotor having gear teeth thereon which mesh with gear teeth on the other rotor, said gear teeth forming the sole driving connection between the rotors, each rotor also having blades extending peripherally therefrom beyond the gear teeth and engaging the walls of the corresponding chamber and also having recesses to freely receive the blades of the other rotor, each blade occupying the space of a single gear tooth only, whereby several of the gear teeth will be in mesh in all positions of the rotors.



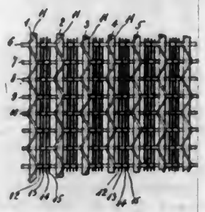
1,666,322. POULTRY FEEDER. ELMER S. WEST, Maysville, Ky. Filed Mar. 8, 1927. Serial No. 173,713. 5 Claims. (Cl. 119—52.)

1. In a poultry feeder, the combination with a structure including a hopper, a pan into which the hopper discharges, a wall surrounding the outer pan wall in spaced relation thereto, of a collecting base supporting said structure and with which the space between said wall and the pan wall communicates and means upon said wall deflecting material passing downwardly through



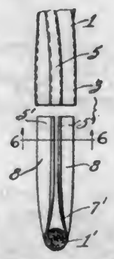
said space toward the center of the collecting base, the collecting base telescopically interiorly engaging said wall, said means likewise constituting a stop limiting downward movement of the wall upon the base.

1,666,323. EMBROIDERY-HOOP HOLDER. CLARENCE D. BALDWIN, Bellingham, Wash. Filed Aug. 3, 1927. Serial No. 210,283. 2 Claims. (Cl. 45—24.)



1. A clamping device of the kind described consisting of a frame member having a vertical longitudinal slot therein, a rearwardly extending jaw rigidly fastened to the lower end of said frame member, a loose jaw the forward end of which is downwardly folded forming a loop having transverse notches in the edges thereof rearwardly of said loop with a bridge between the bottoms of said notches engaged with said frame member in said slot said notches engaging said frame member whereby the lower end of said loop bears on the front of said frame member when said loose jaw is parallel with said fixed jaw behind said frame member and is vertically movable through parallel positions in said frame member slot, and a clamping bolt extended through align holes in said jaws.

1,666,324. ROTARY MIXING MACHINE. JOHN FAULDER BURN, London, and JOHN STUART LANCASTER, Warwick, England. Filed Mar. 24, 1927, Serial No. 178,060, and in Great Britain Sept. 28, 1926. 11 Claims. (Cl. 88—73.)

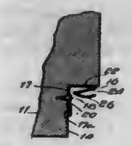


1. In a mixing machine, a rotary mixing receptacle or drum having a frusto-conical termination presenting at one end an opening of reduced diameter and closed at the other end by a basin-like base, the latter having a boss at its centre forming a bearing on which the drum may rotate, the interior of the base essentially being in the form of an inclined track and with a step to connect the high and low ends of the same for the purpose specified.

1,666,325. WOVEN ELASTIC FABRIC. LESTER B. CHISHOLM, Melrose, Mass., assignor to Everlastik, Inc., Chelsea, Mass., a Corporation of Massachusetts. Filed May 15, 1926. Serial No. 109,285. 3 Claims. (Cl. 139—421.)

1. In a woven elastic fabric, the combination comprising elastic warp strands, picks, and binder warp threads woven through the picks in the space between the elastic strands, said binder warp threads being sufficiently hard twisted to kink and automatically curl with lateral displacement away from the elastic strands when the elastic strands are contracted to an amount permitted by the drawing together of the picks.

1,666,326. LIGHTNING ROD. CHARLES D. DALLAS, Chicago, Ill. Filed Aug. 5, 1921. Serial No. 490,052. 1 Claim. (Cl. 173—31.)

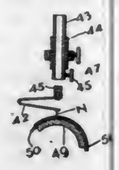


Means for connecting a transverse conductor to the open end of a longitudinally, spirally ribbed lighting rod, comprising a strap bent upon itself to encircle the conductor, each end of said strap having a rib extending longitudinally, centrally thereof, and the adjacent edges of said ends cooperating to form longitudinal ribs, whereby the ends may be compressed for insertion into the rod with the ribs on the strap ends mating with the ribs on the rod.

1,666,327. WEATHER STRIP. WILLIAM J. DENNIS, Chicago, Ill. Original application filed Apr. 11, 1924, Serial No. 705,834. Divided and this application filed June 18, 1925. Serial No. 37,988. 1 Claim. (Cl. 20—69.)

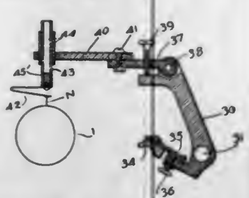
A weather strip formed of a substantially flat metal strip having one edge bent over to lie on one face thereof, the other edge bent over to form an intermediate portion having one edge lying flat against that face of the main strip onto which the first edge is folded, an outer yieldable leaf portion formed by bending the outer edge of the intermediate portion back along and away from itself, and the extreme outer edge being slightly curved away from the main strip to form a convex bearing surface.

1,666,328. WEATHER STRIP. WILLIAM J. DENNIS, Chicago, Ill. Filed Feb. 23, 1926. Serial No. 90,192. 1 Claim. (Cl. 20—69.)



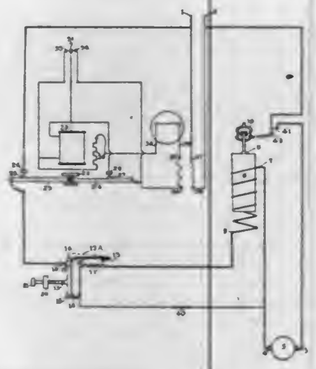
A weather strip comprising right angularly disposed leaf portions, one of said leaf portions having its outer longitudinal edge folded back upon itself toward the other leaf portion, spaced flanges formed integral with the outer longitudinal edge of the other leaf, said flanges being disposed at an angle relative to the second leaf and each other and at an acute angle to the first leaf portion, and a longitudinal arcuate portion formed in the outermost flange.

1,666,329. RECEIVING PAPER AND RECEIVING SOLUTION FOR TELAUTOGRAPHY. MARVIN FERREE, New York, N. Y., and JOSEPH WIESMAR, Cleveland, Ohio, assignors, by mesne assignments, to Telepix Corporation of America, a Corporation of New York. Filed Jan. 31, 1925, Serial No. 5,956. Renewed Sept. 21, 1927. 1 Claim. (Cl. 178—5.)



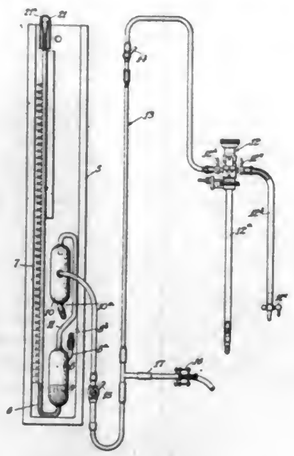
In an apparatus for electrically receiving pictures, the combination of a conductive support adapted to be directly associated with a recording needle, an absorbent pad connected to said support and having the receiving

paper located thereon, said pad and said receiving paper both containing a conductive solution adapted to be decomposed under the action of an electric current,



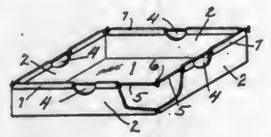
so that any current which passes from said needle to said drum passes through both said receiving paper and said pad.

1,666,330. NEEDLE HOLDER FOR TELAUTOGRAPHIC APPARATUS. MARVIN FERREE, New York, N. Y., and JOSEPH WISSMAR, Cleveland, Ohio, assignors, by direct and mesne assignments, to Telepix Corporation of America, a Corporation of New York. Filed Jan. 31, 1925, Serial No. 5,957. Renewed Sept. 21, 1927. 2 Claims. (Cl. 178—5.)



1. In an apparatus for transmitting pictures by a series of electrical pulses, a drum adapted to carry chemical paper or the like, a needle mounted upon an angular blade spring arranged substantially perpendicular to the axis of the drum, and adjustable means for immovably holding the outer end of the said blade spring with respect to said drum, said adjustable means being movable in a direction towards and away from said drum.

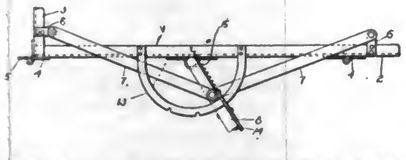
1,666,331. ELECTRICAL SAFETY CONTROL CIRCUIT FOR AUTOMATIC BURNER EQUIPMENT. FRANK FISCHER, Larchmont, N. Y., and ARNOLD FRANCIS VAN PELT, Interlaken, N. J., assignors to Grant Oil Burner Corporation, Wilmington, Del., a Corporation of Delaware. Filed Aug. 27, 1925. Serial No. 52,946. 4 Claims. (Cl. 158—28.)



1. In an electrical control circuit for burners having gas ignition pilots, a fuel-supply motor, a heat-requiring conductor, the conductor being located adjacent to the pilot so as to be heated and thereby rendered conductive by the pilot when the pilot is ignited, the conductor being connected in series with the motor so that the motor cannot start when the pilot is not ignited, the conductor being so proportioned as to be heated by current passing through it and thereby maintained in a conductive state independently of the pilot when the motor and conductor are energized so that the motor will continue to run if the pilot goes out while the motor and conductor are energized.

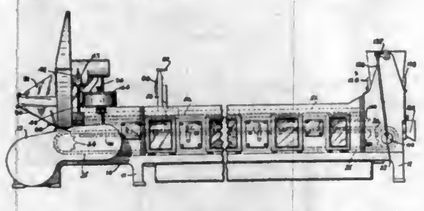
1,666,332. BLADDER-PRESSURE-TESTING APPARATUS. EDWIN W. HIRSCH, Chicago, Ill. Filed May 23, 1927. Serial No. 193,399. 12 Claims. (Cl. 73—31.)

1. Apparatus for testing the pressure of the human bladder comprising means adapted to be projected into the bladder to permit the flow of urine therefrom, a pressure gauge, a measuring fluid in said gauge having a specific gravity approximating the specific gravity of the urine, conduit means between said first named means and said gauge adapted to receive the urine, variable controls carried by said conduit means, and a pressure chamber in said conduit means between said gauge and first named means for stabilizing and uniformly delivering the pressure exerted by the flowing urine to said pressure gauge and for preventing the passage of the urine into said gauge.



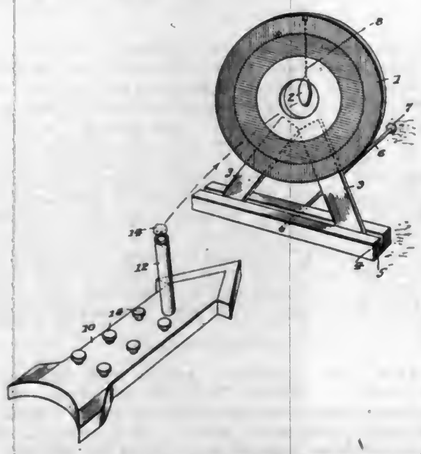
1,666,333. COLLAPSIBLE TRAY FOR EGG CRATES. NAOKICHI ISOYAMA, Los Angeles, Calif. Filed Aug. 11, 1926. Serial No. 128,546. 3 Claims. (Cl. 229—30.)

1. The collapsible tray set forth comprising a rectangular bottom plate, flaps hinged to the edges of said plate and adapted to be brought into upright position to form four sides of a tray, and wires extending along the edges of the flaps and fastened to said edges and projecting beyond the ends of the flaps and forming hooks



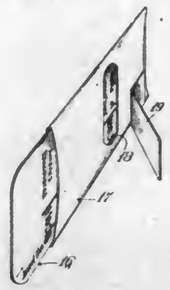
for engagement with each other to hold the flaps in upright position, and adapted to be unhooked to allow the flaps to be flattened down into the plane of the bottom plate.

1,666,334. SCRAPER. CHARLES LARSON, Chicago, Ill. Filed Mar. 23, 1927. Serial No. 177,618. 5 Claims. (Cl. 37—53.)



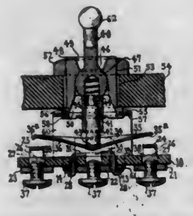
1. In a scraper, a body portion, end wings adjustably connected thereto, and manually operable means secured to said body portion for actuating said end wings simultaneously.

1,666,335. AUTOMATIC SLICING, TOASTING, AND BUTTERING MACHINE. RICHARD LENTZ, Los Angeles, Calif. Filed June 29, 1925. Serial No. 40,194. 9 Claims. (Cl. 53—5.)



3. In a toaster, a pair of spaced elements, means to hold an article between said elements, shiftable means for moving said elements as a unit and other means for moving said elements toward and from each other.

1,666,336. TOY TARGET GAME. LOGAN L. MALLARD, Norfolk, Va. Filed July 10, 1926. Serial No. 121,587. 6 Claims. (Cl. 273—107.)

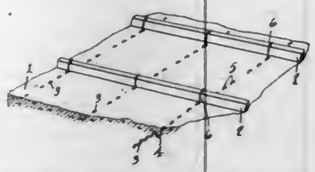


1. In a target game, a projection means including a movable base member, a flexible tubular projector removably mounted on said base and a projectile adapted for engagement with the end of said projector for discharge therefrom when the same is flexed and released.

1,666,337. MEMORIZATION DEVICE. JAMES E. MCDADE, Chicago, Ill. Filed July 6, 1925. Serial No. 41,608. 8 Claims. (Cl. 35—2.)

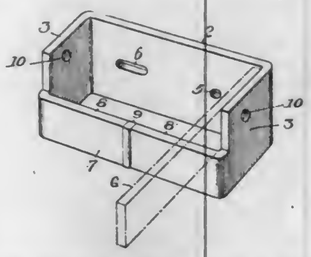
1. A memorization device comprising in combination a card bearing on one face a mass of data arranged in columns with related elements oppositely disposed, an envelope having a window and adapted to expose successively through the window the several sets of related elements, each set by itself, upon relative longitudinal movement of the card and envelope, and a flap carried by said envelope and movable into and out of position over said window, said flap also being provided with a window therein through which one, only, of said related elements is visible.

1,666,338. ELECTRIC SWITCH. GEORGE J. MEUER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Jan. 18, 1926. Serial No. 81,898. 10 Claims. (Cl. 200—68.)



1. In an electric switch, the combination with an insulating base, of a plurality of stationary contacts carried thereby, a movable contact member supported intermediate said first mentioned contacts and having contact arms overhanging the latter, means for positively holding said movable contact in an intermediate position wherein all of said contacts are disengaged, said means comprising a pivoted lever adapted upon oscillation thereof to tilt said contact member to effect engagement of the latter with said stationary contacts selectively.

1,666,339. LUMINESCENT FUSE PLUG. LOUALLEN F. MILLER, Minneapolis, Minn. Filed Oct. 22, 1926. Serial No. 143,422. 5 Claims. (Cl. 200—121.)



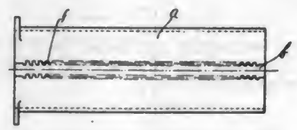
1. A fuse plug having applied thereto in the vicinity of its fuse a luminescent substance which, when the fuse is "blown," will be rendered luminescent for an extended period of time.

1,666,340. ANCHORING ELEMENT FOR CONCRETE CONSTRUCTION. ROBERT B. MITCHELL, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich. Filed Jan. 26, 1927. Serial No. 163,650. 2 Claims. (Cl. 72—101.)

2. An anchoring element for use in concrete construction consisting of a corrugated rod having spaced loop-like bends therein disposed in the plane of the corrugations and providing anchoring members, the corrugations facilitating the engagement of ties with said anchoring element when the anchoring members of the element are embedded in a concrete body.

1,666,341. TREAD CARRIER. HARRY NAGIN, Pittsburgh, Pa., assignor to The Tri-Lok Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 19, 1926. Serial No. 130,138. 5 Claims. (Cl. 189—43.)

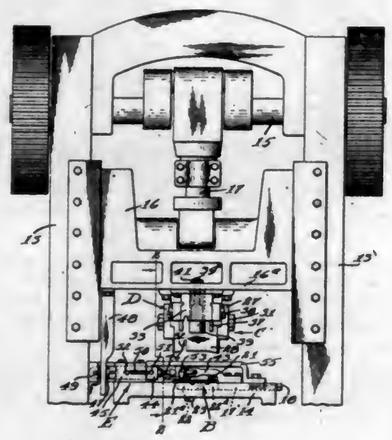
1. A tread carrier comprising a strip of metal bent to form a base adapted for attachment to a stairway riser, an integral portion extending outwardly from the base, and an integral tread supporting portion extending at an angle to the outwardly extending portion.



1,666,342. PROCESS FOR THE MANUFACTURE OF THYMOL FROM UMBELLULONE. ELNATHAN K. NELSON, Takoma Park, Md., assignor to the Government and the People of the United States of America. Filed Sept. 27, 1927. Serial No. 222,396. 2 Claims. (Cl. 260—154.) (Granted under the provisions of the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. The production of thymol from umbellulone by distilling California laurel oil and passing the vapors through a tube heated to 280° C. and separating the thymol formed by fractional distillation.

2. The production of thymol from umbellulone by distilling umbellulone, passing the vapors through a tube heated to 280° C. and separating thymol from the distillate by means of a solution of caustic alkali.

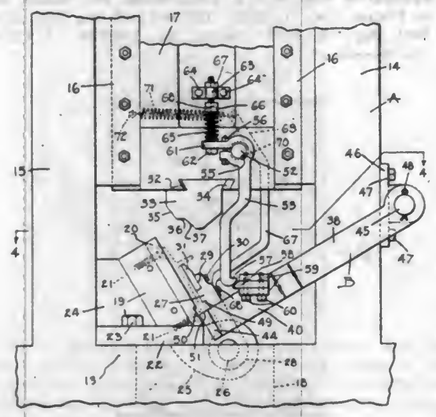


1,666,343. METHOD OF MANUFACTURING PISTON RINGS. MASATOSI OKOCHI and KEIKICHI ERIHARA, Tokyo, Japan, assignors to Zaidan Hojin Rikagoku Kenkyujo, Tokyo, Japan. Filed May 4, 1926, Serial No. 106,721, and in Japan May 16, 1925. 2 Claims. (Cl. 29—156.6.)

1. The method of making piston rings consisting in slitting a substantially cylindrical blank longitudinally and simultaneously forming joints along the edges thus provided, applying fastening means to the blank so as to

exert a closing action on the blank tangentially of and across the slit, and finally cutting said blank transversely at suitable intervals to provide individual rings.

1,666,344. TIEPLATE PUNCHING AND SHEARING PRESS. MELVIN OVESTRUD, Stillwater, Minn., assignor of one-half to Twin City Forge & Foundry Company, Stillwater, Minn., a Corporation of Minnesota. Filed Apr. 29, 1925. Serial No. 26,674. 12 Claims. (Cl. 164—15.)

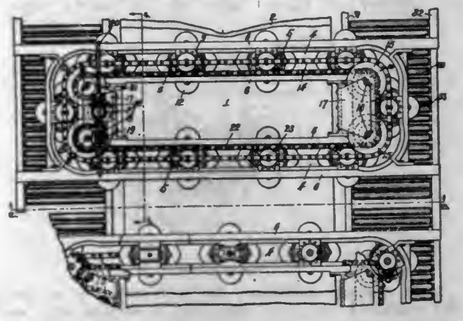


1. In a press of the class described, a frame, a bed thereon, a vertically reciprocable ram above said bed, shearing and punching elements carried by the ram, means on the bed complementing the shearing and punching elements, said elements being arranged in tandem in the direction of feed to said press, the shearing element comprising a pair of blades for severing two sections from a blank transversely thereof, the punching element comprising spaced punches for perforating two zones in the blank to be severed by said blades on a subsequent stroke of the ram, and a pair of oppositely arranged delivery chutes, each disposed to receive one of the sections severed from the blank on each stroke of the ram, one chute leading to one side of the press and the second chute to the other side of said press.

1,666,345. BENDING PRESS FOR TIE-PLATE FLANGES. MELVIN OVESTRUD, Stillwater, Minn., assignor of one-half to Twin City Forge & Foundry Company, Stillwater, Minn., a Corporation of Minnesota. Filed July 26, 1926. Serial No. 124,847. 13 Claims. (Cl. 153—25.)

1. A press for bending the flanges of tie plate sections, comprising a frame, a reciprocable ram carried by said frame, a die member mounted on said frame, a bending punch on said ram co-operating with said die

member for bending the flange of the tie plate section thereover, means operated by said ram for freeing the bent tie plate section from said die and for so holding



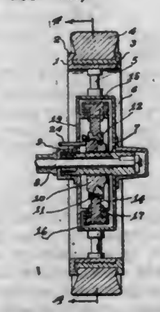
it, means for removing the bent tie plate section from the press and means operated by said removing means for releasing said freeing and holding means.

1,666,346. COMBINED MOP AND WRINGER. WILLIAM R. PAUL and JENNIE HENRY PAUL, Amarillo, Tex. Filed June 6, 1927. Serial No. 196,939. 8 Claims. (Cl. 15—120.)

1. A combined mop and wringer comprising a slotted handle, a mop holding loop slidably mounted on said slotted handle and provided with a crank projected through the slot, a crank on said shaft, a second mop holding loop provided with shanks pivotally connected to said handle, a collar slidably mounted on said handle providing a bearing for said shaft and holding said shank and second mentioned loop in line with said handle during a mopping operation, and bracing means operatively connected with said handle and collar for preventing movement of said collar on said handle during a mopping operation.

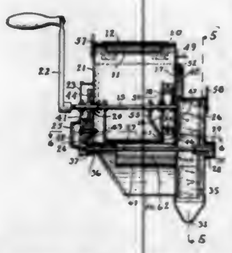
1,666,347. CONTINUOUS GLASS-POLISHING MEANS. ARCHIE W. PLATT, Toledo, Ohio, assignor to The Edward Ford Plate Glass Company, Rossford, Ohio, a Corporation of Ohio. Filed Sept. 3, 1926. Serial No. 133,338. 9 Claims. (Cl. 51—120.)

1. In a machine of the class described, a conveyor for supporting plate glass and having a defined path of movement, a polishing unit having an endless path of movement forward and backward across the conveyor transverse to the conveyor movement with portions of its movement at the sides of the conveyor, means for



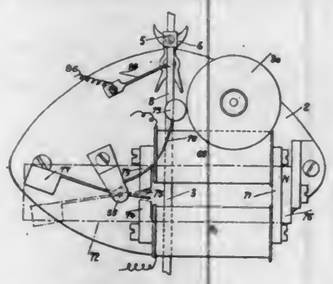
causing said unit to traverse its path of movement, and means disposed at one side of the path of movement of the conveyor for re-conditioning the polishing surface of the unit as it passes thereover.

1,666,348. RAILWAY CATTLE GUARD. CURTIS D. PRUETT, Dallas, and WILLIAM KADERNASCHKA, Troup, Tex. Filed Oct. 18, 1927. Serial No. 226,924. 3 Claims. (Cl. 256—14.)



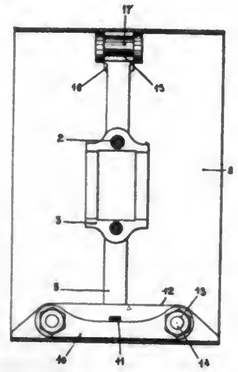
1. In a railway livestock guard, in combination with a plurality of railway ties, of spacer members secured to the adjacent ends of the ties, of trip members angularly disposed between adjacent ties, and having braces therebetween, the trip members over one half side of the road bed being in parallel planes, and those on the other half, being in parallel planes, the planes of the trip members on the first half being angularly disposed with respect to the planes of those members over the second half of the roadbed, and a plurality of triangular strips in full clearance of the rails and covering the tops of said ties, the tops of said trip members and said triangular strips being upon a plane one with the other.

1,666,349. VEHICLE BRAKING MECHANISM. ALFRED T. PETERSON, Crooked Rivers, Saskatchewan, Canada. Filed Dec. 31, 1926. Serial No. 158,318. 9 Claims. (Cl. 188—78.)



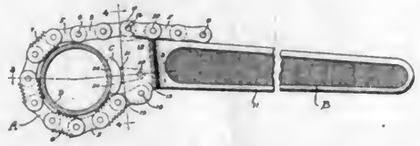
1. In a brake mechanism, an axle, a frusto-conical element rotatable thereon, a brake drum, a brake shoe engageable therewith, means to rotate said frusto-conical element, whereby the brake shoe is moved axially and radially to engage the drum.

1,666,350. DUSTING APPARATUS. WILLIAM L. PITT, Cleveland, Ohio. Filed Feb. 9, 1925. Serial No. 7,918. 2 Claims. (Cl. 43—148.)



1. In dusting apparatus, the combination of a material container having a substantially vertical side wall with a discharge opening for the material adjacent the bottom thereof, a shaft extending through said container and provided with means for feeding the material to said opening and, exteriorly of the container, with a crank whereby the shaft may be rotated, a shaft arranged parallel with the first-mentioned shaft and having an impeller arranged adjacent said wall with its intake alongside said opening, a casing enclosing said impeller and having an air intake opening below said container and through which air is admitted to said casing independently of the material, a wall surrounding said intake opening and cooperating with the bottom wall of said container to form a tubular passage through which air is supplied to said intake opening, gearing arranged on the exterior of said container for driving the impeller shaft from the first-mentioned shaft, a casing for said gearing carried on a wall of said container, an exteriorly adjustable valve pivoted on the first-mentioned shaft and cooperating with said discharge opening to regulate the flow of material therethrough, and means whereby the apparatus may be supported on the body of an operator.

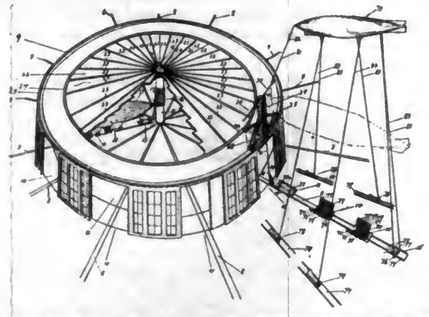
1,666,351. ELECTRIC STRIKING MECHANISM. SIMON ROLLIN, Tulle, France, assignor to Societe Anonyme des Anciens Etablissements Hatot, Paris, France. Filed Mar. 8, 1927, Serial No. 173,756, and in France Mar. 12, 1926. 7 Claims. (Cl. 58—38.)



1. An electric striking mechanism for clocks comprising the clock pendulum, a reversing switch actuated by the pendulum, a polarized electromagnet, means whereby the switch is adapted to send current of alternatingly opposite direction into the electromagnet, during the striking period, the pivoting armature of the electromagnet, a striker secured thereto, a bell disposed in the path of the striker, means whereby the electromagnet when fed by current of a given direction moves the striker towards the bell and when fed by current of opposite direction moves it away from the bell, and an arrangement for controlling the number of beats of the striking mechanism.

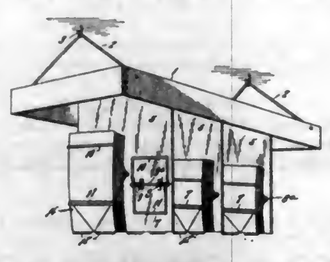
1,666,352. SPLIT PULLEY. LOUIS ROUANET, Ivry-Port, France, assignor to Compagnie d'Applications Mecaniques, Ivry-Port, France, a French Company. Original application filed Mar. 5, 1926, Serial No. 92,567, and in France Apr. 11, 1925. Divided and this application filed May 12, 1927. Serial No. 190,889. 1 Claim. (Cl. 64—18.)

A split pulley having a two part body, fastening bolts adapted to secure said body to a shaft, a split outer band arranged about the body and closed thereon at one end of the dividing diameter, fastening means for connecting the free ends of the outer band, the adjacent faces of the two parts of the body near the end of the dividing diameter opposite that to which the fastening means are located being provided with recesses, counterweights removably arranged in the said recesses and said weights being held in position upon the tightening of the fastening bolts.



1,666,353. WRENCH. ADOLPH C. SCHELP, Colp, Ill. Filed July 14, 1924. Serial No. 725,948. 1 Claim. (Cl. 81—69.)

In a wrench, a handle, a head at one end of said handle rigid therewith and including a pair of elongated spaced plates extending transversely of the handle and providing an elongated slot with its longitudinal axis transversely of the handle, a chain pivotally connected at one end to and between the pair of plates at a point adjacent one end of the plates, means provided at the opposite end of the pair of plates for detachably connecting the free end of the chain therebetween, and a fulcrum member pivotally connected to and between the plates of the head at a point intermediate the ends of the plates, nearer to the pivotal point of attachment of the chain than to the detachable point of connection of the chain with the plates and embodying a shoe extending forwardly of the head of the wrench and having a concaved work engaging face

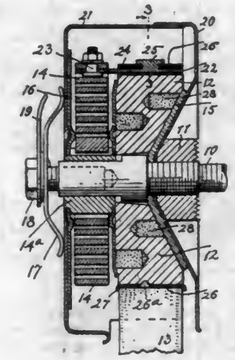


1,666,354. AIRSHIP-LANDING STATION. FREDERICK WILLIAM SCHWERDTFEGER, New York, N. Y. Filed Sept. 3, 1925. Serial No. 54,313. 7 Claims. (Cl. 244—2.)

1. A station for landing and launching airships, comprising a circular hangar, a pillar centrally located within the hangar, a number of radial tracks placed on the hangar-floor and rotatable around said central pillar, a movable mooring tower situated on a circular track placed on the periphery of the hangar-roof, an elevator device from the hangar-floor to the hangar-roof, another elevator device within said mooring tower, a series of gangways lo-

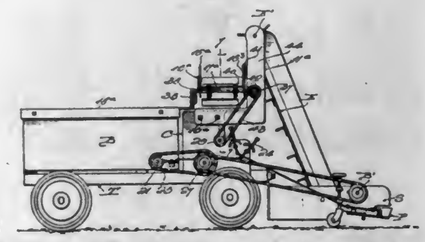
cated on the roof and communicating between said elevator devices, a system of outer tracks radial to the hangar, and means of lowering and berthing airships into vehicles movable along said radial tracks and of depositing airships in to the hangar, as described.

1,666,355. RACK OR HOLDER FOR PAPER BAGS. ALVIN SETHER, Chippewa Falls, Wis. Filed Mar. 4, 1926. Serial No. 92,229. 1 Claim. (Cl. 211—251.)



A device for the purpose indicated comprising a tray consisting of a flat sheet metal plate provided with suspension means at one end and with right-angularly disposed extensions at the opposite end, and bag supporting means carried by the tray on that face from which the extensions project, said supporting means consisting of complemental U-shaped members, a rod to which said U-shaped members are pivotally connected, bearings supporting the rod and secured to the face of the tray, and torsion springs in surrounding relation to the rod between the bearings and the pivotal connections with the U-shaped members and bearing respectively upon the face of the tray and the U-shaped members to yieldingly impel said U-shaped members toward the tray.

1,666,356. PAPER FASTENER. RAYMOND H. SMICKLE, Belvidere, N. J. Filed Apr. 4, 1927. Serial No. 180,919. 5 Claims. (Cl. 24—153.)

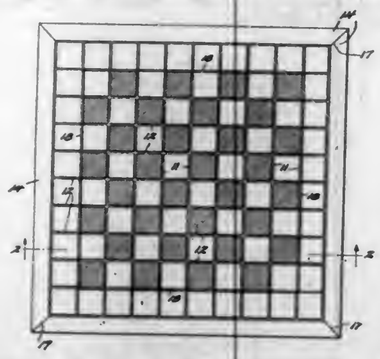


1. A paper fastener comprising a pair of pliable double ended members arranged in parallel relation, one of said members having a slot, and means in engagement with said slot for holding the members together intermediate their ends.

1,666,357. SHOCK ABSORBER. JACOB R. SNYDER, Cleveland, Ohio, assignor to The Star Rebound Controller Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 10, 1924. Serial No. 742,785. 12 Claims. (Cl. 267—10.)

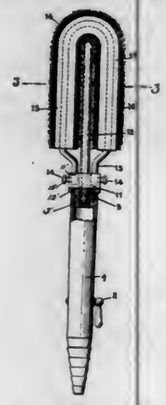
1. A shock absorber comprising a rotatable drum, a strap adapted to be wound onto and unwound therefrom, a spring for rotating the drum in one direction, and a combined attaching means and spring support extending from the side of the drum.

1,666,358. SNOW-REMOVING MACHINE. MARSOP SOUHIGIAN, Lawrence, Mass. Filed Nov. 4, 1926. Serial No. 146,225. 3 Claims. (Cl. 37—45.)



1. In a snow removing machine, the combination with a motor truck having a driver's cab; of a pair of vertical bracket plates secured to the sides of said cab and rising from the latter, snow elevating means in advance of the truck and having its upper end connected with and supported by said bracket plates, and a conveyor positioned to receive the elevated snow, said conveyor having a frame connected with and supported in part by said bracket plates.

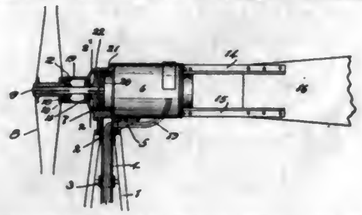
1,666,359. GAME BOARD. HERBERT J. A. STEVES, New York, N. Y. Filed May 4, 1927. Serial No. 188,825. 1 Claim. (Cl. 273—136.)



A game board having a series of equi-distant parallel continuous grooves in its surface, and another series of equidistant parallel continuous grooves at right angles thereto sub-dividing the surface into squares, and means for forming a raised border for a central group of said squares to enclose a conventional checker board, to avoid confusion in playing checkers on the same board, said means being composed of a series of removable rec-

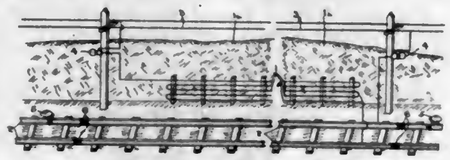
tangular plugs inserted in the grooves bounding said central checker board portion, said plugs being of the length of a side of a square, and of greater height than

the depth of the grooves to facilitate removal, whereby said plugs are adapted for use as markers for playing squares over the entire surface of the board.



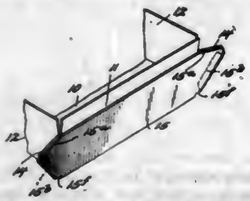
1,666,360. CLEANING DEVICE. GUGLIELMO TANCETTI, Genoa, Italy. Filed Apr. 16, 1926, Serial No. 102,527, and in Italy Sept. 30, 1925. 2 Claims. (Cl. 15—127.)

1. A device of the character described, including a fibrous mop fabric having a tubular edge, a U-shaped frame on which the tubular edge of the mop fabric is threaded, a supporting block for removably receiving the ends of the frame, set screws fore releasably securing the ends of the frame in the supporting block, the block being provided with a central longitudinal opening, a blind tube engaged with the block and lying between the sides of the frame and having a series of small perforations on the side face of the fibrous portion of the mop fabric, and a threaded nipple extending from the opposite side of the block and in alignment with the longitudinal opening, substantially as and for the purposes set forth.



1,666,361. WINDMILL. LAURENCE THOMPSON, Warren, Manitoba, Canada. Filed Mar. 28, 1927. Serial No. 179,119. 1 Claim. (Cl. 170—37.)

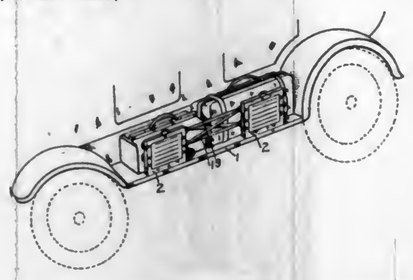
In windmill construction, the combination with a horizontally disposed rotatable base plate, of an electrical generator secured to the rear portion of the base plate, a horizontally divided housing in advance of the generator, said housing having the under section thereof secured to the base plate, and the upper section thereof detachably fastened to the under section and being provided at the end remote from the generator with a bearing extension, a wind wheel shaft rotatably mounted in said extension and aligned with the generator shaft and entering the housing, a gear wheel secured to the inner end of the wind wheel shaft, a pinion secured to the forward end of the generator shaft and contained within the housing, counter shafts crossing the housing and



positioned parallel to the aligned shafts, and disposed equidistant at opposite sides thereof and having their ends removably mounted between the upper and lower sections of the housing, similar pinions secured to the counter shafts and meshing with the gear wheel of the windmill shaft and similar gear wheels secured to the counter shafts and meshing with the pinion of the generator shaft.

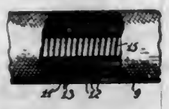
1,666,362. SAFETY DEVICE FOR RAILWAYS AND THE LIKE. PURCELL THOMAS WEBB, Christchurch, New Zealand. Filed Apr. 24, 1925, Serial No. 25,629, and in New Zealand May 2, 1924. 4 Claims. (Cl. 246—121.)

1. Means for the purpose specified, comprising an electric line erected adjacent a section of railway line to be protected, and forming part of an electric circuit containing lamps, located near the ends of said section of railway line, said lamps being adapted to be extinguished by a fall of earth or the like breaking said electric line; and signaling means for giving warning of the approach of a train, to said section of railway line, the section of railway line protected by the electric line being insulated from the rest of the railway line and also forming part of the circuit through the electric line and the lamps, and the said circuit being closed when the electric line is unbroken by the wheels and axle of a train bridging the rails of said insulated section of railway line, substantially as described.



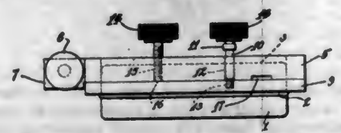
1,666,363. BAKE PAN. ANTHONY JOSEPH WILL and DAVID ALBERT FELDMAN, Baltimore, Md., assignors to The August Maag Company of Baltimore, Baltimore, Md., a Corporation of Maryland. Filed Sept. 3, 1925. Serial No. 54,367. 3 Claims. (Cl. 53—6.)

1. In combination, a rectangular bake-pan, a reinforcing and protecting plate extending along one side of



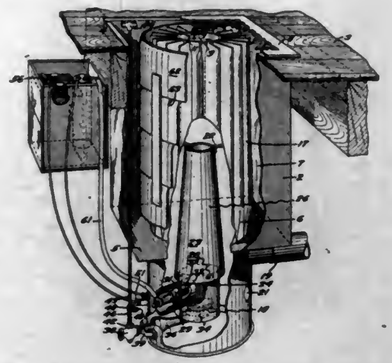
said pan, said pan having flaps at the corners folded against the ends of the pan, said plate having a portion at each end folded against the end of the pan, the folded ends of said plate overlying said folded flaps on the pan and each of said ends having one edge folded over an edge of said flap.

1,666,364. FOOT MAT AND LUGGAGE AND LIKE CARRIER DEVICE FOR MOTOR ROAD VEHICLES. WILLIAM HENRY BAUERT, Roseville, near Sydney, New South Wales, Australia. Filed June 30, 1924, Serial No. 723,358, and in Australia July 24, 1923. 1 Claim. (Cl. 280—164.)



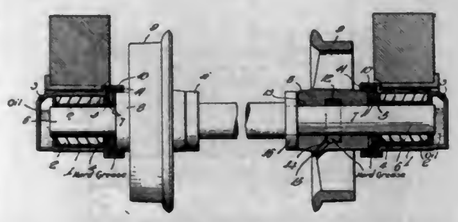
A mat and luggage carrier including a frame, means for hingedly securing said frame with the running board of a vehicle, said means including a laterally projecting pivot pin, a lever pivoted to said frame and normally occupying a position folded against the latter, said lever being movable to a position engaging the laterally projecting pivot pin.

1,666,365. NONEXPANSIVE HOSE. CLIFFORD C. BRADBURY, Glencoe, Ill., assignor to Hydraulic Brake Company, Detroit, Mich., a Corporation of California. Filed Apr. 23, 1926. Serial No. 104,051. 1 Claim. (Cl. 137—90.)



A flexible hose adapted to withstand high internal pressure without appreciable expansion, comprising a helix of relatively non-compressible wire circular in cross section and having its adjacent turns contacting one another, said helix having the outer surface ground away to form a substantially cylindrical outer surface lying in a plane externally of the mid-point of the wire, and an elastic tube about said helix tensioned so as to exert high radial pressure on the outer cylindrical surface of the coil.

1,666,366. CAN OPENER. JOSEPH CERECHINO, Los Angeles, Calif. Filed June 21, 1927. Serial No. 200,851. 4 Claims. (Cl. 220—43.)

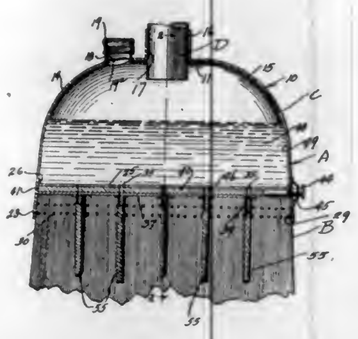


1. In a device of the class described, the combination of a clamp ring, a ring movably secured to the clamp ring, and means for moving the said latter ring from the clamp ring.

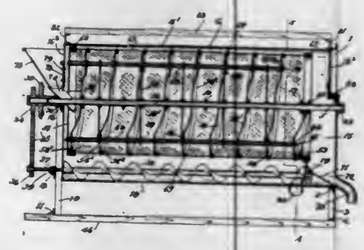
1,666,367. HEATING DEVICE. LOUIS F. CLAUSING, Burlingame, Calif., assignor to Royal Metal Works, San Francisco, Calif., a Copartnership consisting of Louis F. Clausing and Max Schwartz. Filed Nov. 10, 1923. Serial No. 674,096. 3 Claims. (Cl. 126—116.)

1. A heater comprising an open top box, heat radiating means in said box, and a plurality of rings disposed one above another and spaced apart so as to leave open spaces therebetween for passage of air from the outer to the inner column, the spaces being in a vertical series, said rings being disposed between the radiating means and the box.

1,666,368. JOURNAL BOX, BEARING, WHEEL, AND AXLE ASSEMBLY. THOMAS R. COOK, Scranton, Pa., assignor to The Hudson Coal Company, Scranton, Pa. Filed Mar. 28, 1927. Serial No. 179,016. 1 Claim. (Cl. 308—109.)



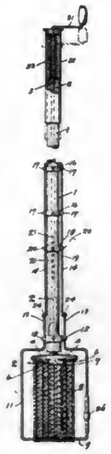
An assemblage of the class described comprising a journal box having an oil-filled reservoir and a bearing supplied with oil from said reservoir, an axle extending into said journal box and bearing, thrust means on the axle abutting one end of the journal box, a wheel whose hub is loose on the axle and abuts said thrust means, the aforesaid end of said journal box being provided with a shroud which surrounds the aforesaid thrust means and the adjacent end of said hub, said hub having a recess in communication with its interior, and a hard grease filling in said recess, said hard grease filling serving not only to lubricate the hub and axle but being adapted to creep out of the hub into the aforesaid shroud to lubricate the aforesaid thrust means, to pack said shroud against entrance of foreign matter and to prevent leakage of oil from the journal box along the axle.



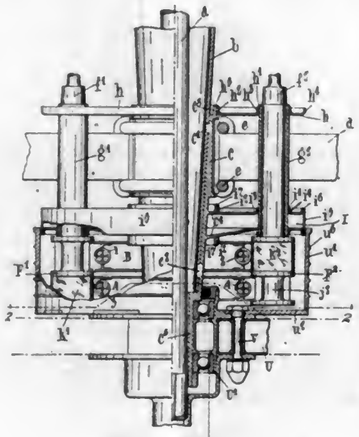
1,666,369. DUST-LAYING BROOM. MARY R. DEHLING, Wausau, Wis. Filed Aug. 19, 1926. Serial No. 130,256. 3 Claims. (Cl. 15—182.)

1. In a broom the combination of a metallic receptacle having a liquid receiving compartment therein, handle means connecting with the receptacle, said receptacle

including a bottom and a depending peripheral skirt portion below the bottom, flexible broom straws having their upper ends within the skirt portion immediately below the bottom of the receptacle, stitching extending between the wall portions of the skirt portion for stitching the straws to the skirt portion of the receptacle, and means for feeding liquid from the receptacle into the broom straws, including long flexible tubes extending from the bottom wall of the receptacle down thru the straws in embedded relation therein and having outlets adjacent the lower ends of said broom straws.



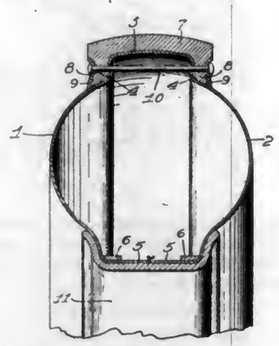
1,666,370. GRAIN CLEANER. DANIEL WEBSTER DETWILER, Rosebud, Alberta, Canada. Filed May 27, 1927. Serial No. 194,752. 15 Claims. (Cl. 209—297.)



3. In a grain cleaning machine, the combination with a casing, of a rotatably mounted and driven shaft therein, a helical flange mounted concentrically to the shaft and spaced therefrom and having a clamping web and directed substantially at right angles to the longitudinal axis of the shaft, means for rigidly supporting the flange from the shaft to cause it to rotate therewith, a cylindrical wire mesh screen enveloping the flange and bearing on the web, a helical member surrounding the screen, said screen being clamped between the helical member and the clamping web and means for feeding grain into one end of the screen.

1,666,371. MOP. ALBERT DE ROSE, Gilroy, Calif. Filed May 12, 1925. Serial No. 29,766. 2 Claims. (Cl. 15—120.)

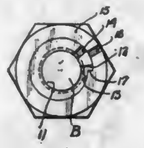
1. A mop of the character described comprising a tubular handle, a slidable and rotatable shaft extending through said handle, a wiping element, means secured to the lower end of the shaft for supporting one end of the wiping element in proximity to the lower end of the handle, a frame pivoted to the handle and supporting the other end of the wiping element, elastic means secured to the handle and engaging the upper end of the frame tending to maintain the frame in a plane passing through the axis of the handle, and a crank secured to the upper end of said shaft.



1,666,372. VEHICLE BRAKE. JENÖ FEJES, Budapest, Hungary. Original application filed May 28, 1926, Serial No. 112,343. Divided and this application filed Dec. 30, 1926. Serial No. 158,068. 4 Claims. (Cl. 188—78.)

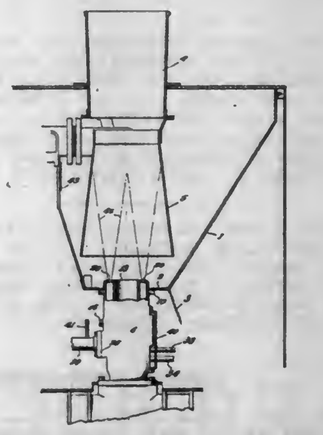
4. A self-contained unit for attachment to the rear axle of a motor or like vehicle comprising in combination a supporting boss (c), main supporting spring, means for attaching the latter spring to the said boss, two flanged sheet iron supports (h, I) edge-welded to said boss, tubes (g_1, g_2) to which the said flanged sheet iron supports are edge-welded, spindles (f_1, f_2) mounted on the said tubes (g_1, g_2) a cylindrical and a cam-like extension (f_1k_1—f_2k_2) on the said spindles, two pairs of brake shoes mounted on the said cylindrical and cam-like extensions of the spindles (f_1,f_2) and each made of strips of sheet iron welded at their edges, some of which strips have flanges to allow edge-welding being effected, and springs between the brake shoes of each pair, as set forth.

1,666,373. SPRING STEEL TIRE. FELIX S. FELDHEIM, Evanston, Ill., assignor of one-half to Victor Karbowski, Chicago, Ill. Filed Oct. 1, 1926. Serial No. 138,038. 2 Claims. (Cl. 152—8.)



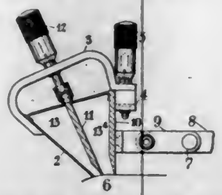
1. A device of the type described comprising a body portion having resilient side portions, an annular head portion, and annular grooved portions disposed between said side portions and said head portion, a tread disposed upon said head portion, bead portions integral with said tread and receivable in said grooved portions, retainer rings disposed adjacent said bead portions, means extending through said grooved portions, said bead portions, and cooperating with said retainer rings for securing said tread in place, inwardly extending flange portions integral with said side portions, and reinforcing rings disposed upon said flange portions adjacent the inner walls of said side portions.

1,666,374. GARDEN TOOL. TONY C. GATTI, Pascogoula, Miss. Filed Apr. 19, 1926. Serial No. 103,137. 2 Claims. (Cl. 97—66.)



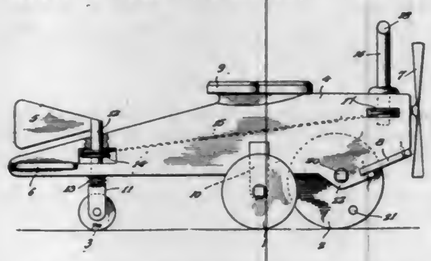
1. A tool head of the character described, comprising a body having a longitudinal edge formed to set up a plurality of ground working teeth, each tooth being bent at its face to project at an obtuse angle with respect to one face of the plate, said plate further having the central portion thereof cut away to provide an ear bent outwardly at right angles to the face of the plate for the attachment of a handle thereto, and said other longitudinal edge having a portion thereof bent at an obtuse angle to one face of the plate body to set up a weeding blade extending throughout the length of said other longitudinal edge, and a reinforcing flange formed across each end of said plate body to prevent bending of the same while in use.

1,666,375. LOCK NUT. IGINO GUIDUCCI, Tivoli, Rome, Italy. Filed Jan. 26, 1927. Serial No. 163,696. 1 Claim. (Cl. 151—19.)



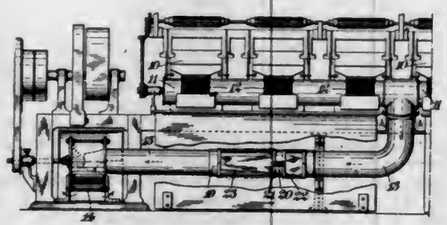
In a lock nut device adapted to be applied to the threaded portion of a bolt over a nut engaging said threaded portion, the combination of an outer member separate from said nut and having an inner eccentric wall, an inner member separate from said nut and said outer member and located within said outer hollow member, said inner member being longitudinally slidable with respect to said outer member, said resilient member having an outer eccentric wall corresponding to the inner eccentric wall of said outer member, the length of the radius of the outer eccentric wall of said resilient member increasing in the direction of the locking movement thereof, said inner resilient member being annular and having an internal thread corresponding to the thread of the bolt.

1,666,376. EXHAUST NOZZLE. WINFIELD SCOTT HAINES, Dunmore, Pa., assignor to Peter Garfield Seigle, Dunmore, Pa. Filed Apr. 22, 1927. Serial No. 185,894. 5 Claims. (Cl. 230—96.)



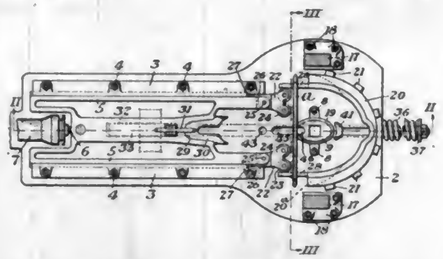
1. An exhaust nozzle for locomotives comprising a single casting having a gas and smoke chamber in its upper portion and provided with vertical partitions forming the sides of said chamber and defining with the sides of the casting passages for exhaust steam from the engine cylinders, and vertically spaced webs extending across the body between the partition to define an exhaust chamber, the upper web forming the bottom of the smoke and gas chamber and having a central opening establishing communication between the exhaust chamber and the smoke and gas chamber and the walls of the casting at the ends of the exhaust chamber having openings to receive exhaust pipes from the locomotive auxiliaries.

1,666,377. CELLULOSE-DERIVATIVE FILM AND METHOD OF MAKING THE SAME. HENRY JAMES HANDS, Chiswick, London, England, assignor to Spicers, Limited, London, England. Filed Jan. 25, 1927, Serial No. 163,540, and in Great Britain Sept. 24, 1926. 3 Claims. (Cl. 18—57.)



1. Sheets of cellulose ester compositions exhibiting a gradual variations in property from one face to the other face of the sheet.

1,666,378. CHILD'S TOY. JOHN ELDRIDGE HARNER, Dodge City, Kans. Filed Feb. 9, 1927. Serial No. 166,974. 3 Claims. (Cl. 208—42.)



1. A toy comprising an elongated body, centrally disposed wheels, a front wheel and a rear wheel, the rear wheel being supported in a frame having a pivotally mounted stem adapted to receive a limited vertical movement, a front post, pulleys secured to the stems of the post and rear wheel frame, and a flexible connection between the pulleys of the posts and rear wheel frame to admit of a turning of the latter for steering.

1,666,379. WASTE-COLLECTING DEVICE FOR COMBING AND LIKE MACHINES. WALTER HARTLEY, Bolton, England, assignor to Dobson & Barlow Limited, Bolton, England, a British Company. Filed Jan. 22, 1926, Serial No. 82,992, and in Great Britain May 15, 1925. 10 Claims. (Cl. 19—115.)
